Administration.—The scheme is administered by the National Social Insurance Institution working through social provident institutes established in every province. The Governing Body of the Institution consists of eight members representing employers and eight representing compulsorily insured persons who are appointed by the principal organizations of their respective groups; four members selected from experts in social insurance questions, the Director General of the National Insurance Institution and the Director General of the National Industrial Accident Insurance Institution, one official representative each of the Ministry of National Economy and the Minister of Finance. A chairman must be selected from amongst persons other than those mentioned above.

Jugo-Slavia

The Act respecting Workers' Insurance passed in May, 1922, provides for old age pensions.

Qualifications.—Insurance is compulsory for every person who performs manual or mental work for remuneration without distinction of age, sex or nationality. Agricultural workers, prisoners and persons employed occasionally in household tasks are exempt. Voluntary insurance is provided for those not liable to compulsory insurance. Pensions are payable at seventy years of age to those who have paid five hundred weekly contributions.

Pensions.—The pension is a sum equal to twelve times the average annual contribution. The widow of an insured person or pensioner receives an annuity for three years at an annual rate of one-fourth of the pension received by or due to the husband. Children under receive benefits at the same rate until the age of sixteen years. The pension of widow and children together must not exceed the amount to which the deceased would have been entitled.

Pension Fund.—Employers and workers each contribute one and a half per cent of the daily basic wage. A state subsidy is granted for the purpose of increasing pensions amounting to less than 1,500 dinar (about £60) ($289.50).

Administration.—A Central Workers Institution is established for the whole Kingdom, working through local workers benefit societies.

Luxemburg

An Old Age and Invalidity Insurance Act was passed in 1911.

Qualifications.—The age at which a person may be pensioned was reduced in 1914 from sixty-eight to sixty-five years. The scheme embraces all workmen, assistants, companions, apprentices and domestic servants and employees in industries, offices, etc., foremen and technical experts, clerks and commercial apprentices, whose annual remuneration does not exceed 3,750 francs ($723.75). Provision is made for the extension of the Act to other callings by regulation. Certain classes whose earnings are over 3,750 francs but less than 4,500 francs ($868.50), are permitted to insure if they are under forty years of age.

Public employees are excluded if at least as favourable treatment is already accorded them. Special provisions relate to railway employees.

A Luxemburger must have worked in the Grand Duchy for at least 2,700 days in order to qualify for an old age pension and for 1,500 days for a disability pension. In the case of a foreigner the number of days' work required is fixed at 2,700 in both cases. Provision is made for suspension of this clause in connection with the subjects of countries according benefits to aliens.

Pensions.—The amount of the pension paid to those who have worked 1,350 days, whose annual earnings were 500 francs ($96.50), or less is fixed by the Act at 180 francs ($34.74)

for men and 144 francs ($27.79), in the case of women. These rates are subject to increases as the wages increase.

In addition, 8 centimes .015 cents and 16 centimes .03 cents respectively are added to the pension for each period of six days' work in excess of 1,350 days.

In the event of death before a pension is granted 50 francs ($9.65), is paid monthly for six months to three or more children under sixteen years of age, for five months to two such children or for four months to one. A widow without children under sixteen is granted 50 francs ($9.65) for 3 months.

Pension Fund.—The law fixes the rate of contribution for the first five years at 2.1 per cent of the wages paid, one-half of this amount to be borne by the workers and the other half by the employers who are responsible for the payment. The state contributes one-third of the minimum annuity.

Administration.—The State Insurance Institution is charged with the administration of the Act, which refers also to sickness insurance. One-half of the expenses of the Institution is borne by the state but one-fifth of this amount is refunded by the communes.

Norway

In December, 1923, an Old-Age Assistance Act was passed but will not be put in force until a date which will be determined.

Qualifications.—Persons entitled to pensions are Norwegian citizens who have resided in the country or have sailed under the Norwegian flag at least one-half of the period since their attaining sixteen years of age and at least five years before the formulation of the claim to pensions. Persons whose civil rights have been legally suspended or who have been convicted of vagrancy, drunkenness, begging or neglect to support their families during the five years previous to making claim for pensions are disqualified. Pensions are payable at seventy years of age. In the case of a married couple, it is sufficient if conditions are fulfilled by the partner on whose age the claim is based.

Pensions.—The annual old-age pension is sixty per cent of the sum by which the annual income of the pensioner falls short of a basic pension. This basic pension is fixed by the communal authorities in each commune and must be such that sixty per cent of it suffices to maintain a single person or a married couple without their income. In the case of a married couple with children under sixteen years of age, the basic pension is proportionately increased. In computing income 450 kroner ($120.60) are left out of account in the case of married persons where both have attained the age of seventy years. In other cases, the amount is 300 kroner ($80.40).

Pension Fund.—Pensions are paid by the municipal authorities who are entitled to claim a subsidy from the state of fifty per cent of their expenditure with a maximum amount of 450 kroner ($120.60) for each married couple and 300 kroner ($80.40) for each single pensioner. The state subsidy may be increased in the case of municipalities with small financial resources.

Administration.—The administration of the Act is entrusted to Municipal Old Age Assistance Commissions which are under the supervision of the State Insurance Office.

Portugal

In 1919, Portugal set up a system of compulsory old age insurance in connection with a broader scheme of social insurance.

Qualifications.—A full pension is paid at the age of seventy years, provided premiums have been paid for thirty years. Earnings must not exceed 900 escudos ($972). The following are excluded from the scheme: public officials otherwise pensioned, soldiers employed as labourers; infirm persons unable to earn more than a third of the average wages of ordinary labourers, those who earn only their subsistence and wage-earners and other employees already insured.

Pensions.—At the age of seventy years, a pension equal to the whole of the wages is paid. In case of invalidity, the amount of the pension varies with the number of contributions made.

Pension Fund.—The employee must contribute to the fund 1½ per cent of his daily wages, 1 per cent being for insurance against invalidity and ½ per cent to insure against old age. The employer is obliged to pay an amount equal to 6 per cent of the wages of his employees, 4 per cent being allocated to the insurance against invalidity and 2 per cent to the old age insurance fund. The state is liable for a payment equal to 7½ per cent of the average wages of those wage-earners who are annually on military service.

If an insured person has contributed for five years and dies before he has received a pension, his children are entitled to 10 escudos ($10.80) monthly for the first six months after his death. A widow having no children receives 50 escudos ($54).

Administration.—The cost of administration is borne by the state. An Institute of Compulsory Social Insurance was established to

administer the system of old age insurance together with other forms of social insurance.

Spain

In 1908, Spain passed a law providing for voluntary old age insurance, subsidies being granted by the state. In March, 1919, a Royal decree created a compulsory system.

Qualifications.—A pensioner must be sixty-five years of age. Total income must not exceed 4,000 pesetas ($772) per annum. The system applies only to industrial workers, but in the decree, provision was made for investigation into the problem of its application to agriculture.

Pensions.—The decree states that for persons under forty-five years of age at the date of enactment, the "initial" pension shall be 365 pesetas ($70.45) per annum. At a later date the "initial" pension is to be converted into a "normal" pension by means of a compulsory contribution levied on all insured workers for the purpose of increasing the pension. The minimum contribution may be increased voluntarily up to an amount sufficient to furnish an income of 2,000 pesetas ($386).

For wage-earners over forty-five years of age at the date of the publication of the decree, the pension will vary with the voluntary contributions of the worker and other factors. Contribution by employer and state are similar to those in the case of workers under forty-five years of age. If the amount to his credit is sufficient to provide a life annuity of 180 pesetas ($34.74), this annuity is created. If this is not the case, the money is transferred to a public or social institution on which the law imposed the task of assisting the worker for the remainder of his life.

If an insured person dies before reaching the age of sixty-five years, the amount to his credit is paid to his heirs. In the event of disablement, the beneficiary may withdraw the amount or claim certain benefits provided by the Act of 1908.

Pension Fund.—The state contributes 12 pesetas ($2.32) per annum to each pension and the employer's contribution is the sum required to be added in order to provide the fixed amount. In the case of a worker over forty-five years of age, the sum paid by any employer is the average of his contributions on behalf of other workers.

Administration.—The general provisions of the Act of 1908 are applicable to the carrying out of the decree of 1919. In addition to the officers of the National Institution of Public Welfare, a special council is created. An advisory commission is also provided for, composed of representatives of employers and workers. Insurance institutions in the various districts must partially insure their operations in an independent savings bank which in turn must insure in the National Institution of Public Welfare.

Sweden

A law providing for compulsory old age insurance in Sweden was passed in 1913 and put into force at the beginning of the next year.

Qualifications.—Insurance against old age is not confined to wage-earners in Sweden but applies to every registered citizen of sixty-seven years of age or when permanently disabled. Each applicant for benefits must file and prove his claim. Employees of state railways and the telegraph service, civil servants, elementary school teachers, members of the army and navy, and the clergy of the established church together with their wives, are exempted from the scheme since they are otherwise pensioned by the state. Persons in receipt of poor relief, habitual drunkards and idlers are not eligible for pensions.

Through voluntary insurance, the amount of a pension may be increased to a certain extent, the state adding one-eighth to the amount of the contributions for this purpose.

Pensions.—The amount of the pension varies with the contribution made, the fixed rate in the case of men being 30 per cent of the total amount of premiums paid. In the case of women the percentage is 24, the lower rate being thought justified on actuarial grounds.

If the income at the age of sixty-seven is less than 300 krone ($80.40), an additional pension is paid from a fund provided by taxation (three-fourths from the state and one-fourth from the commune). The amount of this state pension varies inversely with the income up to 150 krone ($40.20), (10 krone ($2.68) less for a woman).

By an amendment of October, 1921, which came into force at the beginning of 1922, additional pensions will be paid to persons having an annual income of less than 425 krone ($113.90), in the case of men and 400 krone ($107.20) in the case of women and will amount to 225 krone ($60.30) for men and 210 krone ($56.28 for women with a reduction of six-tenths of the amount by which the annual income exceeds 50 krone ($13.40). These new regulations apply only to persons who became unable to work since the beginning of 1922. The earlier provisions will still apply to those whose invalidity began before the date mentioned even though application for a pension was not made until after the beginning of 1922.

A further amendment also effective from January 1, 1922, allows additional pensions to a married man unable to work who has children under fifteen years of age dependent upon him even though his wife is not an invalid.

Applicants whose invalidity began before January 1st, 1922, will receive as an additional pension for children a maximum of 74 krone ($19.83); those who become invalids after that date receive a maximum of 102 krone ($27.34) for each child.

Pension Fund.—Contributions to the old age insurance fund are payable from the sixteenth year and vary with the income, the population being divided into four classes according to the annual income received. A person in receipt of less than 500 krone ($134) annually pays 3 krone (80.4 cents), and one with an income of more than 1,200 krone ($321.60) is liable for 13 krone ($3.48). If a citizen is unable to pay, his premium must be made up by the commune where he is registered.

Administration.—There is a central administrative body which has a representative in every commune. This officer is assisted by a local committee and is charged with the collection of premiums and the assignment of pensions.

Switzerland

In the Canton of Glarus a compulsory, contributory system of old age insurance was adopted in 1916.

Qualifications.—Contributions are compulsory for all persons between seventeen and fifty years of age and pensions are payable at the age of sixty-five. Disability pensions are payable after five years.

Pensions.—The amount of the pensions increases by 30 francs each year after the sixty-sixth year of age, the initial pension being 180 francs ($34.74) in the case of men and 40 francs ($7.72) less in each case for a woman.

Pension Fund.—The canton gives 85,000 francs ($16,405) and the communes give 1 franc (.193c) per head of population to the general pension fund annually. Each insured person pays 6 francs ($1.16) yearly.

United States

A number of old age pension bills have come before the United States Congress, the last having being introduced in 1924, providing pensions for persons, sixty years of age who had been citizens of the United States for sixteen years, the amount of pension varying with the income of the recipient and ranging from $4 to $8 per week.

In addition to the attention given to the subject of old age pensions in the federal field a bill known as "The Standard Bill" was prepared in 1922 for introduction in state legislatures. This bill is the basis of legislation passed in Pennsylvania, Montana and Nevada and of recent amendments to the Alaska law of 1915. In 1925, a bill providing for old age pensions passed both houses of the California Legislature, but was vetoed by the Governor as "harmful to the spirit of thrift and economy". A similar situation has arisen in Washington. The State Legislature at a special session this winter (1925-26) passed the standard bill, modified so as to make acceptance of the pension scheme optional for each county. The Governor of the State, however, vetoed the measure.

In two states, Massachusetts and Indiana, commissions appointed to consider the subject of old age pensions brought in reports during 1925. The Massachusetts report was only partial and recommended pensions for public employees. The Legislature has granted further time for consideration of the question of general old age pensions. The Indiana Commission's report was favourable to the adoption of a pension scheme. In Virginia an official committee created by the legislature recently reported in favour of old age pensions and a bill is now being considered in that state. Bills are also pending in New Jersey and Rhode Island.

A résumé of the standard bill follows, together with an account of the action taken by those states in which laws providing for old age pensions are or have been in force. Only those provisions of the state laws which differ from the provisions of the standard bill are given.

The Standard old age pension bill for State legislation makes available a maximum income from all sources of $1 a day, including the pension, for persons who have attained the age of seventy years or upwards and have qualified by their record of good citizenship and residence within the State for not less than fifteen years. Economical administration is provided for through a salaried State superintendent working through local boards. The State furnishes the pension and bears the expense of State-wide administration, but county or local boards meet the expense of local administration.

Alaska.—

In 1915, the legislature of Alaska provided that anyone of sixty-five years of age, who has lived in Alaska for ten or more consecutive years since 1905, may apply for an allowance in lieu of making application to be received in a home for indigents. According

to an amendment in 1917, the maximum pension is $12.50 monthly except in the case of women of sixty years of age who are in urgent need when the maximum amount is $25 monthly. No more than $15,000 may be expended on allowances in one year.

Arizona.—

In 1915 Arizona established a system of non-contributory pensions for all needy American citizens of sixty years of age, who have resided in Arizona for at least five years prior to making application. The pension is $15 per month. This Act was declared unconstitutional by the Superior Court of Arizona in November, 1915, and appeal was made to the Supreme Court of the State which rendered an opinion to the effect that the law, while not unconstitutional, was inoperative by reason of the failure of the measure to provide machinery for carrying out its provisions.

Pennsylvania.—

In 1923, the Standard Old Age Pension bill was passed and forty-five county boards were organized of which thirty-eight sent in a total of 3,347 applications. The Act was declared unconstitutional by the County Court in August, 1924, and this decision was confirmed by the Supreme Court of the United States two months later.

Nevada.—

In 1923, the Legislature of Nevada passed a law establishing a system of old age pensions. The Standard bill was used as a basis but modified as regards the age of pensioners which was fixed at sixty years. This law was never in operation owing to inadequate financial provision and was repealed in 1925 and replaced by another providing for a county system similar to that in force in Montana. The Boards of County Commissioners are authorized to provide funds for the payment of pensions, which are granted at the age of sixty-five years. The rules regarding length of residence are made more strict.

Montana.—

In 1923, a modified form of the standard bill was passed by the Legislature. Pensions do not exceed $25.00 per month. The Act is administered by boards of county commissioners acting as old age pension commissions. Pensions are payable from county poor funds in accordance with specified procedure.

Wisconsin.—

In 1925, the State Legislature of Wisconsin passed a law providing for a system of old age pensions which might be adopted by any county by a two-thirds vote of its elected board. The rules as to residence, age, etc., follow the lines laid down in the standard bill. The Act is administered by county judges subject to the approval of the State Board of Control. Expenses incurred under the Act are paid from the county treasury which is reimbursed by each city, town or village for two-thirds of the amount paid in pensions to its residents and by the State for one-third. A State subsidy not exceeding $200,000.00 per annum is granted for pensions and $5,000.00 per annum for administration. According to the latest information some half dozen counties have voted to accept the plan.

Uruguay

A law establishing a non-contributory system of old age pensions went into effect in Uruguay in May, 1919.

Qualifications.—All persons are pensionable at the age of sixty years or when totally disabled and indigent.

Foreigners and naturalized citizens must have lived in Uruguay continuously for fifteen years.

Pensions.—The minimum annual pension is to be 60 pesos ($62.04), and may be paid in cash or other assistance. If a pensioner is in receipt of any annuities or allowances in excess of 10 pesos ($10.34), the pension is to be reduced 50 per cent of the amount exceeding 10 pesos ($10.34).

Pension Fund.—The money for the payment of pensions is to be obtained by taxation on real estate above a certain value, liquors, playing cards, etc., and on employers to the extent of 20 centesimos (20.68 cents) per month for each employee.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] APRIL, 1926 [NUMBER 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

ACCORDING to returns furnished by employers in nearly every industry except agriculture, fishing and hunting, there was a further moderate increase in employment at the beginning of March. The gain was practically the same as on the corresponding date of last year, but the index number (the base 100 representing the number of employees of the same firms on January 1, 1920) was rather higher than on March 1 of any year since 1920, standing at 91.5 on March 1, 1926, as compared with 90.7 in the previous month, and with 87.0, 90.7, 89.9, 81.9 and 88.0 on March 1, 1925, 1924, 1923, 1922 and 1921, respectively. These percentages are calculated from statements tabulated by the Dominion Bureau of Statistics from returns received from 5,753 firms, whose payrolls included 750,695 persons on the date under review, as compared with 743,813 in the preceding month. The Employment Service of Canada reported practically no change in the average daily number of placements in February as compared with the previous month, or with February last year. At the beginning of March the percentage of unemployment among members of local trade unions was 8.1 as compared with percentages of 8.1 at the beginning of February and 9.5 at the beginning of March, 1925. The percentages for the month under review are based on returns received by the Department of Labour from 1,573 local trade unions, with an aggregate membership of 148,068 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.46 at the beginning of March, as compared with $11.50 for February; $10.74 for March, 1925; $10.58 for March, 1924; $10.79 for March, 1923; $10.54 for March, 1922; $13.23 for March, 1921; $16.92 for June, 1920 (the peak); $15.98 for March, 1920; $12.66 for March, 1918; and $7.68 for March, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined to 160.1 for March, as compared with 162.2 for February; 161.6 for March, 1925; 154.4 for March, 1924; 155.9 for March, 1923; 153 6 for March, 1922; 186.0 for March, 1921; 256.7 for May, 1920 (the peak); 241.3 for March, 1920; 200.3 for March, 1919; and 194.3 for March, 1918.

The time loss caused by industrial disputes in March was less than during either February, 1926, or March, 1925. Fourteen disputes were in progress at some time during the month, involving 898 employees, and resulting in a time loss of 12,697 working days. Corresponding figures for February were as follows: 11 dispute, 2,433 employees, and 22,966 working days; and for March, 1925, 15 disputes, 11,891 employees and 249,400 working days.

Combines Investigation Act, 1923

Two reports on recent proceedings under the Combines Investigation Act, 1923, will be found on pages 317-321 of this issue. The first is an account of the proceedings in connection with the first prosecution following investigation under the act (*Rex versus Simington et al*), which resulted in the conviction, on charges of conspiracy, of certain individuals and corporations connected with the distribution of fruits and vegetables in Western Canada, and in the imposition of fines amounting in the aggregate to $200,000. The second report gives the results of an inquiry undertaken by the Registrar into an alleged combine in the manufacture and sale of bread in the city of Montreal.

Advisory Board on Tariff and Taxation

An Advisory Board on Tariff and Taxation was appointed early in April, consisting of the Rt. Hon. George Perry Graham, Brockville, Ontario, Chairman; and Messrs. Alfred Lambert, manufacturer, Montreal, and Donald Gordon McKenzie, farmer, Winnipeg. The duties of the Board will be to inquire into and hear representations on all matters pertaining to the tariff and other forms of taxation, as may be directed by the Minister of Finance, and to advise the Minister in regard thereto. The Board will be under the jurisdiction of the Minister of Finance, who may make such

regulations and give such instructions as he deems expedient or necessary to carry out the purpose for which it is appointed. It will hold meetings whenever it appears to the Board to be necessary or desirable and also whenever required by the Minister of Finance to do so. The Board members will avail themselves of information and advice from such officers of the Departments of Agriculture, Customs and Excise, External Affairs, Finance, Labour, Trade and Commerce, or other departments of the public service, as may be able to be of assistance to the Board. The Minister of Finance, on the recommendation of the Chairman of the Board, may engage competent persons possessing special knowledge to assist the Board, and may similarly engage such clerical assistants as may be necessary, and such persons and clerical assistants may be paid for their services at a rate to be determined by the Minister of Finance.

Resolution on legal minimum wage

The House of Commons on March 15 considered a resolution moved by Mr. J. S. Woodsworth, Winnipeg North Centre, "That in the opinion of this House a wage sufficient to provide for a reasonable standard of living should constitute a legal minimum wage." The subject matter of the resolution was, on the motion of the Prime Minister, referred for further consideration to the Committee on Industrial and International Relations.

Productive labour for prisoners

The House of Commons, on March 31, without opposition, adopted a resolution moved by Miss MacPhail, member for South-East Grey, "that, in the opinion of this House, the administration of penitentiaries be amended to provide: first, sufficient productive work to keep the inmates employed; and, second, that a share of the proceeds go to dependents, and in case of no dependents such share to be held in trust until release."

In the debate on this motion it was stated that prior to 1921 organized labour as a rule was opposed to work being done in the penitentiaries which might compete with free labour, even if the work was done for government departments, but that recently the opinion of labour on this subject has been modified. The legislative proposals of the Trades and Labour Congress of Canada, printed on another page of this issue, contain the request "that steps be taken to give effect to the report of the Government Commission (1921) on Prison Reform." This Commission "most emphatically" recommended statutory provision to provide productive labour for all convicts. "Such provision," it reported, "need not extend to any work except for what is known as state use and can, in Canada, not extend any compulsion beyond the federal service, but the evidence taken by the Commission has satisfied it that manufactures within this limitation will afford much more than ample scope for all the industry and activity which the penitentiaries can put forth."

The advantages of the new system were stated in the same report by Brigadier-General Hughes, superintendent of penitentiaries, as follows: "The inmates of the penitentiaries are the wards of the Dominion government, and there is no valid reason why goods required for state use, and state use only, should not be made, as far as possible in the penitentiaries. The government spends many thousands of dollars yearly for furniture, furnishing, and equipment of various kinds, a small portion of which could be made in the penitentiaries. The revenue derived from this source would enable the institutions to pay each inmate on his discharge, or to his family while he is in prison, a small wage, which would materially assist the stricken family in keeping the wolf from the door while the wage-earner is incarcerated; or, in case the inmate had no family responsibilities, would furnish him with sufficient funds on discharge to assist him in making a fresh start in life."

Workers' right of contract for wages

The question of the payment of the men who are requisitioned under various Provincial acts for emergency labour in fighting forest fires was raised in the House of Commons on March 18, and led to a discussion of the general question of the freedom of wage contracts. The following resolution was adopted, on the motion of Mr. A. W. Neill, Comox-Alberni, seconded by Mr. A. A. Heaps, Winnipeg North:—

"That, in the opinion of this House, every effort should be made to affirm and establish the full industrial freedom of the citizens of Canada to bargain for their services on all industrial contracts and works; that the exploitation of labour should be prevented and condemned; that no person should be induced or compelled by undue influence, threats of dismissal, loss of wages or position or by any other unfair and improper means, to work for wages less than the standard or to engage in work which he has not agreed to do; that in all cases such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out should be enforced and paid; and that this House will, so far as it is within the jurisdiction of Parliament, endorse every reasonable and legitimate proposal to preserve such industrial freedom of contract and action, and will co-operate with the several provinces in these objects to provide for uniform legislation throughout Canada.

The control of forest fires being subject to Provincial laws, the foregoing resolution, it was pointed out, was intended by the House only as a general declaration of principle. Mr. Neill pointed out that while persons of all classes, except those in certain vital occupations, are subject to the call to fight forest fires, the actual burden necessarily falls on country workers, to whom the question of remuneration is a matter of vital concern. He asked the House to approve the principle that when a man is taken against his will to fight bush fires he shall be paid the current rate of wage.

All the provinces, except Prince Edward Island, make provision for the requisitioning of able men in emergencies caused by forest fires, the ages of the persons subject to call being between 16 and 60 in Saskatchewan and British Columbia; 16 and 65 in Alberta; 18 and 60 in Ontario; 18 and 50 in New Brunswick, and 18 and 55 in Quebec. No age limit is mentioned in Nova Scotia or Manitoba. Trainmen, telegraphers and despatchers on duty, doctors and persons physically unfit are excepted in New Brunswick, Ontario, Saskatchewan, Alberta and British Columbia. No mention is made of the payment of the men called out in Ontario, Manitoba, Saskatchewan or Alberta. In New Brunswick the rate of compensation is decided by the Minister on the recommendation of the Forestry Commission. In Nova Scotia the Chief Forest Ranger may pay "reasonable remuneration" up to $2 per day. In Quebec the rate is fixed from time to time by the Minister, and in British Columbia the compensation is determined by the Lieutenant-Governor in Council.

Benefit of uniform labour laws

The Prime Minister, in supporting the resolution given in the preceding note, dwelt on the need for greater uniformity in industrial standards throughout Canada. (It may be recalled that a Dominion-Provincial conference met in Ottawa in 1919, under federal auspices, to consider this subject. The report of this commission was reprinted in the Labour Gazette, May, 1920.) Mr. King said:—

"I believe that uniformity of industrial standards is one of the most important objects to be attained by legislation. In Canada it should be our aim to bring about, if at all possible, uniformity of legislation among the different provinces. It is important for this reason: if there is not uniformity it very often happens that the particular province that has higher standards in labour ultimately loses in consequence of the lower standards that exist in other provinces. The higher standard is undermined by the lower to the disadvantage of the particular part of industry enjoying the highest standard. I remember some years ago looking into the question of sweating in industry, I found that in some of the American states where the clothing industry was carried on, that as one state raised its standards of legislation with respect to fair working conditions the labour employed in that industry was gradually supplanted by labour enjoying a lower standard in another state, and the state that was really seeking to preserve a high standard of labour was losing its industry as a consequence. Now the only way in which that sort of thing can be prevented is that there shall be like industrial standards over areas of effective competition however wide they may be. The League of Nations has seen the importance of that principle and has laid down in its labour clauses as an object to be aimed at the establishment of uniformity of industrial conditions not only as between the provinces of any one country but as between the different countries of the world; and I really believe it is a fact that until in some way the standards are made equal in the different countries, those countries that have higher standards are going to some extent to be handicapped in virtue of those very higher standards they have adopted.

"I believe speaking generally there is no country in the world that enjoys higher staidards of industry than our own. From the national point of view, I believe there is everything to be said in favour of a resolution that will help to convey to the world the knowledge that the Parliament of Canada supports the broad principle of uniformity of legislation with respect to fair wages and conditions in industrial contracts and freedom from exploitation and freedom in industrial bargaining. For that reason, for the moral support that Parliament is able to give these great principles, I hope the House will adopt the resolution."

Value of "no accident" campaigns in industry

"No Accident" campaigns are becoming a feature of industrial safety movement in Canada as in the United States. For example, mention was made in the February issue of the "No Accident Year" achieved by the Port Colborne plant of the Canada Cement Company, and of the similar record for two years at the International Harvester Company's plant at Chatham, Ont. The results of a "no-accident" competition between the Spanish River Pulp and Paper

Company and the Laurentide Company were announced in the last issue, and in the March issue attention was called to the offer by the *Pulp and Paper Magazine of Canada* of two challenge shields for "the safest mill in Canada" for the six months commencing March 1, 1926.

Mr. Lewis A. DeBlois, former president of the National Safety Council (U.S.A.), writing in the *Monthly Labour Review* (published by the United States Department of Labour) for March, commends such efforts as affording the most convincing proof that industrial accidents may be entirely eliminated: "These prolonged no accident records," he says, "are to my mind the most encouraging symptoms of real progress. Let it be understood that they are not 'luck' and are achieved only after months and sometimes years of patient, plodding effort by pay-roll and salaried men alike; safety education must come first and then 'safety spirit' before the goal is reached. These records teach us the great salient truth: Accidents can be eliminated—not only those we always knew how to avoid but even those we have been pleased to term "unavoidable.' If there exists any exception it is among the great natural catastrophes, such as earthquakes and tornadoes. The truly industrial accident does not have to occur! The safety enthusiasts conceived this truth and American industry have proved it."

New relations of labour and management

In a paper on "Labour's Ideals concerning management," read before the Taylor Society recently, President William Green, of the American Federation of Labour, referred to the recent advent of "management" as one of the chief factors in industry. "Not until recently was management considered of great importance," he said. "Formerly capital and labour were regarded as the only essential factors. This view prevailed during the period when the relationship between employers and employees was of a more personal character. It must be relinquished because financial changes have taken place, until now, through the diversified ownership of corporations, management control has supplanted personal ownership control. This brought with it the formation of new relationships and the assumption of new responsibilities."

Mr. Green spoke of the changing relation of labour and management as follows:—

"Many of our older concepts are giving way to the newer and more progressive points of view. The relationship of management and labour is changed and is changing. The mental attitude of labour toward industry and industrial processes is undergoing revision and readjustment. Management is understanding more and more that economies in production can be brought about through the co-operation of labour and the establishment of high standards rather than through the autocratic control and exploitation of labour. Labour is understanding more and more that high wages and tolerable conditions of employment can be brought about through excellency in service, the promotion of efficiency and the elimination of waste. It is becoming more clearly understood that high wages and a high standard of efficiency in industry are correlated, and the industry that is best managed, most economically controlled, where workmanship of the highest order under satisfactory conditions is maintained, is the industry that can pay the highest wages."

Public and private systems of compensation insurance

The Workmen's Compensation Board of Nova Scotia, in their report for 1925, reviewed on another page of this issue, make a comparison between "state" insurance as it now exists and the system formerly in operation in the province: "The advantage of a Compensation Act such as we have in Nova Scotia is well illustrated by a comparison of the rates under such an act with the rates of private insurance companies that were writing casualty insurance prior to 1917. Under the old Compensation Act of 1910, the limit of an employer's liability for any one accident was $1,500. Under the present Act there have been cases where the cost of a single accident was over $12,000. For the purpose of making a comparison of the rates of private insurance companies who issued policies protecting employers under the old Act, with the rates of assessment under the present Act, a number of policies were obtained from employers. Notwithstanding that the compensation payable under the present Act is several times greater than under the old Act, the Board's rates in 1925 were lower in nearly every case than the insurance companies' rates in 1916, the year before the new Act came into force.

"In many states of the United States private insurance companies are permitted to do business in competition with state boards. In 1924, 63 casualty companies incurred losses on account of accidents amounting to $245,000,000. The expenses of those companies in connection with the casualty insurance amounted to $216,000,000. The expenses were 89 per cent of the losses. That means that those companies would have to collect $189 in order to pay out $100. In Nova Scotia the expense

ratio for nine years was 8.38 per cent, or a saving of over 80 in the expense ratio. If the compensation business in Nova Scotia had been carried on by private insurance companies for the past nine years it would have cost the employers of the province $6,336,000 more than the amount paid to the Board, without any increase of benefits to the workmen."

Manitoba and old age pensions

The Legislative Assembly of Manitoba on March 25, passed the following resolution:

"Whereas the Acting Minister of Labour on March 18, 1926, moved in the House of Commons that the House go into Committee to consider a plan to provide a system of old age pensions, based on the report of the special parliamentary committee of 1924, which report contemplated joint action by the federal government and provincial legislatures.

"Therefore, be it resolved that this Legislature, while endorsing the principle of old age pensions, is of the opinion that any scheme of old age pensions should be administered by the Department of Labour of the federal government at the expense of the Dominion.

"And be it further resolved, that an humble address be presented to His Honour the Lieutenant-Governor, praying that he will cause this resolution to be conveyed to the Secretary of State for Canada."

As originally proposed by Mr. Ivens the resolution would have recommended, in view of the recent action by the House of Commons that the Provincial Government "should at once take steps to formulate in common with the federal parliament, some definite plan to provide a system of old age pensions, and that those provinces which have not already taken similar action, be urged to do so without delay."

Proposed revaluation of soldiers lands in Alberta

The Legislative Assembly of Alberta unanimously passed the following resolution on March 16:

Whereas the Canadian Pacific Railway Company, and other large land companies, are re-valuating their lands in Western Canada and making a substantial reduction in the price of same, to new settlers;

And whereas a great number of returned soldiers, farming under the Soldier Settlement Board, have abandoned their farms; and those who remain under this Board, are still obliged to pay for their farms at inflated war values which in many cases make it extremely difficult to carry on under normal conditions;

And whereas in the case of abandoned Soldier Settlement Board farms these farms are in most cases sold to new settlers at a re-valuated price;

Therefore this Legislature is of the opinion that in addition to live stock reductions already made, the Dominion Government should place returned soldiers, farming under the Soldier Settlement Board, on an equality with new settlers by making an equitable readjustment of the obligations to the said Board in respect to land and equipment, and that in such readjustment, due consideration be given to past payments already made by such returned soldiers.

Pensions for school teachers in Manitoba and Ontario

Manitoba has two pension systems for school teachers, one applying to the City of Winnipeg, which has been in operation for 20 years, and one to the province outside the city, for which provision was made at the 1925 session of the legislature (Labour Gazette, May, 1925, page 459). By the latter a fund is established by contributions from the teachers amounting to 1 per cent of their salaries. Teachers who did not wish to contribute were allowed to write themselves out before July. So far there is no provision for governmental contribution.

The pension provision applying to Winnipeg is in a flourishing condition. Contribution is compulsory and is set at $10 a year for those receiving less than $1,400 a year, and $20 for those over this amount. The school board contributes a like amount.

The amount of pension is the same for everyone, $300 per annum. According to the last report, 1924, the number receiving this annuity was eight, while four were receiving under the disabilities clause amounts according to the length of service. No additional applications for the retiring allowance have been received this year and there is but a slight increase in the amount paid out to teachers retiring because of disability. Under the Winnipeg pension scheme beneficiaries must have taught thirty years, twenty of which must be in the service of the city. There is no compulsion, however, on teachers to retire at the completion of this period and, as a matter of fact, fifty teachers eligible for pension are preferring to remain at their desks.

Pensions to the amount of $1,588,000 are now being paid to the school teachers and inspectors of the province of Ontario, out of the Teachers' and Inspectors' Superannuation Fund of Ontario, according to the second annual report on the fund made by Professor M. A. McKenzie, actuary. Out of the $1,588,000 the 338 women teachers on the fund receive $1,049,000, and the 161 men $539,000.

The aggregate value of future pensions is estimated at $9,156,000, but many of the contributors to the fund may withdraw from educational work before they are entitled to draw pensions, the amount thereof being estimated at $3,347,000. The payments at death of prospective pensioners are estimated at $1,120,000.

The maximum pension is $1,000 and the minimum $365, based on 40 years of service; it is compulsory on the part of all teachers and inspectors to contribute to the fund, which takes the place of the previous pension funds of Ontario. The teachers and inspectors contribute 2½ per cent of their salaries to the superannuation fund, and the provincial treasury contributes a similar sum.

Final act in postal strike of 1924

The Postmaster-General informed a delegation of postal employees who waited on him at Ottawa on March 20 that the employees who took part in the postal strike in 1924 would receive the amount of wages which they lost when they were reinstated as postal helpers at the minimum rate then current. About 2,500 employees benefit by this concession, including nearly 1,500 at Toronto, and 700 at Montreal. The amount involved in the readjustment is about $112,000. In giving his decision, the Postmaster-General made the following statement:—

"As it is not pretended that the striking employees had any legal right to be paid at a rate other than that upon which they agreed to return to work, it is only on compassionate grounds that the matter can be given consideration. I am favourably impressed by the fact that you men, personally, have little or nothing to gain, and are dictated by a desire to write 'finis' to an unpleasant chapter in the history of the Canadian postal service. I appreciate your viewpoint, and as tangible evidence of the desire of the department to engender in the postal service the fullest possible measure of good-will and harmony, I am issuing instructions that postmasters concerned be requested to immediately prepare the necessaray pay lists that will give effect to your request."

The circumstances of the strike were outlined in the LABOUR GAZETTE, July, 1924, as follows:—On June 18, postal employees in several cities went on strike for a higher salary schedule than that provided for in new regulations. At Montreal, Toronto and Windsor, the strike was called off on June 30, but in several cities in Ontario some employees were out only for a day or part of a day. In Montreal, Toronto and Windsor the strikers were partially replaced by new employees. On June 29 the striking employees were permitted to return to work, each individual agreeing by signed statement "to resume duty unconditionally as a postal helper in the Post Office staff."

"Equal rights" versus protection of female employees

The Women's Bureau of the United States Department of Labour is making an investigation into the effects of the special laws which regulate the employment of women. The inquiry was suggested at the second Women's Industrial Conference which was held at Washington, D.C., early in the current year on the initiative of the Department. The main feature of the Conference was the conflict between the so-called "equal rights" group and those who favour protective legislation for women. The former, a small but active minority, represents the movement in the United States among certain women for an amendment to the American Constitution demanding equal rights before the law for men and women. The latter represents a large body of women belonging, for the greater part, to women's trade union organizations and social reform groups, who believe that the maintenance of protective industrial legislation is demanded by all the facts and circumstances of industry. After a sharp debate, during which a statement was quoted from the report of the Secretary of Labour to the effect that the whole theory of special legislation for the protection of women had been challenged, and drawing attention to the need of a thorough inquiry into the subject, a resolution was finally adopted asking the United States Department of Labour to make a comprehensive investigation of the effects of special laws regulating the employment of women.

Limiting competition for export orders

According to press despatches an arrangement for apportioning international competition is being organized by manufacturers in the steel producing countries in Europe, including Great Britain, France, Germany, Belgium and Luxemburg. This arrangement would fix quotas of export orders for each country, on a plan similar to one that was in existence in the same industry before the war between Great Britain and the United States. A similar agreement in the coal industry is said to be under discussion between German and British exporters. Strong support to the movement is being given by labour. Arthur Pugh, chairman of the General Council of the Trade Union Congress, in a recent interview said: "So far as Britain is concerned it would appear she has nothing to lose by a friendly arrangement, as this country and the United States have been the two nations whose exports of rails have suffered by the

growth of the industry on the continent. Further if agreement and development on similar lines put an end to the cut-throat competition which has compelled continental workers to accept longer hours, has largely played into the hands of the middleman at the expense of the producer and has reduced the wages of the workers in the different competing countries, the result cannot fail to be beneficial."

South African Wage Board inaugurated

The Wage Board established in the Union of South Africa under the Wage Act of 1925, was inaugurated on February 17. The provisions of this act were outlined in the Labour Gazette for February. At the opening ceremony Mr. T. Boydell, minister of labour, stated that it marked one of the most important events in the social and economic life of the country. As already noted, the Wage Act supplements the Industrial Conciliation Act of 1924 (Labour Gazette, June, 1924), under which the conditions mutually agreed upon became legally binding on the two parties in industry. The earlier act was for the organized employer and the organized worker. The Wage Act, on the other hand, was intended for the unorganized workers. The Board has full power and responsibility in making recommendations regarding the wages in a particular industry, and the minister must either accept or reject, but may not alter these recommendations. The Board will start an investigation on the minister's suggestion, or at the request of employees or workers.

The chairman stated that the Board intended to give preference to sweated, unorganized industries. He dealt with the objection that their efforts would result in the dislocation of industry, and the raising of the cost of living. The evidence given before the Economic Commission, however, showed there were employers who were paying fair wages and giving their employees good conditions even among the sweated industries. It seemed to the Board, he said, that if one employer could do this there was no reason why all employers in sweated industries should not rise to the same standard as the good employer. In trying to bring this about, the good employer would have no additional burden placed upon him. If an employer who employed sweated labour was compelled to pay better wages and to provide better conditions for his men, he would not dare to raise the prices of the articles he produced because the good employer would be able to sell his article at a lower price, and consequently there would be no reason for restricted output. The chairman further pointed out that a poor output meant that only poor wages could be paid. A vicious circle was then created, but the Board was out to break that vicious circle and to enable people with better conditions to increase their efficiency and their output. They sincerely hoped to get better output from better wages.

British Miners' Welfare Fund

The Royal Commission on the British Coal Mining Industry, in their report which is summarized on another page of this issue place value on the work under the Miners' Welfare Fund, recommending that its scope should be enlarged. The work of this organization has been described in previous issues of the Labour Gazette. It was established under the Mining Industry Act of 1920, to be used for purposes connected with the social well being, recreation and conditions of living of miners and their families, and with mining education and research. The Fund is now supported by a levy of a penny on each ton produced in the mines (The Royal Commission recommend that this amount should be increased to a "substantial contribution from royalties"). It is administered by a committee appointed by the Board of Trade with the assistance of district committees. The report of the fund for 1925, recently received by the Department, shows a continued increase of activity in the various undertakings. The sum set aside for mining education has been increased from £475,000 to £500,000, education being thus placed on the same level as safety and health research. The committee express the hope that there will be available, in addition, a sum sufficient for the establishment of a scholarship scheme on a national basis before the end of 1926. It is their intention that the scholarships shall be of sufficient amount to enable the holders (either working miners, or their sons or daughters) to enjoy the full benefit of university life, and to exercise complete freedom of choice as to the course of study they will pursue.

The main activities promoted by the various committees during the year were in connection with institutes, halls, clubs, libraries (including small grants for the purchase of books, etc), recreation and sports grounds, playing fields, swimming pools and baths, colliery bands, etc.; pithead baths, drying rooms and shelters, slipper baths, wash-houses, etc.; hospitals, convalescent schemes; distinct nursing services; ambulance services; mining education (lectures, scholarships, establishment and equipment of centres for junior instruction, etc.).

The House of Assembly of the Union of South Africa has before it a bill to provide for the control of mining companies by the state. The bill gives to the Government the power to appoint directors to the boards of mining companies. These official directors are to be paid by the company on the same scale as other directors, and to have the same rights and privileges, in particular free access to all books, accounts and records. Secrecy is enjoined on them, but they may make communications to the Minister of Mines, who, if he considers it in the interests of the public or of the shareholders, may publish any information obtained by him through a Government Director.

A new table of fees, published under the Saskatchewan Theatres and Cinematographs Act, provides that a duly qualified operator, non-resident in Saskatchewan, may obtain a license from the Provincial Secretary, good for two months, to operate a moving picture machine for the exhibition of a special feature, on submitting satisfactory evidence of his qualifications as an operator, together with a fee of $5.

The coal workers who bunker ships at Dartmouth, in Devonshire, England, where unemployment is acute, have divided themselves into three gangs. One of these works at bunkering, while the other two go to the labour exchange, and having qualified, draw the "dole." This is done by all three gangs in rotation; and since there is enough work to keep a third of the men busy, all of them manage to make a living.

Local 151 (Toronto) of the Brotherhood of Painters and Decorators is addressing letters to the health officers of municipalities in Canada asking them to instruct contractors to take greater precautions while using the paint-spraying machine. The letters state that "the paint-spraying machine, when used on buildings, is dangerous. The men it is true are provided with masks. These masks become clogged, and then they discard them that they may breathe freely. Inhaling the fumes of the poisons, they contract disorders peculiar to the trade."

The Ontario Government informed the Legislature on March 29 that in the future, before any progress certificates were issued to any contractor in respect to provincial public works, the contractor would be required to give an assurance to the government that the workmen have received their wages in full. The government will hold back enough to ensure the payment of all wages if the need arises. This announcement arose out of reports that men working under a certain road contractor had not received their wages.

The coroner's jury in connection with the death of a workman who was killed by a descending hoist on a new building at Vancouver in February strongly recommended that a responsible signaller should be provided for all hoists for materials used in building construction.

In an inquiry into the death of a miner at South Porcupine, Ontario, on February 28, as the result of injuries received from falling timber in a mine the jury recommended that in future sized lumber should be used in timbering a shaft. The evidence showed that one edge of the timber was standing out a fraction of an inch from its position when the ore bucket in ascending, swinging slightly from side to side, caught in the edge of the timber and dislodged it, causing it to fall down the shaft.

The total benefits awarded by the Ontario Workmen's Compensation Board during the month of March amounted to $461,792.14, $373,379.73 of this being for compensation and $88,412.41 for medical aid. The benefits during the first quarter of this year were $1,380,-305.95, as compared with $1,312,136.10 in the first quarter of 1925. The number of accidents reported in March was 5,215, this being the highest month this year. The total number of accidents for the first quarter of 1926 is considerably higher than for the same period last year, the number reported to the end of March this year being 14,322, as compared with 12,655 during the first quarter of 1925. There were 82 fatal cases reported during the first three months this year, as compared with 46 during the same period last year.

During the season of 1925, 944 seamen were given treatment at hospitals in Montreal under the provisions contained in the Canada Shipping Act, section 386, relating to hospital treatment for sick mariners on ships which pay the duty levied on ships entering port. This duty amounts to two cents per net registered tonnage, payment however being required only three times in any one year. The amount collected by the Customs Department at Montreal last season for the purposes of the Sick Mariners' Fund was $39,432.46. The Labour Gazette for April, 1925, contained a note on the subject of hospital treatment for sick mariners in Canada, with special reference to the Port of Vancouver.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of March was as follows:—

The approaching spring weather was reviving the agricultural industry in the Province of Nova Scotia. The last of the winter work was being finished up in the logging industry and workers were awaiting the logging drives. The fishing industry was fair, though storms were to some extent interfering with its activities. The prevailing condition in the coal mining industry was rather good, and it was anticipated that with the opening of navigation shipments to the St. Lawrence would increase the business very considerably. Most lines of manufacturing were active; saw-mills were increasing their output; iron and steel industries were showing continued steady activity. At most points in the Province construction was rather quiet, but in Halifax it was increasing and the prospects were good.

Demands for farm hands received by the New Brunswick employment offices were not yet very heavy. In this Province fishing was fair and preparations were being made for the usual spring activity. With the disappearance of winter, the logging industry was slackening off. Pulp and paper and saw-milling industries were active; other lines of manufacturing were reported as busy. Although the construction industries were not showing unusual activity, they would seem to be experiencing fair conditions.

From the Province of Quebec it was reported that, with the arrival of spring weather, farm orders were coming in. Logging had slackened off considerably, though river driving, which was commencing, would give considerable employment in this industry for some little time. From Sherbrooke it was reported that there were increases in activity in the mining industry. Manufacturing was reported as brisk from practically all centres and increases to staffs were being engaged in numerous cases. In the building and construction industries the prospects were that there would be a very active season; demands for carpenters and painters were already being received in some volume by the employment offices. During March snow cleaning gave casual work to large numbers of workers. There was a shortage of suitable women domestics reported, particularly from the City of Montreal.

In Ontario orders for farm help were numerous and general throughout the southern portion of the Province, with some centres reporting difficulty in securing a sufficient number of suitable applicants. The manufacturing industries in this Province, generally speaking, were active and prospects were reported as good; increases in working time and in staffs seemed general. The iron and steel industry showed substantial improvements at various centres. Construction, the opening of which was retarded to some extent by the delayed spring, had begun to resume spring and summer activity and prospects were fair. The logging industry was quiet pending the commencement of river driving. The mining industry continued its normal activity. Demands for domestic workers were about as usual and again some shortages were reported from different centres.

Heavier demands for farm help, although cold weather was interfering with them to some extent, was the predominant note of the employment situation in the Province of Manitoba. Though construction prospects were fair, not much work had yet opened up. The demands for casual workers were light, but that for women domestics was steady.

As customary at this time of the year, the superintendents of the employment offices in Saskatchewan reported substantial increases in the registered vacancies for farm workers, although no shortages of suitable applicants was yet in evidence. Logging was quiet. The construction industries have not yet developed any great amount of activity. General conditions seemed rather quiet, awaiting the full opening of outdoor work. Women domestics were in brisk demand, with a shortage of farm domestics reported from some centres.

Unseasonable weather in Alberta was holding up outdoor work and slackening the demand for farm workers, though of these there would not seem to be any marked surplus. Construction was gaining in momentum and increasing numbers were being employed, while prospects for increased work later were distinctly encouraging. Coal mining was decreasing in activity. The demands for female domestic workers were rather heavy.

The logging industry in British Columbia showed little change and the improvements in it which were noticeable were rather light. Extra gang and road work was opening up and relieving unemployment to some extent. Other construction was picking up and the prospects for it seemed good. Metal mining industries were normally busy, although not many extra workers were being taken on. Although the cessation of bush work in this province had temporarily added in some districts to the numbers unemployed, conditions generally appeared to be on the upturn.

EMPLOYERS' REPORTS.

Employment, as indicated by employers, showed a further but rather small increase, involving practically the same number of workers as did the gain indicated on the corresponding date last year. The situation, however, was more favourable than on March 1, 1925, or on that date in any other year since 1920.

Additions to staff were registered in the Eastern and Central Provinces, while employment declined in the Western Provinces. In the Maritime Provinces, there was an increase in the employment afforded by the track departments of the railways, owing to the heavy snow storms. Transportation was also more active, but reductions were indicated in logging and mining. In Quebec, manufacturing registered largely increased employment; the iron and steel, building material, textile and leather groups, in particular, showed marked expansion. Railway construction and maintenance and services were also busier, the former group chiefly on

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending March 27, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturers and construction. Manufacturing includes consumers' goods and producers' goods.

account of snow-clearing. Trade, on the other hand, showed seasonal curtailment. In Ontario, manufacturing, especially of iron and steel products, reported substantial improvement, and construction and services made comparatively small gains. Logging, mining, transportation and trade, however, registered reduced staffs. The seasonal losses in the first named were the largest. In the Prairie Provinces, continued curtailment of operations was shown, mining, transportation, trade and logging being seasonally slacker. The declines were, however, somewhat smaller than those reported on the corresponding date last year. In British Columbia, contractions in employment, in transportation and construction were partly offset by improvement in manufacturing, chiefly in metal-using, lumber and pulp and paper factories.

The trend of employment was upward in Montreal, Quebec, Toronto, Hamilton, Windsor and the other Border Cities, and Winnipeg, while in Ottawa and Vancouver declines were recorded. In Montreal, further pronounced recovery was noted in manufactures, especially in iron and steel. Services also afforded more employment, but building and trade were seasonally slacker. In Quebec, manufacturing and construction were rather busier. In Toronto, improvement was chiefly confined to manufacturing, the iron and steel groups showing most recovery. In Ottawa, there were general but rather small contractions. In Hamilton, iron and steel works were decidedly more fully employed and food factories also showed improvement. In Windsor and the adjacent Border Cities, employment in automobile plants showed a further increase, while construction was seasonally dull. In Winnipeg, construction afforded much more employment, but trade reported continued seasonal losses. In Vancouver, reductions in shipping and stevedoring and in construction were partly offset by increases in manufacturing, notably in iron and steel.

An analysis of the returns by industrial groups shows that manufacturing, railway construction and services showed increased activity, while in logging, mining, transportation, building and highway construction and trade, there was a falling off in employment, largely seasonal in character. Within the manufacturing group, the largest gains were in automobile and other iron and steel works, but textile, leather, lumber, clay, glass and stone and non-ferrous metal works also afforded more employment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of March, 1926.

Trade Union Reports.

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The percentage of unemployment among local trade unions at the end of February as shown by reports from 1,573 organizations with a combined membership of 148,068 persons, remained exactly the same as that reported at the close of the previous month, 8.1 per cent of the members being unemployed. Fluctuations, however, occurred in the various trades and industries throughout the country. The level of employment was higher than in February, 1925, when the percentage of idleness stood at 9.5. Unemployment was still quite prevalent in Nova Scotia where a large number of coal miners were thrown out of work owing to a shutdown for repairs. Considerable short time continued to be registered in the coal areas. Manitoba, Saskatchewan and Alberta unions were also less fully engaged than in January though the percentage of change was not very outstanding. In the remaining provinces employment increased. Unemployment in the manufacturing industries, as indicated by reports from 412 unions, with an aggregate membership of 40,432 persons was in lesser volume than in either the previous month or February last year. The percentages of unemployment among papermakers, tobacco, wood, garment, glass and iron and steel workers were smaller than those registered in January, but bakers, printing tradesmen, textile and leather workers reported less activity. As mentioned above, the coal mining situation in Nova Scotia was less favourable than in January, and unemployment in Alberta and British Columbia coal mines also increased slightly. Quarry workers in Nova Scotia reported a large number of their members idle. The building and construction division showed no change as compared with January, 26.6 per cent of the members being out of work at the close of both months. Employment in the various trades within the group, however, fluctuated to some extent. Steam shovel and dredgemen, painters, decorators and paperhangers, hod carriers and building labourers, and brick-

layers, masons and plasterers were more active than in January, but in the remaining trades employment declined. The change in comparison with February last year was slightly adverse, the increase in employment among bridge and structural iron workers, bricklayers, masons and plasterers, granite and stonecutters, and tile layers, lathers and roofers not being quite sufficient to offset the reductions in the other trades. Reports from 637 organizations of transportation workers, with a membership of 56,388 persons indicated that 5.0 per cent of the members were idle as compared with 5.3 per cent in January. Navigation workers reported considerable inactivity; the situation for steam railway employees remained practically unchanged but the deciding factor for the group was the street railway division where a higher level of employment was maintained. The situation in the transportation group as a whole, was also better than in February last year. Retail shop clerks were not so busy as in January. Barbers showed slight improvement, but employment for hotel and restaurant employees, stationary engineers and theatre and stage employees declined. Fishermen were much more active than in January. Lumber workers and loggers reported 26.4 per cent of their members idle as compared with no unemployment in January.

Employment Office Reports

During the month of February, 1926, the offices of the Employment Service of Canada made 19,371 references to vacancies and effected a total of 18,157 placements, of which 11,222 were in regular employment and 6,935 in casual work. Of the placements in regular employment 8,550 were of men and 2,672 of women. Applications for work were received from 29,414 workers, of which 21,322 were from men and 8,092 were from women, while employers notified the Service of opportunities for 13,163 men and 6,660 women, a total of 19,823 vacancies. Only a nominal decline was shown in the volume of business transacted when the above figures are compared with those of the preceding month and also with the corresponding month last year, the reports for January, 1926, showing 20,699 vacancies offered, 35,988 applications made and 19,009 placements effected, while in February, 1925, there were recorded 20,240 vacancies, 31,537 applications for work and 18,987 placements in regular and casual employment. A report in detail of the work of the offices for the month of February, 1926, will be found elsewhere in this issue.

Production in Certain Industries

Some figures indicating the movement of trade and industry in March and in previous months are given in the table on page 312.

The Dominion Bureau of Statistics reported that February production of coke pig iron in Canada amounted to 49,746 long tons. This was 12 per cent under the 56,644 tons of January, but 69 per cent over the 29,506 tons reported for February of a year ago. Foundry and malleable grades at 19,733 tons showed an appreciable advance over 11,895 tons of the previous month, but this gain was more than offset by the loss in basic iron output which amounted to only 30,013 tons as against 44,749 tons in January.

For the two months ending February the cumulative production of all grades was 106,390 tons or about double the output of 57,808 tons in the first two months of last year. This year's production was composed of 74,762 tons of basic iron, 28,960 tons of foundry iron and 2,668 tons of malleable iron; 58 per cent of the whole was made for further use of the producers and the balance was intended for sale.

Blast furnace charges for February included 91,405 long tons of imported iron ore, 56,987 short tons of coke and 29,087 short tons of limestone. For each long ton of pig iron made this represented a furnace charge of 4,116 pounds of ore, 2,291 pounds of coke and 1,169 pounds of limestone.

No additional furnaces were blown in during the month and as a result the same five furnaces were in blast on February 28, as at the end of January. The active furnaces had a capacity of 1,825 long tons per day or about 36 per cent of the total Dominion capacity and were located as follows: 2 at Sydney, N.S., 2 at Hamilton, Ont., and 1 at Sault Ste. Marie, Ont.

Production of ferro-alloys at 2,343 tons showed a slight advance over the 2,224 tons produced in the previous month. Production in February consisted of ferrosilicon only; in January, most of the output was classed as ferromanganese.

Reflecting the lowered output of pig iron the production of steel ingots and castings in Canada during February, at 53,157 long tons showed a decline of 22 per cent from the 68,536 tons of January but was 43 per cent greater than the 37,221 tons reported for February, 1925. The decline was wholly in the outpupt of steel ingots which grade fell to 50,207 tons from 66,221 tons in the previous month. Steel castings rose to 2,950 tons from the 2,315 tons reported in February.

For the two months ending February the total output was 121,693 tons or about double the 64,347 tons reported for the same two months last year. This year's production included 116,428 tons of steel ingots and 5,265 tons of steel castings.

Pig iron prices remained unchanged in February, No. 1 Foundry at Toronto still being quoted at $26.85 per ton, No. 2 Foundry at $26.35, and both grades at Montreal at $29.25. The Bureau's index number for Iron and Its Products (1913 prices=100) fell from 147.5 to 147.2, due mainly to slightly lower levels for round and square steel bars.

Full statistics of coal production during February are not yet available. The output of coal from Canadian mines during January was considerably lower than the total recorded for the previous month. The January output was 1,223,648 tons, a decrease of 22 per cent from the production of 1,560,975 tons in December. The loss in tonnage was general throughout the coal-producing provinces and was due principally to lack of orders.

Exports of Canadian coal totalled 65,047 tons in January as against 116,585 tons in December and 138,720 tons, the preceding five-year average for the month of January. Nova Scotia and New Brunswick accounted for exports of 21,748 tons, while the exportations from the western provinces amounted to 43,299 tons.

Coinciding with the decline in the output of coal in Canada there was a falling-off in the number of men employed; the total for the month was 28,682, consisting of 22,075 underground and 6,607 surface employees. In the previous month employment was furnished 29,732 men, of whom 22,944 worked underground and 6,788 on surface. The production per man-day was similar to that recorded for December, namely 2.5 tons, while the total production per man was only 42.6 tons in January as compared with 52.3 in December.

External Trade

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in February, 1926, the merchandise entered for consumption amounted to $70,908,980 as compared with $61,429,913 in February, 1925. The domestic merchandise exported amounted to $87,512,147 in February, 1926, as compared with $84,718,819 in January, 1926, and $70,126,125 in February, 1925. Foreign merchandise exported amounted to $1,296,393 in February, 1926, and $1,038,302 in February, 1925.

The chief imports in February, 1926, were: Fibres, textiles and textile products, $16,124,029, and iron and its products, $14,196,004.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $32,411,946, and wood, wood products and paper, $21,511,431. In the eleven months ending February, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $502,093,633; wood, wood products and paper at $251,149,546, and animals and animal products at $179,311,756.

Building Permits

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty cities in Canada during the month of February, 1926, indicated an increase of 54.2 per cent, as compared with the preceding month, and of 20.8 per cent over the corresponding month last year. The total value for February, 1926, was $7,104,343; for January, 1926, $4,608,688 and for February, 1925, $5,879,858.

The *Maclean Building Review* estimates the total value of the contracts awarded in Canada in March at $19,779,300, as compared with $13,477,600 in February, and $13,392,900 in March, 1925. Of the contemplated new construction in Canada during March, 1926, $11,692,200 was for residential building; $12,470,800 for business building; $8,213,900 for industrial building, and $11,217,100 for engineering construction (including bridges, dams, wharves, sewers, water mains, roads, streets and general engineering). By classification, the construction contracts awarded during March, 1926, were divided as follows:—business building $10,496,800, or 53.1 per cent; residential building, $6,607,100, or 33.4 per cent; industrial building, $1,607,900 or 8.1 per cent, and for public works and utilities, $1,067,500, or 5.4 per cent. The apportionment by provinces was, Ontario, $9,052,400 or 45.7 per cent; Quebec $5,711,400, or 28.9 per cent; British Columbia, $2,746,600, or 13.9 per cent; the Prairie Provinces, $2,111,800, or 10.7 per cent, and the Maritime Provinces, $157,100 or .8 per cent.

Strikes and Lockouts

The time loss due to industrial disputes in March was less than during either February, 1926, or March, 1925. There were in existence during the month 14 disputes, involving 898 employees, and resulting in a time loss of 12,697 working days, as compared with 11 disputes in February, involving 2,433 workpeople and resulting in a time loss of 22,966 working days. In March, 1925, there were recorded 15 disputes, involving 11,891 employees, and resulting in a time loss of 249,400 working days. One of the strikes and lockouts commencing

prior to March, and three of the strikes and lockouts commencing during March, terminated during the month. At the end of the month, therefore, there were nine strikes and lockouts affecting 429 workpeople, not including those strikes and lockouts in which employment conditions were roported to be no longer affected but which had not been formally called off.

Prices

Retail food costs showed little change in the average, being, however, slightly lower than in February. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was $11.46 at the beginning of March, as compared with $11.50 for February; $10.74 for March 1925; $10.58 for March 1924; $10.79 for March 1923; $10.54 for March 1922; $13.23 for March 1921; $16.92 for June 1920 (the peak); $15.98 for March 1920; $12.66 for March 1918; and $7.68 for March 1914. Besides the seasonal decline in the prices of eggs, milk and cheese, slight decreases occurred also in the prices of beans and evaporated apples. The most important advances occurred in the prices of beef, fresh and salt pork, bacon, butter and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged $21.77 at the beginning of March, as compared with $21.87 for February; $21 for March 1925; $21 for March 1924; $21.42 for March 1923; $20.96 for March 1922; $23.87 for March 1921; $26.92 for July 1920 (the peak); $25.01 for March 1920; $20 for March 1918; and $14.35 for March 1914. Fuel was somewhat lower than in February, due to a decline in the price of anthracite coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined somewhat being 160.1 for March, as compared with 162.2 for February; 161.6 for March 1925; 154.4 for March 1924; 155.9 for March 1923; 153.6 for March 1922; 186.0 for March 1921; 256.7 for May 1920 (the peak); 241.3 for March 1920; 200.3 for March 1919; and 194.3 for March 1918. In the grouping according to chief component materials six of the eight main groups declined, one advanced and one was unchanged. The groups which declined were: Vegetables and their Products, because of lower prices for grains, flour and milled products, rubber and sugar; Animals and their Products, due to lower prices for live stock, bacon, eggs, leather and furs; Fibres, Textiles and Textile Products, because of declines in the prices of cotton, wool, silk, jute and hessian; Wood, Wood Products and Paper, due to a decline in newsprint; Non-Ferrous Metals, because of lower prices for copper, lead, silver and spelter; and Iron and its Products. Non-metallic Minerals advanced slightly due to higher prices for coal, coal-oil and lime. The Chemical and Allied Products group was unchanged.

The first issue of *Industrial Psychology, the Journal of Human Engineering,* was published at Hamilton, New York, in January, and is being continued monthly. The term "human engineering" is used to denote the science of the economic handling of the human element in industry. Such a science would establish principles of industrial management as the result of studies of the peculiarities of individual workmen. Among the articles in January issue of the new magazine are discussions on "Handling men through their self interest"; "Better judgments of men"; "Industral dissatisfaction"; "Tests of chauffeurs"; "A correlation machine"; "Control of office output", etc.

Regulations governing hospitals under the Alberta Hospital Act provide that no training school for nurses shall be established or conducted in connection with any hospital unless: (*a*) there are at least four registered medical practitioners resident within an area of two miles of the hospital; (*b*) the hospital has an authorized bed capacity of at least thirty patients; and (*c*) the hospital has a daily average of twenty patients. Where a training school for nurses exists, the members of the medical staff are requested to aid and assist in the educational advancement of the nurses in training, to the fullest extent.

The program for the thirteenth annual convention of the International Association of Industrial Accident Boards and Commissions, to be held in Hartford, Connecticut, September 14-17, 1926, is now being prepared. It is hoped at this convention to bring to light the many problems which have confronted the Boards and Commissions in the different States and Provinces in administering the compensation laws, so that those who have faced similar problems and solved them can from their experience help in their solution by other Boards and Commissions.

The number of persons permanently employed by the Government of Alberta on February 1, 1926, was 2,120, as compared with 2,561 in 1921. Of the total for 1926 111 are engaged in services that were not in existence in 1921.

COMBINES INVESTIGATION ACT, 1923

Prosecution of Alleged Combine in the Distribution of Fruits and Vegetables in Western Canada

THE general manager, three supervisors and four brokerage corporations connected with the Nash organization in Canada, who were indicted in the British Columbia Supreme Court (*Rex v. Simington et al*) on charges of conspiracy arising out of a report made by Mr. Lewis Duncan, barrister of Toronto, as special commissioner under the Combines Investigation Act, were found guilty by the jury on five of the six counts of the indictment and sentenced by Mr. Justice D. A. McDonald on March 13. A fine of $25,000 and imprisonment for one day was imposed on each of the convicted individuals: J. A. Simington, S. P. Lloyd, W. Colquhoun and W. E. Carruthers; and a similar fine on each of the corporations:—Mutual (Vancouver), Limited, Vancouver; Mutual Brokers, Limited, Calgary; Mutual Brokers, Limited, Regina; and Mutual Brokers, Limited, Winnipeg.

Special interest attaches to this case in view of the large number of companies and individuals implicated, the extensive nature of their operations throughout the four western provinces, and the fact that it was the first prosecution arising out of the operation of the Combines Investigation Act, 1923.

The report of the commissioner appointed in July, 1924, to investigate the combine alleged to exist among certain jobbers, brokers and other dealers in fruit and vegetables in British Columbia and the prairie provinces was published in February, 1925, and reviewed in the Labour Gazette for March, 1925 (pp. 261-2). The commissioner concluded from the evidence he had collected that the Nash organization of jobbing and brokerage houses, controlled by the Nash Shareholders' Company of Minneapolis, was a combine which was operating, and had operated, detrimentally to the producer and consumer of fruits and vegetables. In accordance with the procedure laid down in the Combines Investigation Act, the Minister of Labour submitted the report to the Attorneys General of the four western provinces for any action they might deem it wise to take, but the interprovincial nature of the business of the Nash houses made it difficult for any one province to assume the task of prosecution. Accordingly, the Dominion Government, at the request of, and with the co-operation of, the provincial authorities, and urged thereto by resolutions from numerous fruit growers' organizations and other public bodies, instituted proceedings against 42 firms and 11 individuals, members of the Nash organization in Canada.

Mr. J. C. McRuer, formerly Assistant Crown Attorney for Toronto, was appointed general prosecutor on behalf of the Dominion, and associated with him at Vancouver during the trial were Mr. W. S. Lane, of Vancouver, and Mr. J. J. Frawley, of the Attorney General's Department at Edmonton. Mr. R. F. McWilliams, K.C., Winnipeg, and W. P. Meudell Anderson, Regina, assisted in the preparation of the evidence in their respective provinces.

On June 6, the Acme Fruit Company, Limited, of Calgary, filed a statement of claim in the Supreme Court of Alberta against the Attorney General of Canada, the Attorney General of Alberta, and Mr. Lewis Duncan, for an injunction restraining Mr. Duncan from proceeding with his investigation and a declaration that the Combines Investigation Act, 1923, was *ultra vires*, and that neither the Attorney General of Alberta nor the Attorney General of Canada was entitled to institute prosecutions against the Acme Fruit Company under that Act. This action was not pressed by the plaintiffs pending the criminal prosecution.

On July 15, the Royal Canadian Mounted Police executed search warrants simultaneously in the offices of twenty-three of the Nash companies in Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Moose Jaw and Winnipeg, seizing a large number of books and documents required by the Crown, which were assembled at Winnipeg, Regina, Calgary, Edmonton and Vancouver. Other documents were seized later and the work of analyzing the records of the various firms turned over to the Crown accountant, Mr. E. J. Howson, of Thorne, Mulholland, Howson and McPherson, of Toronto. Mr. Howson was assisted by the following firms of chartered accountants: Messrs. Harvey and Morrison, of Calgary; Messrs. Buttar and Chiene, of Vancouver; and Messrs. McIntosh, Cole and Robertson, of Winnipeg.

On September 30, a bill of indictment was preferred before the Grand Jury at the Assize Court at Vancouver, Mr. Justice D. A. McDonald presiding. The bill contained 16 counts against the 53 defendant companies and individuals involving charges of conspiracy to take secret profits, rebates and commissions, to defraud the growers who marketed fruits and vegetables through them, and to make

false returns to them while acting as agents, to defraud the public, and, by means of fraud, to affect the market price of these products. In addition to the six charges of violation of the common law, the Secret Commissions Act, and Sections 573 and 444 of the Criminal Code referred to, there were four charges of contravention of Section 498 of the Criminal Code, by conspiracy to limit unduly the facilities for supplying or dealing in fruits and vegetables, to restrain trade or commerce in these articles, to enhance prices unreasonably and prevent or lessen competition in the sale of fruits and vegetables. Counts 11 to 16 involved charges of violation of the Combines Investigation Act, 1923. This statute prohibits, under penalty, the formation or operation of a combine which has operated or is likely to operate to the detriment of the public. A combine is defined by the Act to include the relation resulting from the purchase, lease or other acquisition by any person of any control over or interest in the business of any other person, and any actual or tacit contract, agreement or arrangement which has or is designed to have the effect of limiting transportation facilities, preventing or limiting production, fixing a common price or a resale price, enhancing prices or preventing or lessening competition or substantially controlling production or sale or otherwise restraining trade or commerce.

The following were the persons and companies named in the indictment: J. A. Simington, S. P. Lloyd, Wm. Colquhoun, W. E. Carruthers, H. L. Davidson, Gordon Smith, J. F. Parker, H. W. Morgan, Geo. H. Snow, J. W. Dilworth, K. A. Gibson, Mutual (Vancouver), Limited, Mutual Brokers, Limited of Calgary, Mutual Brokers (Edmonton), Limited, Mutual Brokers of Regina, Limited, Mutual Brokers of Saskatoon Company, Limited, Mutual Brokers, Limited, of Winnipeg, Mutual Purchasing Company, Limited, Robert Forbes Company, Limited, Staples Fruit Company, Limited, Mutual Fruit Company, Limited, Acme Fruit Company, Limited, Mitchell Fruit Company, Limited, Nash-Simington Company, Limited, Brown Fruit Company, Limited, The Royal Fruit Company, Limited, Lethbridge Mercantile Agency, Limited, Alexander Grocery Company, Limited, Camrose Grocery Company, Limited, Medicine Hat Grocery Company, Limited, Red Deer Grocery Company, Limited, Stockton and Mallinson Company, Limited, Lloyd Fruit Company, Limited, Rex Fruit Company, Limited, Canadian Fruit Company, Limited, Moose Grocery Company, Limited, Northern Fruit Company, Limited, Early Fruit Company, Limited, Crown Grocery Company, Limited, Kerrobert Mercantile Company, Limited, Prince Albert Fruit Company, Limited, Smith Fruit Company, Limited, Walker Fruit Company, Limited, Weyburn Grocery Company, Limited, Swift Current Grocery Company, Limited, Bright Emery, Limited, Dingle and Stewart, Limited, Rogers Fruit Company, Limited, Sterling Fruit Company, Limited, Brandon Grocery Company, Limited, Pioneer Fruit Company, Limited, Dingle Fruit Company, Limited, Portage Fruit Company, Limited.

The Grand Jury returned a true bill on October 1, and on the following day those of the accused who were residents of British Columbia were arraigned and released on bail of $5,000 each to appear on October 6 with the rest of the defendants, when they were also given bail of $5,000 each. The counsel for the defence included Mr. E. P. Davis, K.C., of Vancouver, Mr. H. B. Robertson, K.C., Vancouver, the late Mr. J. H. Senkler, K.C., Vancouver, Mr. A. McLeod Sinclair, K.C., of Calgary, and Mr. J. D. McPhee, Vancouver. On October 6 all accused individuals appeared in person and accused corporations by counsel. The arraignment was adjourned until the 12th October to enable the defence to consider their position as to the charges. When the case came before the court on the 12th, Mr. A. McLeod Sinclair moved to quash the indictment, and arguments in support of the motion were advanced by Mr. Sinclair and Mr. Davis to the effect that the Crown had not followed proper procedure in instituting the prosecution, that only an interim report had been made by Mr. Lewis Duncan under the Combines Investigation Act, that the evidence had not been submitted to the Attorney General for British Columbia, and, finally, that the Combines Investigation Act, 1923, and Section 498 of the Criminal Code were *ultra vires* of the Dominion Parliament since they involved property and civil rights, matters reserved under the British North America Act to the provincial legislatures. In view of the amendment to the Criminal Code in 1923 by which the Crown has no appeal where judgment has been rendered against the Crown on a motion to quash or in case of acquittal, and since there were in the indictment charges based on Section 498 of the Code which were substantially similar to those preferred under the Combines Investigation Act, counsel for the Crown withdrew the charges preferred under that Act. Mr. Justice McDonald declined to give judgment as to the constitutional validity of Section 498 of the Criminal Code on a motion to quash, and stated that he would reserve the point until a motion was made in arrest of judgment.

Application by the defence for trial without jury before a county court judge was opposed by the Crown and a requisition, signed by the Attorney General of the Province under Section 825, Subsection 5 of the Criminal Code, was filed directing that counts 1 to 6 inclusive be tried by jury. Further application was made for a trial of the corporations by a judge without a jury. It was argued that the provisions of the above subsection did not apply to corporations as the only punishment that could be levied on a corporation was a fine. This application was refused by Mr. Justice McDonald on the ground that the defendant companies must plead in the court where the indictment had been found. The application of the defence for trial before a Supreme Court judge without a jury on the four charges under Section 498 of the Criminal Code was not opposed by the Crown. On the refusal of the defendants to plead, the court directed that a plea of "Not guilty" be entered and the hearing on the first six counts of the indictment be set at the foot of the list of cases to come before the court. On application by the defence for time to inspect the documents seized by the Crown, the trial was ordered postponed for a fortnight, and, in order to avoid interruption at the Christmas vacation, the court granted the request of the Crown for a further adjournment until January 18.

At the reopening of the Fall Assizes on January 18, the court proceeded to empanel a jury. As each of the 53 defendants was entitled to twelve challenges, there was delay in securing the required number of jurors. Accordingly, the Crown counsel expressed his willingness to proceed to trial without a jury. The defence, however, would not agree to this suggestion and a jury was empanelled on January 26 after more than 250 jurors and 800 talesmen had been summoned from whom jurors could be chosen. The defence challenged 580 jurors; two were challenged on behalf of the Crown and 38 ordered to stand by.

The Crown's case, as outlined by Mr. McRuer in his address to the jury, rested on evidence showing that the forty-two defendant companies, representing the Nash interests in Canada, were engaged in a conspiracy to defraud the fruit grower and the public through their methods of marketing fruits and vegetables. Thirty-seven jobbing firms carried on business throughout the four western provinces, four being in Winnipeg, two in Regina, two in Moose Jaw, two in Saskatoon, two in Calgary, one in Vancouver that carried on a sort of combined jobbing and brokerage business, and others in smaller places in the prairie provinces. Employees of the Nash organization owned stock in various companies as allotted to them through the controlling Nash Shareholders' Company of Minneapolis, and the stock of the brokerage corporations was held by five persons in trust for shareholders of the jobbing corporation. Thus the jobbing houses were in control of the brokerage business, and the broker who morally and legally owed allegiance to the fruit grower was serving also the jobber. The perishable nature of the commodities dealt in added to the difficulties of marketing and rendered the grower more dependent on his broker than he might otherwise have been. The defendant individuals owned stock in several jobbing houses, and those of them who were supervisors, S. P. Lloyd for Manitoba, W. Colquhoun for Saskatchewan, W. E. Carruthers for Alberta and British Columbia, and J. A. Simington in general charge of the Nash business in Canada, determined the prices at which brokerage corporations should sell to jobbing houses in order that a profit might be made over and above the commission deducted from the amount remitted to the grower and which was not disclosed in their return to the grower, thus violating their obligations as agents for the latter.

The Crown's case against the defendants was based on documents seized by the Royal Canadian Mounted Police on the premises of the accused corporations and those seized by Mr. Duncan in the execution of his commission. Strong objection to the admission of these records as evidence was raised by the defence counsel. The ground taken by the defence was that evidence of conspiracy within the County of Vancouver must be presented before documents seized outside the county could be admitted in evidence. Mr. Justice McDonald ruled that, since the court had jurisdiction throughout the province, it was only necessary for the Crown to prove that an overt act of conspiracy had been committed within the province in order to render admissible documentary evidence from without the province. This having been done to the satisfaction of the judge, the Crown counsel proceeded to lay this evidence before the court. The admission as evidence of letters and other documents seized by Mr. Duncan during his investigation under the Combines Investigation Act was objected to by the defence on the ground that the statute stipulated that such documents would not be used against the person producing them in any criminal proceedings subsequently instituted against him except in a case of perjury. After hear-

ing argument on this point by the opposing counsel, Mr. Justice McDonald ruled that documents which were obtained from the defendants by Mr. Duncan in any manner other than production by a witness in giving evidence before him were admissible against the defendants on whose premises they were found. Mr. Duncan accordingly produced such documents as came within this ruling and the same were admitted in evidence.

When the Crown's case concluded on February 24, a motion by counsel for Miss K. A. Gibson, of Mutual (Vancouver), Limited, to dismiss the case against her was refused by the court, but Mr. Justice McDonald stated that he would instruct the jury not to convict her on the ground that she was acting under instructions and was not credit manager of the firm. Counsel for the other defendants moved to withdraw the prosecution from the jury, contending that the Crown had failed to prove the accused were parties to a conspiracy, but the court's decision was that the case must go to the jury against all defendants and the defence were instructed to reply to the Crown's charges.

Evidence was given on behalf of the defence and concluded on March 9. After addresses to the jury by counsel for the defence and the Crown, Mr. Justice McDonald charged the jury on March 12. His Lordship stated that in his opinion the evidence did not justify the conviction of Miss Gibson and that the rest of the accused should be acquitted on the fifth count of the indictment, the charge of conspiracy to affect the market price of fruits and vegetables. With regard to the other five charges before them, the judge said: "The biggest principle on which this case stands, the underlying thought throughout the whole question, is the principle which was laid down by the greatest teacher who ever lived when he said, 'No man can serve two masters, for either he will hate the one and love the other or else he will hold to the one and despise the other,' and it is a principle which is as true to-day as it was two thousand years ago". The law of agency was explained to the jury—"No agent is permitted to enter as such into any transaction in which he has a personal interest in conflict with his duty to his principal"; and also the law of conspiracy—"A conspiracy consists of an agreement between two or more to do an unlawful act or to do a lawful act by unlawful means. . . . Now in this case we have before us there is no evidence really to prove any express agreement itself but various acts are sworn to from which you may, if you see fit, conclude that such an agreement was made. Where there is no direct evidence to the fact of conspiracy, then the acts of each and every one of the alleged conspirators may be given in evidence for the purpose of proving that there was a conspiracy, if such acts were done apparently in furtherance of a common design."

The jury retired at noon on March 12 and late in the afternoon of the 13th announced their verdict.

Inquiry into Alleged Combine in Manufacture and Sale of Bread in Montreal

An inquiry on the subject of an alleged combine in the manufacture and sale of bread in the City of Montreal has been completed by the Registrar of the Combines Investigation Act, and a report made to the Minister of Labour under date of March 25, 1926.

The substance of the complaint was as follows:—

That a combine or association of bakers exists in Montreal, operating to the detriment of the public, and having the effect of (1) eliminating competition and creating a monopoly; (2) fixing uniform prices, wholesale and retail, to be observed by all the Montreal bakers and grocers; (3) maintaining these uniform prices by the following means; (*a*) withholding flour from bakers selling below the fixed wholesale or retail prices; (*b*) withholding bread from grocers selling below the fixed retail price.

The immediate cause of the complaint was an advance in bread prices in Montreal early in September, 1925, which gave rise to charges that an international baking merger, recently formed and including three of the largest English bakeries in Montreal, had been chiefly responsible for the increase. This was not borne out by the inquiry, which disclosed that the advance was due to an attempt on the part of the bakers in the non-English groups to put an end to a price-war which has waged among them intermittently for years, and to establish a uniform price (10c. wholesale, 11c. retail) for a 1½ lb. loaf. Most of them had been selling bread at extremely low prices—some below cost, even as low as 7c. retail. The understanding reached was disregarded by most of the bakers before the month of September was out. There was no agreement to have flour withheld from bakers, or bread from grocers, who sold below the fixed price. The report points out that no ultimate public advantage could be secured through "below-cost" prices, which in Montreal were due in the main to the ignorance of most of the bakers with respect to their own costs of production and distribution. Analyses of costs which were made showed that selling prices

were not unreasonable, and the finding of the registrar was that no combine or agreement existed which operated to the detriment of the public.

As far as the merger was concerned, it was found that the only change in price since its formation in April, 1925, was in the nature of a decrease, from 12½c. to 12c. retail. Competition had not been lessened, and the existence of 146 bakeries in Montreal provided a sufficient public safeguard for the present. "In the event of developments likely to operate against the public interest," the report adds, "there is within reach of the public, in the Combines Investigation Act, ample power to ensure appropriate and effective action."

The report embodies some of the facts and figures secured in the course of the inquiry, and includes the following table comparing production and distribution costs as between English and French bakers in Montreal; as between the years 1919 and 1925 in Montreal; and as between Montreal and Great Britain. The figures from Great Britain are for January, 1923, as published by the Royal Commission on Food Prices. They are based on the costs, not of London bakers, but of bakers in the provinces; distribution costs in London are reported as slightly higher, but no satisfactory analysis of them is available:—

COMPARATIVE STATEMENT OF COSTS AND PRICES OF BREAD

Per 1½ lb. loaf	Montreal November, 1919		Montreal September, 1925		Great Britain January, 1923
	French Group	English Group	French Group (39 bakers)	English Group (11 bakers)	
	cents	cents	cents	cents	cents

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1926

THE number of strikes and lockouts in existence during March was 14, as compared with 11 in February. The time loss for the month was less than during March, 1925, being 12,697 working days, as compared with 249,400 working days in the same month last year. The considerable time loss and number of employees in March, 1925, was chiefly due to a strike of coal miners in Nova Scotia.

Date	Number of disputes	Number of employees involved	Time loss in working days
March, 1926	14	898	12,697
February, 1926	11	2,433	22,966
March, 1925	15	11,891	249,400

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 373 workpeople, were carried over from February, and six disputes commenced in March. One of the strikes and lockouts commencing prior to March, and three strikes and lockouts commencing during March, terminated during the month. At the end of March, therefore, there were on record ten strikes and lockouts as follows: boot factory employees at Toronto; boot factory employees at Montreal; fur workers at Montreal; millinery workers at Toronto; hat and cap makers at Montreal; moulders at Owen Sound; stage hands at Vancouver; musicians at Vancouver; men's clothing factory workers at Montreal, and printing pressmen and bookbinders at Montreal.

The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet declared them terminated. Information is available as to five such disputes, namely, cigarmakers at Montreal, commencing March 24, 1925; women's clothing factory workers at Montreal, December 9, 1925; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924, and upholsterers at Montreal, June 27, 1925.

Of the strikes and lockouts commencing during March, three were against violation

STRIKES AND LOCKOUTS DURING MARCH, 1926.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to March, 1926.			
MANUFACTURING—			
Rubber products:			
Rubber factory employees, Montreal, Que.	84	84	Commenced February 11, against a reduction in wages. Settled by negotiations. Work resumed March 2.
Boots and shoes (other than rubber and felt):			
Boot factory employees, Toronto, Ont.	59	1,593	Commenced January 13, against changes in wages and working conditions alleged to be in violation of the agreement. Unterminated.
Boot factory employees, Montreal, Que.	56	1,512	Commenced February 4, against reduction in wages. Unterminated.
Fur and leather products (other than boots and shoes):			
Fur workers, Montreal, Que...	120	3,240	Commenced April 1, 1925, failure to renew agreements and proposed substitution of individual agreements. Unterminated.
Clothing (including knitted goods):			
Millinery workers, Toronto, Ont.	32	864	Commenced February 12, to secure a signed agreement. Unterminated.
Iron, steel and products:			
Moulders, Owen Sound, Ont...	9	243	Commenced January 19, 1925, against a reduction in wages. Unterminated.
SERVICE—			
Recreational:			
Stage hands, Vancouver, B.C.	7	189	Commenced January 9, against alleged violation of agreement. Unterminated.
Musicians, Vancouver, B.C....	6	162	Commenced January 11, in sympathy with strike of stage hands and alleged violation of agreement. Unterminated.
(b) Strikes and lockouts commencing during March, 1926.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Minto, N.B.....	225	2,025	Commenced March 16, against a reduction in wages. Settled by arbitration and work resumed March 26.
MANUFACTURING			
Clothing (including knitted goods):			
Men's clothing factory workers, Montreal, Que.	110	550	Commenced March 2, against alleged violation of agreement. Settled by negotiations and work resumed March 8; in favour of employees.
Hat and cap makers, Montreal, Que.	10	235	Commenced March 4, against alleged violation of agreement. Unterminated.
Men's clothing factory employees, Montreal, Que.	100	1,100	Commenced March 19, against alleged violation of agreement. Unterminated.
Printing and publishing:			
Printing pressmen and bookbinders, Montreal, Que.	40	800	Alleged lockout, March 9, of members of certain unions. Unterminated.
TRANSPORTATION AND PUBLIC UTILITIES—			
Water transportation:			
Stevedores, Liverpool, N.S....	40	100	Commenced March 1, for increased wages. Settled by negotiations and work resumed March 3; compromise.

of agreement; one was against reduction in wages; another was for increased wages, and the sixth was an alleged lockout of members of two particular unions. Of the strikes and lockouts which terminated during the month, two resulted in favour of employees or the employees being substantially successful, while two others resulted in compromises being effected.

The following notes give particulars in regard to certain disputes in addition to information given in the tabular statement.

Rubber Factory Employees, Montreal, Que.—This strike of rubber workers which commenced February 26, against a reduction in piece work rates of ten per cent, namely 8½ cents per pair with a bonus according to production, was terminated on March 2. Representatives of the National Catholic Union negotiated on behalf of the strikers and work was resumed at a rate of 12 cents per pair without a bonus.

Coal Miners, Minto, N.B.—A strike of 225 coal miners at Minto, N.B., occurred on March 16, the proposals of the Commission investigating not being acceptable to the miners. During January a strike against a wage reduction occurred, and the miners resumed work pending an investigation by a Commission appointed early in February by the provincial government. This Commission conducted an inquiry and proposed a settlement about March 13, but the proposals recommended by it were rejected by the miners and a cessation of work followed. Hearings by the Commission were resumed and the Commission made a recommendation on March 26 which was accepted. The miners were substantially successful in obtaining their demands, a slight reduction on the average being made, on the basis of a nine-hour day and special payment for overtime work.

Men's Clothing Workers, Montreal, Que.—On March 2, 110 clothing workers ceased work in protest against the discharge of union employees and the employment of non-unionists, in violation of the terms of the existing agreement. Negotiations were carried on which brought about a settlement in which the employer agreed to abide by the agreement. Work was resumed on March 8.

Hat and Cap Makers, Montreal, Que.—A strike of 10 hat and cap makers occurred at Montreal on March 4, in protest against alleged violation of the existing agreement. This strike remained unsettled at the end of March.

Men's Clothing Factory Employees, Montreal, Que.—One hundred clothing workers at Montreal ceased work on March 19, in protest against alleged violation of the existing agreement. It was understood that the employer was opening a new factory in which non-union help was to be employed. This strike remained unsettled at the end of the month.

Printing Pressmen and Bookbinders, Montreal, Que.—An alleged lockout of 40 printing pressmen and bookbinders occurred in Montreal on March 9, when the employer decided to employ only members of a certain union and discharged those employees belonging to another. The employer claimed to have replaced the workers by the end of the month, but the union still considered the dispute in existence.

Stevedores, Liverpool, N.S.—Forty stevedores ceased work on March 1, for an increase in wages from 30 cents per hour actual time worked to 40 cents per hour continuous hours. Negotiations were carried on and a compromise was effected whereby work was resumed March 3, at the rate of 30 cents per ton for all pulp wood loaded.

Business Organization in United States

The Chamber of Commerce of the United States announced during March that machinery was being set up for the elimination of trade abuses and uneconomic trade practices, marking a further step toward the eventual self-government of business. The board of directors authorized the appointment of a permanent Committee on Trade Relations to serve as the focussing point for all activities in this direction. The new committee will comprise representatives of wholesaling, retailing, manufacturing and the consuming public. It will serve in the first instance as a clearing house for information relating to the adjustment of trade disputes and the suppression of trade practices detrimental not only to the merchant and the manufacturer but to the consuming public. The first task of the committee will be to promote the setting up of the necessary machinery within the various trades to facilitate the adjustment of disputes between manufacturers, wholesalers and retailers in a particular trade. It will aid in the adjustment of disputes between members of different trades.

LABOUR LEGISLATION IN QUEBEC IN 1926

THE third session of the Sixteenth Legislature of the Province of Quebec opened on January 7 and continued until March 11, 1926. The outstanding legislation was a new workmen's compensation act, revising and modifying the existing law "with a view," as stated in the closing speech from the Throne, "to making it a still more efficacious instrument for promoting goodwill and mutual aid between employers and working men." Fresh sources of revenue were found for public education and for the treatment of the sick in hospitals, and improvements were effected in the laws governing the administration of justice and of municipal affairs.

Workmen's Compensation

The report of the commission appointed under an act passed at the session of 1922, to study the subject of workmen's compensation, was outlined in the Labour Gazette, February, 1925. The commission made no recommendation in regard to the proposal of labour organizations in the Province for the establishment of a Board to administer the act, and the new act accordingly continues the existing system under which claims on behalf of injured workmen or their dependents are referred to the civil courts. The bill as originally introduced early in the session was amended in many of its sections during its passing through the Legislative Assembly and the Legislative Council. The act will become effective on April 1, 1927. Its provisions are outlined in the following paragraphs:—

Classes Included.—The act applies to workmen and apprentices, or their representatives, engaged in the following occupations:—in building; in factories and workshops; in stone, wood or coal yards; in lumbering operations; in transportation, loading or unloading; in any gas or electrical business; in construction of public roads, railways, water works, sewers, dams, wharves, elevators, bridges, etc; in mines or quarries; in any industrial enterprise or yard where explosives are manufactured, used or kept, or in which machinery is used (other than man power or animal power), but only if an accident is caused by such machinery or explosives. Commercial establishments are also included in so far as concerns accidents due to elevators, machinery, or occurring in a workshop.

The foregoing classes of labour were covered by the former act with exception of "lumbering operations, including the floating of timber," which are now included. Agriculture, navigation by means of sails, and domestic service, are expressly included. The Provincial Government, and public and private corporations are on the same footing as private individuals in regard to the compensation of employees in these classes.

A workman who usually works alone does not become liable under the act from the fact of one or more other workmen casually working with him, or from the fact of members of his family habitually working with him.

Compensation.—The amount of compensation for an injured workman or his dependents is as follows:—

For total permanent disability a life "rent" equal to two-thirds of yearly wages (formerly 50 per cent).

For permanent partial disability, a life "rent" equal to one-half the sum by which his yearly wages have been reduced (unchanged). If permanent partial incapacity is aggravated by another accident the "rent" must equal two-thirds of the sum by which the yearly wages are reduced by such aggravation.

These "rents" are due from the date on which the permanent nature of the incapacity is established.

For temporary disability of less than 7 days the injured employee is entitled to medical attendance (new). For similar disability lasting seven days or more he is entitled to an allowance equal to half his daily wages at the time, starting from the seventh day after the accident (unchanged). Such allowance shall be payable at the time and place where payment is usually made in the enterprise, but the intervals between payment shall not exceed sixteen days. It shall not exceed twenty-five dollars a week, or be less than eight dollars a week save where the wages of the person injured are less than this amount, in which case it shall not exceed the amount of his daily wages.

In cases of death the rates of compensation are as follows:—

(a) To the surviving consort, not divorced nor separated from bed and board at the time of the death, provided the marriage took place before the accident, a life rent equal to twenty per cent of the yearly wages of the deceased. If the deceased has left legitimate or legitimized children, under sixteen years of age, the life rent to the consort shall be increased in the following proportions: For one child, ten per cent of the yearly wages of the victim; For two children, twenty per cent of the yearly wages of the victim; for three child-

ren, thirty per cent of the yearly wages of the victim; for four or more children, forty per cent of the yearly wages of the victim. The rent shall be proportionally reduced as the children of the victim reach the full age of sixteen years. In the event of remarrying, the consort shall lose the right to his or her share of the rent, but shall continue to receive that allotted to the children. Where the widow who is receiving a rent remarries, she shall receive a final allowance equal to the rents for twelve months.

(*b*) To each child who is without father and mother, a rent equal to twenty per cent of the yearly wages, until he reaches the full age of sixteen years, the total of such rents not to exceed sixty per cent of the yearly wages.

(*c*) If there be no consort surviving or children, qualified to receive under the preceding sub-paragraphs a and b, each of the ascendants and descendants, of whom the deceased was the principal support, shall receive a rent, payable to the ascendants for life, and to the descendants until the age of sixteen years, equal to ten per cent of the yearly wages of the victim, the total amount of the rents so allowed not to exceed thirty per cent, and each rent, as the case may be, being reduced proportionally.

All compensation due under the act is inalienable and exempt from seizure. "Rents" are payable monthly, at the domicile of the workmen, or where he desires.

Medical Aid.—Medical aid, hospital charges, transportation to hospital, etc., also are to be provided for a period not to exceed six months, according to a tariff approved by the Lieutenant Governor in Council. Where there is more than one hospital the injured person may select one. Injured persons are to have the services of nurses speaking their own language, if desired.

Funeral Expenses.—The funeral expenses of a deceased employee must be paid, up to the limit of $100.

Limit of Wages Considered—The yearly wages to be considered in calculating the "rent" are to be not less than $600, and not more than $2,000.

Contracts.—The head of an industry or enterprise is held to be jointly and severally liable with a contractor or sub-contractor by whom an injured workman is employed.

Reports.—Accidents must be reported to the Minister of Public Works and Labour within 30 days. Settlements also are to be reported by the employer. An injured person or his representative is to give his employer notice of an accident within 30 days, under penalty of forfeiting the right of action.

Compulsory Insurance.—With the exception of the crown, public corporations, and railways under the control of the Parliament of Canada, all employers in the industries under the act must either take out insurance, with an approved insurance company, for accidents to their workmen, or else deposit in the office of the Minister of Public Works and Labour a surety bond, or sum of money, etc., sufficient to answer for their ability to make compensation payments. The penalty for not doing so is from $500 to $1,000, or imprisonment from 8 to 30 days. Employers may pay to an insurance company the capital of the rents for which they are liable. When the capital of the rents is $500 or less settlement may be made by the payment of a lump sum to the injured person or his representatives.

Employers are forbidden to retain any portion of the wages of their workmen for the purpose of insurance, any agreement to this effect being null. If such retention has been made the workman may recover the amount unlawfully retained.

Action under Common Law.—Injured persons or their representatives retain the right of action under common law against the authors of the accident, other than the employer. The compensation so granted shall free the employer to that extent from his obligations under the act. Employers also may take similar action against a third party at their own risk, if the injured person fails to do so. The act does not remove the common law rights of action belonging to any persons who cannot avail themselves of its provisions.

Medical Examinations.—The injured person is to submit to a monthly examination at the employer's expense, if required. The doctor is to be chosen by the employer, but the examination may be made in presence of a doctor chosen by the workman.

Waiving of Claims.—Every agreement between the workman and his employer in regard to compensation for an accident, contrary to the provisions of the act is null and void.

Procedure.—The last section of the act lays down the procedure to be followed. The Superior Court, the Circuit Court and the Magistrates' Court have jurisdiction in every action.

A summary petition for the recovery of compensation must be presented to court, six days' notice having been given to the defendant. No trial by jury may be held in any action under the act.

Costs of Action.—The legal representatives of the injured person are entitled only to the

taxable costs adjudged against the opposing party. They cannot receive from their clients any retainer, fee or commission, either directly or indirectly, under pain of being guilty of contempt of court. In addition, they will be obliged to return all sums so collected. Similarly all obligations undertaken by an injured person to remunerate the services of an intermediary who undertakes to secure compensation are of no effect.

Appeals.—A final appeal to the Court of King's Bench, before five judges, is allowed in cases involving sums over $200.

Limit of Claim.—Petitions for recovery of claim must be filed within one year of the date of accident. A petition to revise the amount of compensation must be filed within two years of the final judgment fixing the amount.

Accidents Outside Province.—Employees who are engaged in Quebec, but work outside, are not entitled to benefits under the act, if they are entitled to compensation under the law of the place where the accident occurs.

New Industries.—Employers to whom the act does not apply may place themselves under its provisions if they make a written agreement for such a purpose with their employees.

Minimum Wages for Women

The Women's Minimum Wage Act of 1919, as amended in 1925, was further amended in the section relating to the constitution of the Commission under the Act. The number of the members is enlarged from three to four, one being the Deputy Minister of Labour, and one a woman, as already provided, and the other three appointed by Order in Council. Three members form a quorum.

Technical Schools and Education

The Technical or Professional Schools Act, when it is proclaimed by a future Order in Council as being in force, will create a single body to administer technical education in the province under the title of "Corporation of Technical or Vocational Schools." The Corporation will consist of the Provincial Secretary; the director-general of technical education; the principal of the Montreal School of Higher Commercial Studies; a representative of the Schools of Fine Arts of Quebec and Montreal; a representative of industry and commerce; and the mayors of Quebec, Montreal and Hull.

The members will serve without remuneration, except for travelling expenses, for a term of five years. The corporation will have complete financial control of the Montreal School for Higher Commercial Studies, the Quebec, Montreal and Hull technical schools, the Schools of Fine Arts of Quebec and Montreal, and any other schools entrusted to it. The Corporation will receive annually $75,000 from Montreal, $30,000 from Quebec, and $15,000 from Hull, for their respective technical schools. The Corporation will be provided by Order in Council with the necessary staff. It will have powers to make by-laws for the administration of the various schools, these by-laws to have the force of law. The expenditure incurred under these arrangements will be defrayed out of amounts to be voted annually by the Legislature.

The act contains provisions for the organization of Quebec, Montreal and Hull technical schools. Each is to have an "improvement board," a consulting body consisting of seven members serving gratuitously, appointed for three years, the provincial secretary and director-general of technical education being *ex-officio* members. A board of patrons is also to be appointed for each school to promote its development. The immediate direction of each technical school will be entrusted to a principal, assisted by a staff of professors. A separate section of the act relates to the organization of the School for Higher Commercial Studies.

Under another act the Three Rivers Technical School was authorized to renew a loan raised under an act of 1918. Pending the negotiation of the new loan the province will advance the sum required to repay the loan.

An act was passed to provide for the creation of an educational fund from the natural resources of the province. Duties may be levied for this purpose by the Lieutenant-Governor in Council as follows: 10 cents per cord of wood intended for the manufacture of pulp and paper taken from the public lands; this may be increased to 15 cents if the wood is manufactured outside the province; one-half of 1 per cent on the gross income of every person, company or corporation developing the water powers of the province, when such power is used in manufacturing forest products; 10 cents per horsepower utilized from water powers, on those selling power or light; 6 cents per horsepower developed by public utility companies, and one cent per month from each consumer. The proceeds of these duties is to be deposited in a special fund entirely for the assistance of education in the province.

Maritime Fisheries Bureau

The Maritime Fisheries Bureau Act was amended to enable the Bureau, in addition to its other powers, to aid in building and maintaining fish curing establishments. This

act was passed at the second session of 1922, establishing the Bureau as a branch of the Department of Colonization, Mines and Fisheries, its object being to promote co-operation among fishermen and otherwise aid the fishing industry. It is hoped by these means to raise the standard of the quality of the fish shipped, and thus improve the return secured by the fishermen for their catches.

Hospital Duty on Dollar Meals

By an amendment to the Quebec Public Charities Act a duty of 5 per cent was authorized to be levied upon the price of each meal costing one dollar or over, served to the public in a hotel or restaurant in cities and towns, the proceeds to be turned over to the Public Charities Fund. Every meal-check must contain the words "hospital duty" with the amount of the duty opposite. The duty must be paid by the consumer, the hotel or restaurant keeper acting as an agent for the province. Municipalities were further empowered to impose a tax to assist its local hospitals and charitable institutions, the proceeds to be administered by the Quebec Bureau of Public Charities. This legislation is intended to provide means to supplement the present insufficient sources of revenue of the various charitable institutions. The amending Act will take effect on its proclamation by the Lieutenant-Governor in Council.

Provincial Civil Service

The Civil Service Act was amended to provide for the reclassification of provincial civil servants. The Act confirms the classification of all the employees of the Government into "outside" and "inside" service, made by an Order in Council passed on October 16, 1925.

Public Health

The duties of the Director of the Provincial Bureau of Health were enlarged so as to permit him to organize health districts of counties or of groups of municipalities.

Mothers' and Orphans' Pensions

The Honourable Premier Taschereau informed the legislature in February that the Government was studying a system of mothers' and orphans' pensions.

WORKMEN'S COMPENSATION IN NOVA SCOTIA AND NEW BRUNSWICK IN 1925

Nova Scotia

THE Workmen's Compensation Board of Nova Scotia, in its report for the year 1925, mentions some of the outstanding facts in connection with the administration of the Act since it took effect on January 1, 1917. During the nine years, from the beginning of 1917 to the end of 1925, accidents to the number of 59,349, in the industries within the jurisdiction of the Board, were reported. During that time 801 workmen were killed. The amount actually paid to workmen or their dependents was $4,449,762, and the amount, at the end of 1925, required for the purpose of paying life and other pensions and compensation to disabled workmen, was $4,306,205. The total compensation paid or payable to workmen and their dependents for the nine years amounts to $8,755,968. That amount does not represent the entire cost of the accidents for the nine-year period, as the administration expense is not included. There were 447 widows awarded pensions for life or until remarriage; 1,084 children under 16 years of age were awarded monthly pensions while under that age; dependent mothers and fathers to the number of 212 were awarded compensation; 25 members of the family, other than widows, children and parents, more or less dependent upon workmen who had been killed, received benefits; and life pensions were awarded to 2,103 workmen who were disabled, wholly or partially, for life.

Prior to January 1, 1920, medical aid was not furnished except in special cases. Since that date injured workmen have been entitled to free medical aid for thirty days from date of disability, and during the six years that have elapsed the amount of $302,895 was paid for such purpose.

Industrial Conditions in 1925.—The total amount of wages paid in the industries reporting to the Board in 1925 was about $7,000,000 less than in 1924, a decline of about 15 per cent. The pay-roll in 1925 totalled $39,962,776; in 1924, $47,103,602; in 1923, $54,678,604; 1922, $47,159,622; 1921, $60,970,120; 1920, $74,600,999 and 1919, $60,017,418.

The main factors in the decline in 1925 as compared with 1924 were coal mining, lumbering, car manufacturing, road making, power plants construction, and railroad operation. On the other hand, increases were shown in the pulp industry, butter and cheese manufacture, fish curing and packing, coastwise navigation and other industries.

Accidents.—The numbers of accidents classified according to degree of disability, from 1917 to 1925, are shown in the following table:—

—	1917	1918	1919	1920	1921	1922	1923	1924	1925	Total
Fatals, compensable	146	186	59	99	58	62	71	75	45	801
Permanent partial disability	193	237	250	288	215	235	288	271	134	2,111
Temporary total disability	4,498	4,508	4,640	5,756	4,128	4,190	5,109	4,616	4,139	41,584
Medical aid only	.....	.....	.....	973	502	535	782	824	810	4,426
Total compensable claims	4,837	4,931	4,949	7,116	4,903	5,022	6,250	5,786	5,128	48,922
Pending adjustment	.....	.....	.....	.....	.....	.....	.....	.....	161	161
Fatals not compensable (1921–1925 inclusive)	.....	.....	.....	.....	5	5	5	4	6	25
Other non-compensable accidents (fatals included for 1917–1920)	2.338	2,734	1,510	1,138	515	455	529	547	475	10,241
Totals	7,175	7,665	6,459	8,254	5,423	5,482	6,784	6,337	5,770	59,349

Cost of Compensation.—The cost of compensation in 1925 was $978,445, a decline of $181,000 from 1924. This decline was mostly in the mining division. The rates of the cost of accidents to the total wages paid was 2.45 in 1925, 2.46 in 1924, and 1.57 in 1921.

The actual payments for compensation and medical aid in 1925 amounted to $670,570. Of this amount $381,123 was paid to workmen other than pensioners, and $289,446, was paid to those entitled to pensions. During the past year 4,139 workmen, wholly disabled for 7 days and upwards, were paid compensation for the period of disability At the end of the year the persons receiving compensation in the form of a monthly pension were as follows:—

Widows	344
Children under 16	758
Dependent mothers	63
Dependent fathers	39
Workmen disabled for life (partially or wholly)	593

The income of the Board from assessments in 1925 was $808,859, of which $344,581 was received from the Mining, and $128,835 from the Lumbering and Woodworking group.

Medical Aid.—The Act provides for thirty days medical aid following the date of disability. The estimated cost of providing medical aid in 1925 amounted to $66,240.76 compared with $60,767.76 in 1924.

In the Mining and Iron Steel classes the greater portion of the medical aid is furnished under medical schemes adopted by the workmen, and consequently is not furnished by the Board. In the Navigation class medical aid is as a rule furnished under the Merchants' Shipping Act.

Cost of Administration. The administration expenses during the year amounted to $102,955. The average ratio of administration to total expenditure for nine years was 8.38 per cent.

Pension Fund.—The pension fund totalled $3,443,716 at the end of the year. Of this amount $1,796,307 was in the Mining class. Pension payments during the year amounted to $209,447. A disaster reserve fund is also maintained, amounting at the end of the year to $771,702.

Reserves and Surplus.—The Board once more corrects the common impression that the reserves accumulated from year to year are in the nature of a "surplus," and that the assessment rates must be excessive to cause the reserve fund to grow to its present figure of over three million dollars. It is pointed out that the reserve fund is made up of actual awards made to dependents in fatal cases and to workmen who have been wholly or partially disabled for life, but instead of paying the full amount of the award in a lump sum, the amount of the award is held by the Board in trust to pay the monthly instalments during the lifetime of the beneficiary. If these awards were paid over to a trust company they would not appear in the annual reports and would not give rise to misconceptions.

New Brunswick

The seventh annual report of the Workmen's Compensation Board of New Brunswick covers the calendar year 1925. The full statistics for the past year, however, are not included in the report, as the time limit for reporting accidents had not been completed at the time of publication. The total estimated income of the year 1925 was $553,806.10, and the estimated expenditure $615,144.78, leaving a provisional deficit of $61,338.68. It is pointed out that these figures may vary considerably when the complete figures for 1925 have been received, and when all collections have been made and all claims adjusted.

The actual and estimated expenditure for 1925 included in the total of $615,144.78, includes the following items: Temporary total disability, $147,265; medical aid, (*a*) hospital and nursing service, $22,482; administration, $49.420; fatal accidents, $119,206; burial expenses, $1,953; permanent partial disability, $47,570; unreported claims, etc. (estimate), $96,000; uncompleted claims (estimated), $71,000.

The sum of $984,603 was carried forward by the Pension Fund at the end of 1925, after pension payments had been made for the year.

The cost of administration including the commissioners' salaries and the cost of permanent equipment, is stated as being nine and one-half per cent of the total amount expended by the Board. The rates of assessment to be charged against employers in the various classes of industry in the province in 1926 were given in the Labour Gazette for January, 1926, and the rates for 1925 were given in the issue for January, 1925.

The report contains complete statistics for 1924. A table is given showing the number of accidents by classes from 1919 to 1924 inclusive:—

—	1919	1920	1921	1922	1923	1924	Total
Fatal accidents	25	47	35	30	37	38	212
Permanent total	.....	.....	1	1	2	1	5
Contingency	.....	.....	.....	.....	4	8	12
Permanent partial	183	254	241	245	244	261	1,428
Temporary total	1,832	2,967	3,032	3,225	4,047	3,823	18,926
Minor and medical aid only	656	796	1,037	1,310	1,835	1,978	7,612
	2,696	4,064	4,346	4,811	6,169	6,109	28,195

The cost of compensation for each year, 1919-1924, was as follows: In 1924, $620,756; in 1923, $564,890; in 1922, $496,676.40; in 1921, $496,675.69; in 1920, $548,302.82, and in 1919, $376,007.45.

THE MINING INDUSTRY IN NOVA SCOTIA IN 1925

THE Report on the mines of Nova Scotia for the fiscal year ended September 30, 1925, recently published by the Provincial Department of Public Works and Mines, gives full information on the various branches of mining carried on in the province, including an account of mining methods, number of employees, production, and other information in regard to each mine. Appended to the report is a monograph pamphlet dealing with gypsum in Nova Scotia, being one of a series giving in concise and popular form information regarding the mineral resources of the province, for the use of prospectors, operators and others. The report contains many tables, particularly in regard to coal mining.

On March 1, 1925, the coal output for the province was 254,750 tons in excess of the output at the same date in the previous year and it appeared that 1925 production would be a more satisfactory one than the year 1924. Unfortunately on March 6, there was a strike in all of the mines of the British Empire Steel Corporation in Cape Breton and on the mainland. The mines remained totally idle until August 9, a period of over five months, and as a result the total coal production for the fiscal year showed a falling off of 1,684,862 tons.

The coal output for the year was 3,288,321 tons of 2,240 pounds, as compared with the previous year's output of 4,973,184 tons, a decrease of 1,684,862 tons. The quantity of coal supplied the Dominion Iron & Steel Company was 370,061 tons as against 739,321 tons in 1924, a serious decrease of 369,260 tons.

The coal sales for the year were 2,893,608 tons of 2,240 pounds, as compared with the previous year's sales of 4,448,188 tons, a decrease of 1,554,579 tons. The quantity of coal on bank at the end of the fiscal year was 33,048 tons, as compared with the previous year, 83,085 tons, a decrease of 50,037 tons. The quantity of coal distributed for consumption in Nova Scotia during the fiscal year was 1,284,803 tons of 2,240 pounds, as compared with the previous year, 1,782,413 tons, a decrease of 497,610 tons. Shipments to the United States were only 2,280 tons during the fiscal year, as compared with 5,706 tons for the previous year. The shipments to the St. Lawrence markets in the fiscal year were 807,505 tons of 2,240 pounds, as compared with 1,570,733 tons for the previous year, a decrease of 763,228 tons.

The quantity of coke manufactured in the province during the year was 198,926 tons; in the previous year there were 332,538 tons, showing a decrease of 133,612 tons. The quantity of tar manufactured from coal during the fiscal year was 2,973,108 imperial gallons, as against 5,594,345 gallons manufactured during the previous year. The benzol gas from coal, manufactured for motor fuel, etc., during the year was 393,953 imperial gallons, as against 761,660 in the previous year, showing a decrease of 367,707 gallons.

The number of men employed at the coal mines shows the total to be 11,652, as compared with 12,376 of the previous year. The average daily force consisted of 1,925 men working on the surface, and of 4,394 cutting coal and 4,933 others working underground, making a total of 11,252 colliery men, besides 400 men engaged in accessory occupations. The "colliery days" totalled 1,688,744. The number of short tons produced per man in 1925 is given as 319, as compared with 369 in the previous year, and 540 in 1923.

The number of fatal accidents in the mines from all causes was 18 in 1925, as compared

with 31 in 1924, 32 in 1923, 19 in 1922, 29 in 1921, and 26 in 1920. The proportion of fatalities per million long tons was 5.44 (or 4.89 per million short tons), and the proportion per thousand men employed was 1.56 in 1925, and 2.05 in 1924. The corresponding proportion in the United States mines in 1924 is given as 2.87 per 1,000 men employed. Underground accidents formed 94.4 per cent of the fatalities in Nova Scotia during the year, 55.5 per cent being caused by falls of roof or face, 38.9 per cent occurring in connection with mine cars or locomotives. All the fatal accidents which occurred on the surface were sustained in connection with haulage and cars.

The production of gold in the province during the year amounted to 1,526 ounces, an increase of 776 ounces as compared with 1924. While no substantial shipments of arsenical concentrates were made from the province during the fiscal year, a large quantity was recovered from the mill tailings of the operating companies. 1,117,918 silicate brick were manufactured during the year. This was a decrease of 199,752, as compared with the previous year. The mining and shipment of crude and calcined gypsum reached 471,174 tons for the fiscal year. This was an increase of 35,781 tons over the previous year. The production of salt for the fiscal year was 6,249 tons, as against 5,239 tons for the previous year.

OLD AGE PENSION PROPOSALS IN MASSACHUSETTS

SINCE the publication of the Supplement on "Old Age Pension Systems in Various Countries," issued with the Labour Gazette last month, information has been received of the report of the commission appointed in 1923 by the Massachusetts legislature to investigate and report on the question of State pensions for old age. The report of this commission was presented to the legislature at the last session. It first shows the extent of the destitution to be relieved.

"Of the total number over 65 years of age who have been interviewed throughout the state, we find that 1,114, or 6.4 per cent have incomes under $100 per year, while 2,912 besides, or 16.8 per cent of the total aged population, have no incomes at all. Of those interviewed over the age of 70, about 8 per cent have incomes under $100, and nearly 21 per cent have no incomes at all. Of those interviewed over 75 years of age, 9.4 per cent have incomes under $100, and 25 per cent have no incomes at all. If the larger cities of the state alone were to be taken, the percentages of extreme poverty indicated by this research would be considerably higher. In Boston, for instance, the percentage of aged persons without any property or income in the age group over 65 is about 25 per cent of that group in that city, and for those 70 years of age and over, about 20 per cent. It is also to be said that the figures given do not include persons in receipt of public or private organized charity, the inclusion of whom would considerably increase these percentages."

As a means of relieving the need thus shown, the commission recommends a pension for persons aged 70 or over who have certain qualifications and whose property does not exceed $3,000 or whose annual income does not exceed $365 a year. The maximum amount suggested is $1 a day, and in calculating the pension for any given case, any income already possessed is to be subtracted from this, except that "income derived from personal earnings of the beneficiary shall not be deducted in so far as it does not exceed $150 per annum." The pension contemplated is to be non-contributory. In justification of this, it is pointed out that a contributory plan could not become effective for a considerable time, but the need is immediate, and that the difficulties of establishing a contributory system are practically insuperable.

The cost of the proposed system is carefully considered. The total population aged 70 and over in the state is estimated at 133,000. From this figure must be deducted those not in need and those having children able to support them, and a further allowance is made for the partial support children may be able to give when they are not capable of fully maintaining their parents. It is calculated that these deductions would leave approximately 18,000 qualified applicants, and that to pension them in the manner proposed would cost between five and six million dollars annually. Allowing for the reduction in certain forms of public indoor and outdoor relief, it is estimated that the cost of the system would be in the neighbourhood of $5,500,000 per annum. To meet this expenditure the commission recommends a poll tax of $2 a year in addition to the existing poll tax, to be paid by women and men alike, and the addition of one-half of 1 per cent to the state income tax.

Two of the five commissioners dissented from the above recommendation on the ground that while there was evident need of better provision for the aged poor than now exists, a non-contributory pension system is not a desirable method of meeting that need.

CANADA'S EXPERIENCE WITH PRIVATE EMPLOYMENT OFFICES

Substance of recent address by R. A. Rigg, Director of the Employment Service Branch, Department of Labour of Canada.

TO the Province of Ontario belongs the honour of being the first in Canada to establish free government employment offices. Under powers provided by legislation enacted in 1906, such offices were opened in the cities of Hamilton, Ottawa and London in the year 1907; Berlin (now Kitchener) in 1908; Brantford in 1910; and Walkerville in 1912. This honour, however, has its lustre considerably dimmed by the fact that the most meagre financial provision was made to support the policy and the further fact that the offices were operated only on a part-time basis. Under such circumstances it was natural that the agent should regard the work as a mere side line and generally give to it a most indifferent attention. The result was that the offices proved to be quite ineffective competitors with the alert private agents, who secured the lion's share of the business.

In 1910 the legislature of the Province of Quebec passed an act authorizing the government to establish and maintain in cities and towns free employment bureaus for workmen, such bureaus to be under the control of the minister of public works and labour. Under the authority of this legislation, offices were opened in the cities of Montreal and Quebec in 1911, and in the city of Sherbrooke the following year. Much more liberal appropriations were provided for the maintenance of these offices than in the case of the Ontario offices, and consequently much more efficient work was accomplished.

The complete breakdown of the private agencies system during the periods of industrial depression proved influential in educating the public mind to the fact that a more efficient and less mercenary system was needed. Jobs were few and the cry of distress loud and poignant. The private agent cared little for the extremity of the need and the fewer the vacancies the more attractive loomed the fee. The economic and social suffering occasioned by such periods was the travail in which municipal employment offices were born. Such offices were established by the city of Toronto in 1908 and by the cities of Victoria, Vancouver, New Westminster, Edmonton, Calgary, Winnipeg, Ottawa, and Montreal during the slump of 1913-14. All of these offices rendered free service, with the exception of Calgary, in which case a small fee was charged.

Prior to the year 1919 a very useful service was provided through the medium of offices conducted by the Provinces of Ontario, Manitoba, Saskatchewan, and Alberta for the placing of farm workers within the respective Provinces. The three last-named Provinces transferred this activity to their offices established in 1919 and co-ordinated with the Federal-provincial scheme, creating the Employment Service of Canada. In Ontario farm-labour placement work is still carried on under the direction of the provincial department of immigration and colonization. Undoubtedly these activities were undertaken by the Provinces named on account of the failure of the private agencies reasonably to meet, by honest methods, the requirements of the farmers for labour.

The evidences of fraud practised by private agencies upon immigrants who had newly arrived in Canada were so many and of such general character that in April, 1913, the Federal Government passed an order in council prescribing regulations for the protection of immigrants. This order in council, No. 1028, required, among other things, that every agency dealing with immigrants should be licensed by the Federal superintendent of immigration; that records of business should be kept and reports concerning same furnished; that a maximum fee of $1 could be charged for securing employment, the fee to be refunded if employment at wages and upon terms as represented was not procurable upon arrival at the place of employment; and that in the event of a license holder being convicted of an indictable offence his license should ipso facto be deemed to have been cancelled. The May, 1913, issue of the LABOUR GAZETTE, published by the Federal Department of Labour, in reporting the new order in council, states that it—

> is designed * * * to protect immigrants against impositions and injustices at the hands of unscrupulous agents trading on their ignorance of conditions in this country * * * While it is not suggested in the order in council that the employment agencies throughout Canada are generally of an undesirable class, the Dominion Government has satisfied itself by investigation that conditions exist in some localities which render the passage of these regulations most desirable.

Some 315 agencies were licensed under the authority of this order in council, 300 being of the ordinary private fee-charging type. Eloquent testimony concerning the corrupt methods adopted is revealed in the fact that before the war broke out, or, in other words, within 16 months of the passing of the order

in council, one out of every four of these licensed agents had been prosecuted and convicted and his license cancelled. Owing to the practical cessation of immigration resulting from the outbreak of the European war, the provisions of order in council No. 1028 fell into disuse and have not been restored, Government machinery for employment service work having now been provided.

In addition to the aforesaid Federal licensing and regulating of private employment offices, certain of the Provinces and municipalities also attempted some measure of control for the principal purpose of protecting workers against victimization. While such efforts exercised a salutary influence, it cannot be claimed that they met with any flattering measure of success until 1919, when the field of employment work was militantly invaded by the Employment Service of Canada, with the support of the Federal and provincial governments behind it and its offices located at strategical points from the Atlantic to the Pacific. While it is by no means contended that all private commercial agencies are unscrupulous or lacking in the desire to render full service for payment received, it does appear to be the truth that all the bona fide investigations concerning their methods which have been conducted have disclosed abuses of a criminal character. Nor have such practices been isolated cases or confined to an insignificant proportion of such offices. Employment work is a field which affords attractive opportunities for the type of individual who pays scant respect to the law and has less regard for the principles of honesty and fair play in his dealings with his fellow-men. Perhaps in no branch of administration is the task of law enforcement more difficult, except it be that which is charged with the weighty responsibility of administering Volstead and other prohibitory liquor legislation.

The most recent investigation is that conducted in 1923 by the New York State Department of Labour. Following a similar investigation made 22 years ago, which brought to light the evil practices of many private commercial agencies, the New York State Legislature enacted a law which authorized municipalities to license such agencies. Concerning the investigation of three years ago, Margery Leve Loeb, in an article contained in the December, 1923, issue of the *American Labour Legislation Review*, says:

"A recent investigation by the New York Department of Labour has shown that, in spite of 19 years of regulation, employment agencies continue the same abuses that have been exposed by surveys during the past 75 years."

My only criticism of this statement is that the report rather indicates that very little attempt appears to have been made to apply regulation. However, experience seems to teach that it is almost as difficult to induce governing authorities to enact adequate enforcement laws regulating private fee-charging agencies as it is to persuade them to abolish such agencies and to set up efficient and co-ordinated free public offices.

Two royal commissions fully empowered to investigate the subject of employment-office work have been appointed in Canada. The first commission was created in December, 1912, by the government of the Province of British Columbia. The report, which was presented in March, 1914, is emphatic in its condemnation of private employment agencies, as follows:

Though a great deal of unemployment necessarily exists in times of depression, your commissioners are convinced of the unsatisfactory working of private employment agencies. Some unscrupulous managers, concerned only with the collection of fees from workmen out of employment, receive moneys under false representations. The workman is assured that employment is to be obtained, only to find, after seeking work and spending his time and incurring expense, that the reported vacancy has been filled. The evidence we have received justifies the need of efficient public control to prevent employment agencies being conducted solely for profit.

The commission further found—

that collusion sometimes existed between the manager of the employment agency and the foreman of the contractor requiring labour, whereby the foreman received a share of the agency fee on all workmen placed with the contractor. The obvious result of such an arrangement is that workmen are discharged after a few days of work to make way for new men, who in turn are soon displaced by others.

After expressing the opinion that municipalities with a population of 10,000 or more might with advantage conduct free employment bureaus, the report continues:

We consider that it would be still more in the public interest if national labour bureaus were established by the Dominion as a whole and [the work] taken entirely from the hands of private agencies.

The second commission was appointed by the government of the Province of Ontario in December, 1914. In the report, which was submitted early in 1916, the evidence disclosed shows that from May to December, 1914, 56 convictions were secured against private agents in the courts of Ontario. When it is taken into consideration that no matter how zealous officials may be in seeking to enforce such law, evidence sufficient to justify conviction is in many instances extremely difficult to secure, the above-quoted record may safely be interpreted as indicating that a very large percentage of private employment agencies conducted their business with intent to plunder their patrons as opportunity presented itself. The commission recommended the appointment of a provincial labour commission, part of whose duty it should be to

administer a system of free public employment bureaus and to further the institution of provincial employment bureaus throughout Canada, with a view to their ultimate linking together in an effective national system.

The Ontario government responded to the recommendations of the commission by establishing in 1916 a trades and labour branch which immediately proceeded to open employment offices in six of the principal industrial centres in the province. This movement has grown until to-day all the Provinces of Canada have established free employment offices, with the exception of the small Province of Prince Edward Island, where the problem is of minor proportions. Stretching across the Dominion from Halifax, in Nova Scotia, to Victoria, in British Columbia, is a chain of provincially established free employment offices located in 65 centres, with the Federal Government acting as the co-ordinating link, the whole comprising the Employment Service of Canada.

It will be recalled that the International Labour Conference held at Washington, D.C., in 1919, after adopting a convention in favour of the establishment of free public employment agencies, approved the following:

> The general conference recommends that each member of the International Labour Conference take measures to prohibit the establishment of employment agencies which charge fees or which carry on their business for profit. Where such agencies already exist, it is further recommended that they be permitted to operate only under government licenses and that all practicable measures be taken to abolish such agencies as soon as possible.

Eight months before this conference was held all the Provinces of Canada, with the exception of the far eastern ones, namely, Nova Scotia, New Brunswick, and Prince Edward Island, in conjunction with the Federal Government had brought into being the Employment Service of Canada. It is also worthy of mention that four and a half months before the International Labour Conference convened in Washington legislation passed by the Provinces of Manitoba and Saskatchewan prohibiting the operation of fee-charging employment agencies had gone into effect. The substance of this prohibitory legislation is as follows:

> No person, firm, corporation, or association shall collect or receive, directly or indirectly, any fee or compensation for sending or persuading, enticing, inducing, procuring, or causing to be sent from or to any place within the Province to or from any place outside the Province, or between any two places within the Province, any person seeking employment, or for giving or furnishing information regarding employers seeking workers or workers seeking employment.

Similar legislation was put into effect during 1919 by the Provinces of Alberta and British Columbia, and by the Province of Nova Scotia in 1920. Last year the Provinces of Saskatchewan and Manitoba amended their statutes to enable municipalities in which no government employment office was located to establish and operate an employment office. The Saskatchewan legislation further provides that the municipality may charge such fees to employers availing themselves of the service of the employment office as may be fixed by by-law, while the Manitoba legislation requires that such offices shall render free service, the cost of operating and maintaining the office to be charged against the funds of the municipality. The Provinces of Ontario and Quebec have not prohibited private agencies from operating, but have through their licensing systems made such material reductions in the number of these agencies that in both Provinces, which comprise the most densely populated and the most highly industrialized section of Canada, only 25 private fee-charging agencies are operating. No legislation relating to private commercial employment offices exists in the Province of New Brunswick, but as only three such offices are in operation there the situation is not serious. Nevertheless, a delegation representing the New Brunswick Federation of Labour recently waited upon the government of the Province and urged that prohibitory legislation be enacted.

The Employment Service of Canada is operated under an agreement annually entered into between the Federal Government and each of the eight Provinces named previously. A section of this agreement reads as follows:

> The party of the second part [being the provincial government] shall not issue any new provincial licenses to commercial employment agencies which charge any fee or commission either to employers or employees, and shall not transfer any licenses already issued.

It will therefore be seen that in the natural course of fulfilment of the policy that has been adopted it is only a question of time when the private commercial agent, whose only interest in employment work is the fee which he may be able to exact, will have passed into oblivion in so far as Canada is concerned.

In the Province of British Columbia the legislation making it illegal for fees to be charged on account of any assistance rendered either to employers or employees in placing workers in employment has been somewhat severely attacked. Certain agencies continued to operate on a fee-charging basis in spite of the statute which aimed at their abolition. Acting on behalf of the British Columbia government, James H. McVety, general superintendent of the Employment

Service of Canada for the Province, instituted police court proceedings against the offenders. The police magistrate dismissed the cases, ruling that the agencies were operating legally. This action of the court had the practical effect of invalidating the legislation and rendering it virtually useless. A stated case was granted at the request of the Crown and submitted to Mr. Justice Murphy of the Supreme Court of British Columbia. The learned judge ruled that it was unlawful for an agency to collect a fee or accept a commission of any kind from either employer or employee and reversed the decision of the magistrate. Having done this, however, he proceeded to express the opinion that it was quite lawful for a private employment agent to conduct his business so long as payment was made not on a per capita basis but in the form of salary or remuneration without regard to the number of persons engaged by him for employment.

This interpretation, while expressed only in the form of an opinion, afforded encouragement for groups of employers to establish a species of semi-private employment office, the activities of which it would be very difficult to regulate or control. As one such agency, operating on behalf of a number of firms engaged in the same industry, was in existence in Vancouver, an information was laid against the manager. This case also was dismissed by the magistrate, whereupon an appeal from the decision was taken by the Crown in the county court before Judge Cayley. The judgment rendered in this action was that the fact that the employment manager was paid a monthly rate without regard to the number of workers engaged was of no consequence. He therefore found for the appellant, but as the action was a test case only a minimum fine of $10 was imposed. Thus the efficacy of the prohibitory law, in so far as present court rule is concerned is vindicated.

If effective regulation of private agencies is at all possible, it should surely be demonstrated in the provinces of Quebec and Ontario. Both these provinces have stringent regulations relating to private agencies, and both have organized free employment services. Yet, in spite of the law and the competition of the government employment offices, there is ample reason for belief that the predatory practices of private agents are still stealthily indulged in. But the indictment against the private employment office system does not rest wholly on the ground that many agents are utterly unprincipled in character and ghoulishly cheat and rob those who stand in extreme need of sympathy and assistance. The evil of their nefarious methods registers itself to the disadvantage and loss of employers. While it is not claimed that the best judgment is always displayed by public employment officials in the matching of vacancies with the most suitable type of employee, it is submitted that on the whole much more care is exercised with such end in view than in the case in the average private exchange.

Furthermore, complaints that bribes have been accepted or deception practiced are very seldom filed against any of the offices of the Employment Service of Canada, with their staffs comprising 269 employees. Amongst the rare occasions on which such charges have been made investigation has still more rarely discovered any ground for justification. It may quite safely be assumed that if such practices were carried on in the public offices they would quickly be called to the attention of the authorities. The patrons of the public employment service regard it as an institution in which they have a proprietary interest. This attitude of mind, coupled with the keen sense of satisfaction which the man on the street experiences in finding fault with governmental enterprises, provides an effective safeguard against abuses creeping into the public employment service, which abound in the private agency field. The operations of the public employment office are too open to critical scrutiny to permit of serious abuses being practiced.

The private agency system stands condemned not only because it has resulted in crimes perpetrated against workmen but also because of the fact that it creates disorganization of plant arrangements and causes an unnecessary labour turnover.

Two other weaknesses inherent in the system, which have not been previously indicated but which render the private commercial agency incapable of meeting the need of modern conditions, are (1) the lack of coordinating and clearance facilities, and (2) the utter inability to render service to handicapped or juvenile seekers for employment. The first of these defects could be overcome only by the monopolozing of the employment field by an individual private concern. With regard to the second, it is obviously impossible for a system that depends for its existence upon fees collected either from employer or employee, and whose end is profit, to give the detailed individual attention required for the successful placing of handicapped or juvenile workers.

Private agencies have, moreover, frequently exercised a malignant influence upon rela-

tions existing between employers and their workpeople. Not only have they sharpened and deepened the spirit of enmity between the two contending parties when strikes or lockouts have taken place by supplying strike-breakers, but they have in numerous instances proved active agents in provoking the temper among dissatisfied employees, which inevitably made conciliation and settlement impossible.

Fee-charging agencies are also out of tune with the need of the times because they charge fees. There are very few services which the State can render to its citizens which are more important than that of providing a free national system of employment offices. In any community where there exists a proper sense of the responsibility that the collective strength should be placed at the disposal of the weakest members for the purpose of aiding and encouraging such in their hour of direst need, no system of employment service can be regarded as satisfactory which denies to those who are unable to pay from $3 up information where work is available for them.

Such has been the experience of Canada with private commercial employment agencies. The sins of commission and the spirit of venality which controls the conduct of many of these agencies, coupled with the inability of all of them as unco-ordinated activities to so function as to meet successfully the needs of modern industry, have led the governments of Canada to indict them as being incapable of efficiently discharging the responsible duties attaching to employment service work.

LICENSING OF MOVING PICTURE OPERATORS IN SASKATCHEWAN

NEW regulations were published in Saskatchewan on March 9 under the Theatres and Cinematographs Act. The rules governing the granting of operators' licenses are as follows:—

41. Any person desiring to become an operator of moving picture machines may obtain an apprentice's license from the Provincial Secretary, but an operator's license shall not be granted except for operating a miniature moving picture machine using slow burning film of special width and perforation, until such applicant has successfully passed an examination before an examiner or examiners duly appointed for that purpose, who shall from observation, as well as by questioning, ascertain the candidate's competency by testing his practical knowledge of the following subjects:—

(1) The handling of the lamp, appliances and wiring;

(2) Wire sizes and insulations;

(3) Testing for electrical defects in lamp and wiring;

(4) The use of the various safety appliances, mechanical and electrical;

(5) General precautions to be observed in operating moving picture apparatus and its connections;

(6) The various clauses of these regulations.

No candidate who fails to pass an examination shall be re-examined within the 60 days of such examination. Candidates who pass the examination shall be graded into three classes, viz: first, second and third, according to the equipment of the theatres in which they operate. First class operators shall be eligible for employment in theatres with any equipment. Second class operators shall be eligible for employment in any theatre except theatres equipped with transverters, motor generators, mercury arc rectifiers, or other similar machines to be decided on by the examiners and shall be eligible for employment in any theatre as assistants to first class operators. Third class operators shall be eligible for employment only in theatres using incandescent light for projection purposes.

Provided however, that any operator who has passed an examination but failed to obtain the standing required for the place in which he intends to work may, in the discretion of the provincial secretary, obtain a permit good for three months giving the required standing;

Provided further that the provincial secretary may revoke the standing of any operator, if in his opinion, said operator does not by his work attain the standing which he obtained.

42. All applicants for first and second class examinations, before being accepted for examination, shall have served an apprenticeship of six months, under a duly qualified operator or shall have held an operator's license or standing in this province or elsewhere, of a degree satisfactory to the examiners.

Ex-Service Men and Old Age Pensions

The Victoria, British Columbia, branch of the Canadian Legion suggests that the federal Old Age Pension scheme should allow certain preferences in regard to ex-service men. A resolution in the following terms was forwarded to the Dominion Government during March:—

"Whereas it has been published in the press throughout Canada that an Old Age Pension Bill has been presented to Parliament;

"And whereas it is the common knowledge that army ex-service men, on account of war service, have become prematurely aged;

"Be it resolved that provision be made in the proposed Old Age Pension scheme that certain preferences be extended to all ex-service men, as follows:

"(*a*) Preference in age. Recommended that the age limit for pension be fifty-five;

"(*b*) Preference as to length of residence in Canada: Recommended that all men who served their country in the late or other wars be considered eligible regardless of length of residence;

(*c*) Recommended that the Act expressly state that no reductions shall be made in the Old Age Pension for war disability pension."

TRADES AND LABOUR CONGRESS OF CANADA

Legislative Programme Submitted to Dominion Government

A DELEGATION representing the Trades and Labour Congress of Canada and many of its constituent organizations waited on the Dominion Government at Ottawa on March 31 to submit a memorandum of legislative proposals based mainly on the resolutions adopted by the Congress at its forty-first annual convention (LABOUR GAZETTE, September, 1925, page 891). The members of the delegation were as follows:—

Tom Moore, president; J. T. Foster, vice-president; James Simpson, vice-president; Bert Merson, vice-president, and P. M. Draper, secretary-treasurer, Trades and Labour Congress of Canada; A. Bastien, general organizer, American Federation of Labour; Leon Worthall, organizer, Journeymen Barbers' International Union; W. G. Powlesland, vice-president, International Brotherhood of Blacksmiths; R. C. McCutchan, vice-president, International Brotherhood of Boilermakers and Iron Ship Builders; E. W. A. O'Dell, general representative, Boot and Shoe Workers' Union; William Thorne, vice-president, Bricklayers, Masons and Plasterers' International Union of America; Arthur Martel, executive board member, United Brotherhood of Carpenters and Joiners of America; Jas. F. Marsh and Pat. Green, general organizers, United Brotherhood of Carpenters and Joiners of America; John Noble, organizer, International Brotherhood of Electrical Workers; Frank Healey, organizer, International Union of Steam and Operating Engineers; Donald Dear, vice-president, International Association of Fire Fighters; F. W. Bush, executive board member, United Garment Workers of America; James Somerville, vice-president, International Association of Machinists; W. V. Turnbull, vice-president, United Brotherhood of Maintenance of Way Employees; E. J. Hopcroft, representative, United Brotherhood of Maintenance of Way Employees; J. W. Jewkes, secretary-treasurer, Canadian Pacific System Division, United Brotherhood of Maintenance of Way Employees; Alex. McAndrew, representative, United Brotherhood of Maintenance of Way Employees; A. J. Crawford, general organizer, Sheet Metal Workers' International Association; John W. Bruce, general organizer, United Association of Plumbers and Steamfitters; George R. Brunet, vice-president, Printing Pressmen and Assistants' Union; R. Trepanier, representative, Amalgamated Association of Street and Electric Railway Employees of America; W. P. Covert, vice-president, International Alliance Theatrical Stage Employees and Moving Picture Machine Operators; George Sangster, organizer, Journeymen Tailors' Union of America; J. G. A. Decelles, executive board member, Commercial Telegraphers' Union; C. McMahon, representative, Commercial Telegraphers' Union; L. T. Spalding, representative, International Typographical Union; A. E. Thompson, representative, International Typographical Union; J. A. P. Haydon, representative, International Typographical Union; Alex. McMordie, secretary-treasurer, Federated Association of Letter Carriers; John J. Reeves, representative, Federated Association of Letter Carriers; A. Gariepy, representative, Cigarmakers' International Union.

The Dominion Government was represented by the Prime Minister, the Right Honourable W. L. Mackenzie King; the Honourable J. C. Elliott, minister of Labour; the Honourable Ernest Lapointe, minister of Justice; the Honourable W. R. Motherwell, minister of Agriculture; the Honourable J. H. King, minister of Public Works, and the Honourable G. H. Boivin, minister of Customs.

The Prime Minister dealt with several of the recommendations, promising careful consideration of the memorandum on the part of the Government. In regard to the proposed Old Age Pensions Act, he stated that the Government's immediate aim was to have the principle of old age pension placed on the statute books, and that adjustments as to the amount of pensions, age limits and other provisions would follow at a later stage. He denied the report that the Government intended to submerge the Department of Labour in some other department.

Text of Memorandum

In presenting these legislative proposals it has not been thought essential to again submit detailed memorandum on a number of subjects covered by the special briefs which were submitted to the Government one year ago,[1] and copies of which were furnished, by request, for the use of the Ministers of the several departments concerned. We would ask, however, that the briefs previously presented should be considered in conjunction with the present summarized requests on these particular items.

[1] LABOUR GAZETTE, February, 1925, page 171.

Summary *re* Briefs Presented February, 1925

Eight Hour Day and Forty-four Hour Week.—During the past year the question of jurisdiction of the Dominion Parliament and Provincial Legislatures, in connection with the application of the Washington Eight-Hour Day Convention, has been dealt with by the Supreme Court and the decision rendered,[2] whilst generally defining this as a matter to be dealt with by the Provincial Legislatures, clearly establishes the power of the Federal Government to enact legislation making the eight-hour day applicable to federal public works and employees of the Dominion Government.

Within Canada, British Columbia has already given effect to a general eight-hour day law and amendments to the Factory Act submitted by the Government to the Alberta Legislature will, if passed, establish the eight-hour day in that province also. Internationally, considerable progress has been made in securing ratification of the Washington Eight-Hour Convention, ratification having been agreed to by a number of important industrial countries, conditional upon others taking similar action.

By the pact reported to have been signed by Great Britain, France, Germany, Italy and Belgium, a further step has been taken towards the enactment of eight-hour day legislation, and final ratification of this convention by these very important industrial nations. Canada being also a signatory to the Treaty of Versailles and a member of the International Labour Organization (League of Nations) and having strongly supported and voted for the convention at the Washington conference in 1919, and the question of Federal-Provincial jurisdiction being now decided, we urge that steps be taken to give full effect to the Washington eight-hour convention as far as lies within the jurisdiction of the Dominion Government.

Fair Wage Regulations.—That the present Fair Wage Regulations be amended by:—

(*a*) Repealing the latter part of Clause 3, Schedule A, which reads: "The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour".

(*b*) That provision be inserted that moneys collected under Section D, Clause 4 of the Schedule A should be paid direct to the worker by the Government and if no claim for same is received within a reasonable period then such moneys to remain the property of the Government and a further provision that an additional amount should be added in all such cases of default to be collected by the Government as a penalty upon the contractor for violation of the regulations.

(*c*) That Clause 1, Schedules A and B, be amended to provide for hours of labour "not to exceed eight hours per day" instead of "such hours as are customary in the district, etc."

It is necessary to again draw attention to the fact that Clause 5, Schedule A, providing for clerks of works or other inspectors to ensure due observance of fair wage provisions of contract is not being enforced. We urge that steps be taken to give full application to this section.

That these regulations, as amended should be embodied in an Act of Parliament so as to definitely ensure their application to all government works and works undertaken by commissions or other similar authorities where government funds are provided partly or in whole or where guarantees may be given by the government for the raising of moneys in connection with such works.

Election Act Amendments.—Amendments to this Act are requested in order to

(*a*) Provide for proportional representation in group constituencies and the use of the transferable vote in single member constituencies.

(*b*) To incorporate the provision for holiday on election day passed by the House of Commons last year.

(*c*) To abolish election deposits and their forfeiture and substitution of a stated number of bona fide signatures of electors as a qualification on nomination papers.

(*d*) Repeal of section of Clause 10, Franchise Act 1920, which prohibits unincorporated associations, such as trade unions, from making voluntary contributions towards election campaigns.

(*e*) Repeal of Clause 11, Franchise Act 1920, which section prohibits any person not being an elector who resides without Canada from assisting in any manner in election campaigns.

(There seems to be no logical reason for retaining this section as no effort appears to be put forward to enforce its general application.)

In addition to the above we respectfully urge the removal of all restrictions which prevent federal, provincial or municipal employees from exercising their full political rights as citizens and the enactment of such legislation as would prevent any future interference with the same.

British North America Act Amendments.—We again urge the necessity for seeking amendments to the British North America Act so as to bring it into harmony with conditions created by present day national developments. Such amendments are especially needed to:

(*a*) Enable necessary steps to be taken to abolish the Senate as a non-elective body and introduce such reform as would prevent the vetoing of legislation passed by the elected representatives of the people.

2 Labour Gazette, July, 1925, page 671.

(*b*) Abolish appeals to the Privy Council and establish the Supreme Court of Canada as the highest court of appeal.

(*c*) To give the Federal Government the necessary power to effectively administer the Industrial Disputes Act, 1907, and later amendments.

(*d*) To foster "national unity" by giving greater powers to the Federal Government to deal with social and labour legislation and particularly that covered in the recommendations and conventions of the International Labour Conferences (League of Nations).

Immigration and Emigration.—Reaffirming requests previously made we again urge:—

(*a*) Repeal of Sections in Immigration Act which discriminate against British born citizens, and sections which bring within prohibited classes those exercising reasonable right of assembly and freedom of speech.

(*b*) Prohibition of entry of contract labour, unless endorsed by and secured through the Employment Service of Canada.

(*c*) Strict application of the laws for the control of Oriental labour in Canada, pending legislation for total exclusion of same.

(*d*) Abolition of all bonuses to private employment agencies, and request to the British Government for fuller supervision and control of booking agencies operating in the British Isles.

(*e*) That representation be made to the United States authorities with the object of removing discrimination under the Quota Law between Canadian born and other Canadian citizens.

(*f*) The creation of a Dominion Advisory Council on Immigration on which Labour shall have representation, and which would co-ordinate federal, provincial and other immigration activities, prevent overlapping of same, and formulate policies suitable to conditions as they exist from time to time.

(*g*) That all colonization opportunities be as freely presented to the residents of Canada as to residents of the British Isles and foreign countries.

(*h*) Compliance with 'recommendation' of the International Labour Office (1923) to compile and publish statistics regarding emigration from Canada as well as immigration to Canada.

We wish to record our emphatic opposition to any modification of the regulation now in force giving effect to the findings of the British Commission regarding Child Immigration "that children, unaccompanied by their parents, should not be induced to leave England before they have arrived at working age."[3]

We further desire to record our protest against the action of the Senate in refusing Bills passed by the House of Commons, on a number of occasions, aimed to give effect to the request embodied in Clause A and sincerely trust that similar legislation will continue to be placed before Parliament by the Government until the will of the people, through their *elected* representatives, prevails.

Criminal Code Amendments

During the first session of Parliament 1919, amendments were made to the Criminal Code based upon provisions of Orders in Council made operative during the war period. These amendments were strongly protested at the time, being considered unjustifiable, unnecessary and liable to lead to dangerous abuse. They are incorporated in Section 97a and 97b Chapter 146, Criminal Code (1919) and refer particularly to associations which seek to bring about governmental, industrial or economic change by the use of force, violence or physical injury to person or property. Power is given to seize, without warrant, either property or person of those belonging or suspected to belong to such unlawful associations and upon the person charged rests the proof of innocence. Since these amendments were passed a "sympathetic strike" has been defined by some legal authorities as coming within the definition of "force" (Justice Metcalf-Russell case, Winnipeg). It has also been held that "sometimes it has a deterring effect upon people's mind to have their motions watched and to encounter black looks" and that this may be sufficient to create terror in a person's mind during periods when industrial or economic changes are being sought. Similar views were also expressed in a memorandum issued by the Minister of Justice, Hon. C. J. Doherty, to the Trades and Labour Congress in May, 1921.

These references serve to illustrate that our fears that the interpretation of "force" would not be confined to "physical force" were well founded and prompts us to again urge the repeal of those two sections, believing that their effect is to unduly curtail and abridge British liberty. We have no desire to seek privilege to commit unlawful acts and believe that sections 69, 501 and other sections of the Criminal Code provide ample protection in case of actual offences committed against person or property whilst seeking economic, industrial changes, etc.

Sedition.—The interpretation as to the meaning of sedition, seditious intention, libel, conspiracy, etc., was considered broadened by the repeal in 1919 of Section 133, Chapter 146 of the Criminal Code, 1906. Whilst we again reiterate our belief that the sections referring to sedition, etc., should be entirely eliminated from the Criminal Code as there is apparently no possible definition of these matters, and the question of whether any offence has been committed must rest in the discretion of the judge trying the case, in the absence of such action on the part of the Government we would urge the re-introduction of Section 133, repealed in 1919, and which reads:—

"No one shall be deemed to have seditious intention only because he intends in good faith,—

(*a*) To show that His Majesty has been misled or mistaken in his measures; or,

[3] Labour Gazette, February, 1925, page 179.

(*b*) To point out errors or defects in the government or constitution of the United Kingdom, or any part of it, or of Canada or any province thereof or in either House of Parliament of the United Kingdom or of Canada, or in any legislature, or in the administration of justice; or to excite His Majesty's subjects to attempt to procure, by lawful means, the alteration of any matter in the state, or,

(*c*) To point out, in order to secure their removal, matters which are producing or have a tendency to produce, feelings of hatred or illwill between different classes of His Majesty's subjects."

This would, at least, modify the definition of sedition, etc., so as not to include any one acting in good faith.

Injunctions, etc.—The practice of Courts issuing injunctions, preventing strikers from peacefully picketing still continues, quite a number of cases having arisen during the past few years. The Courts seem divided as to the interpretation of the present law on this important matter and some of the injunctions so granted have been dissolved when brought to trial, whilst other judges have reached a contrary decision. The effect, however, has been the same in nearly all cases, namely that the strike has been made ineffective and broken through the medium of the temporary injunction.

The right to peacefully picket was defined and made legal by Section 12, Chapter 173 of the Consolidated Statute 1886 but when the Criminal Code, 1892, Chapter 29 was compiled this provision legalizing peaceful picketing was omitted and has not yet been reinstated.

Closely interlocking with this question of picketing is the one of participation in sympathetic strikes. British law has always recognized that a strike must be effective to be of any service and with that in view Parliament has from time to time amended the laws so as to safeguard certain necessary activities connected with strikes.

In urging that Canadian law should be brought into harmony with British law in these respects, we again reiterate our request for

(*a*) The reinsertion of the picketing provision dropped from the Criminal Code in 1892, and

(*b*) The amendment of Section 2 (38) by inserting "workmen means all persons employed in trade or industry whether or not in the employment of the employer directly involved in a trade disagreement."

These suggested changes, we feel sure, would do much towards removing the present unrest created by the uncertainty as to the legal position of workers involved in strikes and help to eliminate the injustices now being perpetrated through the abuse of the issuance of injunctions in industrial disputes.

Old Age Pensions

It is pleasing to note that definite action is being taken by the Government to give effect to the oft-reiterated requests of the Trades and Labour Congress to establish a measure of protection for the aged needy workers of this country. It is a matter of regret, however, that the old age pension measure now before Parliament is so restricted as to leave outside its scope great numbers of worthy citizens who we sincerely believe should be entitled to its benefits. It is our studied opinion, backed up, we have every reason to know, by the united opinion of the workers of this country, that no measure can be considered to be really satisfactory if based on less than the principles submitted, in detail, both to the Committee of Parliament, which dealt with this subject, and to the Government one year ago. Briefly enumerated they are:—

(*a*) The responsibility for the protection of aged workers should be accepted by the Federal Government so as to ensure equality of treatment to all Canadian citizens, irrespective of the province in which they reside.

(*b*) The age at which pensions should be obtainable should not be over 65 years, and only those of assured incomes of reasonable amounts should be exempted from its provisions.

(*c*) That pensions should be available to citizens who have held continual residence, except for short absences, for twenty years or longer.

It is pleasing to note that the provision of recommendation (*c*) has been incorporated in the present Bill and it is hoped that it may yet be possible to incorporate recommendations (*a*) and (*b*) also.

We desire to approach this question in a spirit of helpful co-operation and not of hostile criticism, and recognize the necessity of avoiding action which would delay, in any manner, the relief of the thousands of aged needy workers which even the present measure will make available.

We recognize that administrative machinery is already available in most, if not all, provinces through which an old age pension plan could be immediately operated and that the cost of new federal machinery may involve added expense. Also that municipalities and provinces would be relieved of considerable expense at present borne in maintaining many who would become beneficiaries of the proposed Act.

In view of these facts there is no doubt considerable ground for the provision which would make the plan a joint federal-provincial one, but we do strongly urge that means be sought to ensure the right to participate on an equal basis by all eligible Canadian citizens,

without discrimination, and without regard to the province in which they may find it necessary to reside in order to earn their livelihood.

The present proposal of $20 per month is, we suggest much too low to maintain even a semblance of a Canadian standard of living and even when supplemented by the additional income allowed under the Act before deductions are made, still remains less than the minimum set for single persons by the several minimum wage boards of the respective provinces.

A number of labour organizations which have established protection for their aged members have fixed the pension payable at much higher sums and in almost every case dependent members of these local unions would be debarred from benefits under the proposed pension plan as the amount received from their own organization would equal, or exceed, that named in the present Bill. Though we have no definite information, it is probable that most beneficiaries of fraternal societies having old age pensions, and certainly practically all of those coming under federal, provincial, municipal, railway or private industry pension schemes, would be likewise exempt.

With these facts in mind and the knowledge that Canada is, comparatively speaking, a young man's country, it is difficult to conceive that anything approaching 100,000 needy workers would have to be provided for within the suggested age limit of 70 years. In view of this, and the added fact that very few industrial workers are able to secure employment after having passed the age of 65, we would urge that the qualifying age be reduced from 70 to 65 and that a sum of not less than $30 per month be fixed instead of $20 as at present proposed.

In conclusion, we wish to emphasize that we consider the need to secure relief for the aged needy of this country is so imperative that we accept the responsibility of pledging our support to secure the enactment of an old age pension measure at the present session of Parliament but trust that the suggestions herein presented may yet be possible of acceptance before the measure is finally adopted by Parliament.

Unemployment and Unemployment Insurance

The unemployment problem presents two distinct phases. First, the creation of opportunities for work so as to reduce to the utmost degree the volume of unemployment, and second the providing of unemployment insurance to relieve those for whom work is not provided.

The Federal Provincial Conference of September, 1924, made detailed recommendations for dealing with the first section of this problem, one of which—by the acceptance of joint responsibility with the provincial and municipal authorities to pay an equal proportion of the excess cost of relief work—has been this winter again put into effect by your Government. Whilst this commendable measure of relief is highly appreciated, the regularly recurring periods of intense unemployment call for action to give full effect to the further proposals contained in the report of this conference, of which the following is a condensed summary.

All possible, federal, provincial and municipal work to be undertaken during the winter months or other periods of depression in ordinary industrial activity; that the hours of labour should be not more than eight per day; that a national committee be formed representative of the federal and provincial governments for the purpose of determining where necessary work can be initiated to best relieve unemployment and find ways and means for financing such proposed work; and that immigration should be regulated so as to prevent accentuation of the unemployment problem.

With these measures in effect the volume of unemployment would be considerably reduced but the problem would not be entirely solved and we urge that those still unable to obtain work should receive the protection of unemployment insurance. This should be Dominion-wide in order to deal equitably with all workers, especially those engaged in the development of our natural resources whose occupations are often of a transient nature.

The principles which we suggest should be the basis of such legislation have, on several previous occasions, been presented to the Government and are again reiterated for your consideration.

(*a*) Creation of a Federal Fund, from which payments may be made to unemployed, and under-employed persons.

(*b*) This fund to be raised by assessment on the payrolls of undertakings whose workers are covered by such insurance and added to by Dominion and if possible Provincial public funds.

(*c*) Payments to be made to workers during actual unemployment or when employed for fixed periods for less than seventy-five per cent of their regular working hours.

(*d*) No employer to be allowed to discharge numbers of workers without due notice to the Employment Service of Canada so as to give them an opportunity to provide for their redistribution.

(*e*) The Government to have power to investigate as to the real need of discharge of workers, and consequent limitation of production.

(*f*) No employer to be allowed to discharge workers for lack of work, until the hours of such industry have been reduced to at least half of the normal working hours.

(*g*) Workers in this way under-employed to have their wages supplemented from the Federal Fund up to not less than seventy-five per cent of their normal earnings.

(*h*) This Act to apply to workers under public bodies as well as to private employers.

(*i*) Use of the Advisory Councils of the Employment Service, should be made for the carrying out of the Act and power given them to deal with matters relating to the co-ordinating of public works, and perhaps their partial financing from the fund, in order to avoid unemployment.

Registration of Union Labels

Union labels are adopted by labour organizations as a means of informing the public that products bearing such labels are manufactured under conditions agreed upon by the manufacturer and the union or unions to which his employees belong and to assure the public that the principle of collective bargaining and the employment of union labour is recognized in the shop or factory in which these products are made.

The union shop card displayed in establishments such as barber shops, retail stores, etc., carries a similar significance. The union buttons worn by members of trade unions are likewise used to convey the knowledge that the wearer thereof is a bona fide member of that particular organization.

From time to time cases arise wherein employers not entitled to the use of these labels and cards fraudulently make use of them or use labels of such great similarity as to deceive the public.

Because of this, over a great number of years, requests have been made by labour unions for legislation to be enacted which would protect the union labels, cards and buttons in the same way that trade-marks are given legal protection against counterfeit and fraudulent imitation.

In 1905, and on several previous occasions, the House of Commons has passed legislation of this nature which, however, failed to become law, owing to being defeated in the Senate.

Trade Unions in Great Britain are permitted by law to register their labels, etc., and Acts identical with the Bill presented to the Dominion Parliament in 1905 are on the Statute Books of over thirty-eight of the States of the American Union.

In 1919, the Dominion Government gave further serious consideration to this request and under the auspices of the Department of Labour, a conference between a number of prominent manufacturers and representatives of interested labour unions was held in Toronto in January of that year. General agreement was there reached endorsing this legislation with a proviso "that an amendment should be made to section 3 of the draft bill of 1905 empowering the Minister, on application, to cancel the registration of any union label for cause and after due investigation at which all parties interested should have right of hearing.

Following this conference a draft of proposed amendments to the Trade-mark and Designs Act, incorporating the provisions of previous Bills, was drawn up by Mr. Gerald H. Brown, Secretary of the Labour Committee of the Government, in conjunction with Mr. Ritchie, registrar of Trade-marks and Mr. Gisborne, Parliamentary counsel. These amendments, however, have not yet been presented to Parliament.

We would, therefore, earnestly request that legislation be introduced at the present session of Parliament which would provide proper protection against the infringement and misuse of these labels, cards and buttons.

National Fuel Policy

The importance of a national policy to ensure to the people of this Dominion a regular supply of coal at reasonable rates was emphasized in resolutions adopted at the last convention of the Trades and Labour Congress. These resolutions pointed out the present chaotic conditions existing in the coal mining industry due to over development, over capitalization and irregular operation of the mines. The result of this brings considerable unemployment and actual starvation for the miners, high prices, and often lack of coal, for the consumers, and a steadily increasing dependence upon the United States for our coal supplies. The control of our coal areas now being generally vested in provincial legislatures, it will probably be held to be outside the scope of the Federal Government to take steps to nationalize this industry. However, we feel sure that there are many measures which might be taken which would materially assist in remedying the unsatisfactory conditions referred to.

Discussions have already occurred in Parliament and some experiments have been made to ensure regularization of coal supply by subsidizing transportation, by bonusing development of coke production, by the imposition of tariffs on certain grades of coal, etc., etc. Any good resulting from measures of this kind can, however, be easily nullified, and the consumer exploited so long as production and distribution remains a private function, uncontrolled.

We would urge, therefore, that measures be undertaken to secure co-operation with the Federal authorities of the Provincial Governments especially having control of coal pro-

ducing areas, to the end that a national policy might be evolved which would ensure proper development of the coal resources of Canada, more regular employment for the workers in the industry and the greater distribution at reasonable prices of Canadian mined coal.

Militia Act Amendments

Complying with representations made to the Government in January 1924, by the Trades and Labour Congress, amendments were made during the following session of Parliament to the Militia Act having for their purpose the restriction of the use of Federal troops during industrial disputes. Included in the requests at that time was one that the Federal Government should be given discretionary powers as to their compliance with such requisitions for troops even when made by a municipality or a provincial government. This particular request, however, was not incorporated in the amendments to the Act.

During the recent strike in the Nova Scotia coal areas, when troops were again demanded by the Provincial authorities, the Federal Government claimed to have no control as to the numbers which might be despatched to the area and we wish to again reiterate our belief that it is in the interests of Federal authority that further amendment should be made to the Militia Act placing the discretionary powers previously sought with the Federal Government.

A further amendment to the Militia Act is asked in order to give effect to the request embodied in the following resolution adopted by the 1925 convention of the Trades and Labour Congress and on which early action is sought in order to prevent repetition of similar tragic circumstances:—

"Whereas, recent disturbances in Cape Breton, which culminated in the killing of William Davis and the wounding of several of his fellow workers, was directly attributable to the provocation of Besco's armed company police, and whereas, but for their presence and their brutal efforts to cow the workers, there is little likelihood that any violence or disorder would have ensued. Therefore, be it resolved, that this convention of the Trades and Labour Congress of Canada demand immediate and drastic legislation, prohibiting corporations from maintaining armed forces."

This declaration is meant to apply only to such armed forces as are designed for use during Industrial disputes.

Whether by amendment to the Militia Act or by elimination of provision in the militia estimates for military training of school children, we request that steps should be taken which, without interfering with the jurisdiction of the provincial authorities on matters of education, would give effect to the following resolution of protest passed at the 1925 convention of the Trades and Labour Congress:—

"Whereas, military training as practised in the public schools is a pernicious and deceitful method of imbuing the youth with militarist and jingoist aspirations, aiming not so much at the development and training of the muscles as at shaping the mind during the most impressionable period of a boy's life, therefore, be it resolved that this convention of the Trades and Labour Congress of Canada protests against military training in the schools."

International Labour Conventions and Recommendations

By the signing of the Treaty of Versailles, the Canadian Government not only became a member of the League of Nations, but also accepted membership in the International Labour Organization and have since been fully represented at the conferences of that body and also held Government membership on the Governing Body of the same.

The purposes of this International Organization are, we think, well enough known to all and therefore need not be referred to at this time. In all, seven conferences have been held (1919-1925) and a large number of conventions and recommendations emanating from these conferences forwarded to the Governments of the respective member states.

Many of these have been considered by the Canadian Government as coming within the jurisdiction of the Provincial Legislatures. Whilst we believe that all these conventions and recommendations should receive equal consideration from the Government, we are not dealing with those affecting, exclusively agricultural workers, but confining representations to those which apply to conditions of industrial and commercial workers whom we directly represent.

In the hearing before the Supreme Court of Canada of the stated case regarding the jurisdiction of the Federal and Provincial Governments on the eight-hour day, representations were made by the Ontario and Nova Scotia Governments that all these conventions came within the section of the British North America Act respecting treaties, giving to the Federal Government full and exclusive power to legislate upon them. We still adhere to the belief that this provides the only effective method of ensuring uniform national action on these matters but realize that it may be some considerable time before this policy is adopted. We, therefore, confine our present request to action on those items which have been generally accepted by the Government as coming within Federal jurisdiction.

We are very glad that the final steps have been taken to register ratification on four of these conventions respecting conditions of employment at sea and press for further action which will enable ratification by Canada of a number of other conventions and give legis-

lative effect to a number of the recommendations.

Without enumerating all of these items in detail, we particularly desire to draw attention to the following:—

1. *Draft Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week.*

The decision of the Supreme Court recognizes the power of the Federal Government to give effect to this convention so far as its own employees and those employed on Government works are concerned.

2. *Recommendation concerning unemployment.*

This recommendation contains provisions prohibiting the operation of private employment offices, permitting the recruiting of bodies of workers in foreign countries only by mutual agreement, providing for the introduction of a system of unemployment insurance and for the co-ordination of public works with a view to the avoidance of unemployment.

The above are covered by requests included in our proposals on immigration and unemployment.

3. *Draft convention concerning the use of white lead in painting.*

Doubt has been expressed as to whether action on this matter would conflict with the jurisdiction of the provinces but we draw your attention to the similarity between this and the convention prohibiting the use of white phosphorous which was ratified by the Federal Government several years ago.

4. *Weekly rest in commerce and industry.*

This draft convention provides for a weekly rest day in industry and a recommendation to the same effect is applicable to workers in commercial establishments.

At the Federal-Provincial Conference held in Ottawa, September 1922, the following resolution was adopted:

> Resolved, that this conference approves of the principle of the Draft Convention and suggests that the Federal Government takes such steps as may be necessary to ensure ratification after consultation with the Attorneys-General of the various provinces.

The present Lord's Day Act is obsolete, exempting as it does all workers already enjoying the eight-hour day and we respectfully submit that new legislation embodying the principles of this convention and recommendation should be enacted in preference to amending the existing Lord's Day Act.

5. *Recommendation regarding gathering of statistical information on immigration, emigration and the transit of emigrants and immigrants.*

It is understood that this recommendation is being complied with by the Dominion Government except as regards statistics of emigration. We respectfully suggest that it would be in the interests of Canada to fall in line with other countries and gather reliable statistics as to the numbers of people emigrating from this country.

We wish to reiterate our full support of Canada's membership in the League of Nations and International Labour Organization and our belief that it is essential in order to encourage action on matters which come within provincial jurisdiction that the Federal Government should seek, at all times, to secure the co-operation of the Provincial Legislatures on such matters and also in having representatives attend the annual conference of the International Labour Organization.

Shipping Act Amendments, Seamen's Conditions and Marine Matters

We first wish to record our appreciation of the action taken in giving effect from January 1, 1926, by proclamation, to the amendments made to the Shipping Act, July 1924, and concerning the minimum age for admission of children to employment at sea; unemployment indemnity in case of loss or foundering of a ship; minimum age for the admission of young persons to employment as trimmers and stokers and provision for the compulsory medical examination of children and young persons employed at sea, also the action of the Government in authorizing, by Order in Council P.C. 357, of the 11th March 1926, the ratification of the four international conventions complied with by this new legislation.

We regret, however, that no action has yet been taken on the many requests previously submitted in the memorandum prepared in 1923 by the National Association of Marine Engineers and submitted by them in conjunction with the Executive of the Trades and Labour Congress to the Department of Marine and Fisheries. In 1914 a new Shipping Act was prepared by the Department of Marine and Fisheries but owing to the interference of the war time period it was not proceeded with. We have been given to understand, on several occasions, that either that Bill or amendments to sections of the present Act would be introduced but up to the present these promises have not been fulfilled.

The amendments sought are, briefly; to section 566 so as to broaden the provision for in-

spection and safety requirements; to Section 573, 588 and 623 increasing the qualification for inspectors and the standards of examination; to Section 632 and 649, which deal with the granting of temporary certificates and classification of engineers by grades.

We again wish to enter protest against the practice authorized by Order in Council which permits Norwegian and other foreign owned vessels to operate in coastwise port to port trade in Canadian waters, which practice is causing considerable unemployment amongst Canadian seamen.

We again reiterate our previous request for the adoption of the British Columbia standard of wages by the Marine and Fisheries, Public Works and other Departments of the Government on all vessels operated by them in other parts of Canada.

It has been requested, on past occasions, that the subsidies paid to the Royal Mail Steam Packet Company for the operation of vessels between Canada and the West Indies should be used to equip Canadian Government Merchant Marine Steamers with the required passenger accommodation, freight and refrigerator equipment to carry on this trade. This request is again reiterated with the addition that should the improved service demanded under the new West Indies Treaty call for the construction of new ships that these should be built in Canada and manned by Canadian citizens and that such service should be operated in conjunction with the Canadian National Railways.

We further request the Government to give consideration to the advisability of placing a duty on ships used exclusively in Canadian trade that are built or repaired outside of Canada, in order to rehabilitate our ship building industry and alleviate the unemployment existing amongst the ship building trades.

Conditions of Employment in Postal Service

Since the postal strike of July 1924, the Executive of the Trades and Labour Congress, along with representatives of the Letter Carriers and other Postal Workers Organizations, have made numerous representations to the Postmaster General requesting the payment of the difference in salaries paid to those workers for the two months subsequent to the termination of the strike. On the 22nd of March we were notified, by the Postmaster General, that these requests had now been complied with and the Congress Executive joins with the Postal Workers Organizations, whose members are directly affected, in expressing appreciation of this commendable action on the part of the Postmaster General, the Hon. Senator Charles Murphy, and the Government. We feel sure that this action will do much to restore harmonious relations between the Department and its employees.

Our further representations made on behalf of the Federated Association of Letter Carriers are confined, at this time, to the request, contained in a resolution adopted by the 1925 convention of the Trades and Labour Congress of Canada, which asks that as a means of overcoming the arbitrary powers conferred on the Civil Service Commission over these employees, that Section 45b, Civil Service Act, 1919, be repealed.

It is held that the routine of the Civil Service Commission is such that the Service suffers great hardship through their dilatory and arbitrary procedure of having all the Service classified before any particular Department can be dealt with and further that the system of inter-related salary schedules for all branches of the Service has no relation at all to the duties performed. The absence of any reasonable system of promptly redressing grievances, which arise under the operation of this section of the Act, and which are thereby referred to the Commission for adjustment, is creating much injustice and discontent in the ranks of the postal service. It is respectfully suggested, therefore, that machinery be established, either through the Industrial Disputes Act or some similar manner, whereby classification and fixing of salaries and matters arising therefrom may be dealt with promptly and with justice to the men concerned.

District Agricultural Statistics

Under the title "Agricultural Statistics by Counties and Crop Districts" the Dominion Bureau of Statistics has published a report designed to present by counties and crop districts the annual estimates of agricultural acreages and production and numbers of farm live stock. Previously these estimates have been published by the Bureau in the form of provincial totals only.

The report meets the demand for information respecting the agricultural and live stock production of local areas smaller than those of the several provinces. Such information is especially sought by manufacturers and others desirous of ascertaining the purchasing power of particular localities with a view to the possible establishment therein of new industries,, or the expansion of existing business.

NOTES ON LABOUR UNION ACTIVITIES

Federation of Catholic Workers of Canada

A delegation representing the Federation of Catholic Workers of Canada laid before the Dominion Government on March 18 four recommendations based on resolutions adopted at the annual convention of the organization held at Three Rivers, Quebec, last October. A list of the resolutions passed at that convention was given in the Labour Gazette for October, 1925.

The delegation was composed of the following members: Chevalier Pierre Beaulé, president of the Confederation, and Messrs Achille Morin, Hull, 1st Vice-President; G. J. Bolduc, Three Rivers, 2nd Vice-President; F Laroche, Quebec, General Secretary; M. J. Comeau, Treasurer; Abbé Alfred Coté, Quebec; Abbé Chamberland, Three Rivers, and Thomas Poulin. The delegation was received by the Prime Minister, the Right Honourable W. L. Mackenzie King; the Honourable Ernest Lapointe, Minister of Justice, and the Honourable P. J. A. Cardin, Minister of Marine. The recommendations were as follows:—

Shipbuilding.—Whereas the Canadian ship-yards have been undergoing a crisis these last few years; and whereas most of the shipbuilding is actually done in England, with the result that a considerable volume of work is thus taken away from Canadian workers; and whereas the firms operating the shipyards in Canada have made heavy expenses and great sacrifices in order to answer the needs of navigation in Canada; and whereas all ships built in England and doing coasting service in Canadian waters are exempted from duty; the Federation of Catholic Workers of Canada strongly urge the Government of Canada to impose a duty of 40 per cent on every vessel built outside of Canada and registered in the Canadian coasting service, and that a preferential tariff of 20 per cent be imposed on vessels built in England for these same purposes.

Tariff Board.—This Conference do not wish to discuss the question of British preference, but they have ascertained with regret that the British preference does not at present fully answer to the end assigned to it in regard to favouring British and Canadian industries. This Conference is convinced that the Canadian industry is in a position to compete fairly with the British industry protected by a preferential tariff, but experience has shown us that this competition has become impossible since this preference indirectly favours goods coming from countries whose currency is suffering from depreciation. This Conference urge the Government to amend this British preferential tariff in such a way as to make it applicable exclusively to goods wholly manufactured in England. The Conference, to this end, urge the appointment of a competent Tariff Board.

Union Label.—This Conference beg the Government to amend the Registration Act in such manner as to permit labour unions to register their union label.

Labour Adviser.—This Conference insists again that the Catholic Syndicates be given official recognition by the Federal Government in a practical way and, especially, by the appointment of a technical labour adviser to the Canadian delegation at the International Labour Conference.

The Prime Minister assured the delegation that the matters submitted by the Federation would receive careful consideration from the Government with the least delay possible. The questions concerning the tariff would be referred to the Tariff Advisory Committee.

New Brunswick Federation of Labour

The thirteenth session of the New Brunswick Federation of Labour was held at Fredericton on March 16-18, president J. E. Tighe, of St. John, occupying the chair. In his opening address the president referred to mothers' allowances and minimum wages for women as the legislative reforms that were most urgently needed by labour at the present time. Many resolutions were submitted, and the following legislative programme was finally adopted:

Theatres and cinematographs act.—That this act be amended to provide for the appointment of a provincial inspector who shall be a licensed operator; the appointment of a licensing and examining board to consist of the inspector and three licensed operators; said board to have power to cancel or suspend any operator's license for cause; three classes of operators' licenses to be issued, namely, class A, chief operator; class B, assistant operator, and class C, apprentice; license fees to be $5, $3 and $1 respectively; every theatre using more than one projector to have at least one chief operator and an assistant holding a class A or B license in the operating room at all times during the performance; all operating rooms to be constructed of fireproof material and equipped with safety appliances in accordance with the specifications of the New Brunswick Board of Fire Underwriters, and subject to the approval of the Fire Marshal and Inspector; all moving picture machines in use in the province to be in charge of a class A operator.

Old Age Pensions.—We would urge upon the Government the need of co-operating with the Federal Government in the establishment of an Old Age Pension scheme, as proposed by the Federal Government.

Mothers' Allowances—We endorse the principle of allowances for mothers and the recom-

mendations of the commission as stated in their report of last year. With regard to their recommendation No. 4, we would recommend that the administration board consist of five members, two of whom shall be women.

Minimum Wage Act for Women and Children.—We would urge the Government to give the recommendation of the commission of inquiry into Mothers' Allowances and Minimum Wage Acts legislative effect this year.

Public Ownership of Public Utilities.—We would urge the Government to develop Grand Falls under public ownership and control, feeling that this is a birth-right of the people and should not be given to any private person or corporation under any conditions, but so developed that all the benefits will accrue to the people, believing that the greatest benefits to the greatest number can be obtained only under public ownership and control.

Special Sales Tax on Mail Order Houses.—It has come to our notice that a bill is to be introduced in the legislature imposing a sales tax on all business done by mail order houses in this province. We believe this would be a very unfair tax and would tend to restrict open competition and result in depriving a large part of the buying public of economies afforded by dealing with these houses.

Workmen's Compensation Act.—If it is the intention of the Government to consider amendments to this act at this session we would request that they also take into consideration the following amendments:

(*a*) That section 36, subsection (4) be amended to provide that in all cases of death the widow and children shall receive not less than $30 and $7 respectively.

(*b*) Section 36 (1), (a) be amended to read "continuing for more than six days" instead of seven days as at present.

Free School Books. We urge that the secretaries of school boards be instructed through the Board of Education to make application for free school books as provided last year, and that scribblers be added to the free list.

Amusement Tax. It has come to the attention of this Federation that the Government is considering raising the tax on amusement tickets. When this tax was first placed on amusement tickets it was the general opinion it was done as a war measure, to raise revenue needed during that period, and are now looking for the abolition of this tax instead of any increase, and as this tax is in most part paid by the labouring people who patronize such amusements as motion pictures, baseball games, hockey games, etc., we are therefore opposed to any increase to this tax but rather look to its abolition.

Industrial Disputes Investigation Act. We are in favour of the legislature passing an act as has been suggested which will make the federal act effective in this province.

The text of the resolution on this subject was as follows:

Whereas it was enacted by chapter 14 of the Acts of the Parliament of Canada, 1925, entitled "An Act to amend the Industrial Disputes Investigation Act, 1907," that the said Act shall apply to, inter alia, "any dispute which is within the exclusive jurisdiction of any province and which by the legislation of the province is made subject to the provisions of this Act; and

Whereas it is deemed expedient, in view of the amendment recited above, that provisions of the said Act shall be made to apply to industrial disputes of the nature defined in the said Act which are within the exclusive legislative jurisdiction of the province, therefore be it

Resolved that this Federation request the provincial government to pass the necessary legislation making the Industrial Disputes Act applicable to industrial disputes in this province."

Factories Act. That the present act be completely redrafted, but to continue the administration under the Workmen's Compensation Board.

Labour Representation on Public Boards. We would urge the Government to give labour representation on all public boards appointed by them.

Mining Act. Legislation to be enacted for the regulation and inspection of mines to conform as closely as possible to the decisions of the Unification of Labour Laws Commission.

Minto Coal Strike. This Federation would urge upon the Government that the fullest possible support and encouragement be given its commission, affording all possible opportunity to a proper and complete presentation of the case for the men by properly accredited representatives of the men to the exclusion of the One Big Union.

Lumbering Industry.—We urge the incoming Minister of Health and Labour to hold a thorough investigation as to hours, wages, conditions, etc., of the men working in the lumbering industry of this province; with the view of having these men attain the same standard of living that is enjoyed by the workers in other parts of the province. We would further recommend that legislation be enacted at this session of the legislature or by order-in-council, limiting the hours of work to not more than nine in any one day in this industry.

Fair Wages.—The following resolution was adopted on motion of the St. John Trades and Labour Council:

"Whereas the Saint John Trades and Labour Council has been for some time endeavouring to have a Fair Wage Officer appointed for the Maritime Provinces, and

"Whereas the Western Provinces of Canada are provided with Fair Wage Officers and we know that in

many cases where the good offices of the Fair Wage Officer have been available that many strikes and lockouts have been averted, therefore be it,

"Resolved that this Federation in convention assembled go on record as being in favour of the appointment of a Fair Wage Officer for the Maritime Provinces, and that the secretary-treasurer of this Federation urge upon the Dominion Government the necessity of the appointment of same, and be it further

"Resolved that a copy of this resolution be forwarded to the officers of the Trades and Labour Congress of Canada."

The convention was addressed by the Hon. J. B. M. Baxter, premier, and the Hon. P. J. Veniot, ex-premier of the province.

The following officers were re-elected:—President, J. E. Tighe, St. John; Secretary, G. R. Melvin, St. John.

Division No. 4, Railway Employees' Department, American Federation of Labour.

The sixth biennial convention of Division No. 4, Railway Employees' Department, American Federation of Labour was held at Montreal on March 27, president R. J. Fallon, in the chair. A larger number of delegates attended the convention than at any time since the division was organized. The final report of the credential committee showed 169 delegates present, including 15 boilermakers, 13 blacksmiths, 68 carmen, 6 electrical workers, 37 machinists, 1 pattern maker, 5 pipe fitters, 4 sheet metal workers, 3 local councils, 3 short line system federations and a number of visitors.

Tom Moore, president of the Trades and Labour Congress of Canada and Labour member of the Board of Directors of the Canadian National Railways, was introduced and delivered an address. "You are meeting to-day in better circumstances than two years ago, "he said," for trade in general is showing signs of improvement. The returns for this year up to the present time show that the gross tonnage of the Canadian National Railways is 10 per cent higher than one year ago. This indicates a revival in industrial activities throughout the country."

Reports of the president and the secretary-treasurer showed that despite the continued trade depression in Canada the division has maintained its membership, some organizations reporting substantial increases.

Secretary-treasurer Dickie's report showed that the loan of $10,000, necessitated through the failure of the Home Bank about two years ago wherein was deposited the funds of the division, has been paid.

President Fallon's report said: "We have met with remarkable success in stabilizing hours, largely by bringing back railway work to railway shops, and our men have not suffered a close down of the shops nor a reduction in staff since the union management co-operative program was launched in the Canadian National Railways. The Canadian National Railways' shops have secured a large amount of work previously done in contract shops under unfair conditions, even to the extent of handling all of this year's requirements of new equipment (cars and locomotives). On the latter some $150,000 will go into the hands of our members which otherwise they would not get, besides demonstrating what can be done in their own shops. "As regards our relations with the running trades organizations (transportation brotherhoods) a most excellent understanding exists whereby co-operation prevails on all matters apart from schedule work, and they are very careful not to compromise their position in that connection."

Referring to the movement for the amalgamation of craft unions the president said: "As this is a matter for each craft to decide for itself according to their respective conventions, I am of the opinion that it would be best to leave the matter entirely to them and devote our energy as a federated movement to create that federated spirit among crafts and that personal good-will and co-operation that is so necessary to bring about closer relationship, be it amalgamation or any other kind of working agreement."

On the recent activities of the Canadian Brotherhood of Railroad Employees the convention unanimously passed the following resolution:

Resolved, that this convention of Division No. 4 goes on record as requesting its affiliated organizations and members thereof to refrain from participating therein or attending any conference of a purely trade union character where members of the Canadian Brotherhood of Railroad employees are present as delegates, and be it further

"Resolved, that division officers make every effort to curb the activities of the Canadian Brotherhood of Railroad Employees which in any way conflicts with the interests of the international labour movement."

Division No. 4 pledged itself to give all assistance to the International Brotherhood of Stationary Firemen and Oilers in its campaign to organize this class of worker on Canadian railways and that the executive officers give consideration to the affiliation of this organization if such affiliation is requested by responsible officers of the organization.

The convention decided to start an immediate drive for wage increases and improvements in working conditions. A large part of

the time of the convention was occupied in considering schedule matters resulting from this decision.

Shopmen were urged to establish local councils where they do not already exist and to do everything possible to strengthen those already established.

Resolutions were passed recommending that the age limit for old age pensions be fixed at 65 instead of 70 years; and that the bonus system in connection with wage payment be abolished, or the amount distributed on a collective or pool basis.

R. J. Fallon was unanimously re-elected president, as was vice-president Frank McKenna and Secretary-treasurer Charles Dickie.

District officers were elected as follows: President, D. S. Lyons, Winnipeg; vice-presidents, T. Rugby, Winnipeg, and C. Clarke, Stratford; secretary-treasurer, H. Kempster, Winnipeg.

Winnipeg, Manitoba, was chosen as the next convention city.

Dates of Coming Conventions

Electrical Communication Workers of Canada, at Winnipeg, in April.

Amalgamated Association of Iron, Steel and Tin Workers of North America, at Washington, D.C., on April 6.

Federation of Technical Engineers, Architects and Draftsmen, at Washington, D.C., in April.

Brotherhood of Dominion Express Employees, at Toronto, in May.

United Wallpaper Crafts of North America, at New York, in May.

Amalgamated Clothing Workers of America, at Montreal, in May.

American Federation of Musicians, at Salt Lake City, in May.

American Wire Weavers' Protective Association, at New York, in May.

Associated Actors and Artistes of America, biennial convention, at New York, in May.

Toronto District Trades and Labour Council

The Toronto District Trades and Labour Council, at a meeting on March 18, unanimously adopted a report of the legislative committee recommending certain amendments to the Federal Old Age Pension Bill, now before Parliament. (The principles incorporated in the bill were stated in a note in the last issue of the Labour Gazette). The suggested amendments were to the effect that "the state pension should be available to all who choose to claim it at the qualifying age, which we recommend at 65 years of age; that the pension maximum be $30 per month, without restrictions, and that the Act be a Federal Act binding upon the provinces."

Amalgamated Clothing Workers of America

The Amalgamated Clothing Workers of America, an organization of 125,000 members engaged in the making of men's clothing, will meet in convention in Montreal at the Mount Royal Hotel on May 10. This is the first time for the Association to meet in Canada, and 350 delegates and about 150 guests are expected to attend.

The convention will last for one week and will be preceded by the meetings of the executive of the association which will begin its sessions one week earlier, on May 3, in preparation for the business of the convention. Sydney Hillman, president of the association, will preside at all meetings, and other international officers present will be Joseph Schlossberg, general secretary; Jacob S. Potofsky, assistant general secretary, and Bryce M. Stewart, formerly director of employment for the Canadian Government, now employment director for the Amalgamated Clothing Workers.

Organization work, ways and means of improving conditions and unemployment insurance are some of the matters which will come before the convention. Unemployment insurance has been established in Chicago in the men's clothing industry, and the organization now plans to put it into force in other cities, the next city to be concentrated upon being Philadelphia.

National Women's Trade Union League of America

The tenth biennial convention of the National Women's Trade Union League of America will be held at Kansas City, Missouri, on June 28-July 3. This organization is endorsed by the American Federation of Labour and by the Trades and Labour Congress of Canada. Its headquarters are at Chicago. It does not issue charters to trade unions of women, its efforts being directed to encouraging female workers to join existing organizations. The convention call states that "great industrial areas are still untouched by organization, have still to be reached with the trade union idea. We must advance upon the new highways of opportunity thus opened to us. To these new opportunities we must respond with renewed zeal, with a loftier conception of our high privilege as co-workers in the labour cause, with fresh methods of co-operation and accomplishment.

"The need has become acute for new organization methods and technique designed to meet this newer unionism. This includes a

concise setting forth of our principles and standards that they may be immediately intelligible to both worker and employer. We shall therefore invite our convention delegates to participate in a One Day Institute on Organization to assist in the development of these new methods. Data now being compiled will be distilled and the result molded into serviceable form for use in this new approach to the complex organization problem.

"New organization methods and technique command an important place on the convention programme for workers' education, recognized to-day both by labour and learning as an important movement in itself. A widened vision helps the worker in understanding his relationship and responsibility to industry and to society. And only an informed leadership can establish a sound basis for the collective merchandising of a day's work."

International Federation of Trade Unions

The Bureau of the International Federation of Trade Unions (I.F.T.U.) met at Amsterdam on February 11 and 12, and decided to submit to the next meeting of the General Council of the International Federation of Trade Unions a letter from the General Council of the British Trades Union Congress, requesting that further consideration should be given to the proposal for a conference on an unconditional basis with the Russian trade unions with a view to the restoration of international trade union unity.

The Bureau also decided to submit to the General Council of the International Federation of Trade Unions the letter in which the All-Russian Central Council of Trade Unions informed it that the Council maintains its previous proposal for a joint conference on an unconditional basis.

The Bureau considered the possibility of arranging a conference between representatives of the International Federation of Trade Unions and representatives of the American Federation of Labour on the occasion of the visit of the latter to Europe for the forthcoming International Workers' Congress on Migration.

Industrial versus Craft Organization in Germany

The German trade unions held a convention recently at Breslau at which definite action was taken on the question whether the General Federation of Labour should be organized on the basis of crafts or industries. This question has been under discussion for about thirty years. A committee had been passed at the congress at Leipzig in 1922 to draft a plan for industrial organization for submission at the Breslau conference. Various difficulties developed, however, such as the difficulty of deciding, in many cases, to which of two industrial federations certain occupations should belong. But a still greater difficulty lay in the fact that it is impossible by a mere resolution to force workers who have belonged for decades to one union to quit it and join another union in which they feel themselves strangers. These workers would be entirely lost to the trade-union movement.

The congress avoided the risk of the disruption of the existing organization, and adopted a resolution, to which all but two of the constituent federations were finally won, urging voluntary amalgamation of the federations along voluntary lines. One of the leaders of the metal workers' union commented on the decision of the convention as follows: "This latest attempt to solve this old controversial problem has plainly demonstrated that in practice such a solution is much more difficult than has generally been assumed. Tradition, peculiarities of individual crafts, attachment to the old organization, and other circumstances hinder its solution. This fact cannot be changed by any resolution of a congress but only by gradual development."

Proposed Amendments to British Factory Laws

A bill to amend the existing factory legislation was introduced in the British Parliament in March by Miss Ellen Wilkinson. The bill aims at extending the protection of the Factory Acts to such dangerous works as building and excavation, which have hitherto been exempt, and in addition makes provision for the following reforms: More effective cleaning of work-rooms; less overcrowding, consequent upon the allocation of 400 cubic feet instead of 250 feet to each worker; better lighting, ventilation, and regulation of temperature; more efficient medical supervision; special provisions for the prevention of sickness in conspicuously unhealthy trades; safer protection against moving machinery; more effective inspection of boilers and electrical plant; inspection of staircases, floors, etc., to prevent their overloading and subsequent collapse; stricter precautions against fire; improved washing, first aid, and sanitary facilities; prohibition of nightwork in bakehouses; removal of dust and fumes from workrooms; forty-eight hour week for women and young persons, with proper rest periods; protection of outworkers by insistence on stamped weights and measures; prohibition of heavy weight lifting by women and young persons.

EFFECT ON MIGRATION OF BRITISH SCHEMES OF SOCIAL INSURANCE

THE Secretary of State for Dominion Affairs presented to the British Parliament recently the report of the inter-departmental committee recently appointed "to consider how far the existing provision for Old Age Pensions and for National Health and Unemployment Insurance tends to discourage migration from this country (the United Kingdom) with a view to settlement in the Empire overseas, and how far any such tendency will be accentuated by the Widows', Orphans' and Old Age Contributory Pensions Act; and in what manner any adverse effect resulting from such legislation can best be counteracted." (The appointment of this committee was noted in the Labour Gazette, December, 1925, page 1164). In the opinion of the committee, the two chief causes which tend at the present time to discourage migration are (1) bad trade conditions and (2) the restrictions which the Dominion authorities find it necessary to place on the grant of assisted passages. The committee also believe that while these are the most important causes the cumulative effect of the various schemes of social insurance is a subsidiary one, these schemes tending to discourage migration, both directly as a result of the sense of security they induce, and indirectly in that they raise the standards of living in Great Britain, and so counteract to an appreciable extent the attraction of the life of independence offered in the Dominions. A consideration of each scheme separately shows, in the opinion of the committee, that National Health Insurance does not act perceptibly as a check on migration. They consider, however, that Unemployment Insurance and the comparatively recent extension of outdoor Poor Law Relief to able-bodied persons discourage migration to an appreciable extent at precisely the ages when, other things being equal, it might be expected that the opportunities of overseas life would prove most attractive.

The committee do not consider that Old Age Pensions, under either the non-contributory or the contributory scheme have any considerable effect, while the effect of widows' and orphans' pensions must necessarily, at this early stage of operation, be largely a matter of conjecture. It is thought, however, that this scheme will have some influence on married men and that there is little doubt that the prospective loss of pension will be a material consideration in the case of widows contemplating migration. It is the belief of the committee that when openings in the Dominions are more varied and attractive, as they should become with improving trade conditions if bolder and more comprehensive schemes of development and settlement are undertaken, and if it were possible to modify the restrictions on assisted migration and, in particular to facilitate the migration of families and of women, social insurance legislation would have little effect in discouraging migration.

The committee state that they have received evidence of the existence of a fear among labour organizations that a substantial increase in migration overseas may have the effect of lowering wage standards in the Dominions, and this fear has sometimes led to opposition to the policy of assisted migration. It is the belief of the committee that these fears are groundless; indeed, doubts have been expressed as to whether it will be possible for the Dominions to maintain their present standards of living without a substantial and balanced development of their agriculture and industries, for which development the first requisite is more people, both as producers and as consumers. Under the Empire Settlement Act and the schemes of assisted passages, it is possible to control and direct the flow of assisted migration, so as to ensure the absorption of settlers without dislocation to local industries.

The Motor Vehicle Act of Quebec provides that the Lieutenant-Governor in Council may require that operators of motor vehicles pass an examination to establish their competency to drive a motor vehicle. Accordingly, an order was made on March 24, requiring every applicant for a license as operator of a motor vehicle to show the license issued to him for the previous year, or a certificate signed by an examiner under the Act, showing that he was a competent driver.

At the convention of the Federation of School Teachers of Prince Edward Island, held recently, a resolution was passed urging the provincial government to increase the salaries of the female teachers so as to make them equal to those of men of the same qualifications. The Federation also asked for modern text books in arithmetic and other subjects, and the discontinuance of the issuing of a license or permit to any teachers who have not passed a regular examination.

VOCATIONAL EDUCATION IN SCHOOLS AND INDUSTRY*

VOCATIONAL schools of less than college grade are a recognized part of every modern educational system. In Canada they are still in the early stages of development and have not yet had time to prove their real worth. Vocational education in secondary schools has not been in existence for more than twenty years in any part of Canada and in most communities the development of industrial courses in day schools has been confined to the past five or six years. Indeed, in a few cities and in many smaller communities industrial education is still a development of the future or is limited to poorly organized evening classes in such subjects as mechanical drawing, woodworking and auto mechanics. However, the foundations have been laid and, despite the fact that serious mistakes have been made, such that the whole structure will have to be altered or rebuilt in many instances, it may safely be said that vocational schools have come to stay and will play an increasingly important part in the future development of Canada's educational systems.

Having accomplished the task of introducing vocational courses into secondary school systems of the Dominion, it is now the duty of administrators and teachers of this work so to organize and teach the various courses of study that the best possible results will be obtained without unnecessarily increasing the already heavy expenditures on school work. Those responsible must devise systems of vocational education which are best suited to the educational needs and industrial conditions of Canada.

It is very encouraging to find that in some of our larger industrial communities the schools are no longer content merely to copy what is being done elsewhere. They have studied the needs of the local situation and have developed methods and courses based upon local requirements and the experiences of educators in localities where similar conditions exist.

It is the purpose of this paper to review briefly existing aims and practices and to point out how schools and industry can work together in their common task of fitting young people into industrial life.

Before we can determine the parts which each should play in a system of education, there must be a mutual understanding on the part of all concerned as to the meaning and purpose of education and the scope and aims of that part of the educational program which concerns both vocational schools and industry.

*Extracts from paper read by Mr. A. W. Crawford, director of Technical Education, Department of Labour of Canada, at the annual convention of the Ontario Educational Association, April 5-9, 1926.

18700—4½

Meaning and Purpose of Education

Education has been defined in different terms and from various viewpoints, but a commonly accepted idea of educational activities is that they include all types of organized instruction and training the purpose of which is to enable individuals to live better lives. In other words, the purpose of education is to develop and train individuals so that they may function effectively in whatever environment they may find themselves. Such a vague and comprehensive objective is too indefinite to serve as the basis for a school program of studies because schools can provide and supervise only a small part of the educational activities and experiences of any individual. In order to set up any definite feasible objectives for a system of vocational education, as distinct from general or cultural education, it is necessary to know what activities and habits are affected by vocational education which are not equally or similarly affected by general education.

When we attempt to list the activities affected by both types of education we discover that the only differences are found in those actions and habits which have to do with the individual as a producer of wealth, or, in other words, with man's use and development of natural and human resources. Both have the same aims and effects in connection with the personal and social activities of the individual, but whereas a general educational program is prepared with very little thought of the use which the student will make of his knowledge in training in connection with his occupation, the whole program of vocational education is centred in the vocational interests, abilities and activities of the student. Theoretically, general education aims to prepare pupils for all the activities of life, while vocational education is primarily concerned with the vocational activities.

Without entering further into a discussion of the meaning and purpose of education, we may accept the statement that one of its aims is to fit people for earning an independent living. Whether or not this particular aim should be a responsibility of the publicly supported schools is a mater of opinion, but the fact remains that in a new, democratic, social system such as we have in Canada, it is desirable that each healthy individual shall earn his own living during his active adult life. Among our wealthy citizens, even more than among the poor, we look with contempt upon the man who is not willing to earn his way by service through work of some kind.

It may be that Canadians attach too great importance to the money value of education as represented by the potential earning power of those who complete certain courses of training, but the fact is that most pupils who, of their own accord, remain in school after passing the compulsory school attendance age, do so because they wish to fit themselves for service in some well paid, congenial occupation requiring high school or college training. They believe and are informed that the school training is the best or possibly the only method of preparation for their future life work. The great majority of young men who enter universities do so because they believe that the training received is a necessary part of their preparation for earning a living as doctors, teachers, clergymen, engineers, dentists or members of other professional occupations. General or cultural education, and training for increased earning capacity, are so closely interwoven in our school systems that it would be practically impossible to separate them. Indeed, we are forced to the conclusion that all school training has as one of its chief objectives the preparation of young people for earning an independent livelihood. Just how far the schools can and should go in providing direct vocational training for industrial trades and occupations is a question which can only be answered by intensive study and experience.

The Scope and Aims of Vocational Education

One of the difficulties of establishing secondary vocational schools in Canada is the lack of agreement in the minds of those concerned regarding the functions of these schools. Some employers look upon vocational schools as a means of supplying industry with an abundance of well trained mechanics and skilled workers without any special effort on the part of industry itself. Some members of labour organizations believe that vocational schools are tools in the hands of employers which threaten to flood the labour market with half trained workers who will demoralize industrial life by reducing wage rates and increasing unemployment. There is a decided lack of unanimity on the part of educationists and teachers regarding the purpose and value of vocational school training. Anyone studying the vocational schools of Canada will immediately be struck by the lack of uniformity in courses, methods and aims, as indicated by the types of work being carried on.

Such differences are not only necessary but they are highly desirable during the early stages of development through which we are passing. It is only by testing out various ideals and methods that we can hope to arrive at a satisfactory solution of existing problems or to improve existing systems of education so as to keep pace with the ever-changing industrial and social conditions which give rise to our educational problems. However, it is a regrettable fact that few principals of vocational schools, teachers, employers or industrial workers have clear-cut, definite objectives in mind which they are able to convey to others who seek information regarding the aims and methods of the work being done. It is well that we differ in our opinions, but if we wish to convince others that what we are doing is necessary or worth while, we must know exactly what it is we are trying to do and have a clear idea of how we hope to reach our objectives. It is not sufficient to adopt the aims and methods of other countries in the hope that they will solve our problems.

The Technical Education Act, under which the Dominion Government shares equally with the provincial governments in the cost of promoting and developing vocational education of less than college grade, defines the work to be assisted as "any form of vocational, technical or industrial education or instruction approved by agreement between the Minister (of Labour) and the government of any province as being necessary or desirable to aid in promoting industry and the mechanical trades and to increase the earning capacity, efficiency and productive power of those employed therein." This definition limits the field of vocational education to the productive activities of industrial life, and makes no provision for the personal and social development of the individual except in so far as such development increases his effectiveness as a producer. It is a definition which lends itself to simple, definite objectives, although it may be regarded as narrow and purely utilitarian in its aims.

A similar idea of the purpose of vocational education is expressed in the following definition,—Vocational education in any form of organized training and instruction the controlling purpose of which is to fit individuals for useful employment or for advancement in their chosen occupations. This definition, while in no way limiting the subject matter or organization of the courses of study, makes it imperative that the training and instruction of each individual be directly related to his vocational ambition or occupation. In organizing such a program it is assumed that each student has definitely selected the occupation for which he wishes to be trained or that he is already employed and desires supplementary training and instruction which will fit him for advancement or give him increased earn-

ing power. It is also assumed that each student has received or will make arrangements to receive elsewhere any required general education which is not directly related to his chosen occupation. There is no suggestion of providing training for citizenship or leisure.

In their recent book entitled "Vocational Education in a Democracy," Dr. Chas. A. Prosser and Chas. R. Allen define vocational education in its broad sense as "that part of the experiences of any individual whereby he learns successfully to carry on any gainful occupation." In the narrow sense of the term it is defined as "a series of controlled and organized experiences used to train any person or persons for any given employment."

Evidently vocational education includes only that part of an individual's educational experiences which have to do with his activities as a wage earner or professional worker.

In the light of these definitions let us briefly examine some of the aims and methods of vocational education from the viewpoints of schools and industry, in the hope that this may be of assistance in clarifying objectives and determining the parts which each should play in a vocational education program.

The Royal Commission on Technical Education and Industrial Training which was appointed by the Dominion Government in 1910 and which spent three years investigating and reporting on the problems of vocational education in Canada and other countries, has set forth the aims of vocational schools in the following order of importance:—

1. The preservation of health and the vigour of life.
2. The formation of good habits.
3. The development of the sense of responsibility and duty.
4. The preparation of the body, mind and spirit for following some useful occupation.
5. The cultivation of the mental powers, the acquisition of knowledge and the development of the scientific spirit with direct reference to the occupation.
6. The promotion of good-will and desire and ability to co-operate with others.
7. The maintenance of standards and ideals.
8. As all inclusive and ultimate, the perfecting of the human spirit, the improvement of the quality of life itself and the betterment for the conditions of labour, leisure and living.

In fulfilling these aims, much more is involved than would be necessary to meet the requirements of vocational education as defined in the foregoing statements. One hesitates to apply the names vocation to any program which is sufficiently comprehensive to include instruction and training in each of the above divisions.

The aims set forth by the Commission might, with minor alterations, be adopted by any secondary school system in Canada but it is the emphasis which is placed upon numbers four and five and the methods which are adopted to fulfil these two aims which distinguish existing vocational schools from the regular academic high schools. In the high schools it is assumed that those who complete the courses of training will go to colleges and universities where direct training for occupations will be a part of the curricula. No special effort is made to prepare pupils for occupations but it is assumed that those who leave school before entering university will have a general education and training which will be of direct value in whatever occupation they may enter. This is undoubtedly true, but unfortunately for the majority of young people who leave these schools for industrial employment, the training has been so inadequately related to life experiences that much of its value is lost through lack of application or further development and the individuals fail to appreciate the relationship which does exist.

The advocates of vocational schools believe that special attention should be given to the definite preparation of young people for suitable occupations which are available to those who do not go to universities.

Organization and Objectives of Vocational Schools in Ontario

The part which vocational schools in Ontario are expected to play in the education and training of these young people is indicated by the following extracts from the Recommendations and Regulations for Vocational Schools issued by the provincial Department of Education:

"*The Industrial Schools and Departments* are designed to give boys and girls looking forward to employment a thorough training in the essentials of a general education and at the same time to furnish a special training in the subjects and operations which are fundamental to the trades and industries in which they expect to become employed.

"*The Technical High Schools and Departments* are planned to meet the needs of those who are looking forward to occupying junior executive and technical positions in the trades and industries or to proceeding to higher institutions for advanced training in technical and engineering lines.

"*The General Full-Time Day Courses* provided in Vocational Schools and Departments are planned to cover from three to four years of progressive work by pupils in full-time attendance. The great majority of these pupils

will be adolescents from fourteen to eighteen years of age. The courses are designed to give, as a basis of citizenship, an extension of their training in the essentials of a general education, and at the same time a specialized training in the subjects, processes, and operations which are fundamental in the fields of work to which the school concerned is most closely related.

"The importance of developing well-informed and intelligent citizens should be recognized as clearly as the necessity for training efficient workers. It is to be remembered also that instructed intelligence is a most important factor in vocational efficiency.

"The Special Day School Courses of instruction are planned to meet the needs of those not otherwise cared for, who can avail themselves of opportunities for supplementary training in the day time.

Such classes offer opportunities for study to men working on night shifts, women who can spare the time from their home duties more easily in the day than in the evening, or persons who have periods of temporary unemployment.

"Special day courses may be organized also for adolescents required to attend school under the provisions of the Adolescent School Attendance Act who find it more convenient and suitable to attend full time for the period required than part time throughout the school year.

The part-time courses of instruction offered in vocational schools are planned to meet the specific needs of the following groups:—

(*a*) Those adolescents who, under the Adolescent School Attendance Act, are required to attend part-time classes and who elect to enrol in a vocational school.

(*b*) Those adolescents and adults who may be attending part-time classes in a vocational school under an approved co-operative plan in accordance with an agreement by employers, employees and the vocational school concerned.

"The purpose of the evening school courses of instruction in the vocational schools is to offer opportunities for education and training along vocational and related lines to men and women at every stage of their career. Any course of instruction designed to meet the vocational needs of workers in any field may be organized under the provisions of the Act.

"The preliminary organization of the Advisory Committee having been effective, the Committee and the Principal should proceed to make a careful survey of the trades, industries, and pursuits for the purpose of discovering the subjects in which it is desirable to offer instruction, and of determining the kind of instruction that will meet the needs of the community."

As evidence of the fact that the schools are endeavouring to carry out such a program the following extracts from a recent report by the principal of the vocational school in a representative Ontario city may be quoted:—

"The courses offered by the school are all designed to give a good general academic education combined with a thorough training in a number of activities fundamental to the industries and business pursuits. While this training does lead directly into a number of trades and callings, it is intended to give a general training along technical and business lines rather than intensive instruction in any one trade or pursuit."

If the public realized this more generally, it would remove considerable criticism, as many to-day expect the graduates of a Technical School to be experts in some particular trade. The Department of Education, after careful investigation, deliberately chose to establish such types of schools rather than trade schools such as existed in some other countries. The idea is that a student who has received such a general training will be able to learn a specific trade in a much shorter time than one who has not been so trained, and will ultimately, through his wide knowledge of operations connected with his own trade and the related mathematics, science and so forth, be a much more valuable and expert tradesman, and because of the general education, a much more valuable citizen than one who received a narrow trade education only.

The courses given in the school are as follows:—

"First, the general Preparatory Course, which is open to boys and girls with fourth-book standing. This is a one-year course and is designed for those who have shown in the Public School that they are not particularly book-minded, and for those who feel that they are more suited to industrial pursuits than to academic studies. It serves as a preparation for the more advanced courses of the school and at the same time gives a training in a variety of subjects, such as enables the student to make an intelligent choice of the course for which he or she is best adapted.

"Second, the general Technical Course for boys is designed to prepare students for directive positions in the industries. In the third year, students are allowed to specialize along some practical line for which they have shown special aptitude.

"Third, the Home Economics Course for girls is designed to prepare girls for the home-making activities and such occupations as dressmaking, millinery, dietetics and nursing.

"Fourth, the Commercial Course combines a thorough general academic education with an intensive training in stenography, typewriting, bookkeeping, and general business pursuits. It is designed not only to prepare for office positions but also to give a general training to those who may wish to enter business in any capacity.

"While the school is not a trade school, there are a number of trades for which the courses provided make direct preparation. It is proposed to make an effort to guide students into some specific vocation, at least two or three months before they have to leave the school, and then to permit them to spend the remaining time in the special course which will best fit them for this vocation. In this way, every student who leaves the school will have received some special training for a definite vocation.

"This year a determined effort will be made to link up the school with the industries of the city. The Principal will visit the various industries of the city to find out how the day or night school may be made to serve the needs of these industries to greater extent than at present. We shall also endeavour to find in these industries a market for the product of the school, that is, employment for our graduates. In this connection it is proposed to establish an employment bureau in the school. A questionnaire will be sent out to the various employers and business men, in order to determine the nature of the employment, the number of the employees and the probable chances of obtaining employment, both now and during normal times. Our aim will be to bring about such a condition that employers will come to the school when they need young men or women in any capacity."

It is evident from the foregoing statements that the chief concern of vocational schools in Ontario is the general education and welfare of the pupils. In other words, the so-called vocational schools and technical high schools endeavour to fit young people for industrial life without reference to any particular job or occupation and to provide opportunities for the continued education and training of industrial workers so that they may secure a general education and advance to the limit of their abilities or ambitions. These schools represent an organized effort to provide at public expense a type of education for industrial workers which is equivalent to that now being provided for professional workers.

An effort is made by tryout courses in various types of shopwork and commercial subjects, also by interviews and tests, to divide pupils entering vocational schools into groups, according to the type of work for which they appear to be best fitted or in which they have the greatest interest. Courses of instruction are provided which are directly related to the requirements and experiences of workers in these lines of work. The physical, cultural and social aims of education are not neglected but the subject matter of the courses is selected because of its relationship to the present and future living conditions of these pupils and not because of its value in connection with university training. No effort is made to produce skilled workers in the various industrial occupations but an earnest effort is or ought to be made to help each pupil choose a suitable occupation and to prepare him physically, mentally, morally and socially for entrance to this occupation. In addition to laying this broad foundation for industrial life, the vocational school should provide supplementary and part-time instruction for industrial workers who wish to fit themselves for promotion or who desire to remedy defects in their general education in order that they may avail themselves of opportunities for advanced training and enlarged service.

The Scope and Aim of Vocational Education in Industry

Thus it will be seen that when everything possible has been done by full-time day vocational schools, the pupils have received only the preliminary part of their vocational education. A broad foundation of general training has been laid, but the pupils have not been trained for a specific occupation to the extent that they are competent journeymen or mechanics. The working conditions and general environment of the school are so different from those of industry that a period of adjustment is necessary before the pupil becomes familiar with the new conditions and settles down to his work as a producer, working on a time basis. Speed, skill and confidence must be acquired through repetition and varied experiences such as only industry can provide. The ability to co-operate with adults and to work harmoniously under a shop foreman must be acquired on the job. Young people leaving school before the age of 18 lack the mental and moral development which is necessary to successful adult life in industry. They need supervision and assistance in connection with their social and civic problems and should not be left to

make their decisions and fight their way through the period of adjustment without sympathetic competent advice.

In order to determine the part which industry should play in providing this additional supervision and education, it is necessary to understand industrial conditions and the viewpoint of those charged with the responsibility of organizing and administering industrial activities.

Industry's chief aim is to produce and distribute at a profit, raw materials, manufactured articles and structures of various kinds. Only in so far as education enables workers to produce more efficiently, is industry directly concerned with the problems of vocational education. It is not a function of modern industry to produce good citizens nor is industry directly responsible for the physical, mental and moral development of its workers. These duties have been assumed by the schools, the churches and the state, in so far as parents and employers have shifted the responsibility on to society because of changing conditions in home life and in industry.

No matter what our opinions may be regarding the advisability or necessity of the change, we must face the fact that industry no longer accepts the responsibility of providing a general education for young people entering the trades and industrial occupations and, in most industrial organizations, little or no provision is made for supervised training even the purely productive activities of industrial life.

The old system of indentured apprenticeship under which the employer was held personally responsible for the general education and training of his young employees has been abandoned. It is not feasible under modern conditions. No satisfactory substitute has been adopted and, as a result of the rapid development of new methods and organizations in industry, young people entering industrial employment between the ages of fourteen and eighteen are faced with increasing difficulties and obstacles which were unknown a few years ago. They have no one to whom they may turn for competent advice and assistance. They either drift along picking up whatever skill and knowledge they require or become lost in a maze of jobs and experiences which seem to lead to nowhere. Consequently parents are loath to send their children into industrial employment and young people with ambition and ability seek elsewhere for suitable occupations.

Speaking generally, it may be said that industry has ceased to provide, or never has provided, training and opportunities for advancement which attract bright, energetic young people who wish to make the most of their lives. There has been much talk about the tendency of young people to seek white collar jobs. Employers in industry have complained bitterly of the quality and ability of the young people whom the schools were sending to them for employment. Is it not possible that the reason for this unsatisfactory condition is the fact that industry has not recognized its responsibility to the young workers?

A brief study of the efforts which are being made in certain industries and by a few progressive industrial organizations to provide adequate training and continuous employment for beginners seems to prove that there will be no lack of suitable applicants for vacancies and very little difficulty in retaining the services of competent workers, in any branch of industry, as soon as those in responsible positions come to regard vocational training and promotion on merit as necessary parts of their industrial organizations.

This statement is borne out by the experiences of the Canadian railways whose well-organized apprenticeship systems are among the few schemes of training which have grown and developed to meet the changing conditions of modern life. In the City of Winnipeg, where the educational authorities claim that it is useless to attempt to provide industrial courses in connection with the technical high schools, there is always a waiting list of suitable applicants for apprenticeship in every trade taught in the two locomotive and car shops. These trades include, moulding, blacksmithing, boilermaking, painting and other occupations which ordinarily are avoided by young Canadians.

Similar results have been obtained in the foundry trades in Milwaukee, Wisconsin, where, before organized apprentice training was introduced and special efforts made to insure continuous employment for boys during their training period, it was practically impossible to persuade suitable boys to learn moulding.

It is no longer a direct responsibility of employers to provide for the general education and technical knowledge of their employees but it does appear to be necessary that in every branch of industry provision should be made for the training of new workers in the special jobs and operations of each trade and industrial occupation. The schools can lay the foundation of vocational education and can supplement the training and instruction received on the job but industry must provide the training and experience which are necessary to develop the operative skill, confidence and speed, necessary for economic production.

In considering the purpose or value of vocational education from the viewpoint of industry, we must bear in mind that there are two distinct viewpoints to be considered, namely, that of employers and that of employees. The employer is directly concerned with the problem of maintaining an adequate supply of well trained workers whom he may employ at a reasonable wage.

The employee, on the other hand, views with alarm any effort which appears likely to supply an excess of workers or in any way to interfere with his efforts to maintain or improve existing wage rates and hours of employment.

This attitude was clearly demonstrated at a recent convention of bricklayers in Toronto. The delegates passed a resolution condemning private trade schools which attempt to teach trades in a few months and requesting the Minister of Trade and Commerce to investigate these schools. In expressing its condemnation of such schools, the conference made it clear that it was not opposed to vocational education (education) under government auspices.

The attitude of organized labour towards vocational education is expressed in the following extracts from a recent editorial in the *Toronto Labour Leader:—*

"Labour organizations are the foremost advocates of technical education in public high schools. The student who wishes to become a bricklayer, plumber, machinist, woodworker, printer, or any other draftsman, and who devotes three or four years of his school life in a technical high school receiving instruction along the line of his chosen vocation, certainly becomes a much more proficient mechanic than the apprentice to any of these trades who had to depend exclusively on the knowledge he could acquire while learning his trade in a workshop or 'on the job' with journeymen. With the exception of health, an industrial worker's skill is the best asset he is possessed of, and the higher he can advance his skill, the larger and better the market he has in which to sell his labour. Superintendents and foremen are always chosen from the ranks of the more highly skilled workers. Therefore it is advisable for every workman to take advantage of his technical training to increase his proficiency. The want of technical training has been felt so badly by some international trade unions that they have, at big expense, opened correspondence courses of their own, so as to give instruction to their membership. This is a very fine argument, that organized labour has, through experience, learned the value of technical training, and the members who pay school taxes should devote their energies to obtain the best educational advantages for their children from the money they expend in school taxes."

Both employers and employees, as organized bodies, are anxious to promote vocational education but neither party is willing to support a plan or system which it believes to be solely in the interests of the other group.

Consequently there is overlapping and duplication of efforts on the part of employers' organizations and trade unions. This condition is noticeable in the printing industry where courses of instruction and apprenticeship schemes are conducted by the United Typothetae of America and the International Typographical Union. Vocational education needs the active support of both organizations but the work could be done more cheaply and effectively if they co-operated in every locality where training is now being carried on.

One outstanding example of the benefits of such co-operative action in the printing industry is to be found in Montreal where employers and employees in all branches and divisions of the printing industry are co-operating with the provincial government in the organization and operation of a printing school which serves the whole industry. This school is organized as a department of the Montreal Technical School.

It may be possible for employers or employees working alone, to organize and carry on training programmes for industrial workers but experiences in other countries and the results of the few instances where such efforts have been made in Canada seem to prove that without the active support of both parties, any scheme of apprenticeship or trade training in industry is doomed to failure. The first essential in any successful training scheme involving employers and employees in more than one industrial organization is a satisfactory working agreement between all parties concerned. The terms of this agreement should be clearly set forth in a signed document or documents legally binding upon the different parties and the provisions of which are administered by a representative committee acting through specially appointed officials and instructors.

A typical example of such a scheme of training is the newly organized apprenticeship programme for the building industry in Vancouver. An apprenticeship council, consisting of two representatives from the local Contractors' Association, two from the Trade Council of the Building Construction Industry, and one independent member, has been appointed to organize and control apprentice training in the building trades. The organization and duties of the Council are set forth in a constitution and by-laws, and each apprentice is regularly indentured through a definite contract signed by the parent, the boy and the employer. A secretary, appointed by the Council, acts as supervisor and arranges for the attendance of apprentices at the local technical school for the transfer of apprentices from one employer to another, etc.

The scope of vocational training in industry is better understood when we consider the purpose of vocational education from the economic or industrial viewpoint. Dr. Chas. A. Prosser, one of the pioneers and outstanding leaders of vocational education in the United States, has set forth the economic objectives and reasons for vocation education in the following order:—

1. To conserve and develop our national resources.
2. To prevent waste of human labour.
3. To provide a supplement to apprenticeship.
4. To increase wage earning power.
5. To meet the increasing demand for trained workers.
6. To offset the increased cost of living.
7. As a wise business investment.
8. Because our national prosperity is at stake.

Co-operation between Schools and Industry

Evidently the vocational training and instruction being given in existing vocational schools is not sufficient to accomplish these objectives unless and until industry as a whole develops an active interest in and appreciation of the work of the schools and undertakes to supplement or complete the vocational training received in schools.

It is necessary that industry should provide suitable openings for graduation from the vocational schools. Employers must recognize and give credit for the training and experience which these young people have acquired.

The value of the industrial course for boys has been recognized by the Ford Motor Co. of Canada and special apprenticeship courses have been organized in tool-making, electrical work, etc., for selected graduates from the Windsor-Walkerville Technical School.

Industry must also encourage its employees to continue the general vocational education and citizenship training which the schools provide through part-time classes, evening classes, correspondence instruction and short-term classes. In order to do this, provision must be made for releasing certain workers for instruction during regular working hours, without loss of pay; facilities must be provided for keeping the schools informed regarding the work and progress of each worker attending classes or receiving instruction; recognition must be given to the increased earning capacity and usefulness resulting from such training; in fact, industry must become a partner with the schools in the common purpose of producing skilled intelligent workers.

The schools must continue to provide for the mental, moral and social development of young Canadian workers. They must enlarge their activities in connection with vocational guidance, prevocational training and the supplementary training of industrial workers; but, above all, they must establish close connection with all branches and divisions of industry, in order that employers and employees may fully appreciate the work of the schools and set up organizations and facilities for co-operative action through which the work of the schools may be supplemented and completed.

The importance which the Ontario Government attaches to co-operative action is indicated by the following clause from the Vocational Education Act of 1921:—

"(5) Subject to the approval of the Minister, any advisory committee may appoint one or more officers with qualifications approved by the Minister to bring to the attention of employers and employees the work of the schools or departments, and to make the necessary arrangements between employers, employees, and the schools or departments for the conduct of part-time or co-operative classes, and, in general, to act as a co-ordinating officer between the local industries and the schools or departments, and every such person so appointed shall be subject to the control of the advisory committee."

This very important provision has been overlooked or neglected by too many vocational committees to the detriment of the work in the province. Except in small communities and small schools, the principals and teachers are too busy to give the necessary time to the work of co-ordination. Special provision must be made for this work either through a co-ordinating officer responsible to the committee as provided in the Act, or through members of the school staff assigned to this work.

The courts of New South Wales are considering the question whether the provisions of the Forty-four Hour Week Act, recently passed by the State Parliament should supersede the standard of hours fixed under a current agreement. The Chief Industrial Magistrate, in a test case at Sydney, held that the former standard of 48 hours could be changed to one of 44 hours during the currency of an award.

A useful compendium of the workmen's compensation acts of the various provinces has been prepared by Mr. T. J. Coghlin, member of the Dominion Legislative Board of the Brotherhood of Railroad Trainmen. It is arranged in the form of a table, the corresponding provisions of the several acts being set forth in parallel columns.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the Labour Gazette relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Attitude of Labour in Canada toward Vocational Schools

The following extracts from an article appearing in the *Labour Leader*, Toronto, indicate the attitude of labour men in Canada toward vocational education.

"Labour organizations are the foremost advocates of technical education in public high schools. For years Ontario labour men have rightly contended that the usual high school education of the province was beneficial only to those students who purpose entering the professions as their life vocations, and was but a waste of time and energy to those who intended to make industrial pursuits their future avocation in life. Of the male students attending Ontario high schools, fully 80 per cent of them either enter industrial or commercial establishments, and of this 80 per cent fully 60 per cent of them choose industrial pursuits for their vocation in life. This fact alone is reason enough for labour men to advocate technical high schools in any industrial centre.

"The student who wishes to become a bricklayer, plumber, machinist, woodworker, printer, or any other craftsman, and who devotes three or four years of his school life in a technical high school receiving instruction along the line of his chosen vocation, certainly becomes a much more proficient mechanic than the apprentice to any of these trades who had to depend exclusively on the knowledge he could acquire while learning his trade in a workshop or "on the job" with journeymen.

"With the exception of his health, an industrial worker's skill is the best asset he is possessed of, and the higher he can advance his skill gives him a larger and better market to sell his labour in. Superintendents and foremen are always chosen from the ranks of the more highly skilled workers. Therefore it is advisable for every workman to take advantage of technical training to increase his proficiency.

"The want of technical training has been felt so badly by some international trade unions that they have, at big expense, opened correspondence courses of their own, so as to give instruction to their membership. This is a very fine argument that organized labour has, through experience, learned the value of technical training, and that their members who pay school taxes should devote their energies to obtain the best educational advantages for their children from the money they expend in school taxes."

Trades and Labour Council Condemns Trade Schools

Trade schools were condemned by the Hamilton and Districts Trades and Labour Council in session at the Labour Temple last month. Schools where barbering and bricklaying is claimed to be taught in from six weeks to three months were severely criticized. Secretary H. S. Mitchell was asked to communicate with Premier Ferguson stating the objection of the Council and asking that such schools be abolished.

Barbers' delegates complained about a barbering college at Toronto. It was reported that litigation was pending in that city, the parents of several pupils having sued for the return of fees.

Apprenticeship Training in the United States

The following article is taken from the January issue of *Law and Labour*s—

The Smith-Hughes Act, enacted some 10 years ago, received impetus from the American Federation of Labour. The Act provides for federal financial aid in an amount equal to one-half that contributed by state or local authorities or both towards the establishment of vocational training schools. Labour seems to have been alert in Cleveland, for there have been established in that city six schools for apprenticeship training, recently quartered in one central building by the board of education. Training is provided for apprentices in sheet metal working, plumbing, bricklaying, plastering, carpentering, painting and the electrical trade. Approximately 100 boys have enrolled in these courses.

Each apprenticeship class is under the direct supervision of a joint committee composed of an equal number of contractors and union representatives and a representative of the public school system. Applicants are required to demonstrate their physical fitness and their

ability to read and write the English language intelligently. Each applicant is given a thirty days' trial. If his work is satisfactory he is indentured to a contractor in the trade he wishes to learn for a period of four years.

The boys are taught the history of their trade, trade science, trade mathematics, plan reading and practical work calculated to make of them better journeymen when they complete the course. Occasional talks and motion pictures are afforded with a view to broadening their minds and stimulating their interest. An arrangement is made whereby the boys may be transferred from one contractor to another during slack seasons, thus offering steady work as an incentive to boys to enroll in the courses. They attend school four hours a week, receiving their regular wages for that time. Wilful absence from school is penalized by temporary or permanent suspension, additional attendance upon school sessions without pay, or an extension of the period of indentureship. The boys are instructed in the obligation of contract relations and the application of such relations in their observance of the rules laid down for them.

Electricians' Union No. 134, Chicago, has maintained a school for apprentices since 1906. Its present average annual enrolment is 600. Although the course is primarily of four years' duration, with twenty-four days' schooling yearly, it is possible for a student to finish in three years by maintaining a general average of seventy-five per cent or better in his studies. Edward J. Evans, vice-president of the International Brotherhood of Electrical Workers, indicates the attitude of labour towards these schools in citing the case of one boy who, after being graduated with honours, went to a technical college and emerged a practicing electrical engineer. Mr. Evans says, "of course, when this occurs our local union loses a valuable active member, and while we dislike that, we retain a friend, and we are glad to wish them luck in their new field."

It is the apparent aim of all such schools not to develop specialists but to equip the apprentices with a foundation which will make them more generally useful to their chosen trade.

Perhaps the essence of organized labour's aims in making itself a factor in public school education is to be found in its pronouncement that, "It is for labour to say whether their children shall receive a real education in our public schools, or whether they are to be turned out as machine-made products fitted only to work and become part and parcel of a machine instead of human beings with a life of their own, and a right to live that life under rightful living conditions."

Training of Teachers in New Zealand

A representative conference met recently in Wellington, N.Z., to discuss teacher training. Those present included officers of the Department of Education, members of university college boards, professors of education, principals of training colleges, inspectors of secondary and primary schools, chairmen of education boards, etc.

The suggested agenda for the conference was as follows:—Relationship between the professors of education and training colleges; establishment of a training college for secondary teachers; the extent to which training college students should be permitted to attend the University College concurrently with their teacher training; advisability or otherwise of establishing a separate training college for non-university students; training of teachers of technical subjects, advisability of providing bursaries in lieu of probationerships to induce entrants to the teaching profession to complete their academic studies before entering the training college; organization of vacation courses at the University College for the benefit of teachers and others.

Sir James Parr, in opening the conference, explained that it was called together for the purpose of giving the Government advice on the best method of training secondary and primary school teachers. He wanted them to look into the management and government of the training colleges and advise the Government as to what steps should be taken to improve the administration and efficiency of those institutions. The training of teachers was of the utmost importance in the system of education. In 1906 the first training college was established, and to show how the system had developed he had only to point out that the first year there were 253 students, ten years ago there were 442, and last year there were 1,280 in training. As far as he was aware, no country made such liberal provision as they did in New Zealand for the training of teachers. He believed that it cost the Government about £280 to train a teacher under the present system. In many other countries the relative number of teachers were not trained by the State, while in some countries the students had to pay for their own training. The conference was called to discuss the means by which the rapidly-growing organization might be made still more efficient even than it was at present. The type of students had never been higher in physical development, merit, personality, and individuality, but he could see that there was room for increased efficiency.

LABOUR TRIBUTE TO THE FRONTIER COLLEGE

MR. J. A. P. HAYDON, President of the Ottawa Central Labour Council, contributes to the *Locomotive Engineers' Journal* for January, 1926, an appreciation of the work of "Canada's Frontier Labour College." An account of the Frontier College, or "the University in Overalls" was given in the Labour Gazette for July, 1924, when it was stated that the college was receiving considerable financial support from the governments of Ontario and British Columbia. Mr. Haydon says: "H. G. Wells, perhaps the world's greatest educator, has described Frontier College as 'the most interesting piece of educational work' he has ever read about. Not only is Frontier the first college for workers in the 'backwoods' of Canada, but it is also the pioneer college of America in the great mission of bringing the treasure store of modern learning to the man working with his hands and wringing an arduous living from the virgin soil. In the mind of Alfred Fitzpatrick the novel idea of taking education to the job first shaped itself and then was translated into a reality."

The writer quotes from Mr. Fitzpatrick's work "The University in Overalls" the story of the college and its origin:—

"Twenty-five years ago I realized my inability to exercise any worth-while influence over the large array of frontier workers with the methods then employed by the church. Despite my best efforts to influence these men for good, there still appeared betwixt us 'a great gulf fixed.' I refused to believe that the fault lay wholly with the picturesque loggers and lumberjacks. So, discarding my clerical garb, I began to live and work with these men. I had decided that what the workers needed was not so much advice, expressed from a dignified pedestal, but sympathy and friendship from a man engaged in similar tasks. It seemed to me that my own education lacked as much of the physical side as the workers lacked of the intellectual side. The idea of the instructor in the dual role of teacher and labourer has, therefore, really grown out of the onesidedness of my own education, my belief in the essential goodness of the neglected workers, and the necessity for a common ground of approach.

"The question naturally arose: How can these classes be brought together for common benefit? Clearly not in the village school ten miles away, but at their place of work. Froebel, the father of the kindergarten, once said: 'Come, let us live with our students.' I tried it, but it did not solve the problem. I soon found that a life of idleness during the day at the camp when the men were all at work did not tend to raise me in their estimation, even though I held classes at night. I therefore found it necessary to go further than Froebel, and said, 'Come, let us work with our students,' and I soon found that I not only had to work with the men, but I had to do my work well. Thus was the Frontier College founded. In the last quarter of a century it has sent 900 men, graduates and undergraduates, mostly of Canadian and American universities, to act as instructors in camps and other places on the frontier. These instructors engage in the same kinds of hard, manual labour as their fellows. In their spare hours they become teachers, helping the men, many of whom have been deprived of opportunities for even elementary education.

"After twenty-five years of effort, the Frontier College is more firmly convinced than ever that the daily contact of instructors with their fellow workers is the best way to bridge over the gulf, too long existing, between the manual workers and the universities. The devotion of these teachers—sometimes under very difficult circumstances, the reception they have met at the hands of workers and officials, and the actual results of their class work have confirmed me in the belief that the Frontier College instructor has a fundamental place in the educational system of Canada. It is true that the instructor has often to undergo the humiliation of being given an inferior class of work, due to the onesided nature of his own education. The college man on an 'extra gang' train is at first offered the task of 'cookee' or 'water boy.' In a lumber camp the work assigned even to the master of arts, is not the position of 'feller,' or 'skidder,' but 'chicadee,' 'choreboy,' 'swamper,' or some other second rate position to which no expert lumberjack or logger is assigned. At a mining camp, too, the university graduate must begin at the foot of the ladder, literally, or he never becomes a first-class practical miner. It is true that there now exist educational opportunities for certain types of workers along the frontier. They are reached by government specialists and correspondence schools, and even in some cases by experts provided by the employers. But there are vast numbers wholly neglected in theoretical and practical education, and who should, wherever located, have an opportunity for study regardless of their occupation.

"Confronted with these facts, the Frontier College in 1922 sought and obtained from the Parliament of Canada a Dominion charter, with power of conferring degrees. By this step we do not wish to compete with the older universities, or to qualify men for overcrowded professions. We are simply desirous of creating an interest in the homestead, farm, camp and shop, believing that the men here have been overlooked by our universities. The insanitary shacks of homesteaders, camp bunkhouses, despoiled forests, and abandoned farms may all be traced to a lack of education among our boys and girls, in their homes and at their daily tasks. There is a regrettable lack of information on the part of the general public and, indeed, on the part of many university graduates, on such vital subjects as settlement, immigration, unemployment, conservation and reforestation. To encourage study along these lines, and to relate our courses to everyday life, we have made biology compulsory in the first year, and forestry in the second."

Mr. Haydon concludes as follows: "Out of this passion for helping working people achieve the finer things of life has grown the whole Frontier College movement. Its purpose is expressed in the Latin phrase on its seal: 'Life without Learning is Death.' Around the seal is the quotation from Emerson: 'I would not have the labourer sacrificed to the result; let there be worse cotton and better men.' Imbued with this spirit, Frontier College has spread light and learning among the desolate timber camps of Canada's northern provinces, displaying the intellectual stagnation that means mental death, with that knowledge about man and cures, economics and world affairs which alone can make man truly happy and free."

NOTES ON INDUSTRIAL SAFETY AND HEALTH

First Aid Training on Canadian Pacific Railway

Since the Canadian Pacific Railway Council of the St. John Ambulance Association was formed, over 25,000 employees have been instructed in the science of rendering first aid to the injured. (An account of last year's trophy competition on the C.P.R. system was given in the Labour Gazette last November). The company believes that at the present time no accident could occur at any point of the system however remote where there would not be at least one employee trained in "first aid."

At the headquarters of the company at Montreal, it was announced on March 22, that 262 employees of the Sleeping, Dining and Parlour car Department had passed the examination prescribed by the St. John Ambulance Association. This group of men consists of conductors, stewards, chefs, waiters, porters, etc., and they have done this work in their own time and without a shadow of compulsion. They voluntarily underwent a two months' course of instruction by one of the Company's First Aid instructors and these classes have only recently closed. Since these men are exclusively employed on C.P.R. trains, it means that in case of accident they would be released immediately for service to the injured, so that no such trains will in future move along the system without efficient First Aid assistance being always at the disposal of passengers.

In all, 421 employees took these classes, but a number of these men were engaged on long-run trains and so were unable to attend all the classes owing to absence from town. Accordingly they did not present themselves before the medical examiner, as they felt they were hardly prepared to pass the searching tests involved. The knowledge they have gained, however, will stand them in good stead when the next series of classes is held.

Industrial Accident Prevention Associations of Ontario

Mr. R. B. Morley, General Manager of the Industrial Accident Prevention Associations of Ontario, stated in a recent address that under the authority given in section 101 of the Ontario Workmen's Compensation Act, eighteen out of the twenty-four classes into which the industries coming under "schedule 1" of the act are divided, have organized for accident prevention purposes. Fifteen of these eighteen classes have federated in the Industrial Accident Prevention Associations. The work of the Industrial Accident Prevention Associations is divided into two parts; first, the work being done in the industries by the inspectors who call periodically on the plants for the purpose of pointing out physical hazards and, at the same time, discussing the whole accident situation with the executive of the plant. Frequently, the inspector arranges for a meeting of the employee while he is at the plant and is given an opportunity of placing the whole question of accident prevention before this plant meeting. The inspector is there for the purpose of helping the employer and not to enforce rules and regulations. The other phase of the work is the safety propaganda that is carried on, employers receiving each month a letter dealing with various phases of accident cost and accident prevention, together with safety bulletins for posting throughout the plant, pay envelope leaflets, etc., and once a year, the safety calendar. The Industrial Accident Prevention Associations are controlled by a group of directors elected from the various industries at an annual meeting and exist only for the purpose of accident prevention.

Fifth International First Aid and Mine Rescue Contest

The Fifth International First-Aid and Mine-Rescue Contest will be held at San Francisco, Cal., during the first week of September, 1926, under the auspices of the Bureau of Mines, Department of Commerce. The date and place of the contest, which is open to all miners, quarrymen, and workers in metallurgical plants and the petroleum and natural gas industries, has been approved by the Secretary of Commerce, following an invitation received from the Society of Safety Engineers of California. The City of San Francisco has expressed its interest in the event of donating the use of the Civic Auditorium for the First-Aid Contest. The University of California has made available the use of the Greek Theatre for the Mine-Rescue Contest.

The International First-Aid and Mine-Rescue contests are held annually under the auspices of the Bureau of Mines, with the cooperation of the American National Red Cross, the National Safety Council, and various mine operators' associations and miners' organizations, with the object of furthering the work of training miners in first-aid and mine-rescue methods, and the consequent advancement of the cause of safety among the million miners of the United States.

The first-aid and mine-rescue contests will be for international championships, and international contest cups, medals and prizes will be awarded to the winner. Proficiency of contesting teams will be determined in accordance with Bureau of Mines' standards by judges thoroughly familiar with first-aid and mine-rescue work.

A feature of the meet will be the awarding of the Congressional medal which is given annually to the team of miners adjudged to be most thoroughly skilled in first-aid and mine-rescue methods.

Another interesting feature of the meet will be the awarding of the medals offered annually by the Joseph A. Holmes Safety Association in commemoration of notable deeds of heroism performed by miners in succoring their comrades in time of peril.

All organizations interested in the contest are invited to enter one or more first-aid and mine-rescue teams. Entry blanks, together with the general rules of the contest, can be obtained from the experiment station of the Bureau of Mines, 4800 Forbes Street, Pittsburgh, Pa.

Quebec Safety League

Reference was made in a note in the last issue of the Labour Gazette to the opening on February 9 of an industrial safety campaign for the district of Montreal. Emphasis is being laid on the engineering side of the movement, and an improvement will be sought in machinery, equipment and process so as not merely to cover up hazards but to eliminate them and at the same time to increase efficiency and production. This engineering phase of safety, it is claimed, is often neglected but it can well be made a major activity that will pay unusually large returns on all the time and effort that may be invested. Safeguards are usually but temporary expedients awaiting the development of more fundamental means of eliminating accident hazards.

One of the companies that pioneered in engineering revision as applied to power presses, has practically eliminated all power press accidents, whereas they used to cut off an average of 36 fingers a year. Not only that, but the production of these presses has been increased 60 per cent.

Safety Rules for Electrical Linemen

The Regulations under the Electrical Protection Act of Alberta, to which reference was made in the last issue of the Labour Gazette, contain the following general safety rules for workmen:

Workmen should familiarize themselves with approved methods of first-aid, resuscitation and fire extinguishment, those whose duties do not require them to approach or handle electrical equipment and lines should keep away from such equipment or lines.

They should cultivate the habit of being cautious, heeding warning signs and signals, and always warning others when seen in danger near live equipment or lines.

Inexperienced or Unfit Employees.—No workman shall do work for which he is not properly qualified on or about live equipment or lines, except under the direct supervision of an experienced and properly qualified person.

Supervision of Workmen.—Workmen whose employment incidentally brings them in the neighbourhood of electrical supply equipment or lines with the dangers of which they are not familiar shall proceed with their work only when authorized. They shall then be accompanied by a properly qualified and authorized person, whose instructions shall be strictly obeyed.

Exercising Care.—Workmen about live equipment and lines should consider the effect of each act and do nothing which may endanger themselves or others. They should be always careful to place themselves in a safe and secure position and to avoid slipping, stumbling, or moving backward against live parts. The care exercised by others should not be relied upon for protection.

Treat Everything as Alive.—Electrical equipment and lines should always be considered as alive, unless they are positively known to be dead. Before starting to work, preliminary inspection or tests should always be made to determine what conditions exist.

If exposed to injurious arcing, the hands should be protected by insulating gloves and the eyes by suitable goggles or other means. They should keep all parts of their bodies as distant as possible from brushes, commutators, switches, circuit-breakers, or other parts at which arcing is liable to occur during operation or handling.

Safety Appliances.—Workmen at work on or near live parts should use the protective devices and the special tools provided, first examining them to make sure that these devices and tools are suitable and in good condition. Protective devices may get out of order or be unsuited to the work in hand.

Suitable Clothing.—They should wear suitable clothing while working on or about live equipment and lines. In particular they should keep sleeves down and avoid wearing unnecessary metal or inflammable articles, such as rings, watch or key chains, or metal cap visors, celluloid collars or celluloid cap visors. Loose clothing and shoes that slip easily should not be worn near moving parts.

Safe Supports.—Workmen should not support themselves on any portion of a tree, pole, structure, scaffold, ladder, or other elevated structure without first making sure that the supports are strong enough, reinforcing them if necessary. They should not work in elevated positions unless secured from falling by a suitable safety belt or by other adequate means. Before trusting his weight to a belt, a workman should determine that the snaps or fastenings are properly engaged and that he is secure in his belt.

The Human Factor in the Causation of Accidents

Report No. 34 of the Industrial Fatigue Research Board of Great Britain is entitled "A contribution to the Study of the Human Factor in the Causation of Accidents." Statistical methods were applied to the study, which was undertaken to ascertain the reasons of the fact that under equal conditions of risk some workers are more prone to accidents than others. The report confirms the conclusion already reached by another method in a pre-

vious inquiry, that susceptibility to accidents varies with each individual. The methods adopted in the latest investigation have made it possible to treat the subject of individual differences on a quantitative basis, and to show their extent and distribution as well as their mere existence. The conclusions reached as the result of the investigation are summarized in the following paragraphs:—

(1) The reported ambulance-room accidents (whether trival or serious) have been examined in a number of groups of factory workers covering different occupations, for periods of time varying from three months to two years.

(2) It is found that in almost all the groups the average number of accidents is much influenced by a comparatively small number of workers, and that the distributions among the workers are far from chance ones.

(3) It is not possible in a mass examination of this kind to find how much of this may be due to individual differences in the conditions of work or how much to personal tendency, but there are many indications that some part, at any rate, is due to personal tendency.

(4) A table is given by which a rough estimate can easily be made from the accident records of a department whether the causes of accidents are mainly such as affect all the workers alike, or whether special risk is attached to any individuals. If the latter is the case, it rests in the hands of the factory officials, familiar with all the conditions of the work, to see how far the cause is mechanical or personal.

(5) Typical accident distributions are described and fitted to some theoretical curves based on different hypotheses. The hypothesis that the ocurrence of one accident makes the occurrence of others either more or less likely does not fit these observations. The particular hypothesis tested of differing initial individual susceptibility is nearer the truth, but clearly other factors come in.

(6) There is a tendency for the number of accidents to decrease to some extent with age, and apparently also, though to a less extent with length of service in the factory, but when allowance is made for age, there is no independent association between experience and accidents; while when allowance is made for experience, the associations between accidents and age remains.

(7) A decreasing accident tendency with age towards serious accidents is shown not to be necessarily inconsistent with the known higher accident mortality and invalidity rates among older workers, but the present data do not include enough serious accidents to establish any relation between the tendencies to trivial and to serious accidents.

(8) The people who have the most accidents are, on the whole, those who pay most visits to the ambulance room for minor sickness.

(9) The consistence of individual tendency to accident is shown by the relationship found between (1) accidents in two different periods, (2) accidents of one type and accidents of other types, and (3) accidents in the factory and accidents at home.

(10) No consistent relation is shown between accidents and output in the few cases where output records were available.

(11) The above tendencies are shown by men and women alike.

(12) In the one group of males, where comparison between night and day work was possible, no difference of any importance was observed in the accidents.

(13) The indications of individual differences seem to be definite enough to justify the further more detailed investigation on the lines of individual study and experimental psychology which is now being carried on, rather than on the lines of the present report. The present results show that it is clearly necessary in such study to take age and health into consideration.

Safety Committee of American Car and Foundry Company

Mr. G. A. Orth, manager of the Safety and Claim Departments of the American Car and Foundry Company of New York, describes in the March number of Safety Engineering the organization of the safety work of the company. "Under a so-called safety engineer (a man who should be not only a mechanician but one gifted with the power of mixing with workingmen and still receiving their respect), five of the shopmen in the various plants are selected to act as a committee of safety, for the period of three months. The duties of this committee consist in inspecting the safety appliances to see that these are in good order; to warn their fellow-workers of any dangers they are carelessly or thoughtlessly courting in their work; to report to the safety engineer any matters requiring attention, and to submit suggestions for improving safety devices and spreading the gospel of safety.

The members of this committee are changed every three months, so that all the workingmen of the plant have an opportunity to serve on it, and contribute their share of mind and heart to the general well-being of the entire organization. Experience has shown that this opportunity to exercise themselves on a higher plane and demonstrate their abil-

ity in a semi-offiical capacity is one which is keenly desired and enthusiastically fulfilled by all.

In this manner, a working staff of safety inspectors and safety educators has been obtained which could not otherwise have been got together, except at a very high cost. And even then, with far less realization of esprit de corps which now obtains through the influence of the members of the committee on the entire body of workers. This esprit is further maintained by safety literature posted, week by week, on the bulletin boards at all the company's plants.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Conference on the Hours Convention

A CONFERENCE of the Ministers of Labour of Great Britain, France, Germany, Belgium and Italy, which met in London on March 15, 1926, for the purpose of settling difficulties of interpretation of the Convention prepared by the International Labour Office providing for the establishment of an eight-hour day and forty-eight hour week in industrial undertakings, came to an end on March 19, agreement having been reached on all points. The conclusions of the conference take the form of declarations of agreement on the scope and effect of various articles of the Convention, the five-day week, the weekly rest day, the application of the Convention to railways, and time lost by holidays. On one point, relating to Article XIV (suspension in the event of national emergency), the assent of the British Minister was provisional. On the remaining points, the conference was unanimous.

It was agreed that the conclusions should be reported by the Ministers to their respective governments, "that those governments who have so far not ratified the Convention may, taking account of the agreements reached, be in a position to proceed with their consideration the question of the ratification of the Washington Convention."

Commenting on the result of the conference, *The Times* (London), says:—"The conference has reached decisions which give a fair prospect of the ratification and enforcement of the Convention in all the principal industrial countries of Europe . . . The governments represented at the conference are not committed to any of the findings to ratification of the Convention, but the implication of the agreement reached is that ratification should follow with no unnecessary delay."

Committee to Promote Legislation

On March 6, 1926, there was held in Geneva the first meeting of a special Committee, set up by the International Federation of League of Nations Societies, to consider question of international labour legislation and especially to support the efforts of the International Labour Organization in this direction. The Committee first elected its officers, Mr. Sokal, until recently Minister of Labour in Poland, being appointed Chairman. In the course of an address to the Committee, Mr. Albert Thomas, Director of the International Labour Office, dwelt on the value of the help which the League of Nations Societies in the various countries could render to the International Labour Organization.

After hearing speeches by Mr. Sokal, Mr. Roger Dollfus (President of the Federation), and Mr. G. N. Barnes (Great Britain), the Committee proceeded to discuss ways and means of multiplying and expediting ratifications of Conventions adopted by the International Labour Conference. Several resolutions on this subject were adopted. It was decided to appoint a sub-committee to consider and report on proposals suitable for submission to the International Economic Conference to be organized by the League of Nations.

In this connection it may be noted that the mixed committee on economic crises, composed of representatives of the economic and financial committees of the League of Nations and of experts nominated by the International Labour Office, adopted at a meeting held in Geneva last week a number of resolutions in favour of the putting into operation of decisions of the International Labour Conference relating to unemployment, including the general adoption of "economic barometers" and the closer study of trade fluctuations and of credit control.

Wage Changes in Various Countries, 1914-1925

The International Labour Office has published a report entitled "Wage Changes in Various Countries, 1914 to 1925," which is a continuation of two earlier reports. The first covered the period 1914-1921 and dealt with the movement of wages both during the war period and the period of rising prices which immediately followed the war. The second report continued the previous one by tracing the movement of wages in a larger number of

countries up to the year 1922. The present one brings the wages movement up to 1925, includes a much larger number of countries, and, as in the previous reports, compares wages with those current in the years 1913-1914. The years 1922-1925 include the period in which prices show, in the majority of countries with sound monetary systems, a distinctly lower level than in 1921, and also includes the period in which, in a large number of countries, prices and wages have become relatively stable.

The main object of the report is not to record the movements in money wages only, but by comparing changes in money wages with those in the general level of prices to estimate the changes in the real wages of the workers. Real wages are, in nearly every case, calculated with reference to the pre-war level. The data are given country by country, but general conclusions as to the movements of wages as a whole are presented in summary form.

International comparisons are, however, rendered difficult owing to the great differences in the methods adopted in the different countries in the compilation of wage statistics and in the diversity of classification of the various groups of workers.

It was pointed out in previous reports that the different countries could in the period 1920-1922 be grouped into three fairly definite groups: those in which real wages were definitely higher than before the war; those in which the level is about the same as the level in 1914; and those in which the level was definitely below the level of wages paid before the war. In the first group were found most of the ex-neutral European countries; in the second group the chief Western European and non-European countries, and in the third group the Central European powers. The latter group, which covered Germany, Austria, and Bulgaria, and, in view of information not available when the previous report was issued, included also Hungary, Poland, Latvia, Roumania, and Finland, was distinguished by the fact that in all these countries in 1920 and 1922 the currency had been continually depreciating and prices steadily rising. This led to the phenomenon of the "time-lag," when wages were continually trying to catch up to prices. This inevitably caused a reduction in real wages. On the other hand when prices were falling, or when they became relatively stable after a period of rising prices, real wages tended to rise.

The chief factor affecting the wage situation in the years 1922-1925 was the changes in the level of prices. In many countries they have fallen somewhat, while in others—particularly those in which prices rose most rapidly in the years 1920 to 1922 or 1923—they have become much more stable. Throughout the period prices remained relatively stable in Great Britain, Sweden, Switzerland, the Netherlands, Canada, South Africa, Australia, New Zealand, and the United States of America. Moreover, since 1922 the four countries in which currency was at that time being inflated, and prices rapidly rising, have all attempted to stabilize their currency and, in general, have succeeded. Germany stabilized its currency at the end of 1923; Austria in the autumn of 1922; Poland at the beginning of 1924; and Hungary at the end of 1924. Moreover, the stabilization of the currency was followed in most cases by the introduction of a new currency. Thus in Germany the Rentenmark was introduced in 1923, and later the Reichsmark was adopted; in Poland the zloty was introduced in June, 1924; in Austria the schilling in March, 1925.

The extent to which wages have been stabilized in recent years is illustrated in the report by a table of index numbers of *money* wages, in which wages in 1920-1925 are expressed as a percentage of their pre-war level. In Sweden, Australia, and Canada money wages have remained fairly stable since 1922; in Great Britain since 1923; and in Austria since 1924. In Denmark, rates, though showing a rise of about 5 per cent from 1923 to 1924, have become more stable than in 1921-1922. In Germany, money wages rose from 1923 to 1924, after a period of monetary disturbance. In Poland, money rates became fairly stable in March, 1924, and remained so throughout the year. The figures available for the United States of America do not permit of any generalization, except that there was an increase from 1922 to 1923 and a decrease from 1923 to 1924; in 1925 the changes are not very considerable.

Workmen's Compensation in U.S.A.

A report on Workmen's Compensation in the United States, by Ralph H. Blanchard, Ph.D., Columbia University, has been issued by the International Labour Office. The author observes that "under the United States Constitution compensation laws applying to employees of the Federal Government, to employees engaged in certain maritime employments and in interstate commerce, and to employees engaged in employments located in the District of Columbia may be enacted only by the Federal Congress. The present Federal law applies only to the first of these groups.

The State Governments alone have power to enact laws applying to the other classes of employment within their several borders. Under a general grant of legislative power to the Territories, they likewise have power to pass workmen's compensation laws. The situation has resulted in a wide diversity of laws and has made the study of workmen's compensation in the United States a highly complicated matter. The fact that a State or Territory has a compensation law does not necessarily indicate a wholehearted acceptance of the principle. As will appear, a given law may be of narrow or broad application, may represent a competent study of the problems involved, or mere political expediency. It may be niggardly or liberal. Out of this wide diversity of provision for compensation few standards of legislation or of practice have emerged which may be said to be representative of the United States."

This analysis of workmen's compensation legislation in the United States is limited to a consideration of its principal features. No attempt has been made to cover the operation of the existing laws. The author points out that complete or accurate statistics pertaining to workmen's compensation are not collected for the country as a whole, nor are they in most cases available for individual jurisdictions. Attempts to secure information have made clear the need of further improvements in statistical procedure and of a central agency for collating and analysing such statistics for the entire country.

Legislative Series

The International Labour Organization is carrying out an important work in the field of comparative legislation by the publication of its "Legislative Series," containing the text of labour laws in various countries. These publications are designed to further one of the main objects of the organization, namely, the creation of an international standard in labour legislation. The series was begun in 1920, and the volume for 1923 appeared in December 1925. The volume consists of about 1,500 pages, and nearly another hundred are devoted to a closely printed chronological index of all the labour legislation of 1923, direct or delegated, received by the International Labour Office. Only about a sixth of the laws and orders referred to in this index are reproduced in the volume, which, however, itself contains over 250 measures translated or reproduced in full. The complete chronological index is a new and welcome feature not found in earlier volumes. It should prove of great value to persons who wish to study closely some branch of labour legislation or the laws of a particular country. Owing to the careful references to official sources, this index would serve admirably as a basis for intensive research, and as the years go on the collected indexes will give a practically complete list of the labour laws and orders of the world, from which it will be possible to trace historical changes and developments.

The British Overseas Dominions are well represented, but Canada's provincial laws (the main source of her labour legislation) are, with one exception, mentioned only in the index, as are also the State laws of the United States. These omissions may be regrettable, but they are comprehensible in view of the great size of the volume without the laws in question, which are moreover easily available to English readers in other sources.

International Labour Directory

The International Labour Office has recently issued four pamphlets, being Parts IV, V, VI and VII of the International Labour Directory, a publication intended to enable those who are desirous of keeping themselves informed on the problems of labour and industry to place themselves easily in touch with official institutions and international or national organizations dealing with these problems throughout the world. Parts IV and V contain lists of the most important national and international organizations of intellectual workers and ex-service men respectively, with their addresses, officers, etc. Part VI contains a list of the principal co-operative organizations of various kinds, together with valuable data concerning each organization. Part VII gives a list of various international organizations concerned with questions of more or less direct interest to the industrial and labour world.

During March the Alberta Workmen's Compensation Board issued Regulation No. 13, providing that "all reports of accidents required to be forwarded by an employer engaged in the industry of coal mining in accordance with the provisions of Section 65 of The Workmen's Compensation Act (Accident Fund) shall be signed by the manager appointed under the provisions of The Mines Act and where there is no manager, by the over-man."

The number of persons employed by the Alberta Government on January 1 in each of the past six years was as follows: In 1921, 2,532; in 1922, 2,424; in 1923, 2,359; in 1924, 2,195; in 1925, 2,208, and in 1926, 2,215.

INFLUENCE OF MACHINERY ON FARMING CONDITIONS

DR. W. A. RIDDELL, Canadian Advisory Officer to the League of Nations, who is resident in Geneva, has contributed an article on "The Influence of Machinery on Agricultural Conditions in North America" to the March issue of the *International Labour Review*, published by the International Labour Office. In this article he deals with the great increase which has occurred in North America in the use of animal and mechanical power during the last thirty years and which has resulted in such an avoidance of waste of human energy that a standard of productivity per worker has been reached which he finds to be from two to six times as high as that of workers in European countries. This enhanced economic value of the agricultural worker is reflected on the one hand in high wages and the possibility of the majority of the hired workers saving enough in a few years to buy farms of their own; and on the other hand, in an increase both of cultivated area and of total production which represents an important and essential contribution to an abundant and regular food supply for the world. The North American continent has been compelled both to increase and to conserve the amount of human labour effort available for the simple reason that that amount has always been less than adequate. We have always lacked human labour and necessity has driven us to invention.

Dr. Riddell in his article traces the increased use of machinery in agricultural operations in North America from the introduction of the mechanical reaper in 1834. Figures are given showing the increased number of horses used in farming operations and the application of steam, gasolene and electric power. Statistics of the United States Department of Agriculture are cited showing that the farmer ranks next to the railroads, and is positively ahead of the great manufacturing and mining industries in his use of power in the United States. As 60 per cent of the power he uses is still animal power, the possibilities, when he has yet more mechanical power at his disposal (as he is bound to have soon in one form or another), certainly strike the imagination as vast. Whereas the average number of acres worked per worker for the years around about 1900 was, in Italy 4.7, in Belgium 5.3, and in France, Germany, Hungary and the United Kingdom between 7.1 and 7.3, in the United States it was not less than 27.0. Similarly, taking the United States standard of productivity per worker as a base of 100, the Italian worker attains only an index number of 15, the Hungarian of 27, the French 31, the Belgian 40, the German 41, and the Englishman 43. The latest information from Canada applies to the census of 1911. Occupation statistics for the census of 1921 are not yet available, but a very interesting comparison will be possible later. In 1911 the area under field crops was 35,261,338 acres and the total number of persons engaged in agriculture was 933,735; therefore each person so engaged was, on an average calculation, responsible for the cultivation of 38 acres, and every 1,000 acres called for 26 workers. In the three Prairie Provinces (Alberta, Manitoba and Saskatchewan) the figures are even more striking; the area under field crops was 17,677,091 acres and the number of persons engaged in agriculture was 283,472, so that each person so engaged was responsible for 62 acres, while every 1,000 acres required only 16 persons. In the United States in 1920, with only 68 per cent of the human labour applied per acre that was applied fifty years ago, there was nevertheless an increase of production per acre of 35 per cent. The same facts put from another point of view are equally striking; in 1870, of every 100 workers in the United States, 47 were required to produce the bare necessities of life, leaving only 53 available for other work. In 1920, only 26 out of every 100 workers were required to produce the prime necessities, leaving 74 available for other work. This means that the men released from farm work by the increasing efficiency of agricultural production, are now busy making books and automobiles and radio sets and all the other things which help to make life worth living. The American and Canadian "hired" man gets good treatment (as a rule) because he earns good treatment. He is worth a high wage because he produces largely and abundantly. Farm labour became about 18 per cent more effective in crop production during the last decade. Although the number of farm workers decreased over 4 per cent in that period, the mass of crop production increased about 13 per cent. The increased efficiency is attributed chiefly to the use of more and better machinery, to time saved by the use of automobiles and to the fact that farm owners and their families are working harder or longer on account of farm labour shortage and high wages.

The Ontario Threshermen's Association is promoting legislation in Ontario to provide for threshermen's liens. Such legislation is now in effect in Manitoba, Saskatchewan and Alberta.

CHILD LABOUR IN THE UNITED STATES

THE thirteenth annual report of the Chief of the Children's Bureau of the United States Department of Labour describes the work accomplished by the Bureau during the fiscal year ended June 30, 1925, in the promotion of child welfare in the United States. An important section of the report is devoted to the study of child labour. It summarizes the present standing of the proposed "child labour amendment" to the United States constitution. This proposed amendment, it may be recalled, is in the following form:—

"Section 1. The Congress shall have power to limit, regulate, and prohibit the labour of persons under eighteen years of age."

"Section 2. The power of the several States is unimpaired by this article except that the operation of State laws shall be suspended to the extent necessary to give effect to legislation enacted by the Congress."

The proposal was submitted to the States by Congress on June 4, 1924, and was brought before 43 legislatures with the following results:

Ratified by both houses in four states (Arkansas, Arizona, California and Wisconsin).

Approved by house, but rejected by senate in Montana.

Rejected by both houses in 21 states (Connecticut, Delaware, Florida, Georgia, Indiana, Kansas, Maine, Massachusetts, Minnesota, Missouri, New Hampshire, North Carolina, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Washington, and West Virginia).

Rejected by one house in 9 States (in addition to Montana) (Idaho, Louisiana, Michigan, Nebraska, Nevada, North Dakota, Ohio, Oklahoma, and Oregon).

Action postponed in two states (Iowa and Wyoming).

Adverse action by one house in Colorado.

The report points out that states refusing to ratify or voting against ratification during the last year may ratify at subsequent sessions of the legislature, so that the amendment is still legally pending. "It is not to be expected," the report declares, "that the efforts to secure the ratification of the amendment will be abandoned as long as large groups of children suffer from premature employment or too long hours because of the failure of the state legislature or state administrative officers to prevent such exploitation, or as long as evidence of the interstate character of the problem increases. The summary of child-welfare legislation shows little improvement through state legislation during the last year, and reports of investigations made by the state departments of labour in New York, Pennsylvania and New Jersey give evidence of the interstate movement of child labour and work for children."

All the states for which information for either individual cities or the entire state was procured, fix a minimum age of at least 14 years for employment in factories and stores, and often in many other occupations, and all except three have in addition certain educational prerequisites for employment. The reports show that in 1924, 43 per cent of the 80,000 children for whom records are available went to work when they were 14 years of age. If New York City, where 32,163 children received their first working papers, is not included, the majority (54 per cent) went to work at 14.

Analyses of the laws and of methods of enforcement with reference to a number of aspects of child labour are planned by the Bureau for the coming year. A study of compensation laws is of special interest, not only because the injured child in industry constitutes in himself a difficult problem, but also because of the public interest in the question of the extent to which compensation laws may be made a deterrent to illegal employment of minors. It is pointed out that a summary and analysis of child labour legislation in foreign countries is much needed.

Studies of the vocational opportunities offered minors in two leading industries in New York city, printing and the women's clothing trades, were completed during the year, making three inquiries into work opportunities for minors which the Bureau has made. These studies describe the importance of minors in the various crafts or trades, the education and training necessary for entrance, the training that can be acquired on the job, terms of apprenticeship where an apprenticeship system is in effect, the conditions of work, occupational hazards, wages, opportunities for advancement within the trade, etc. The report states that definite and accurate information on these points for a variety of occupations and industries is much needed and is increasingly in demand by directors of continuation schools, teachers, vocational counselors, and placement officers.

The Bureau completed its studies of rural child labour during the year. It is hoped during the coming year to make a comparative analysis of the findings in the nine studies comprising the series, which include approximately 13,500 children under 16 years of age working on farms in parts of 14 States and on

6 important crops—cotton, corn, wheat, tobacco, sugar beets, and truck. In much of the work of boys and girls on the home farm the problem is largely the enactment and enforcement of adequate school attendance laws.

With the completion of the studies of rural child labour and, during the coming year, of studies of work before and after school, a series of statistical field studies in which the Bureau has been engaged for several years, relating to the extent and conditions of child labour in occupations which employ large numbers of young children and offer special problems of regulation, will be brought to a close. This series includes studies of both street trades and industrial home work.

Other sections of the work carried on by the Bureau are: Administration of the maternity and infancy act; child hygiene; recreation; child welfare in New Jersey; studies of dependent children; studies of delinquent children; United States Census of juvenile delinquents; domestic-relations courts; children born out of wedlock; county provision for children in need of special care; current statistics as to children, etc.

Economic Conditions in Russia in 1925

The *Commercial Intelligence Journal*, published by the Department of Trade and Commerce, contains information supplied by the Canadian Trade Commissioner on economic conditions in Russia in 1925. It is stated that the year 1925 opened with great hopes for an improvement in the Russian economic situation, some of which were fulfilled, while others experienced great disappointment. There was undoubtedly a fairly considerable improvement in the general economic situation during the year, but nevertheless it is admitted by the Soviet leaders that Russia is again passing through an economic crisis, the influence of which may be more marked than in former years when Russia was not so dependent upon a close connection with the world markets.

An exceptional crop had been anticipated for the 1925 season. The whole economic programme of the Soviet Government was drawn up on the basis of the favourable crop predictions. The export of grain, which had to be discontinued owing to the crop failure in 1924 was again actively taken up and great preparations were made. This would have mitigated the danger of an unfavourable balance of trade in spite of the considerable enlargement of the import programme, for which the grain export was to provide a considerable part of the foreign exchange necessary.

The year 1925 was ushered in with plans of expansion on a large scale in the industrial sphere. The programme laid particular stress upon the provision of means of production. For this purpose the building of several new factories, chiefly in the metal and textile machinery branch, was commenced. Industrial production still remains below domestic requirements, but it cannot be disputed that there has been progress in the industrial sphere. Nevertheless the plans of the Soviet government for further expansion have had to be greatly curtailed as a result of the financial situation of the country and the lack of foreign credits.

The year 1925 saw the liquidating of the fight against private trade. In the Soviet Government order of March 31, 1925, the basis of the new internal trade policy was fixed. Private trade obtained taxation and trading concessions, and became, at least officially, free from administrative control. It showed that the former acute struggle had badly crippled private trading enterprise. In the economic year 1924-25 there was no advance of private trading; on the contrary it was shown that there had been a strong relative decline of private enterprise in Russia and a corresponding increase in State and co-operative trade. Only in connection with the purchase of grain was a strong activity in private trade noticeable.

The Soviet Government was not able in 1925 to avoid a heavy unfavourable balance in Russian foreign trade. The grain export in 1925 was a failure. The acute rise in prices on the Russian grain market, which went hand in hand with the decline of grain reserves, as well as the fall in prices on the world grain market, made the Russian grain export unprofitable. The importation of agricultural machines and implements as well as tractors in 1924-25 in comparison with the previous year increased fivefold. The Russian export trade as usual had to cope with enormously high overhead expenses.

In the overestimation of crop prospects and its effects upon the domestic economy, the Soviet Government were confident that the circulation could be increased without danger of inflation. The unforeseen economic development however, led to a monetary situation in the country which undoubtedly incurred the danger of inflation, as business activity in the last months of the year continually declined.

The twelfth Congress of German Trade Unions held at Breslau recently, adopted a motion drawing attention to the capital importance of the vocational school as a method of educating young workers. The trade unions were also invited to take a firm stand against the tendency of certain employers' organizations to diminish the importance of the vocational school.

ANNUAL CENSUS OF INDUSTRY OF CANADA

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census, covering statistics of fisheries, mines, forestry and general manufactures in Canada. The annual census is in addition to the Bureau's decennial census and the statistics of population, finance, education, etc. Preliminary reports on various industries have been reviewed in previous issues of the Labour Gazette. These preliminary reports are consolidated from time to time in general reports issued by the Bureau.

Pulp and Paper Industry in 1924

The report for 1924 on the pulp and paper industry, forming part of the census of industry taken by the Dominion Bureau of Statistics, contains valuable information on the history of the industry in Canada, and the processes followed in the manufacture of pulp and paper.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. These three stages cannot be treated as entirely distinct, nor can they be separated from the different stages in the lumber industry. Many pulp and paper companies operate saw-mills to utilize the larger timber on their limits to the best advantage and many lumber manufacturers operate "cutting up" and "barking" mills and divert a part of their spruce and balsam logs to pulp manufacture. The same operations in the woods and on the drive frequently provide raw materials for both saw-mill and pulp-mill and it is often impossible to state whether the timber being cut will eventually be made into lumber or pulpwood. This stage of the pulp and paper industry is included under "operations in the woods" in reports on the lumber industry.

The pulp and paper industry was the most important manufacturing industry in Canada in 1924. In 1923 it displaced the flour milling industry which had hitherto headed the list in gross value of products. The pulp and paper industry also headed the lists during 1923 for salary and wage distribution and came second with regard to capital invested and number of employees. The industry with minor exceptions has increased steadily in importance from its inception in 1803.

If the production of pulpwood for exportation be considered as a branch of the industry its importance becomes still more evident. If the total net value of the combined industry be considered as the sum of the values of pulpwood exported, pulp exported and paper products manufactured, the maximum was

*Quebec and New Brunswick combined.

reached in 1920 with a total of $224,414,131. There was a decrease in 1921 followed by increases in 1922 and 1923 and a small decrease in 1924 when the net total was $187,174,703.

Table I gives the principal statistics in connection with the manufacture of pulp and paper in Canada during 1923 and 1924 by provinces. The primary stage of the industry, the production of pulpwood, is dealt with in reports on the lumber industry as the production of pulpwood cannot be separated from the production of sawlogs and other primary forest products.

Employees, Salaries and Wages.—Table II gives details of employment by provinces separating male and female employees and also separating those on salaries from wage earners. The amounts paid in salaries or wages are given in each case. The table below shows the increases in number of employees and their average earnings from 1923 to 1924.

EMPLOYEES AND EARNINGS, 1923 AND 1924

Classes of employment	Number of employees		Increase or decrease from 1923	Average earnings per employee	
	1923	1924		1923	1924
	no.	no.	p.c.	$	$
Total.....	29,234	27,627	− 5·5	1,313	1,363
Salaried employees....	2,820	2,993	+ 6·1	2,507	2,318
Wage earners.....	26,414	24,634	− 6·7	1,185	1,247

The total number of employees in this industry decreased by over five per cent from 1923 to 1924 due to a decrease of over six per cent in wage earners. The salaried employees increased by over six per cent. The average earnings per employee increased by almost four per cent due to increases in wages. Average salary earnings decreased during the year.

A table is given showing the working hours in force in each province. From this it appears that the 8-hour day is in force with more than fifty per cent of the wage earners in this industry throughout Canada. In New Brunswick almost eighty per cent of the employees work eight hours or less, in Ontario almost seventy per cent and about fifty per cent in Quebec and British Columbia. The longest hours are observed in Nova Scotia where 82.4 per cent of the wage-earners work over ten hours a day. The average number of hours worked per week are also shown in this table and are highest in Nova Scotia at 70·7 and lowest in New Brunswick at 50.

Another table shows, by provinces, the total number of days the mills operated on full time and part time and the days idle, together with averages per mill in each case. During 1924 the average mill operated for 237 days on full time, 16 days on part time and was idle for 42 days as compared to 258 days on full time, 16 days on part time and 32 days idle in 1923. Mills in British Columbia operated for the greatest number of days on full time.

II.—EMPLOYEES, SALARIES AND WAGES, BY PROVINCES, 1924

Classes of employees, by provinces	Total number of employees	Salaries and wages	Male employees	Female employees
	No.	$	No.	No.
Nova Scotia.....	426	216,025	418	8

The Lumber Industry in 1924

The preliminary report on the lumber industry in Canada during 1924, issued by the Forest Products Branch of the Dominion Bureau of Statistics, shows increases in the quantity production of lumber, lath and shingles, the chief products of the industry, as well as increases in prepared pulpwood, sawn ties, box shooks and other by-products and side lines. There were decreases in the total values of lumber and lath, but these were offset by increases in pulpwood, sawn ties, shingles, box shooks, veneer, pickets and other products. The total value of all the products of the industry increased from $139,894,677 in 1923 to $141,929,559 in 1924, an increase of 1.45 per cent.

From the standpoint of gross value of production the saw-milling industry ranks third among the manufacturing industries of Canada with the pulp and paper industry first and the flour and grist milling industry second.

The total number of employees on salaries and wages increased from 35,070 to 35,493,

and the total pay-roll increased from $33,490,504 to $34,783,780 and the average annual earnings per employee increased from $955 in 1923 to $980 in 1924.

The production of sawn lumber in Canada reached its maximum in 1911 with a reported cut of 4,918,202 M feet, board measure. A second peak was reached in 1920 with a cut of 4,298,804 M feet followed by a considerable decrease in 1921. Increases in quantity production have taken place annually since 1921 with a production of 3,878,942 M feet in 1924 valued at $104,444,622 as compared with 3,732,700 M feet in 1923 valued at $108,295,563. The 1924 production represents an increase of 3.92 per cent in quantity but a decrease of 3.56 per cent in value. The average value of all kinds of lumber decreased from $29.01 per M feet in 1923 to $26.93 in 1924, a decrease of 7.27 per cent.

The preparation of pulpwood, including cutting-up and barking or rossing, is carried on as a side line in many Canadian saw-mills and is therefore included as part of the industry. Prepared pulpwood comes second to sawn lumber in importance with 814,180 cords valued at $11,583,293 as compared with 755,933 cords valued at $9,730,861 in 1923.

The production of shingles increased in both quantity and value from 2,718,650 M in 1923 valued at $9,617,114 to 3,129,501 M in 1924 valued at $10,406,596.

The quantity production of lath increased from 1,153,735 M in 1923 to 1,165,819 M in 1924 but the total value of lath decreased from $6,324,747 in 1923 to $5,975,253 in 1924 due to a decrease in the average value from $5.48 to $5.13.

While there were fewer mills in operation in 1924 than in 1923 the average production per mill was considerably higher. The 2,883 establishments reporting in 1923 had an average output of 1,295 M feet while the 2,761 mills in 1924 produced an annual average of 1,405 M feet.

The cost of fuel used in the industry increased from $607,880 to $651,449 and the total quantity of power employed increased from 259,803 horse-power to 285,263 horse-power.

Raw materials in this industry which are in the form of logs, bolts and rough pulpwood delivered at the mill were valued at $83,141,692 in 1924 as compared with $73,325,718 in 1923. The value added by manufacture was $58,787,867 and the total value of raw materials formed 58.6 per cent of the total value of the finished products in 1924 as compared to 52.4 per cent in 1923. This ratio of the value of raw materials to the value of products has been steadily increasing in late years because of increases in stumpage values and increases in the cost of logging due to the longer distances logs must be transported as the more accessible supplies are exhausted.

British Labour Proposal for Unemployment Board

The British House of Commons rejected the "Prevention of Unemployment" bill introduced by the Labour Party in March. It was proposed to set up a National Employment and Development Board, which would include all ministers who were at the head of departments influencing employment by the giving of contracts or by the employment of direct labour. This Board would be presided over by the Minister of Labour, who would be responsible to parliament for seeing that the intentions of the bill were put into effect. The Board would be provided with a regular income of £10,000,000 a year and would have the services of an expert secretary, to be appointed by the ministry of labour. The Board would make a continuous survey of the present and prospective work, through which the government or municipalities could influence employment. It would consider such work as would be given by contracts for the army, navy, and air force, inland revenue buildings, customs and excise buildings, school buildings, government buildings, service uniforms and development work of all kinds. When trade was brisk the government would hold back as large a proportion of prospective work as could practicably be held back, in order to provide employment when trade slackened. So far from being a source of expenditure, the Board would save money, for its schemes would not compete for labour with private industries when men were working overtime.

The Minister of Labour, in opposing the bill, said that to try to make people believe that unemployment could be alleviated by relief works, even on a large scale, was a cruel thing. It could not be done. In the consideration of the problem of unemployment two things had to be kept in view—how to maintain and improve the standard of living, and how to recover the lost part of our international trade. Those two things had to be combined. So far there was a gap between them. His conviction was that the way to combine them was by diminishing costs by means other than the reduction of wages.

EMPLOYMENT SITUATION AT THE BEGINNING OF MARCH, 1926, AS REPORTED BY EMPLOYERS TO THE DOMINION BUREAU OF STATISTICS

A CONTINUATION of the moderately favourable movement in employment indicated in the preceding month was reported by employers on March 1, the gain being practically the same as that recorded on the corresponding date last year. Statements were received from 5,753 firms having 750,695 employees, as compared with 743,813 on February 1. The index number was slightly higher than on March 1 of any year since 1920, standing at 91.5, as compared with 90.7 on February 1, 1926, and with 87.0, 90.7, 89.9, 81.9 and 88.0 on March 1, 1925, 1924, 1923, 1922 and 1921, respectively.

Manufacturing was considerably more active; railway construction, (chiefly on account of track-clearing operations following the heavy snow falls), and services also reported improvement, while seasonal losses were indicated in mining, logging, transportation and trade.

Employment by Provinces

Additions to staffs were registered in the Eastern and Central Provinces, while employment declined in the Western Provinces.

Maritime Provinces.—Owing to the severe storms in the Maritime Provinces, employment in the track departments of the railroads increased considerably on March 1. Transportation was also more active, but reductions were indicated in logging and mining. The 494 firms reporting had 65,373 employees, or 2,584 more than on February 1. The situation was better than on March 1, 1925 or 1924.

Quebec.—Further improvement was noted in Quebec, where the 1,247 employers whose statistics were tabulated increased their working force from 203,061 persons on February 1 to 206,181 at the beginning of March. Employment was in greater volume than on the corresponding date of last year; the gains recorded then were decidedly smaller. Manufacturing registered largely increased activity, as compared with February 1, the iron and steel, building material, textile and leather groups, in particular, showing marked expansion. Railroad construction and maintenance and services were also busier, the former group chiefly on account of snow-clearing. Trade showed seasonal curtailment.

Ontario.—Manufacturing, especially of iron and steel products, reported substantial improvement, and construction and services made comparatively small gains. Logging, mining, transportation and trade, however, registered reduced staffs; the seasonal losses in the first-named were the largest. A combined working force of 316,417 persons was employed by the 2,662 reporting firms, who had 312,751 employees on February 1. Somewhat more extensive increases were noted on March 1, 1925, but the index number then was several points lower.

Prairie Provinces.—Continued curtailment of operations was shown in the Prairie Provinces, where mining, transportation, trade and logging were seasonally slacker. Statistics were received from 741 employers, whose staffs totalled 93,783 persons as against 95,830 in the preceding month. This decline was smaller than that reported on the same date of a year ago, when employment was in less volume.

British Columbia.—Contractions in employment in transportation and construction were partly offset by improvement in manufacturing, chiefly in metal-using, lumber and pulp and paper factories. A combined payroll of 68,941 workers was registered by the 609 firms making returns; they had 69,382 employees on February 1. Additions to staffs were recorded at the beginning of March, 1925, but the situation then was less favourable than on the date under review.

Index numbers of employment by economic areas are given in Table I.

Employment by Cities

The trend of employment was upward in Montreal, Quebec, Toronto, Hamilton, Windsor and Winnipeg, while in Ottawa and Vancouver declines were recorded.

Montreal.—Further marked recovery was noted in manufactures in Montreal, especially in iron and steel. Services also afforded more employment, but building and trade were seasonally slacker. The working force of the 681 reporting firms aggregated 101,611 persons, as compared with 100,003 in the preceding month. Employment was somewhat more active than on the same date of last year, when the recovery was slightly less extensive.

Quebec.—The firms making returns in Quebec increased their staffs from 7,656 persons on February 1 to 7,812 at the beginning of March. Manufacturing and construction were rather busier. Curtailment was shown on March 1, 1925, but the index number then was slightly higher.

Toronto.—There was a gain of 611 persons on the payrolls of the 765 Toronto employers whose statistics were compiled, and who had

93,288 workers. The improvement was chiefly confined to manufacturing, the iron and steel group showing most recovery. Employment at the beginning of March of last year was considerably reduced; the general index stood at 81.8 as compared with 87.1 on the date under review.

Ottawa.—General, but rather small contractions were registered in Ottawa, according to reports from 126 firms employing 9,010 persons as compared with 9,124 on February 1.

Hamilton.—Iron and steel works were decidedly more fully employed and food factories also showed improvement. Additions to staffs totalling 496 persons were made by the 195 employers making returns, who had 26,819 workers on March 1. The situation was better than on the same date of 1925, when gains were also recorded.

Windsor and other Border Cities.—Employment in iron and steel plants showed a further increase, while construction was seasonally dull. Statements were received from 80 firms employing 10,600 workers, or 403 more than in the preceding month.

Winnipeg.—The gains in employment indicated on March 1, 1926, involved the same number of workers as did the decreases noted on the corresponding date in 1925, when the index was some eight points lower. A combined working force of 25,119 persons was reported at the beginning of March by the 275 co-operating firms, who had 24,728 employees on February 1, 1926. Construction afforded much more employment, but trade showed further seasonal losses.

Vancouver.—Reductions in shipping and stevedoring and in construction were partly offset by increases in manufacturing, notably in iron and steel. Returns were tabulated from 226 firms having 23,341 employees, as against 23,781 in their last report. Employment in Vancouver was more active than on March 1, 1925, when the trend was upward.

Table II gives index numbers of employment by cities.

The Manufacturing Industries

A further increase in the number employed in factories was noted on March 1; the largest gains were in automobile and other iron and steel works, but textiles, boots, shoes, clay, glass, stone, lumber and non-ferrous metals also afforded more employment. Statements were compiled from 3,721 manufacturers employing 430,668 operatives, or 8,636 more than in their last report. Although this expansion was rather less than that indicated on March 1, 1925, the index number on the date under review was several points higher.

Leather Products.—Boot and shoe factories showed a further increase in employment at the beginning of March, while other leather works were also busier. Statements were received from 194 manufacturers in this group employing 17,211 workers as against 16,571 at the beginning of February. This gain, which was reported chiefly in Quebec and Ontario, greatly exceeded that noted on March 1, 1925, when the index number was several points lower.

Lumber and products.—There were continued seasonal increases in the number of persons employed in the lumber group on March 1, rough and dressed lumber mills, furniture and wooden vehicle works showed the greatest improvement, most of which was recorded by firms in Ontario and British Columbia. The payrolls of the 694 employers reporting aggregated 40,983 workers or 820 more than in the preceding month. This expansion was less than that indicated on the same date of last year; employment then, however, was below its level at the time of writing.

Musical Instruments.—Thirty-eight firms manufacturing musical instruments reported 2,882 employees, as compared with 2,659 on February 1. This increase was not quite so large as the reduction from which it was a recovery, but it greatly exceeded the gain recorded on March 1 last year, when the index number was some seven points lower. Ontario and Quebec works registered the improvement.

Plant Products, Edible.—In contrast with the decidedly upward tendency indicated on March 1, 1925, there was a decline in employment on the date under review; 202 persons were released by the 311 firms making returns in this group, who employed 25,255 workers. The losses were reported in sugar and syrup factories and in flour and other cereal mills. Employment in Quebec was more active but in Ontario and the Prairie Provinces there were decreases. The situation was slightly better on March 1 than on the same date in 1925.

Pulp and Paper Products.—Employment in printing and publishing establishments showed a considerable falling off, but there were increases in pulp and paper mills and in factories producing miscellaneous paper products. Reports were tabulated from 449 firms in the pulp and paper group, whose staffs declined from 52,552 persons on February 1 to 52,379 on the date under review. There were losses in Quebec and Ontario, while in the Maritime Provinces and British Columbia gains were indicated. Conditions were better than on March 1, 1925, when moderate improvement was registered.

Rubber Products.—Partial recovery from the contraction indicated in the preceding month was reported in rubber factories, mainly in Ontario. Although the improvement was considerably smaller than that recorded at the beginning of March of last year, the index number stood at 92.3 as compared with 79.1 in 1925. The working forces of the 31 co-operating manufacturers totalled 13,176 persons as compared with 13,022 on February 1, 1926.

Textile Products.—Further, though less extensive expansion was shown in textiles; garment and personal furnishing and hosiery and knitting factories registered increased activity, while cotton and woollen mills were somewhat slacker. Returns were compiled from 515 employers whose staffs, standing at 71,340 on March 1, were larger by 693 workers than in the preceding month. While all provinces shared to some extent in the gains, those in Quebec were most pronounced. Employment on the same date of last year had shown a greater increase, but the index number was several points lower.

Chemicals and Allied Products.—Continued improvement was registered in chemical works in Quebec and Ontario. According to statistics from 110 manufacturers, they employed 6,318 workers, as compared with 6,179 in their last report. A similar gain was shown on March 1, 1925, when the situation was slightly less favourable.

Clay, Glass and Stone Products.—For the first time in seven months, employment in building material factories increased, the gain being larger than that reported on March 1, 1925, when the index number was nearly twelve points lower. The bulk of the increase was in Quebec, but Ontario also recorded heightened activity. The working forces of the 107 firms making returns in this group aggregated 7,790 persons on March 1, 1926, or 599 more than in the preceding month. Brick, glass, stone and cement works registered improvement.

Iron and Steel Products.—Employment in automobile and other vehicle factories showed substantial increases and there were also gains in agricultural implement, structural iron and steel and machine shops and in foundries. The most pronounced recovery was in Ontario and Quebec, while in the Maritime Provinces reductions were recorded. Statements were received from 641 manufacturers having 121,559 employees, as compared with 116,410 at the beginning of February. The additions to staffs reported on March 1, 1925, were larger, but the situation then was less favourable.

Non-ferrous Metal Products.—Lead, tin, zinc and copper factories afforded increased employment while smelting and refining was somewhat slacker. Most of the improvement took place in British Columbia. The pay rolls of the 100 firms reporting rose from 12,950 workers on February 1 to 13,422 at the beginning of March. This expansion exceeded that noted on March 1, 1925, when the index number was considerably lower.

Logging

Seasonal contractions were shown in logging camps at the beginning of March, but the losses were not as extensive as at the same time last year. Employment then, however, was better than on the date under review. The working forces of the 220 reporting employers included 30,484 persons, as against 31,939 at the beginning of February. In the Maritime Provinces, Ontario and the Prairie Provinces curtailment was indicated, in Quebec the situation was unchanged, while in British Columbia improvement was noted.

Mining

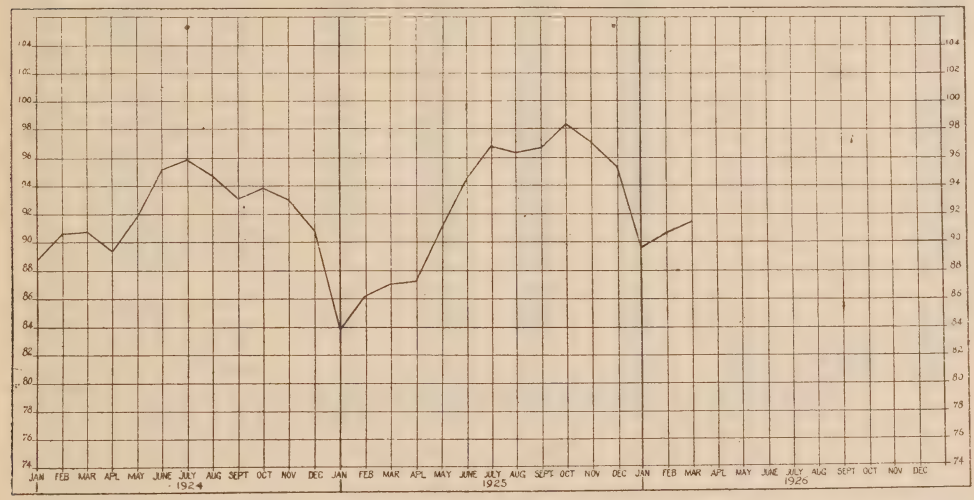
Coal Mining.—Employment on March 1 in every year of the record has declined; 1,728 persons were let out by the 90 operators reporting for the date under review, who employed 24,130 workers. The largest losses were in the Prairie Provinces, but there were also decreases in Nova Scotia. Employment was in less volume than on March 1, 1925.

Metallic Ores.—The mining of metallic ores, chiefly in British Columbia, employed a smaller number of workers than in the preceding month. Activity had increased at the beginning of March last year, when the index number was many points higher. Statistics were received from 48 firms whose staffs declined from 10,965 employees on February 1 to 10,732 on the date under review.

Non-metallic Minerals (other than coal).—The trend of employment in quarries and other divisions of this group was downward, according to the 68 co-operating employers, whose payrolls aggregated 5,293 workers, as compared with 5,702 on February 1. Minor losses were indicated at the beginning of March a year ago; the situation then was not so favourable.

Communication

Employment on telephones was rather slacker, while slight gains were made on telegraphs. A combined working force of 22,927 persons was employed by the 181 communication companies and branches reporting; they had 23,041 workers on February 1. Greater reductions were noted on the same date of last year and the index number then was lower.



Transportation

Steam Railways.—Further but less extensive shrinkage was reported in employment on steam railway operation. The losses involved a much smaller number of workers than those registered at the beginning of March, 1925, when employment was in less volume. Returns were compiled from 102 employers whose payrolls included 72,901 persons, or 787 less than on February 1. In the Maritime Provinces, increased activity was noted, but there were comparatively small losses in Ontario and British Columbia and large decreases in the Prairie Provinces.

Highway.—Employment on road construction work declined, as is usual at the time of year. Statistics were received from 91 employers having 3,014 workers as compared with 3,660 at the beginning of March. The western and Maritime Provinces reported the greatest decreases. Curtailment causing the release of approximately the same number of workers was recorded on March 1, 1925.

Railway.—Chiefly owing to track clearing operations necessitated by the severe snow registered on March 1 a year ago when the index number then was over sixteen points lower.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Shipping and Stevedoring.—The working forces of the 44 firms reporting in this division aggregated 9,966, as compared with 10,484 in the preceding month. Practically all this curtailment took place in British Columbia. Additions to staffs were made on March 1, 1925, but employment in water transportation then was below its level on the date under review.

Construction and Maintenance

Building.—Further seasonal losses were noted in building construction, from which 708 persons were released by the 316 reporting contractors who had 20,430 in their employ. The largest reductions were in Quebec, the Maritime Provinces and British Columbia, while in the Prairie Provinces considerable expansion was shown. Improvements were storms in the Eastern Provinces, there was a considerable gain in employment in railway construction and maintenance. Activity in the Prairie Provinces also increased, but there were declines in British Columbia. The thirty-two co-operating employers enlarged their working forces by 5,060 persons to 31,245 on March 1. Employment on the corresponding date last year had shown a falling off and the index number was much lower.

Services

Hotels and restaurants, laundries and other branches of the service group afforded increased employment, according to 167 firms employing 13,532 persons, as compared with 13,160 in their last report. Activity in this group was greater than on March 1, 1925, when small losses were indicated.

Note.—The number employed by the reporting firms in Jan. 1920, is taken as 100 in every case. The "relative weight" in Tables I, II and III shows the proportion of employees in the indicated district or industry to the total number of employees reported in all districts and industries on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING.

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing
1921

Trade

Further seasonal curtailment in trading establishments was registered at the beginning of March, when 665 persons were released from the personnel of the 562 reporting employers, who had 56,996 workers. There were reductions in retail stores and also in wholesale trade. Much more extensive contractions were noted on the corresponding date last year; the index number then was several points lower.

Table III gives index numbers of employment by industries as on February 1 and March 1, 1926, as compared with March 1 of the last four years. The column headed "Relative Weight" shows the proportion that the number of employees reported in the indicated industry is of the total number of employees reported in Canada by the firms making returns on March 1, 1926.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industry	Relative weight	Mar. 1 1926	Feb. 1 1926	Mar. 1 1925	Mar. 1 1924	Mar. 1 1923	Mar. 1 1922

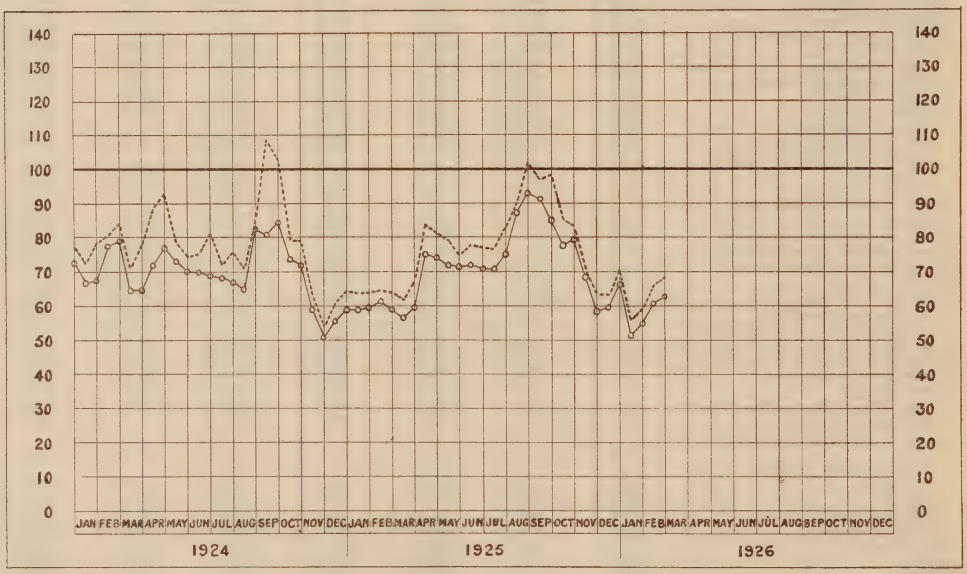
NOTE.—The relative weight column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.



EMPLOYMENT OFFICE REPORTS FOR FEBRUARY, 1926

THE volume of business transacted in the offices of the Employment Service of Canada during the month of February showed only a nominal decline from that transacted during the preceding month, and also from that of the corresponding month last year, the records showing practically the same number of vacancies offered and placements effected in both instances, though the number of applicants registered declined to a somewhat greater extent.

The accompanying chart shows the trend of employment since January, 1924, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and placements in relation to applications rose sharply during the first half of the month, but remained almost on the same level during the balance of the period, the ratio of both vacancies and placements being several points higher than that attained during February, 1925. The ratio of vacancies to each 100 applications was 66.2 and 68.6 during the first and second half of February in contrast to the ratio of 64.5 and 63.8 during the same period in 1925. The ratio of placements to each 100 applications during the period under review was 60.7 and 62.8 as compared with 61.3 and 58.9 during the corresponding month of 1925.

The summary of the reports from the offices showed that the average number of applications reported during the first half of February, 1926, was 1,249 as compared with 1,274 during the preceding period, and with 1,398 daily in the corresponding period of 1925. Applications for work during the latter half of the month registered 1,203 daily in contrast with 1,230 during the latter half of February a year ago. Employers notified the Service of a daily average of 827 vacancies during the first half and 826 during the latter half of the month under review, as compared with a daily average of 902 and 784 vacancies during the month of February, 1925. Vacancies offered to the Service during the latter half of January, 1926, averaged 758 daily. The Service effected an average of 758 placements during the first half of February, of which 474 were in regular employment and 284 in work of one week's' duration or less, as compared with a total average placement during the preceding period of 698 daily and with 857 daily during

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

the first half of February a year ago. During the latter half of the month under review placements averaged 756 daily (462 regular and 294 casual), as compared with an average of 725 daily during the corresponding period of 1925.

During the month of February, 1926, the offices of the Service referred 19,371 persons to vacancies, and effected a total of 18,157 placements. Of these the placements in regular employment were 11,222, of which 8,550 were of men and 2,672 of women, while the placements in casual work totalled 6,935. The number of vacancies reported by employers numbered 13,163 for men and 6,660 for women, a total of 19,823, while applications for work totalled 29,414, of which 21,322 were from men and 8,092 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926 (2 months)	24,027	13,139	37,166

Nova Scotia

Employment opportunities as indicated by the orders listed at employment offices in Nova Scotia during the month of February were over 23 per cent higher than in the preceding month, and nearly the same percentage higher than during February last year. Placements were nearly 30 per cent above January and nearly 20 per cent in excess of February, 1925. When comparing vacancies and placements during the month under review with the corresponding month of last year declines are noted under logging and transportation, but the decreased activity in these industrial divisions was more than offset by gains in the manufacturing industries, railway construction and maintenance, and services. Placements by industrial groups included manufacturing 95; construction and maintenance 125; services 281; and trade 71. Regular employment was secured for 124 men and 70 women during the month.

New Brunswick

Orders listed at employment offices in New Brunswick during February were over 11 per cent higher than in January, and nearly 47 per cent above February of last year. Placements during February were nearly 14 per cent greater than during the preceding month, and nearly 47 per cent above the corresponding month of last year. The gains recorded during the month under review over the corresponding month of last year were all recorded under transportation, construction and maintenance and services. Placements in the latter group numbered 467, while positions were secured for 204 persons in construction and maintenance and 112 in transportation Placements in regular employment during the month numbered 199 of men and 55 of women.

Quebec

There was a nominal decline only in the number of orders received during February when compared with January, but a gain of over 71 per cent in comparison with February last year. Placements were nearly 16 per cent lower in February than during the preceding month, but nearly 39 per cent higher than in the corresponding month last year. All industrial groups except logging and services participated in the gains over February of last year, those in construction and maintenance being the most pronounced. Placements by industrial groups included manufacturing 110; logging, 110; construction and maintenance 430; and services 376. During the month under review regular employment was secured for 623 men and 380 women.

Ontario

Orders listed during February at employment offices in Ontario were over 7 per cent less than during January, and also during February last year. There was a decrease in placements of over 6 per cent and 10 per cent respectively. The declines registered do not, however, indicate less favourable employment conditions, as placements during the month under review were higher than in February last year in all industrial groups except construction and maintenance, the small call for snow shovellers in the highway maintenance division of this group being entirely responsible for the net decline recorded. Industrial groups in which most of the placements were effected were manufacturing 1,071; logging 1,529; farming 491; transportation 162; construction and maintenance 1,977; services 2,548; and trade 314. Placements in regular employment numbered 4,106 of men and 917 of women.

Manitoba

Opportunities for employment listed at Manitoba offices during February were nearly 2 per cent less than during the preceding month and nearly 3 per cent lower than

*20 Placements effected by offices since closed.

during the corresponding month of last year. Placements during February were over 8 per cent less than in January, but nearly 5 per cent higher than during February, 1925. The gains under the latter comparison were due to increased placements of bush workers, the majority of whom were sent to camps in the Port Arthur zone. Placements by industrial groups included manufacturing 81; logging 406; farming 396; construction and maintenance 109; services 1,154, of which 926 were of household workers; and trade 105. Regular employment was secured for 944 men and 454 women during the month.

Saskatchewan

There was a decrease of over 16 per cent in the number of orders received during February when compared with the preceding month, but a nominal gain in comparison with the corresponding month last year. Placements during the month under review showed a decrease of over 9 per cent when compared with January, and over 4 per cent in comparison with February last year. A reduction in farm placements was mainly responsible for the decline from February, 1925. Industrial groups in which most of the placements were effected were logging 78; farming 408; construction and maintenance 76; and services 701. During the month 552 men and 341 women were placed in regular employment.

Alberta

During February Alberta offices reported over 4 per cent less vacancies than in January, but an increase of over 3 per cent in comparison with February last year. Placements were nearly 8 per cent lower than in the preceding month, but when compared with February last year a decline of less than 1 per cent is recorded. Logging and construction and maintenance placements showed an increase over February 1925, but these gains were offset by reduced placements in farming and transportation. Placements by industrial groups included manufacturing 90; logging 435; farming 369; construction and maintenance 154; and services 520. Regular employment was secured for 1,059 men and 259 women during the month.

British Columbia

Vacancies listed at British Columbia offices during the month of February were over 3 per cent higher than in the preceding month, but over 25 per cent below the corresponding month last year. During the month under review placements were over 5 per cent in excess of January, but about 24 per cent lower than in February last year. The reduction in placements from a year ago was confined almost entirely to the highway construction division, under which group relief work was provided last year, which has not been necessary this winter. Industrial groups in which most of the placements were effected during the month included manufacturing 317; logging 340; farming 107; transportation 94; construction and maintenance 275; services 734, of which 489 were of household workers; and trade 90. Placements in regular employment numbered 943 of men and 196 of women.

Movement of Labour

During February, 1926, the offices of the Employment Service of Canada made 11,222 placements in regular employment of which 6,305 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,010 were granted the Employment Service reduced transportation rate, 658 going to points within the same province as the despatching office and 352 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transportation certificates granted by the Quebec offices numbered 24. Of these Hull issued 15 to bushmen going to North Bay and 2 to bushmen going to Cobalt, while within the province the Quebec City office transferred 7 bushmen to points within its zone. Four hundred and nineteen certificates were issued by Ontario offices, 355 provincial and 64 interprovincial. The provincial movement included 278 bush workers travelling to employment near Sudbury, Timmins, North Bay, Fort William and Port Arthur. Thirty-seven building construction labourers, 2 pipe fitters and one domestic went from Fort William and 14 building construction labourers from Port Arthur to points within their respective zones. From North Bay 12 construction labourers were transferred to Timmins and one miner and two labourers to Cobalt and from Toronto one painter was sent to Port Arthur, one cook to Sudbury, 5 rivetters to North Bay and one machinist to Timmins. Interprovincial transfers numbered 64 and were all for the Hull zone, 2 surfacemen and one cook travelling from Cobalt, 42 station workers from Sudbury, 10 building construction workers from Port Arthur, 7 building construction labourers and 2 station workers from North Bay. The Manitoba offices despatched 344 workers at the special rate, 92 to points within the province

and 252 to other provinces. Of the former, 91 were despatched by Winnipeg, 73 of whom were farm hands, one a clerk and the remainder hotel and household workers, the majority of whom were destined to points in the Brandon zone. The Brandon office sent one bushmen to the Dauphin zone. The interprovincial certificates were all issued by the Winnipeg office and represented 216 bushmen, 3 cooks, 4 quarry workers and 2 hotel workers sent to Port Arthur, one teamster to Fort William, one farm housekeeper to Edmonton, one engineer to Prince Albert and 24 farm labourers and farm domestics to various points throughout the province of Saskatchewan. The certificates issued in Saskatchewan numbered 57, all going to points within the province. Twenty-eight bush workers were sent to Prince Albert and 4 to North Battleford; one butcher was sent from Regina to Saskatoon and the balance were made up of farm labourers, farm domestics and cooks sent to various points throughout the province. Alberta interprovincial certificates were issued by the Edmonton office one for a farm hand transferred to Saskatoon and one for a housekeeper sent to North Battleford. Provincial transfers numbered 117. Of these Calgary sent 38 bushmen, one engineer, 9 farm labourers and one maid to Edmonton, 6 farm hands to Drumheller, one farm hand and one maid to its own zone and Edmonton transferred 36 bushmen, one plumber, 6 sawyers, two labourers, one miner, one carpenter, one lather, 5 farm hands and 7 household and hotel workers to points within its zone. Of the 47 persons who benefited by the reduced rate in British Columbia 30 were transferred to points within the province and 17 to other provinces. To Alberta, New Westminster sent 2 farm labourers and Vancouver 10 miners, 2 cooks and one farm hand. To Moose Jaw, Victoria despatched one farm labourer and one housekeeper. Provincially, Prince George issued certificates to 6 bushmen and one farm worker going to its own zone; Prince Rupert sent 2 bushmen to Prince George; Vancouver transferred one planer-man to Prince George, one miner, one sawyer, one baker, one flunkey and 1 farm hand to Penticton, one housekeeper, one farm labourer, one miner and one engineer to Kamloops and 6 miners, 2 cooks, 2 waitresses and one hoist man to points within its own zone.

Of the 1,010 workers who benefited by the Employment Service reduced rate 651 were carried by the Canadian National Railway, 331 by the Canadian Pacific Railway, 19 by the Temiskaming and Northern Ontario Railway and 9 by the Pacific Great Eastern Railway.

BUILDING PERMITS ISSUED IN CANADA IN FEBRUARY, 1926

THERE was an increase of 54.2 per cent in the value of the building permits issued in February, 1926, as compared with the preceding month, and of 20.8 per cent over the corresponding month of last year. Reports were tabulated from 60 cities which had authorized building value at $7,104,343; the total for January, 1926, was $4,608,688 and for February, 1925, $5,879,858.

Some 45 cities furnished detailed statements showing that they had issued over 600 permits for dwellings estimated to cost nearly $2,570,000 and about 1,000 permits for other buildings valued at not quite $4,200,000. In the preceding month, authority was granted for the erection of over 550 dwellings at a proposed cost of some $2,200,000, and of more than 900 other buildings valued at approximately $1,900,000.

All provinces except New Brunswick and Manitoba registered increases in the value of the building permits issued during February as compared with January. The greatest gain was that of $2,187,604, or 239.6 per cent, in Quebec.

As compared with February of last year, Nova Scotia, New Brunswick and Manitoba reported declines in the value of the building authorized, there being reductions of 40.3 per cent, 99.8 per cent, and 36.0 per cent, respectively, in those provinces. Of the increases recorded in the other provinces, that of $824,907 or 36.2 per cent, in Quebec was most pronounced.

Montreal and Toronto issued permits at a higher valuation than in either January, 1926, or February, 1925. In Winnipeg there was an increase in the former and a decline in the latter comparison, while in Vancouver there was on the contrary, a falling off as compared with the preceding month, but an increase over February of last year. Three Rivers, Brantford, Chatham, Kingston, Niagara Falls, Port Arthur, Welland, Ford, Riverside, Regina, Calgary, Edmonton, Lethbridge, Nanaimo, Prince Rupert and Victoria indicated increases as compared with both January, 1926, and February, 1925.

Cumulative record for first two months, 1926.—The value of the building permits issued by 60 cities during the first two months of 1926 and of the last six months is shown in the following table, which also gives the average index numbers of wholesale prices of building materials for the same two months:—

Year	Value	Average index numbers of wholesale prices of building materials for two months. (1913=100)
	$	
1926	11,713,031	152·7
1925	11,320,628	153·5
1924	8,532,399	167·5
1923	9,813,909	164·3
1922	8,048,752	161·6
1921	6,161,045	209·7
1920	10,151,941	205·2

It will be noted that the 1926 total for January-February was the highest on record, being greater by 3.5 per cent than in 1925, by 37.3 per cent than in 1924, by 19.4 per cent, than in 1923, by 45.5 per cent, than in 1922, by 90.1 per cent, than in 1921 and by 15.4 per cent, than in 1920. At the same time the index number of wholesale prices of building materials is this year the lowest since 1920.

The accompanying table gives the value of the building permits issued by 60 cities in February and January, 1926 and February, 1925. The 35 cities for which records are available since 1910 are marked with asterisks.

Alberta and Old Age Pensions

The legislature of Alberta, on April 7, unanimously adopted the following resolution in reference to the old age pension proposals now before the parliament of the Dominion:—

"Whereas the Acting Minister of Labour, on March 18, 1926, moved in the house of commons that the house go into committee to consider a plan to provide a system of old age pension, based on the reports of the special Parliamentary Committee of 1924, which report contemplated joint action by the federal parliament and provincial legislatures;

"Therefore be it resolved that this House endorses an old age pension scheme, but believes that a conference should be called by the federal authorities with the provincial government immediately, in order to complete financial arrangement satisfactory to each party before the passing of the proposed act."

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Iron, Steel and Products

Vancouver, British Columbia.—Western Steel Products, Limited, and Amalgamated Sheet Metal Workers' International Association, No. 280.

Agreement to be in effect from February 1, 1926, until February 1, 1927, with 90 days' notice of opening agreement.

The employers agree to employ union members or those agreeable to become so. No employees in the manufacturing end of the business or machine operators and no foreman or superintendent are to be members of the local. Not more than one inside and one outside foreman to be employed. Failing a supply of competent sheet metal workers, other help may be employed temporarily. Sheet metal work on buildings where parties to this agreement are employed must be supplied and erected by a sheet metal contractor. Employer will not request employees to install material considered unfair unless same is covered by patent rights.

Minimum wages per hour, $1. Junior members, three-quarters of journeymen's rate.

Apprentices shall continue their present seniority, no apprentice being entered as a registered apprentice without the consent of the employer.

A committee of three shall be appointed from the union to discuss and adjust with the manager and superintendent any differences occurring. In event of any dispute arising which cannot be settled by the joint committee, matter must be referred to the general office of the union, and no strike or lockout shall take place until investigated by an international officer and a decision rendered.

If notice of change in wages under the agreement be given by either side, parties will meet and try to adjust matter, making known their decision within 30 days.

Hours per day, eight; per week, forty-four.

In case of job being outside the city limits, employer shall furnish transportation. When it is not practicable for men to travel every day, employer shall pay for board and room. On a job of over ninety days' duration, employer shall provide first class transportation to the city once every six weeks. No transportation before end of ninety days.

One apprentice to three journeymen or less. One junior member to four journeymen or majority fraction thereof.

Members may not do sheet metal work for any person or persons until obtaining a permit from local union No. 280.

Overtime, time and one-half until 9 p.m.; thereafter and Saturday afternoons, Sundays and holidays, double time. No work on Labour Day.

Manufacturing: Printing and Publishing

Brantford, Ontario.—Local Employers in Newspaper and Book and Job Offices and International Typographical Union, No. 378.

Contract and scale to be effective from September 30, 1925, until September 30, 1928.

Book and Job Scale: hours per day, eight for five days, and four on Saturday. Overtime, time and one-half. Forty-four hours to be a week. Day work to be between 7 a.m. and 6 p.m., and night work between 7 p.m. and 6 a.m.

Minimum wages per week, foremen, $34.48. Hand compositors, make-ups, proofreaders and journeymen, day work, $31.68; night work, $33.68. Scale for apprentices per week, third year, $10.43; fourth year, $12.43; fifth year, $14.43.

Newspaper scale: Hours per day, 8, six days per week. Hours per night, 7½, six night per week. Day work to be done between 7 a.m. and 6 p.m. and night work between 7 p.m. and 6 a.m. Minimum wages per week, foremen, $38. Hand compositors, make-ups, proof-readers and journeymen, day work, $35, night work $37. Machinist operators, not less than $37 per week.

Apprentices—one to three journeymen. Foreman and local committee shall examine applicants, who shall be not less than sixteen years of age, and serve five years. Apprentices shall undergo yearly examinations. No overtime work for apprentices unless one journeyman in the same office is employed on the same shift.

Miscellaneous:

Overtime, time and one-half. Day or night shifts beginning on Sundays or holidays, double time.

Learners on machines, shall be union members or apprentices in last six months of their apprenticeship receiving two-thirds of scale for six months.

One superannuated member to an office may work where journeymen are employed, at not less than two-thirds of regular scale.

Manufacturing: Clothing

Montreal, Quebec.—Various Clothing Firms and Contractors and the Montreal Joint Board, Amalgamated Clothing Workers of America.

Agreement to be in effect from February 1, 1926, until May 1, 1926, and from year to year unless notice of abrogation or amendment shall be given in writing thirty days prior to expiration.

Any change in working conditions or hours in the industry shall become effective in the shop or firm.

Only good standing members are to be employed. Application for additional workers shall be made to the union. If such cannot be furnished the firm may secure workers who shall become union members.

There shall be equal division of work among employees of a shop.

Hours, forty-four per week. Overtime shall be dispensed with as far as possible. Overtime work before

or after regular hours, time and one-half. Contractors shall not do productive work in shops before or after working hours.

Disputes shall be taken up for adjustment by shop chairman and shop committee and the employer. If not settled, they shall be taken up by the union representative and the firm.

The firm agrees not to discipline members or place obstacles in way of the union.

The scale of wages established in the market shall be paid in the shop of the firm and in the shop of contractors where the firm's work is done.

Union members shall have access to shops whenever necessary.

Toronto, Ontario.—The Embroidery Manufacturers' Association and the International Ladies' Garment Workers' Union and the Toronto Joint Board of Cloaks, Suits and Dressmakers' Union, on Behalf of the Bonnaz Singer and Hand Embroidery Workers' Union, Local No. 7.

Agreement to be in effect from February 8, 1926, to December 31, 1926, and thereafter from year to year unless terminated on ten days' notice.

Only good standing members to be employed operating Bonnaz and Singer machines, stamping, spooling, finishing, sample-making, designing, pleating and other work required in the embroidery trade.

No workers shall be engaged except through the employment bureau of the union, nor be placed at work unless presenting a union working card. If union is unable to furnish help, same may be employed by the association but must present working card within one day.

Union shop to be maintained, which means one complying with all union standards and conditions as prescribed in this agreement.

No member of the association shall send out work without consent of the union.

No member of a firm shall do any work except to instruct sample makers or other workers.

Foremen and designers shall be union members and be under obligations of the union rules covered by this agreement.

There shall be a shop chairman to represent the employees in dealing with the firm.

Union representatives shall have access to factory at all times.

Hours: forty-four per week, divided among 5½ working days. No work between Saturday noon and 8 a.m. Monday. No overtime while there are vacancies for additional workers and such can be secured. Overtime rate to be time and a quarter until July 1, 1926; thereafter until the expiration of this contract, time and a half. Dominion Day, Laobur Day, and Christmas Day are to be observed and paid for. Refraining from work on May 1 shall not be considered a breach of the contract.

All workers shall work week work only, minimum scale: 1st class operators, capable of operating all bonnaz machines, including the invisible and beading machine, $50; 2nd class operators; full fledged mechanics capable of operating the "L" machine, $40; 3rd class operators, capable of operating the chain stitch machine and handling the "L" machine, $30; all operators capable of operating Singer embroidery machine and other miscellaneous machines, $22; stampers, $20; spoolers, $17; finishers, $16; finishers' learners, learners, who entered the factory on graduating from school, first two months, $13; following two months, $15; after six months, $16. Wages for designers shall be adjusted between the union and the firm accordingly. Increase of wages for apprentices already employed and all other workers not mentioned above shall be adjusted between the union and the members of the association.

No apprentice should be allowed without the consent of the union. To regulate employment, a conference will be held at the beginning of next season to ascertain whether or not additional workers are needed. Wages for workers who do not receive the minimum scale shall be readjusted during July, 1926. Where a worker is deficient in production, by reason of age or physical condition wages shall be agreed upon between the employer and the worker subject to the approval of the union.

Failure to pay wages shall be a violation of the contract, and in addition to penalty imposed on member, the association agrees to pay union for benefit of workers the entire amount of underpayment.

Work shall be distributed as equally as possible. Workers shall not be required to report every day and remain in shop during dull season when there is no work for them.

No home work shall be permitted by the employer. No contracting or sub-contracting work within the shop shall be permitted.

No member shall give out work to or purchase ready-made goods or accept work from establishments where the union is conducting a strike.

No member of the association shall discharge a worker before a notice in writing is served on the union of the reason for intended discharge. If union does not consent, question shall be referred to the trial board.

Association shall comply with standards of sanitation and fire prevention of joint board of sanitary control, and agrees to adopt the sanitary union label.

Before accepting a new member the association shall inform the union in writing of the application.

There shall be no lockouts or strikes in shops of members of the association during period of the agreement, nor any individual lockout, stoppage or shop strike pending the termination of any complaint or grievance. Notice of a strike must be given at once by the association to the union. The union agrees to return the striking workers within 48 hours.

Disputes and grievances shall be submitted in writing to the other party and shall be jointly investigated. In failure to agree, question shall be referred to a trial board of one member from each organization and a permanent umpire to be known as the impartial chairman, selected by both parties. Decisions shall be binding.

Transportation and Public Utilities: Telegraphs and Telephones

Canada.—Canadian Marconi Company (Limited Liability) and Commercial Telegraphers' Union of America, Canadian Marconi Wireless System Division No. 59.

Agreement to be in effect from April 1, 1926, until March 31, 1929, and thereafter, subject to 60 days' notice in writing. Either party desiring to revise agreement shall give notice in writing on February 1, 1929.

The seniority list is to be supplied to the General Chairman and kept up to date. The right of seniority shall govern in all cases, abiltiy being equal.

A telegrapher whose services have been dispensed with on account of reduction of staff shall be given preference in filling new positions or vacancies. A junior telegrapher shall be dispensed with first.

After one year's service at coast stations, two weeks' leave of absence with full wages and maintenance allowance. Applications to be made within 30 days. Casual service aboard ship by way of temporary relief shall not be deemed a reason for denial of annual vacation. Vacation periods shall not be cumulative and payment for lapsed vacations shall not be made.

Generous effort shall be made to grant vacations of uncertain and variable duration, with wages to ships' telegraphers who have been on extended voyages, prior to their return, when they have been unable to receive vacation for a prolonged period.

In event of a three-man station being short staffed, making it necessary for the remaining two telegraphers to keep a constant watch between them, overtime over eight hours per day, time and one half.

The company shall meet a committee to deal with matters in dispute such as wages, working conditions, grievances, etc. If the committee express desire to have an international officer present the company will offer no objection.

Telegrapher must give fifteen days' notice of leaving the service. The company must give fifteen days' notice of reduction of staff or fifteen days' wages. Dismissal cases consequent upon proven misdemeanor shall not be entitled to previous notice or pay. No telegrapher shall be suspended or discharged except for investigation, and any telegrapher who after having been suspended or discharged disproves the charge, shall be reinstated without prejudice, and reimbursed.

A telegrapher leaving the service shall be furnished with a certificate of service.

Wage scale: first year, $70 per month; second year, $75; third year, $85; fourth year, $95; fifth year, $105; sixth year, $115. In addition an allowance of $40 per month to be paid where maintenance is not furnished. Full maintenance allowance to be paid where a coast station telegrapher has been assigned to ship service for two weeks or less.

In addition, a bonus of $15 per month to regular officers in charge of coast stations, and of $10 to officers in charge of ship stations carrying two or more telegraphers. Officers in charge of coast stations shall suffer no loss of bonus through absence on regular vacations, but such bonus shall not be payable to substitutes. In event of a regularly appointed officer in charge being on leave other than vacation, bonus shall be paid to telegrapher performing duties of officer in charge. Uniform trimmings shall be supplied to wireless officers.

Fuel shall be supplied for operating stations other than dwellings but not to coast stations where maintenance allowance is not paid.

The company shall supply light for all stations and dwellings attached thereto, and pay all taxes on station property and buildings.

Rentals on dwellings shall be not more than $9 per month.

A ship's telegrapher laid off at a point away from divisional headquarters shall be entitled to wages, transportation and expenses until his return to his headquarters. A telegrapher quitting service without notice, or dismissed for proven misdemeanor shall not be entitled to transportation and expenses to headquarters. In case of transfer, funds will be advanced to cover reasonable expenses incurred, and telegraphers travelling upon the company's service shall be entitled to first class rail and steamship fare, hotel accommodation and board.

No transfers unjustly or unfairly; married men transferred by the company shall be freed from station duty for four days.

The Company undertakes to insert in future agreements with ship owners that said ship owners shall furnish wireless officers with medical and other attendance and comfortable sleeping accommodation, and if more than one wireless officer is employed, there shall be sleeping accommodation separate from the wireless cabin.

No deduction from wages or allowances shall be made where a telegrapher is travelling in the company's service. In case of transfer from one station to another, travelling expenses shall be paid in lieu of maintenance allowance.

The agreement does not apply to coast stations in Newfoundland, where employers shall be under a separate agreement.

AGREEMENT BETWEEN NOVA SCOTIA COAL MINERS, UNITED MINE WORKERS OF AMERICA, DISTRICT 26, AND THE PRINCIPAL MINE OPERATORS

THE text of an agreement between coal miners in Nova Scotia, the United Mine Workers of America, District 26, and the principal operators, signed March 16, 1926, in effect from February 1 to January 31, 1928, is given herewith. This agreement is the final settlement of a dispute arising out of the expiration of the previous agreement on January 15, 1925, and resulting in a cessation of work from March 6, 1925, to August 10, 1925, involving 11,463 workmen. The cause of the dispute was a proposal for a ten per cent wage reduction by the operators; as the dispute proceeded, maintenance men were withdrawn by the union when the cessation of work took place, disturbances occurred incidental to the picketing, and the militia were requisitioned by the provincial authorities. In the negotiations ensuing the operators refused to agree to certain provisions contained in previous agreements, one of which was the check-off of union dues from miners' pay envelopes.

The resumption of work in August was on the basis of a tentative agreement proposed by the Government of Nova Scotia, the scale in force August 15, 1922, to January 15, 1924, being put in force for six months, which was about six per cent lower than that in force from February, 1924, to January, 1925; a Royal Commission to be appointed by the Provincial Government to make an inquiry into the industry and to recommend a wage scale; and the check-off to be decided by a referendum of the miners.

The Commission recommended a wage reduction of ten per cent from the 1924 scale, to be in effect for at least two years, or that such a reduction be made with a provision for an adjustment of wages every six months for at least three years, according to the ability of the coal mining operations of the companies to pay. (LABOUR GAZETTE, January, 1926, supplement, p. 16.) In regard to the check-off the Commission recommended that

after six months the check-off for various items previously in vogue should be discontinued except "deductions in respect of matters having direct relation to the men's employment (viz., powder, tools and checkweighmen), and that are necessary to be made before his earnings can be determined; deductions in respect of such interests as benefit societies and Hospitals, since the operators are making joint contributions with the men."

Following the issue of the Commission's report, the union decided at a district convention to accept it as a basis for negotiations, January 26, 1926 (Labour Gazette, February, p. 125-126).

A draft agreement was submitted to the miners in a referendum on February 20, on which the union officers had agreed with the operators except on the clause regarding the check-off, the operators refusing to agree to collect the union dues after six months. The union officers, therefore, issued a statement that they would not recommend its acceptance by the miners on this account, declaring that the Commission had recommended a full recognition of the union by the operators, and that the check-off for union dues was usually incidental to recognition. The agreement was not approved by the miners, the vote being as follows:—

	For	Against
Glace Bay	601	2,228
New Waterford	165	585
Sydney Mines	242	730
Cumberland	97	831
Pictou	65	531
	1,170	4,905

The referendum of the miners on the check-off had not been taken, but in view of this vote negotiations were renewed, and on March 11 an amended clause on the check-off was submitted to the miners and approved. The agreement thus ratified was signed on March 16.

The clauses of the agreement are in general the same as those contained in the agreement in force from February, 1924, to January, 1925, effecting settlement of the strike from January 16 to February 20, 1924, which was negotiated by the international and provisional district representatives of the United Mine Workers, the district officers having been suspended by the International President during a strike in 1923 in sympathy with steel workers. This agreement was defeated by the miners in a referendum, although it provided for a six to eight per cent increase in wages, but the miners worked under its conditions until it terminated. This was the first agreement in Nova Scotia between the United Mine Workers and the principal operators setting forth rules and working conditions, agreements up to that time providing for the continuance of previous agreements with certain amendments.

The first agreement between the principal operators and the United Mine Workers was signed in February, 1919, continuing agreements between the operators and the Amalgamated Miners of Nova Scotia (Labour Gazette, March 1919, p. 307), which in turn continued agreements between certain operators and the representatives of the Provincial Workmen's Association and the United Mine Workers of America (Labour Gazette, June, 1917, pp. 452-454; July, 1917, p. 506). In 1920, agreements amending these were signed (Labour Gazette, February 1920, p. 130; March 1920, p. 233; April 1920, p. 391), and included wage schedules in most cases, but these were amended by the "Montreal Agreement" in November, 1920 (Labour Gazette, January 1921, p. 38), and again in August, 1922 (Labour Gazette, September 1922, p. 957), which continued in force until January, 1924, when the first agreement similar to that recently signed setting forth rules and working conditions was negotiated and signed, but not ratified, as mentioned above.

The text of the agreement signed by the representatives of the principal companies, the Dominion Coal Company, the Nova Scotia Steel and Coal Company, the Acadia Coal Company and the Cumberland Railway and Coal Company, subsidiaries of the British Empire Steel Corporation, and the representatives of the United Mine Workers of America is as follows:—

Text of Agreement

PREAMBLE

This agreement is made on the basis and in accordance with the terms of the report of the Royal Commission, composed of Sir Andrew Rae Duncan, Chairman, Major Hume Cronyn and Rev. Dr. H. P. MacPherson, dated January 8, 1926, particularly with reference to recommendation Number One of Section Number Sixteen of that report.

The parties hereto agree that during the period of this agreement, the scale of wages for labour shall be as set forth in the schedules attached hereto.*

*These schedules will be published in a future issue.

It is further agreed between the parties hereto that they shall, as soon as possible after the signing of this agreement, meet in conference and discuss the working out of the periodic wage revision as recommended in the second Alternative of Section Number Sixteen of the report of the Royal Commission and, if a mutually satisfactory basis is arrived at, this contract may be superseded by a contract arranged in accordance with the second alternative of Section Number Sixteen of the Report of the Royal Commission.

In accordance with the recommendation of the commission, the parties hereto accept the principle of cutting, shooting, and loading and will co-operate to put it in operation.

AGREEMENT

No. 1. Hours of Labour:

The collieries will commence to hoist coal at 7 a.m. at which time all the men must be in the mine. The day's work will cease at 3 o'clock, when all arrangements will be available for conveying men to the surface. The surface men around the bankhead and screens, associated with the handling of coal, are to be on duty between the hours of 7 a.m. and 3 p.m., and for a short time after, if necessary, for the purpose of attending to such duties as will facilitate their own work, such time not to exceed a half hour. The standard of other surface labour around the collieries to be from 7 a.m. to 4 p.m. with half an hour for dinner. Where continuous attendance is required, the shifts will be eight (8) hours both surface and underground.

No. 2. Observance of Mining Laws:

This contract shall conform to existing mining laws in the Province of Nova Scotia, and both parties agree to co-operate in the observance of said laws.

No. 3. No Stoppage of Work:

It is distinctly understood and agreed that in case of all disputes and grievances of every nature arising under this contract, the mines shall continue to work pending settlement.

No. 4. Method of Settling Disputes:

(*a*) There shall be a Pit Committee consisting of three men at each mine, two of them must be practical coal miners.

(*b*) The duties of the mine committee shall be confined to the adjustment of disputes between the mine manager and the miners or mine labourers arising out of this agreement, or any district or local agreement made in connection therewith.

(*c*) When any grievance or grievances arise between the mine manager and the miners or mine labourers and they fail to reach an agreement, the miners or mine labourers shall refer the grievance or grievances to the Pit Committee, and should they fail to reach an agreement with the mine manager, they shall refer grievance or grievances to the Local Superintendent and the District Executive. Should they fail to reach an agreement the grievance or grievances shall be referred to the General Superintendent, or his representatives, or the General Manager and the District Executive.

(*d*) It is contrary to the spirit and intent of this clause for any employee to attempt to, or to lay any mine or section of the mine idle for the purpose of forcing a settlement of any grievance.

No. 5. Duties of the Pit Committee:

The pit committee in the discharge of its duties shall under no circumstances go around the mine for any cause whatever unless called upon by the Mine Manager or his representatives and by a miner or Company man who may have a grievance he cannot settle with the Mine Manager or his representative; however, it is mandatory for the Mine Manager or his representative and the miner or Company man affected to make a request for the Pit Committee to come to the place or places where the grievance is at once, so that a thorough investigation can be made and adjustment of grievance made if possible.

Any pit committee-man who shall attempt to execute any local rule or procedure in conflict with any provision of this contract, or any made in pursuance hereof, shall be forthwith deposed as a committeeman. The foregoing shall not be construed to prohibit the Pit Committee from looking after the matter of membership, dues and initiation in any proper manner.

Members of the Pit Committee employed as day men shall not leave their places of duty during working hours, except by permission of the Company, or in cases involving a stoppage of the mine.

No. 6. Hiring, Discharging and Time to be paid for:

(*a*) The management of the mine, the direction of the working force, and the right to hire and discharge are vested exclusively in the operator, and the United Mine Workers of America shall not abridge these rights. It is not the intention of this provision to encourage the discharge of employees or the refusal of employment to applicants because of personal prejudice or activity in matters affecting the United Mine Workers of America. If any employee shall be discharged or suspended by the Management, and it is claimed that an injustice has been done him, an investigation, to be conducted by the parties and in the manner set forth in Section 4, shall be taken up promptly and if it is proved an injustice has been done the management shall reinstate said employee and pay him full compensation for the time he has been suspended and out of employment.

Note.—Our understanding of Paragraph "A," Section No. 6, relating to "Discharge" is that no man shall be discharged except for sufficient cause other than personal prejudice or activity in matters relating to the United Mine Workers of America.

(*b*) Provided that if at the end of five days after the discharge of an employee who claims an injustice has been done him, and an investigation has not been made and a final decision reached within that time, such discharged employee will be given employment pending the final disposition of the case.

If the discharged employee be a miner, the employment given under this clause will be his regular working place, and, if a day man, he will be given such employment at day work as the management elects and that he is competent to perform, if such employment takes a lower rate of wages than that at which he was employed at the time of his discharge, and the final decision of the case be in his favour, he will be paid in the final compensation and adjustment of the case at the same rate of wages he was receiving at the time he was discharged.

(*c*) When the foreman, as provided for in Paragraph "A" of this section, directs an employee to do labour, the scale of wages being lower than his regular scale, he shall be paid the wage scale as paid for labour from which he was transferred during time employed.

(*d*) .. .. ..

(*g*) It is understood and agreed that the Company shall select its day and monthly men, based upon their qualifications and fitness for the work to be performed, provided, however, an applicant claiming he has been discriminated against shall have the right of appeal as provided for in Paragraph "E" of this section and a hearing and final disposition of said appeal shall be made in conformity with Paragraph "E" and "F" of this section. It is further provided that no day or monthly men employed at such work shall be transferred to mining ahead of any applicant waiting for employment as a miner, at the time said day or monthly man was employed.

(*h*) It is agreed that when a boy reaches the age of eighteen years, the management has the right to move him along to a higher classification of work, provided he is capable of performing such work.

No. 7. Day Men to Perform Work Assigned Them:

All day men shall do any class of work in or around the mine that the management may require of them; provided, however, he is paid scale price for such work, no man transferred to other work shall be paid less than his regular wages, any man transferred to other work carrying a higher rate of wages shall be paid the higher rate.

No 8. Miners Requested to Fill Place of Other Employees:

When a miner shall be requested to fill the place of another employee, he shall receive the rate of wages paid for miners which if $4.15, and each and every miner when called upon, who is competent to perform such work, shall take his turn in performing the work assigned him by the management for the day in question.

No. 9. Any Employee Absenting Himself from Work:

Any employee absenting himself from work two days and not reporting for work on the morning of the third day, shall forfeit his right to his working place, unless excused by the Mine Manager, but shall be given another place in turn; provided, however, this shall not apply in case of sickness.

No. 10. In Case Men refuse to Continue at Work Because of a Grievance:

If any man refuse to continue at work because of a grievance which has not been taken up for adjustment in the manner provided herein, and such action shall seem likely to impede the operation of the mine, the Mine Committee when called upon by the Mine Manager, shall immediately furnish a man or men to take such vacant place or places, in order that the mine may continue at work, and it shall be the duty of any member or members of the United Mine Workers who may be called upon, provided he is competent, when called upon by the Mine Manager and Mine Committee, to immediately take the place or places assigned to him or them in pursuance thereof.

No. 11. No Grievance to be Taken Up When Mine is Idle in Violation of Contract:

Under no circumstances shall a grievance be taken up for adjustment during a suspension of work in violation of this contract.

No. 12. Falls in Working Places:

Where a fall occurs in any working place, and which prevents the miner or miners from working at the face, the Company shall make preparations to clean up the fall within two hours from time of receiving notice from the miner or miners affected, failing to do so, the miner or miners affected shall clean up same at day rate, which is $4.15 per day.

No. 13. Deficient Work:

If any place in a mine become deficient for any reason other than the intervention of stone, the management and the men affected shall agree on a rate to be paid while the place is deficient. Should they fail to agree, the men concerned shall continue to work in the place at the rate paid miners taken from place, which is $4.15 per day, until such time as they elect to go on the regular rate of the place.

No. 14. Check Weighman:

Miners may elect a check weighman, who must be an employee in or around the mine at the time and for at least three (3) months previous to his election, and the Company shall furnish him with a check number and he shall credit to his number the portion of coal checked off or deductions made from each and every man due to pay the check weighman for his day's work, or part of day, to pay his wages.

The Company shall give any man so elected a place in or around the mine at the end of his labours as check weighman.

No. 15. Re-employment of Officers:

The Company agrees that all men leaving their employment to accept elected or appointed positions with the United Mine Workers of America, will, at the expiration of their official duties, be given employment at the mine.

No. 16. Maintenance Men During Suspension of Mining:

In case of either local or general suspension of mining, either at the expiration of this contract or otherwise, the engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines shall not suspend work, except at the option of the operator, but shall fully protect all the Company's property under their care and operate fans and pumps and lower and hoist such men or supplies as may be required to protect the Company's property, and any and all coal necessary to keep up steam at the Company's coal plants. But, it is understood and agreed that the operator will not ask them to hoist any coal produced by non-union labour for sale in the market. The operator, at this option, to retain only such engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines as are required, but with the understanding that all the engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines employed at the time of the suspension shall be those regularly engaged at maintenance work. The operator will not employ officials on continuous service positions.

Should the interest of the engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines be directly involved in any issue at the expiration of this contract, and any engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines cease work, the United Mine Workers of America will provide competent men to perform the emergency work above recited at the scale price in effect at the time of the suspension, subject to any subsequent settlement.

No. 17. Changes of Contract:

It is agreed that during the life of this contract nothing shall be done to decrease the earning power of the employee, or to increase the cost of production to the Company; also, it is hereby understood that no custom or condition in effect at any mine can be changed unless mutually agreed to by both parties to the contract.

No. 18. New Work:

When the development of a new mine is begun during the period of this agreement, or new machinery or methods of handling the products is installed, a scale of wages covering the labour at such new mines and under such changed conditions will be the same as in other mines in the neighbourhood where similar conditions exist. Where no similar conditions exist, a scale of wages and conditions will be made by the District Executive and the representatives of the Company.

No. 19. Placing Men Formerly on Local Contracts:

Men who were formerly working on Local Contracts will be given an opportunity to get to the coal face wherever and whenever possible.

No. 20. Recognizing the Pit Committee:
The Company will recognize the Pit Committee in the discharge of their duties, as provided for in this agreement.

No. 21. Check-Off:
(*a*) The Company agrees to continue the check-off as has been the practice in the past until August 6, 1926. After that date the only deductions the Company will make from the men's pay will be for check-weighmen, warehouse supplies, Benefit Societies, Hospitals and United Mine Workers of America.

(*b*) The Company agrees to check off all dues, fines and initiations from all members of the United Mine Workers of America, employed in and around the collieries, also check-offs for assessments or levies for strictly U.M.W. purposes, authority to make such deductions to be given the Company by the President and Secretary of District No. 26, United Mine Workers of America, such authorities to state the purpose for which the assessment or levy is to be made.

(*c*) The maximum amount to be deducted for U.M.W. purposes in any one month shall not exceed Five Dollars.

No. 22. Deaths and Funerals:
(*a*) In the event of an instantaneous death by accident in the mine, employees shall have the privilege of discontinuing work for the remainder of that day only. Work, at the option of the operator, shall be resumed the day following and continue thereafter.

In case the operators elect to operate the mines on the day of the funeral of the deceased as above, or where death has resulted from an accident in the mine, individual employees may, at their option, absent themselves from work for the purpose of attending such funeral, but not otherwise, each member of the United Mine Workers of America employed at the mine at which the deceased member was employed shall contribute fifty cents (.50c) and the operators fifty dollars ($50) for the benefit of the family of the deceased or his legal representatives, to be collected through the office of the Company.

(*b*) Except in case of fatal accidents, as above, the mine shall in no case be thrown idle because of any death or funeral, but in the case of the death of any employee of the Company or member of his family, any individual miner may, at his option, absent himself from work for the purpose of attending such funeral, but not otherwise.

No. 23. Violation of Agreement:
No laws or rules shall be made by any Local Union or group of Local Unions in violation of this contract, joint agreements to have precedence over National, District and Local constitutions.

No. 24. Preparation of Coal:
The ability of the Company to sell coal and to pay wages being recognized as largely dependent upon the coal being clean and marketable, it is mutually agreed and understood that the miners will produce their coal in such manner as not to increase the percentage of fine coal, either by carelessness or the use of unnecessarily large quantities of powder, and will load coal free as possible from all impurities.

No. 25. Price of Workmen's Coal:
Workmen will be supplied with run-of-mine coal at $3.60 per ton at the mine or coal yard.

Where it is necessary to transport the coal over a railway in order to make delivery the cost of transportation shall be added to the price.

No. 26. Sections of Mines Shut Down Indefinitely:
It is agreed wherein any section of a mine is shut down for an indefinite period, that the opportunity of a division of the work will be given to each and every man thrown out of employment. However, it is understood the question must be taken up with the management and an understanding reached as to the method that may be put into effect.

No. 27. Application of This Agreement:
The terms of this agreement apply only to men who are members of the United Mine Workers of America working in and around the mines, and all who are eligible to membership in the United Mine Workers of America as set forth in the Constitution of the International Union.

No. 28. Expiration of Contract:
This contract will continue in full force and effect, beginning February 1, 1926, and expiring January 31, 1928. The 1926 scale of wages to take effect February 13, 1926. It is further agreed that on December 1, 1927, the parties to this contract shall meet in conference for the purpose of formulating another agreement.

No. 29. Obligations:
(*a*) All provisions and terms of this contract are hereby mutually agreed to by and between the Coal Company and all the miners of District No. 26 and signed by the representatives of the parties hereto, who have been duly authorized to execute the same on behalf of the Nova Scotia Steel and Coal Company, and on behalf of District No. 26 of the United Mine Workers of America.

(*b*) That the fulfilment of this agreement entered into is guaranteed by the International Union and the fulfilment of joint agreements entered into is guaranteed by the officers of the International organization, as well as by the Officers of the District, and it is their duty to see that all such agreements are carried out both in the letter and the spirit.

Bell Telephone Company First Aid Contests

The second annual first aid competition of the Bell Telephone Company teams was held at Montreal on April 13 under the auspices of the St. John Ambulance Association. Nearly 90 per cent of all male plant employees of the company employed in Montreal have qualified in first aid work.

First aid instruction has been carried on in the company since 1922, and is operated under the Bell Telephone Centre of the St. John Ambulance Association. Out of a total of 3,486 permanent male plant employees throughout the company's territory, which extends from Quebec city in the east, to Windsor in the west, and north to Sault Ste. Marie, there are 1,993 qualified "first aiders."

During the present season, a very extensive program has been carried on, with the result that in this season alone, 1,272 employees have taken examination, 1,047 of these being for first year certificates. It is expected that before the end of the season, the company will have 250 additional first aiders. It is worth noting that out of this total of 1,272 employees just mentioned, 99.9 per cent were successful in passing. The examiners are qualified practitioners who have no connection with the company.

Installation department No. 1 team captured a silver shield by securing 98.4 per cent and the Sherbrooke team with 98.2 per cent was victorious in the eastern division.

REPORT OF ROYAL COMMISSION ON BRITISH COAL MINING INDUSTRY

THE Royal Commission on the coal industry in Great Britain, appointed on September 5, 1925, published their report during March. The appointment of a commission to conduct a complete inquiry into the industry was noted in the Labour Gazette, August, 1925, in connection with the provisional agreement reached at the end of July, which averted a general strike owing to a proposal by the operators to reduce wages.

The report reviews the essential facts of the present situation as including the development of a new coal field in South Yorkshire and Nottinghamshire; the increase in the number of miners by more than 10 per cent since 1909; disorganization caused by the competition of the Ruhr mines after the occupation of that district; and the government subsidy granted to the industry for a nine-months period commencing August 1.

The commission find that "the coal mining industry, for more than a century the foundation of the economic strength of the country, has come upon difficult times. The change of fortune is the result of powerful economic forces. It is idle to attribute it either, on the one hand, to political unrest or restriction of output among the miners, or, on the other hand, to inefficiency in the day-by-day management of the mines." The assertion that the only remedy for the present situation lies in longer hours and lower wages is strongly denied by the Commission, but large changes in present organization are necessary, and progress may be made if these are adopted. Many mines follow antiquated methods the report states; some are on too small a scale to be good units of production and some are defective in equipment or management. The methods of utilizing coal are unscientific; four-fifths of the coal consumed in the country is burnt in a raw state; oil and valuable by-products are wasted and the atmosphere is polluted; methods of research are inadequate; mining is not intimately associated with other industries as it should be; distribution is too costly; and organization on the employment side is defective.

Dealing with the remedy for these defects the commission reject the proposal of the Miners' Federation for the nationalization of the mines. "We are not satisfied," they say, "that the scheme proposed to us is workable, or that it offers—clear social gain. We perceive in it grave economic dangers, and we find no advantages that cannot be obtained as readily, or more readily in other ways. We contemplate accordingly the continuance of the industry under private enterprise, but we make a number of proposals for its reorganization." These recommendations are as follows:—

Recommendations on Re-organization

1. *Ownership of the Mineral.*—The error which was made in times past, in allowing the ownership of the coal to fall into private hands, should be retrieved. The mineral should be acquired by the State—by purchase where it has a market value, by a declaration of State ownership in the case of unproved coal or coal at deep levels, which has now no market value. The coal of existing mines which are likely soon to cease working, and coal which is not now worked and is not likely to be developed in the future, should be excluded from the purchase. Safeguards should be adopted against excessive compensation claims. A Coal Commission should be appointed, under the authority of the Secretary for Mines, to acquire and administer the mineral property.

2. *Amalgamation of existing Mines.*—The amalgamation of many of the present small units of production is both desirable and practicable. This may often be effected from within, but in many cases it will only take place if outside assistance is given. Any general measure of compulsory amalgamation, on arbitrary lines, would be mischievous; the action to be taken should be elastic and should enable each case to be treated individually. The State as mineral owner will be able to promote desirable amalgamation when granting new leases or renewing old ones. Legislation should provide for a compulsory transfer of interests under existing leases where desirable amalgamations are prevented by dissent of some of the parties or their unreasonable claims. Existing leases would not otherwise be affected.

3. *Combination of Industries.*—A closer connection of mining with the allied industries should be promoted. Highly technical questions are involved, affecting a number of industries, and not electricity alone. The development of electrical supply under the new proposals of the Government should be closely co-ordinated with the generation of electricity at the mines. The heat, power and light requirements of the country should be under the constant and comprehensive survey of a body formed for the purpose. We propose for consideration the establishment of a National

Fuel and Power Committee, with advisory powers, composed of representatives nominated by the Government from among the official and other bodies concerned.

4. *Research.*—The existing provision for research should be largely extended by the industry with the support of the State. It is urgently necessary that new methods for winning and utilizing coal should be sought for, and should be found, if the prosperity of the industry is to be restored and a proper standard of wages and working conditions assured to the workers. If processes of low temperature carbonization were perfected, great national advantages would ensue, particularly through the production of a smokeless fuel for domestic and industrial use, and the provision of large supplies of mineral oil from the country's own resources. The State should give financial support to the further experiments, on a commercial scale, which are necessary.

5. *Distribution.*—The industry as a whole has so far failed to realize the benefits to be obtained by a readiness to co-operate. Large financial advantages might be gained by the formation, in particular, of co-operative selling agencies. They are specially needed in the export trade.

The Government should consider the establishment of an official system for the sampling and analysis of coal, with a view to encouraging selling on specification and guarantee, in both the home and the foreign markets.

Local authorities should be empowered to engage in the retail sale of coal.

We propose measures to secure the adoption of larger mineral wagons on the railways ,and a greater concentration of ownership of wagons. A Standing Joint Committee of the Ministry of Transport and the Mines Department should be formed to promote these measures.

6. *Labour.*—The relations between employers and employed are of fundamental importance, and here also we are convinced that a number of changes are necessary.

(1) The principle on which the recent wage-agreements have been based is in our opinion sound, but amendments are needed in the method of ascertaining the proceeds of the industry for the fixing of wages. A large proportion of the coal is sold by the mines to associated industries, and the most important of these amendments relates to the prices at which these transfers are made.

(2) The standard length of the working day, which is now on the average 7½ hours underground, should remain unaltered. The optional redistribution of hours within the present weekly total, over a week of five days, instead of six, should be considered. The multiple shift system should be extended.

(3) Joint pit committees should be established generally.

(4) The methods of payment of men not employed at the face should be revised where possible so as to give them a direct interest in output.

(5) The introduction of a family allowance system, either nationally or by districts, is desirable. Pooling schemes should be adopted to prevent married men with families being prejudiced in obtaining employment.

(6) Profit-sharing schemes, providing for the distribution to the workmen of shares in the undertakings, should be generally adopted in the industry, and should be made obligatory by statute.

(7) For all new collieries, a proper provision of houses for the workers should be a condition of the lease.

(8) The general establishment of pit-head baths is necessary. This should be undertaken by the existing Miners' Welfare Fund, which should be increased by a substantial contribution from royalties.

(9) When prosperity returns to the industry we consider that annual holidays with pay should be established.

The Immediate Problem.—To bring any of these measures of reorganization into effect must need a period of months; to bring all of them into full operation must need years. The Miners' Federation fully recognize that, even if nationalization were to be accepted, much time must elapse before the great changes it involves could be put into force and the effects be seen. Meantime, the hard economic conditions of the moment remain to be faced.

The dominant fact is that, in the last quarter of 1925, if the subsidy be excluded, 73 per cent of the coal was produced at a loss.

We express no opinion whether the grant of a subsidy last July was unavoidable or not, but we think its continuance indefensible. The subsidy should stop at the end of its authorized term, and should never be repeated.

We cannot approve the proposal of the Mining Association, that the gap between costs and proceeds should be bridged by an increase of an hour in the working day, reductions in the miners' wages, some economies in other costs, and a large diminution in railway rates, to be effected by lowering the wages of railwaymen. In any case these proposals go beyond the need, for we do not concur in the low estimate of future coal prices on which they are based.

While the mine-owners presented a plan which is unacceptable, the Miners' Federation abstained from making any suggestion as to the means for meeting the immediate situation. The duty, therefore, devolves upon the Commission to formulate its own proposals.

If the present hours are to be retained, we think a revision of the "minimum percentage addition to standard rates of wages," fixed in 1924 at a time of temporary prosperity, is indispensable. A disaster is impending over the industry, and the immediate reduction of working costs that can be effected in this way, and in this way alone, is essential to save it. The minimum percentage is not a "minimum wage" in the usual sense of that term. The wages of the lowest paid men will be safeguarded by a continuance of the system of subsistence allowances. The reductions that we contemplate will still leave the mineowners without adequate profits in any of the wage-agreement districts, and without any profits in most districts. If trade improves and prices rise, a profit will be earned. If prices do not rise, an adequate profit must be sought in the improved methods which should in any case be adopted.

Should the miners freely prefer some extension of hours with a less reduction of wages, Parliament would no doubt be prepared to authorize it. We trust, however, that this will not occur.

We consider that it is essential that there should be, as there always has been hitherto, considerable variation in the rates of wages in the several districts. But we are strongly of opinion that national wage agreements should continue. Such agreements are entered into in all the other British industries of importance.

We recommend that the representatives of the employers and employed should meet together, first nationally, and then in the districts, in order to arrive at a settlement by the procedure that we have previously suggested.

By a revision of the minimum percentage coal mining would be saved from an immediate collapse, but it seems inevitable that a number of collieries would still have to be closed. This may give rise to the necessity for a transfer of labour on a considerable scale. We recommend that the Government should be prepared in advance with such plans to assist it as are practicable, and should provide funds for the purpose."

The Report concludes with the following paragraphs:—

"The way to prosperity for the mining industry lies along three chief lines of advance: through greater application of science to the winning and using of coal, through larger units for production and distribution, through fuller partnership between employers and employed. In all three respects progress must come mainly from within the industry. The State can help materially—by substantial payments in aid of research; by removing obstacles to amalgamation under existing leases; as owner of the minerals by determining the conditions of new leases; by legislation for the establishment of pit committees and of profit-sharing, and in other ways.

"The future depends primarily upon the leadership, and the general level of opinion, among the mineowners and the miners of Great Britain. In laying down our charge, we would express our own firm conviction, that if the present difficulties be wisely handled, if the grievances of the one side and of the other be remedied, and a better spirit prevail in consequence between them, the mining industry, with the aid of science, will certainly recover, and even surpass, its former prosperity. It will again become a source of great economic strength to the nation."

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING March the Department received information regarding eleven contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed thereunder. In nine of these contracts the general fair wages clause is inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided

that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Each of the remaining two contracts contained a schedule of rates and hours based on the current standards of the districts in these respects. These schedules are given below.

The following general labour conditions sanctioned by the Fair Wages Order in Council appear in the eleven contracts above referred to:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Department of Public Works

Contracts containing schedule of wages and hours.—Repairs to jetty at Nicolet, County of Nicolet, P.Q. Names of contractors, Chs. Ed. Pagé and Léon Pagé, Three Rivers, P.Q. Date of contract, February 15, 1926. Amount of contract, unit prices—approximate expenditure, $15,750.50. A fair wages schedule is inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	$ cts.	
General foreman	0 40 per hour	10
Pile driver runner	0 35 "	10
Carpenters	0 30 "	10
Blacksmiths	0 40 "	10
Labourers	0 20 "	10
Carters (single)	0 35 "	10
Carters (double)	0 50 "	10

Erection and completion of a garage building at R.C.N. Barracks, Esquimalt, B.C. Name of contractors, Parfitt Brothers, Limited, Victoria, B.C. Date of contract, February 17, 1926. Amount of contract, $1,691. A fair wages schedule is inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
	$ cts.	
Bricklayers and masons	9 00 per day	8
Carpenters and joiners	7 00 "	8
Concrete workers	0 55 per hour	8
Electrical workers	7 50 per day	8
Labourers	0 45 per hour	8-9
Lathers	0 07 to 0 09 per yard	8
Lathers	8 00 to 10 00 per day (According to efficiency)	8
Marble setters	9 00 per day	8
Marble setters' helpers	5 50 "	8
Painters and glaziers	6 50 "	8
Plasterers	9 00 "	8
Plumbers and steam fitters	8 00 "	8
Plumbers and steam fitters' helpers	5 00 "	8
Roofers	6 50 "	8
Sheet metal workers	8 00 "	8
Structural steel workers	9 00 "	8
Teamsters one horse and cart	7 00 "	9
Teamsters two horses and wagon	9 00 to 10 00 per day	9

Contracts containing the general Fair Wages Clause.—Supply and installation of interior fittings in Postal Station "R," St. Denis Division, Montreal, P.Q. Name of contractors, J. T. Schell Company, Alexandria, Ont Date of contract, February 22, 1926. Amount of contract, $2,999.

Structural steel work of elevator in the Post Office at Hamilton, Ont. Name of contractor, The Hamilton Bridge Works Company, Limited, Hamilton, Ont. Date of contract, February 19, 1926. Amount of contract, $700.

Execution of renovations and repairs to the Drill Hall, etc., Picton, Ont. Name of contractor, Alfred Ernest Strickland, Picton, Ont. Date of contract, February 20, 1926. Amount of contract, $6,235.

Construction and installation of elevator enclosure and passenger elevator in the Post Office, Hamilton, Ont. Name of contractor, The Turnbull Elevator Company, Limited, Toronto, Ont. Date of contract, February 23, 1926. Amount of contract, $5,996.

Alterations and additions to the interior fittings in the Public Building at Kitchener, Ont. Name of contractor, Interior Hardwood Company, Limited, Kitchener, Ont. Date of contract, February 22, 1926. Amount of contract, $3,325.

Erection and completion of Inspection and Fumigation Station, Montreal, P.Q. Name of contractors, J. A. A. Leclair, Dupuis, Limitée, Montreal, P.Q. Date of contract, February 22, 1926. Amount of contract, $31,000.

Construction of a stone public building at Wiarton, Ont. Name of contractors, Gordon H. Cook and John S. Cook, "J. S. Cook & Son," Wiarton, Ont. Date of contract, February 20, 1926. Amount of contract, $24,007.65.

Construction of a public wharf at Riondel, District of Kootenay, B.C. Name of contractor, Alfred Harold Green, Nelson, B.C. Date of contract, February 19, 1926. Amount of contract, $6,425.

DEPARTMENT OF RAILWAYS AND CANALS

Contract containing general Fair Wage Clause.—Construction of macadam roadway on the new approaches to the new Queenston Street Swing Bridge, over the Welland Canal, near St. Catharines, Ont. Name of contractor, Roy Honsberger, Vineland, Ont. Date of contract, March 22, 1926. Amount of contract, $1.55 per square yard (approximately $1,767, estimated from estimated quantities).

POST OFFICE DEPARTMENT

The following is a statement of payments made in March, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of orders
	$ cts.
Making metal dating stamp and type, also other hand stamps and brass crown seals	709 41
Making and repairing rubber stamps, daters, etc	224 24
Making up and supplying letter carriers' uniforms, etc	3,633 16
Stamping pads, ink, etc	212 09
Mail bag fittings	8,930 45
Scales	1,059 75
Repairs to letter boxes, etc	48 35

Public Works in Canada in 1925

The report of the Department of Public Works for the fiscal year ended March 31, 1925, recently published, shows that the total expenditure incurred by the Department during the year was $19,302,283, of which amount $8,507,795 was for public buildings, $6,529,466 for harbour and public works, and $2,043,635 for dredging, etc., the remainder being divided between telegraphs, civil government, roads and bridges, and miscellaneous items. Increases over the amount for the previous year were shown under the heads of harbours and rivers, dredging, public buildings and roads, while there were decreases in the telegraphy, civil government and miscellaneous groups. The revenue received from public works amounted to $592,909, more than half of this sum being in the telegraph service. The extent of the various telegraph services in Canada is as follows: Canadian National Telegraph, 23,026 miles, 2,295 offices; Government Telegraph Service, 11,036 miles, 1,052 offices; Canadian Pacific Telegraph, 15,465 miles, 1,527 offices.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again toward somewhat lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being down from the February figures.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities, was $11.46 at the beginning of March, as compared with $11.50 for February; $10.74 for March 1925; $10.58 for March 1924; $10.79 for March 1923; $10.54 for March 1922; $13.23 for March 1921; $16.92 for June 1920 (the peak); $15.98 for March 1920; $12.66 for March 1918; and $7.68 for March 1914. Besides the seasonal decline in the prices of eggs, milk and cheese, slight decreases occurred also in the prices of beans and evaporated apples. The most important advances occurred in the prices of beef, fresh and salt pork, bacon, butter and potatoes. Including the cost of fuel and rent with that of foods, the total budget averaged $21.77 at the beginning of March, as compared with $21.87 for February; $21.00 for March 1925; $21 for March 1924; $21.42 for March 1923; $20.96 for March 1922; $23.87 for March 1921; $26.92 for July 1920 (the peak); $20 for March, 1918; and $14.35 for March 1914. Fuel was somewhat lower due to a decline in the price of anthracite coal. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was again slightly lower at 160.1 as compared with 162.2 for February; 161.6 for March 1925; 154.4 for March 1924; 155.9 for March 1923; 153.6 for March 1922; 186.0 for March 1921; 256.7 for May 1920 (the peak); 241.3 for March 1920; 200.3 for March 1919; and 194.3 for March 1918. Sixty-five prices quotations were lower, twenty-two were higher and one hundred and forty-nine were unchanged.

In the grouping according to chief component material six of the eight main groups were lower, one was higher and one was unchanged. The groups which declined were: Vegetables and their Products, because of lower prices for grains, flour and milled products, rubber and sugar; Animals and their Products, due mainly to lower prices for live stock, bacon, eggs, leather and furs; Fibres, Textiles and Textile Products, because of declines in the prices of cotton, wool, silk, jute and hessian; Wood, Wood Products and Paper, because of a decline in newsprint; Non-Ferrous Metals, because of lower prices for copper, lead, silver and spelter; and Iron and Its Products. Non-Metallic Minerals rose somewhat, due to higher prices for coal, coal oil and lime. The Chemicals and Allied Products group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower. In the former group higher prices for butter, tea, bananas, oranges and coal were more than offset by declines in the prices of flour, oatmeal, bacon, sugar, vegetables, eggs and cotton thread. In the latter group building and construction materials were lower, due to declines in lumber and painters' materials. Manufacturers' materials were lower, due to declines in materials for the textile and clothing industries, for the fur industry, for the leather industry, for milling and other industries, for metal working industries, for meat packing industries, as well as in miscellaneous producers' materials.

In the grouping according to origin both raw or partly manufactured goods and fully or chiefly manufactured goods declined. Domestic farm products, articles of marine origin and articles of forest origin were lower, while articles of mineral origin showed a slight advance.

The Canadian Bank of Commerce index of wholesale prices of imports declined from 174.45 for February to 158.98 for March. That for exports also declined, being 162.93 for March as compared with 164.19 for February. The combined index of both imports and exports was down from 169.32 for February to 160.95 for March.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, declined, being 179.5 for March, as compared with 182.0 for February; 176.7 for March 1925; 264.0 for March 1920; and 116.3 for March 1914. The index of twenty food stuffs was down from 200.7 for February to 199.3 for March. That for manufacturers' goods was down from 163.3 for February to 159.7 for March.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236

commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the Labour Gazette for January, 1925, January, 1926, and in greater detail in the Report on 'Prices and Price Indexes 1913-1924," issued by the Bureau. A description of the methods used in the construction of the index number appears in the Labour Gazette for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the Labour Gazette.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the Labour Gazette resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the Labour Gazette was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the Labour Gazette since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

The upward movement in the prices of beef continue, sirloin steak averaging 29.3c. per pound in March as compared with 28.6c. in February; round steak 23.5c. in March and 23.1c. in February; shoulder roast 15.8c. in March and 15.6c. in February. Slightly higher prices were reported from most localities. Veal and mutton showed little change. Both fresh and salt pork advanced somewhat, the former averaging 29.7c. per pound in March, as compared with 29.1c. in February, and the latter averaging 27.4c. in March and 27c. in February. Advances occurred mainly in the eastern provinces and British Columbia,

*Labour Gazette, December 1923. page 1442.

18700—7½

while the prairie provinces showed declines. Bacon was slightly higher, averaging 41.9c. per pound. In fresh fish cod steak and halibut were slightly higher. Salt herrings advanced somewhat. Lard was unchanged in the average, increases in some localities being offset by declines in others.

Eggs again showed a general decline, fresh averaging 46.4c. per dozen in March, 50.5c. in February, and 62.8c. in January, and cooking averaging 38.7c. per dozen in March, 41.5c. in February and 50.1c. in January. Milk was slightly lower in the average, lower prices being reported from Fort William and New Westminster. Both dairy and creamery butter advanced, the former averaging 45.6c. per pound in March, as compared with 45.4c. in February, and the latter averaging 50.7c. per pound in March, and 49.8c. in February. Increases occurred in most localities. Cheese was slightly lower, averaging 32.7c. per pound.

Bread was unchanged in the average at 7.6c. per pound. Soda biscuits were down from 18.6c. in February to 18.4c. in March. Flour, rolled oats, rice and tapioca were practically unchanged in the average. Canned vegetables were steady. Beans were slightly lower, averaging 7.9c. per pound. Potatoes showed little change, averaging $2.94 per ninety pounds in March, as compared with $2.92 in February and $2.64 in January. Evaporated apples and prunes averaged somewhat lower, the former at 19.6c. per pound and the latter at 15.7c. per pound. Raisins again showed a slight increase, averaging 17.9c. per pound in March and 17.7c. in February. Canned peaches and marmalade were slightly lower. Both granulated and yellow sugar were unchanged in the average, slight increases in some localities being offset by lower prices in others. Pepper advanced from 50.3c. per pound in February to 53.4c. in March. The increase was general.

Anthracite coal was down from an average of $18.93 per ton in February to $18.03 in March. Lower prices were reported from Halifax, Sherbrooke, St. John's, Montreal, Belleville, Peterborough, Toronto, St. Catharines, Hamilton, Brantford, St. Thomas, Chatham, Owen Sound, Sault Ste. Marie and Brandon. Bituminous coal averaged $10.52 per ton in March as compared with $10.59 in February. Little change occurred in the prices of wood. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices continued towards lower levels in March. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged $1.48⅓ per bushel, as compared with $1.54¾ in February. The low price for the month was $1.42¼ reached on the 8th, and the high $1.53¾ reached on the 18th. Western barley declined from 59c. per bushel to 58½c.; flax seed from $2.04¾ per bushel to $1.91¾; corn from 88½c. per bushel to 83¾c.; Ontario barley from 64⅜c. per bushel to 63c.; and rye from 85¼c. per bushel to 85c. Oats advanced from 45⅜c. per bushel to 47⅜c. Flour at Toronto was down from $9.05½ per barrel in February to $8.62½ in March. Oatmeal fell from $4.35 per ninety-eight pound sack to $4.25, and shorts from $32.13 per ton to $31.25. Straw advanced slightly to $10 per ton. Bananas in Montreal advanced from $2.75-$3.75 per bunch to $3-$4, and oranges from $5.25-$5.50 per box to $5.50-$5.75. Linseed oil was 5c. per gallon lower at $1.01. Raw sugar declined from $3.74 per hundred to $3.58, and granulated from $5.99 per hundred to $5.89. The decline was said to be due to the arrival of the new crop from Cuba. Rubber prices continued to decline, Ceylon being 58c. per pound in March, as compared with 62c. in February. Men's rubbers declined from $1.18 per pair to $1. Potatoes at Montreal advanced from $2.92⅔ per bag to $2.99⅔, and at Toronto from $3.12½ to $3.20. At Winnipeg, however, the price was slightly lower at $1.34 per bushel, as compared with $1.47. Rangoon rice was slightly lower at $3.25-$4.90 per hundred. The cattle market was weaker, due, it was said, to large supplies. Western cattle at Winnipeg fell from $6.77½ per hundred to $6.66⅔. At Toronto choice steers were down from $7.25 per hundred to $7.12½. Hogs at Toronto declined from $14.29 per hundred to $13.77. Sheep were 50c. per hundred pounds higher at $8. In fish halibut advanced from 13c. per pound to 14c. Salt cod was down from $8 per quintal to $7, and salt herrings from $8 per barrel to $7. Sockeye salmon rose from $4.75 per dozen one pound tins to $5. Calf skins were down from 16c.-17c. per pound to 15c.-16c. Sole leather was 2c. per pound lower at 40c. Bacon was slightly lower at 32½c.-33½c. per pound. Creamery butter at Montreal rose from 47c. per pound to 48c., and at Toronto from 46c. per pound to 47c. The seasonal decline in the prices of eggs continued, fresh at Montreal being down from 44c.-46c. per dozen to 40c.-42c. Cotton at New York fell from 20.7c. per pound in February to 19.4c. in March. The lower prices were said to be due to the disturbed political condition in France, fears

of labour troubles in England and to accumulation of stocks. Raw silk was down from $6.90 per pound to $6.45. Wool prices were 2c. per pound lower. Jute was down from $15.05 per hundred to $13.22, and hessian from $12.75 to $12.25. The prices for non-ferrous metals were lower. Copper was down from $16.15 per hundred to $16; copper wire from 19¾c. per pound to 19½c.; lead from $9 per hundred to $8.60; spelter from $9.35 to $8.85; and silver from 66⅞c. per ounce to 65⅝c. Tin advanced from 65½c. per pound to 66c. Newsprint paper fell from $3.50 per hundred to $3.25. Coal oil rose from 20c. per gallon to 21½c. Lime advanced from $7.50 per hundred to $8.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The trend of wholesale prices and of the cost of living in the various countries has continued downward with few exceptions.

Great Britain

Cost of Living.—The index number of the Ministry of Labour on the base July, 1914=100, fell 4 points or 2.3 per cent to 168 at the beginning of April as compared with the figure at the beginning of March. Foods fell 3.6 per cent to 159, and clothing fell from 225 to 210-225. Rent, fuel and light, and sundries showed no change at 148, 185 and 180 respectively.

Wholesale Prices.—The *Statist* index number (in continuation of Sauerbeck's figures), base period 1867-77=100, was 127.9 for February, a decline of 1.1 per cent from the previous month's level. Both foodstuffs and materials declined, the heaviest fall, one of 1.5 per cent, being shown by materials, owing to a decline of 4.9 per cent in textiles where fibres, raw cotton and raw wool fell. Animal foods rose 1.5 per cent. The only exceptions to the decline in vegetable foods were flour and potatoes, which remained unchanged.

The Board of Trade index number, on the base 1913=100, was 148.8 in February, a further decline. The February averages were lower than January for seven of the eight groups, the exception being the group foods other than cereals, meat and fish. Foods showed a price reduction of 2.3 per cent, cereals being down by 3.8 per cent and meat and fish by 5.2 per cent. Industrial materials fell 1.3 per cent, the greatest movements being a fall of 2.4 per cent in textiles other than cotton and a fall of 2.7 per cent in miscellaneous articles.

The *Economist* index number, on the base 1901-05=100, was 185.8 at the end of March, a decline of 1.2 per cent from the February level, and the lowest figure recorded since 1916. With the exception of the miscellaneous group, all groups rose.

Austria

Wholesale Prices.—The official index number of the Federal Statistical Office, on the base first half of 1914=1, was 17,554 in January, 1926, and 17,212 in February, a total decline in the two months of 4.7 per cent. Foods declined 4.3 per cent to 15,760 and industrial materials declined 4.7 per cent to 20,465.

Cost of Living.—The base of the Federal Statistical Office's new index number is "previous month=100." The calculations in schillings for the groups are published, and the index number for each group. Foods were 98 in February as compared with January, and housing 102. Other groups were 100 and the collected index was 99. In March the index was 99 as compared with February, foods being 98, clothing 99, drink and tobacco 101, housing 103, and heat and light and sundries, 100. The index is also published on the base July, 1914=1. In January, the index for all groups was 15,004; February, 14,889; March, 14,680.

Belgium

Wholesale Prices.—The index number of the Ministry of Industry and Labour was 560 for January, a decline of 5 points as compared with the December level. There were advances in fuels, petrol, chemicals, fertilizer, resin products, and paper products, and declines in tar, clay products, fats, textiles, hides and leather, and raw rubber.

Cost of Living.—The index number of the Ministry of Industry and Labour, on the base 1921=100, for a working-class family of the lowest category, was practically unchanged in February from the January level, standing at 140.80. The only noticeable change was a rise of 1.6 per cent in heat and light. This was true also of the cost of living for a middle-class family, where the total cost was 140.19 in February and the rise in heat and light was 1.4 per cent.

Finland

Cost of Living.—The index number of the Ministry of Labour, July, 1914=100, declined 2.5 per cent in January to 1149.0. Foods and light and fuel declined, while taxes rose slightly. Other groups showed no change.

France

Wholesale Prices.—The index number of *Statistique Générale,* on the base July, 1914=1, rose 2 points in February to 649. Foods rose slightly, animal foods and sugar, coffee and cocoa rising while vegetable foods declined slightly. Industrial materials were unchanged, as minerals and metals rose and textiles declined.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office, on the base 1913=100 (gold prices), was 118.4 in February, a decline of 1.3 per cent from the January level. Farm products declined 1.8 per cent and industrial materials declined 0.7 per cent. Goods produced declined 1.3 per cent and goods imported declined 1.6 per cent.

Cost of Living.—The official index number, on the base 1913-14=100 (gold prices), was 138.8 in February, a decline of 0.7 per cent for the month. Food declined 1.0 per cent, clothing 1.1 per cent, and sundries declined 0.2 per cent. Rents advanced 0.4 per cent and heat and light advanced 0.1 per cent.

Italy

Wholesale Prices.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 646.24, a decline of 2.1 per cent from the level of the previous month. There were declines shown by all groups except textiles, which rose 6.2 per cent.

Cost of Living.—The index number of cost of living, Milan, on the base July, 1920=100, was 145.68 in January, an increase of one point over the previous month. Foods and sundries showed slight increases; heat and light declined, and clothing and rent showed no change.

Poland

Wholesale Prices.—The index number of the Central Statistical Office, on the base January, 1914 = 100, stood at 154.8 in December and 142.1 in January, thus showing a decline of 8.2 per cent. Wheat and vegetable products declined 16.1 per cent, hides and leather declined 15.5 per cent, and raw materials and finished textiles declined 10.7 per cent. All other groups showed smaller declines.

Cost of Living.—The official index number of cost of living of a family of four at Warsaw, on the base 1914 = 100, was 170.0 in January as compared with 173.0 in December. Foods declined 5.9 per cent, and fuel and light declined 1.4 per cent. Sundries rose 3.7 per cent, and lodging and rates rose 9.1 per cent, or from 66.1 to 72.1. The element of the budget headed "clothing materials and shoes" has been revised, the revision having been published back to the beginning of 1925. The revised figures are about 20 per cent lower and have lowered the cost of living index number a few points.

Spain

Wholesale Prices.—The index number of the Chief Statistician for January was 186, a decline of one point from the December level. Foods fell two points and materials fell one point.

Retail Prices.—The index number of the Chief Statistician of retail prices at Madrid, 1914 = 100, was 188 in January as against 183 in December. Animal foods and vegetable foods rose while fuel and miscellaneous articles showed no change.

Sweden

Wholesale Prices.—The index number of the Department of Commerce declined one point in February to 152, on the base respective months in 1913 = 100. There were declines in the groups vegetable foodstuffs, feed and forage, fuel and lubricating oils, lumber, and hides and leather. All other groups showed no change.

India

Wholesale Prices.—The index number of the Bombay Labour Office, on the base July, 1914 = 100, was 155 in January showing no change from the December level. Foods showed no change on the whole, but there

(a) Figure for previous month. (b) Average for year. (c) Index published quarterly. (d) 15th of month up to of month. (h) Four chief cities. (i) January 1913–December 1920, 22 foods. (k) Cost of food budget. (l) Gold (o) Gold prices on the base 100 hereafter. (p) Index discontinued. New Index number in 1926.

were declines in cereals and pulses, no change in sugar, and a rise in other foods. Non-foods also showed no change on the whole. There were declines in oil-seeds, and manufactured cotton, advances in other textiles, hides, metals, and miscellaneous articles, and no change in raw cotton.

Cost of Living.—The index number of the Bombay Labour Office, on the base July, 1914 = 100, was 154 in February, a decline of one point from the January level. Foods and clothing each declined one point, and fuel and lighting and house rent showed no change.

United States

Wholesale Prices.—The index number of the Bureau of Labour Statistics, 1913 = 100, was 155.0 for February, a decline of one point. With the exception of fuels and lighting, which rose 1.7 per cent, all the groups showed slight declines. Anthracite coal was not included in the index owing to insufficiency of data. Fuels other than anthracite and bituminous coal rose 4 per cent.

Dun's index number (showing the coast *per capita* of a year's supply of commodities) was $190.478 on April 1, which was 1.1 per

end of 1920; beginning of month thereafter. (*e*) Beginning of month. (*f*) Base is average for six capital towns. (*g*) 15th prices hereafter, 1914=100. (*m*) From Jan., 1925, end of previous month. (*n*) No figures published.

cent below the March 1 level, and the lowest point touched since September, 1924. Six of the seven groups were down, the exception being the miscellaneous group. Comparing with the record for a year ago, advances appear in dairy and garden, "other food," metals, and miscellaneous, but these are more than offset by declines in breadstuffs, meats and clothing.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was $13.1055 on April 1, a decline of 2.2 per cent from March 1. Textiles and provisions bore the brunt of the decline, but the chemical, hide and leather, metal and coal and coke groups declined also, while miscellaneous products, fruits, breadstuffs, live stock, naval stores and oils rose, and building materials showed no change.

Cost of Living.—The index number of the Special Commission on the Necessaries of Life of the cost of living in Massachusetts was 166.6 in February as against 167.0 in January. The food section increased one and three-eighths per cent. Clothing declined 1.5 per cent; a decline of 7.7 per cent in fuel and light was caused by the resumption of anthracite mining after settlement of the strike. The groups shelter and sundries showed no change.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Picketing used to "Persuade" Employees held unlawful

A miner of Drumheller, Alberta, was tried before a jury in January, 1926, under the "watching and besetting" provision of the Criminal Code, section 501 (f) and was found guilty and fined $25. Appeal from the conviction was taken in the Alberta Supreme Court, which held that the picketing of the approach to a place of work by numerous pickets, constantly maintained day and night, for the purpose of persuading men either already at work or being brought in to work during a strike not to work under the conditions offered, constituted a violation of section 501. The appeal was dismissed and the conviction affirmed, one judge however dissenting. Since the members of the court were not unanimous in support of the conviction the court directed that separate judgments be given for the purpose of enabling and facilitating an appeal to the Supreme Court of Canada. Chief Justice Harvey outlined the circumstances of the case as follows:—

"The Alberta Coal Company operates a coal mine near Drumheller in this province. In June of last year it made a new wage contract with the officials of the U.M.W.A. of which order its miners were members. There was dissatisfaction among some of the miners over the new wage scale and steps were taken to organize a new union and many of the men went out on strike, but instead of the contest being, as is usual, between the operators and the miners, it was primarily between the miners themselves in relation to the two organizations but with the consequence common to most controversies of such character, that much if not most of the injury would fall on parties not immediately, at least, parties to the dispute. For two or three days pickets of miners of the new organization were stationed in various places of vantage to watch the approach to the mine for the purpose, as one of them states 'to persuade these miners, who were working at the mine and men who were brought in to work at the mine, not to go to work at the reduced scale of wages which was below the wages they had been earning previously.' This purpose, if effected would of course completely close down the mine and, apparently with the object of making it completely effective, the pickets were kept at night as well as by day though the mine was apparently not actively operating by night though, as one can readily understand, to avoid pickets, men might be brought in at night for day work if there were no pickets at that time."

The defence counsel admitted that this picketing constituted a "watching and besetting," and that its object was to bring about the cessation of mining operations. They maintained, however, that as no violence was used or intended, and as only information and peaceful persuasion were to be employed as weapons, such picketing did not constitute an offence within the meaning of section 501. However, after citing several British precedents the Chief Justice reached the conclusion that the picketing as carried out in this case constituted a menace and practical compulsion by moral force, even if no physical force was contemplated, "as to which one might have doubts," and that it "was not such a picketing as would be warranted, and therefore would be wrongful." Three other judges concurred in this judgment.

Mr. Justice Clark, in a dissenting judgment, stated: "I agree that the defendant should be held responsible as one of the watching and besetting parties engaged in what is commonly called picketing, and that he with the others charged did, with a view to compel another person to abstain from doing something which he had a lawful right to do or to do something from which he had a lawful right to abstain, beset or watch the place where such other person works or carries on business within the meaning of section 501 (f), but my difficulty is in saying that such picketing is wrongful and without lawful authority, or in other words that peaceful picketing is wrongful. If it is not wrongful then, in my opinion, the conviction cannot be supported upon the evidence. There is no evidence that during the night when the conduct the defendant is complained of there was any interference with either the Mining Company or its workmen, or any violence, intimidation or threats."

—(Alberta—Rex versus Reners.)

Workmen's Compensation Board may Decide Questions of Law and Fact

A travelling salesman employed by a firm whose offices were in the Pacific Building, Vancouver, sustained personal injuries while descending in a passenger elevator in the building. He brought action for damages against the owners of the building, who contended that the injured man should have applied for compensation under the Workmen's Compensation Act. The employee, however, submitted that his employment was not with-

in the scope of the act, and that therefore he was not debarred from suing a third party at common law. The Workmen's Compensation Board, on being applied to, declared that the claimant was a workman in an industry within the scope of the act, that the accident occurred in the course of his employment. The act declares in substance that if a workman has a right to compensation under the act he could sue a third party at common law if that third party is also an employer. The Board therefore held that the injured man's right to bring an action against the owners of the building was taken away by the act. The case came before the Supreme Court of the Province, where Mr. Justice Morrison found that the Board had not exclusive jurisdiction to decide whether the claimant came within the act or not, and that the action was not barred in consequence of the Board's decision. The Court of Appeal unanimously reversed the judgment of Mr. Justice Morrison, and ordered that the action be stayed. They considered that the Board had exclusive jurisdiction to determine finally on all the questions of law and fact involved, and to make the decision complained of. The claimant then appealed to the Judicial Committee of the Privy Council, who dismissed the appeal with costs.

—(Judicial Committee of the Privy Council—Peter versus Yorkshire Estate Company, Limited, and another.)

An employee of a railway company met his death as the result of being severely scalded by the parting of a steam pipe in February 1925. His daughter, a married woman, brought an action against the company for damages on behalf of herself and her sisters, also married and over 21 years of age. The Company having applied to the Workmen's Compensation Board for a ruling on the question whether or not the accident to the deceased was within the scope of the Workmen's Compensation Act, the Board declared that it was occasioned by accidental injuries arising out of and in the course of employment, and that therefore the right of action which the plaintiff might otherwise have had was taken away. Section 9 of the Workmen's Compensation Act of Manitoba is as follows:—

"The right to compensation provided by this Part shall be in lieu of all rights and rights of action, statutory or otherwise, to which a workman or his dependants are or may be entitled against the employer for or by reason of any accident which happens to him arising out of and in the course of his employment, and no action in any court of law against the employer in respect thereof shall thereafter lie."

The Company then moved in the Court of King's Bench for an order staying the action. The Court granted the order, stating that "the legislature has seen fit to create a tribunal to adjudicate upon all claims by employees (or their dependents) against employers, arising out of accidental injuries. It has provided that the decision of the Board shall be final, and that when an action has been brought by a workman or dependent, and the Board has decided that the action is one the right to bring which is taken away by the act, the action shall be forever stayed. Having regard to the provisions of the act relating to dependents, I am unable to say, if it were open to me to decide, that the Board was wrong in the decision it arrived at. But under the act the decision of the Board is final and conclusive. The action therefore must be forever stayed."

(Manitoba - Foster versus Canadian Pacific Railway).

Servant may not Solicit Custom of Master's Clients for his own Business

Two men who had been employed by an ice company for several years delivering ice, decided that at the approaching termination of their engagement they would commence business in partnership on their own account. They informed their employers' customers to whom they were delivering ice of their intention to do so. When they opened business they had secured in this way the custom of many of the clients of their former employers. The company brought action in the county court, seeking damages and an injunction restraining the defendants from supplying ice to their former customers. The court conceded both claims, assessing damages as in the sum of $500. On appeal, the Appeal Court held that the company was entitled to damages but not to the injunction, giving the appellants the costs of the appeal and the respondents the cost of the action. The majority judgment laid stress on the fact that the defendants had not made a list of the plaintiff's customers, but carried the names and addresses in their memories. In similar cases, it is pointed out, "judges have stopped short of granting an injunction against a servant using knowledge which the memory alone retained, that knowledge not being of a confidential nature." A dissenting opinion was given by one of the judges, who would have allowed the appeal, holding with Chief Justice Lord Kenyon in a similar case "the conduct of the defendant may perhaps be accounted not handsome, but I cannot say it is contrary to law."*—(British Columbia—Delivery Company Limited versus Peers and Campbell).*

Watchman on Ship in Dock is not a Seaman

A man who was employed as watchman and caretaker on board a ship while in dock at Vancouver, and who was on board also as part owner on behalf of his associate owners, claimed for a lien for wages as a rigger and also as a watchman. A motion was brought in the Exchequer Court of Canada in Admiralty by the associate owners to set aside a writ and warrant of arrest to answer the plaintiff's claim. The section of the Canada Shipping Act relating to the mode of recovering wages applies to seamen or apprentices, the term "seamen" being defined as including "every person employed or engaged in any capacity on board any ship, except masters, pilots and apprentices." The act also provides at section 191 that "no suit or proceedings for the recovery of wages under the sum of $200 shall be instituted by or on behalf of any seaman etc." The court found that the plaintiff's claim failed because it was below $200 and was therefore excluded from the jurisdiction of the court. It was held further that the services of a watchman were not maritime services. The motion to set aside the writ and warrant was therefore allowed with costs.—*(British Columbia Admiralty district—Jorgensen versus Chasina).*

Limit of Contractor's Claims for Work Performed

A contractor took action to recover from a railway company on an alleged special contract for work, or in the alternative, on the amount to which he was entitled for the work actually performed (*quantum meruit*). He alleged that there had been a special contract for the ballasting of a portion of the company's railway at a minimum of cost, plus 10 per cent, and claimed that $7,895 was due to him under this contract, together with a further sum by way of damages for stoppage of the work and for the non-supply of an engine of an agreed motive power. A like amount was mentioned in the alternative claim. The trial judge allowed the existence of a special contract fixing unit prices for the ballasting work and providing for a further allowance of 10 per cent in the event that the aggregate payment due to the contractor should prove to be less than the cost of the work. The company appealed against this decision, contending that there had been no special contract. The Supreme Court upheld the defendant's contention, holding that a formal contract, if such had been intended by the parties, would have contained the special provision usual in such contracts. The company's engineer had no authority to bind the company to such an arrangement. The court held however that the contractor was entitled, on the basis of "quantum meruit," to the value of the work he had performed, in so far as the charges were shown to be reasonable and justifiable.

The judgment cited the following opinion on the points raised in this case: "Where there is no agreement as to the amount of compensation to be paid for services or work and labour, the person performing them is entitled to recover what they are reasonably worth * * * The measure of damages is not what benefits, immediate or remote, have been derived from services rendered, but what is the value of such services. * * * One furnishing labour for another, no price being agreed upon, is entitled to a profit, and is not limited in his recovery to the amount which he paid the workmen. The fact that one performed services negligently and unskilfully will not prevent his recovering what his services were reasonably worth."

—British Columbia—Jamieson Construction Company, Limited, versus Lacombe and North Western Railway.)

In an action under the Quebec Workmen's Compensation Act the Superior Court at Montreal recently awarded $246.25 to a minor who was operating a sausage-making machine, as compensation for the loss of the first joint of the index finger of the right hand.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] MAY, 1926 [NUMBER 5

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

EMPLOYMENT at the beginning of April as reported by employers in industry (except in agriculture and fishing) showed little change as compared with the preceding month. The situation however was more favourable than at the same date in any of the preceding five years, in four of which a downward trend was indicated on April 1. Returns received by the Dominion Bureau of Statistics from 5,730 firms, who employed 749,223 persons (as compared with 749,350 in their last reports), produced an index number of employment of 91.4 as compared with 91.5 on March 1, and with 87.2, 89.3, 87.6, 80.6 and 84.1 on April 1, 1925, 1924, 1923, 1922 and 1921, respectively. In these index numbers the base 100 represents the number of employees of the same firms in January, 1900. Reports received from the offices of the Employment Service of Canada showed that the number of placements made during the month of March indicated substantial increases when compared with the placements in the previous month or the same month last year. At the beginning of April the percentage of unemployment among members of local trade unions was 7.3 as compared with percentages of 8.1 at the beginning of March and 8.5 at the beginning of April, 1925. The percentages for the month under review are based on returns received by the Department of Labour from 1,547 trade unions with an aggregate membership of 152,234 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.36 at the beginning of April, as compared with $11.46 for March; $10.56 for April 1925; $10.16 for April 1924; $10.64 for April 1923; $10.26 for April 1922; $12.68 for April 1921; $15.99 for April 1920; $16.92 for June 1920 (the peak); $12.57 for April 1918; and $7.51 for April 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 advanced slightly, being 160.6 for April as compared with 160.1 for March; 156.5 for April 1925; 151.1 for April 1924; 156.9 for April 1923. 153.7 for April 1922; 179.5 for April 1921; 251.0 for April 1920; 256.7 for May 1920 (the peak); 198.1 for April 1919; and 195.0 for April 1918.

The time loss caused by industrial disputes in April was greater than in March, but less than in April last year. Thirteen disputes were in progress at some time during the month, involving 796 employees, and resulting in a time loss of 13,908 working days. Corresponding figures for March were as follows: 14 disputes, 898 workpeople, and 12,697 working days; and for April 1925, 13 disputes, 12,149 employees, and 297,949 working days (due chiefly to a dispute in the Nova Scotia coal mining industry).

Industrial Disputes Investigation Act, 1907

The Department of Labour has received recently three applications for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907. These applications are enumerated on page 435 of this issue.

48-hour week and male minimum wages in Alberta.

The new Factories Act of Alberta, outlined elsewhere in this issue in a review of the legislation enacted at the recent session, contains a section extending to male employees the principle of minimum wages for women. Where under the Minimum Wage Act a minimum rate is fixed for women, the wages of male employees in the same category may not be at a lower rate. Another feature of the new act is the provision for a commission to inquire into the subject of the 48-hour week in industry, with a view to further legislation at the next session. Manufacturers in the province opposed the provision contained in the original bill for establishing a 48-hour week in the act this year.

The March issue of the LABOUR GAZETTE contained a note in reference to the proposal made by the Edmonton Public School Teachers' Alliance for the appointment of a

permanent arbitration board to deal with disputes between teachers and their trustees. Such a Board of Reference has now been provided under an amendment to the Alberta School Act.

Limits of workmen's compensation

The chief inspector of Saskatchewan, in the annual report of the Bureau of Labour and Industries, reviewed in another page of this issue, calls attention to the irremediable losses caused by accidents both to industry and to the employees. "The results of accidents," he says, "are measured as a rule from a monetary point of view, leaving out of consideration a number of conditions that arise as a consequence of the happening. A cash value cannot be placed on the misery ensuing from the loss of eyesight or any of the limbs. Neither can the loss and misery of a family whose principal member has been killed or the value of an experienced workman to the trade in which he was employed, be expressed. The loss which this wastage of labour represents is an entire loss to the community of their services, reducing the output of those that are permanently injured or temporarily incapacitated, and by reducing their earning power their families suffer privation with a general change for the worse instead of an improvement, which everyone has a right to expect as a reward for his labour."

Objections to demerit rating in compensation

The February issue of the LABOUR GAZETTE contained a note on the proposed introduction of merit rating in connection with assessments levied upon employers in British Columbia for the purposes of Workmen's Compensation, and on the operation of the same system under the Ontario Act. In Alberta "demerit rating" has been in effect since July 1, 1924, under Regulation No. 11, which provides that if the Board's expenditures on account of any employer exceed 105 per cent of the assessment received from him, the next assessment is to be increased above the base rate by 1 per cent for each 1 per cent of such excess, with a maximum increase of 30 per cent of the base rate. In the first six months that "Regulation 11" was in force thirteen coal operators received the maximum demerit rating of 30 per cent, making their rate 3.90 per cent of the payroll instead of the usual 3 per cent. A representative of these "demerited" operators appeared before the Alberta Coal Commission at the recent inquiry to object to the demerit system as being a departure from the general principle of the Workmen's Compensation Act, which was intended to spread the burden of accidents over the whole industry. While the Act permits the Board to levy extra assessments on employers who have failed to take due safety precautions, it was claimed that the Regulation made no distinction between accidents due to neglect and those due to bad luck, and that it was therefore doubtful whether the Regulation conformed to the Act. The Commissioners recommend that the principle of compensation just mentioned should be paramount, and condemn "demerit rate" as conflicting therewith. "Based as it is on mere luck in the occurrence of accidents, or in the age or number of dependents of the injured workman, the commission recommends that the demerit system be done away with."

Flat rates desired for workmen's compensation

The employees at the steel and car shops at New Glasgow, Nova Scotia, held a meeting last February at which they expressed a preference for the flat rate system of payment of compensation for industrial accidents, $12 or $12.50 being suggested as a maximum weekly rate of compensation for an accident involving a cessation of work. Under the acts of Nova Scotia and of other Canadian provinces, the amount of compensation is calculated as a percentage of the injured employee's average earnings over a stated period. The Alberta Coal Commission, in the report reviewed on another page of this issue, make a similar recommendation. The commissioners found in the course of their inquiry into the coal industry that the difficulty felt by workmen in understanding the calculation of average earnings, and the general discontent with the amount of benefits, had led to a desire for a flat rate of compensation, notwithstanding the fact that the percentage basis was first adopted at the request of the employees. The original Alberta act of 1908 provided for the flat rate method of compensation. It was amended later by the substitution of the method of percentage of average earnings. Subsequently the employees found that the change in method did not work out as they expected. The flat rate has been retained in regard to payments of dependants, and as the commissioners suggest "it would be more logical to have both disability and dependency on the same basis, either as a percentage of wages or the flat rate." The coal operators in Alberta were found to be generally in favour of a reversion to the earlier method, and the commissioners strongly recommended that the percentage basis of compensation be abandoned in favour of a flat rate.

Guarantee of full time earnings

Industrial Management (New York), contains in its issue for March an article describing an unemployment insurance arrangement which has been conducted during the past five years in two associate paper mills in Holyoke, Massachusetts, the Crocker-McElwain Company and the Chemical Paper Manufacturing Company. As the writer Dr. Herman Feldman points out, unemployment compensation is in its experimental stage, various progressive firms acting as pioneers. Some of the existing plans have been outlined from time to time in the LABOUR GAZETTE (May, 1922; October, 1923; April, 1925, etc.). These plans may be classified in several ways. One desirable line of separation would be according to whether the firm voluntarily adopted the plan or was forced to accept it as part of an agreement with a labour union. Among the firms which have voluntarily adopted plans are the Dennison Manufacturing Company, of Framingham, Massachusetts; the Dutchess Bleachery, a textile firm of Wappingers Falls, New York; the Procter and Gamble Company, with main soap factories in Cincinnati, Ohio, and branches throughout the country, and the Delaware and Hudson Company, a railway. The Crocker-McElwain Company would also be included in this group. Among the plans secured through the pressure of trade unions are the "Cleveland plan," in the women's garment trade in Cleveland; "The Chicago plan" in force among 35,000 men's clothing workers in Chicago; the arrangement in the women's garment industry in New York City and similar plans in other branches or centres of the needle trades.

Under the plan of the Crocker-McElwain Company, employees are hired at base rates which are equal to, and in many cases are greater than the going rates for similar work in the locality. To skilled workers a service differential of 2 cents an hour above the base rate is added for each of the first four years of continuous satisfactory service. These entitled to this two cents differential in the production department include machine tenders, back tenders, beater engineers, first beater helpers, washermen, calendar runners, layboy runners, shippers, counters, trimmers, dewinder runners and head plater men. In the maintenance department, those included are engineers, firemen, oilers, millwrights, machinists, steam fitters, carpenters, patternmakers, blacksmiths, electricians, painters and masons. Unskilled workers receive half of that given to skilled workers, or 1 cent an hour each year above the base rates. It will be seen, therefore, that on the completion of the fourth year skilled workers receive 8 cents an hour differential and unskilled workers 4 cents an hour differential above the base rates. No further service differentials are given to either group after the first four years. Instead, the workers can apply for, and if deserving, may receive a signed agreement guaranteeing full time employment.

When an employee has been included under the plan of the Crocker-McElwain Company, the hazard of unemployment has been entirely removed as far as he is concerned. From that time on he never loses a single hour's pay on account of restricted operation.

The calendar year is divided, for accounting purposes, into 13 periods of four weeks each. Thus, a man earning $40 a week is guaranteed $160 in earnings for every 4 weeks period. If there is short time within that period and the firm can furnish no work for him other than his regular duties, he is excused until needed, but will nevertheless receive a minimum of $160 for the period. In case the total of wages earned during the period for work performed is smaller than the guaranteed amount of $160, an adjustment is made to cover the excused time by the payment of the difference at the close of the period. Extra earnings for overtime during a given period are applied against any short time occurring during that same period. Thus, if in any period a worker earns $50 for each of the first two weeks, then has short time during the third and fourth, earning only $30 in each, no compensation would be due him because his total earnings during that period had amounted to $160 or four times his weekly guaranty. However, overtime within any four-week period is not balanced against short time in another period.

New railroad labour law in United States

The Railroad Labour bill to which reference was made in a note in the February issue of the LABOUR GAZETTE, was passed by the United States Senate on May 11. This law abolishes the former Railroad Labour Board, and establishes new machinery for the settlement of industrial disputes. The bill was practically unaltered in its passage through Congress and will become law when the President affixes his signature.

The bill, which was agreed upon last year by most of the railway executives and heads of the four brotherhoods, and which the President endorsed in principle in his message to Congress, provides:

1. That the railroads and employees shall establish adjustment boards to arrange disputes.

2. That the President shall appoint, with the consent of the Senate, a board of mediation of five persons, none of whom has a pecuniary interest on either side, to intervene when the adjustment boards fail.

3. That boards of arbitration shall be created when both parties consent to arbitration.

4. That when the above methods fail the Board of Mediation shall notify the President, who may appoint an emergency board to investigate and report to him within thirty days. For thirty days after the report has been made there shall be no change in conditions of the dispute except by agreement of the two parties concerned.

National insurance in Great Britain

The Department has received the report of the Royal Commission appointed to inquire into the existing system of National Health Insurance in Great Britain. This commission was appointed in 1924, when the Labour Government was in power, its chairman being Lord Lawrence of Kingsgate. Sir Andrew Duncan, who recently acted as chairman of the Royal Commission on the Coal Mining Industry in Nova Scotia, was one of the members of the British commission. The report of the majority expresses the opinion that national health insurance has established its position as a permanent feature of the British social system and should be continued on its present compulsory and contributory basis, subject to various changes which they propose. They also recommend that, in view of the financial burden of the various social services at the present time, no extensions of benefit involving substantial additional expenditure should be contemplated now or in the immediate future, but that any immediate changes in the scheme should be limited to such as are possible within its present financial resources. For the same reason they recommend that there should be no increase at the present time in the rates of contribution or in the scale of Exchequer grants. The majority recommend the substitution for the existing insurance committees of the appropriate local authorities, with power to co-opt special members. They also propose extensions of benefit in the following order of priority as funds become available: (*a*) extension of scope of medical benefit; (*b*) provision of allowances to dependants; (*c*) improved provision for pregnancy and childbirth; (*d*) provision of dental treatment as a normal benefit.

Among the other recommendations of the majority report, one of the most important is "that it is desirable to make permanent provision which will protect an insured person from incurring any loss or penalty by reason of arrears due to genuine certified unemployment."

Sir Andrew Duncan and another commissioner append a reservation to the majority report on which they draw attention to the lack of co-ordination in the social services of the country, and to the fact that the employer's contribution to the Health Insurance Fund is on a flat rate basis, roughly proportioned to his wages bill, but bearing no necessary relation to his profits. The minority report among other recommendations suggests that local authorities should take the place of approved societies as the bodies through whom sickness or disablement benefits should be administered, and that national health insurance should not be limited in its development by the present financial resources of the scheme.

Joint committee for civic employees at Vancouver

The Vancouver City Council decided during April to appoint a special joint subcommittee composed of two members of the Council and two members of the Civic Employees' Federation, for the purpose of dealing with the grievances and claims of the employees. This action was taken on the recommendation of the Conciliation board, a similarly constituted body, which had investigated questions affecting the conditions of civic employment. Other recommendations adopted by the City Council were, that employees laid off because of lack of work be given preference when additional men are employed; that the city maintain firemen's telephones; that salaries of fire alarm operators be raised to the standard of fire captains' rates; that all city inspectors and mechanics of skilled trades and linemen of the electrical department be paid the standard rate of wages for such trades; and that City Hall janitors work forty-four hours a week at present rates. The City Council fixed the minimum wage of "outside" employees of the city at $4.50 a day, instead of $4.25, as formerly. Members of the "old men's gang" are to receive $3.25 instead of $3 per day. A recommendation that the city should pay one-half of the group insurance premiums of the "inside" employees was referred back to the Conciliation board.

Cost of living of working women in Quebec

The Minimum Wage Board of Quebec considered during April the information as to the cost of living which had been received in response to the invitations issued during the past winter to working women in the pro-

vince (LABOUR GAZETTE January, 1926, page 3). According to press reports thirty-one cost of living budgets were submitted to the Board by various labour organizations and individual employees. These replies were considered at a "round table" conference, held at Montreal on April 28. Mr. Gustav Franq, chairman of the Commission, presided, and there were present, the Deputy Minister of Labour, Mr. Louis Guyon; Mr. J. T. Foster, of the Trades and Labour Council; the other members of the Commission, and a number of others, including representatives of the Westmount Women's Club, Montreal Women's Club, Catholic Women's League, Y.W.C.A., Business and Professional Women's Club, Quebec Dietetic Association, l'Association Feminine d'Affaires, and representatives of local trades bodies.

In the 31 budgets submitted for consideration, the amount for room and board does not vary greatly, $6 a week being the lowest, and $10 the highest given in only one budget; around $7 and $8 a week are most often mentioned. Requirements for clothing show a wider variation; one budget going as low as $95.16 a year, and another as high as $374. For the total, four budgets place the minimum amount at between $12 and $13 a week; five between $13 and $14; eight between $14 and $15; eight between $15 and $16; two between $17 and $18; one between $18 and $19; one between $19 and $20; and two were under $12 a week.

Increased productive efficiency per employee

The National Industrial Conference Board, Incorporated, in a recent survey of industrial and economic conditions during 1925, remarks that "perhaps the feature of the past year most significant for the future industrial prosperity of the United States is the continuation of progress in the attainment of productive efficiency the increasing output of material goods per worker employed in making them. This development is an indication of increasing material well-being for the nation and appears to forecast a larger quantity of goods for enjoyment and more leisure for enjoying them. . . . The utilization of power, increasing more rapidly than the employment of labour, suggests that the worker's manual labour is being more and more relieved by use of power-driven machinery. The increase in hourly wages prior to 1924, affords contributive evidence of the greater reward to labour in return for the reduced amount of effort. The year 1925 shows a continuation of the progress, with the exception that the general average of wages has remained substantially unchanged, the increases in some industries being offset by decreases in others. Production of electric power during eleven months of 1925 averaged 11 per cent higher than production during the corresponding period in 1924, 16 per cent higher than 1923, and about 38 per cent higher than 1922."

The Board notes as an essential characteristic of American industrial management the numerous experiments now being carried on with employees' pensions and employee stock ownership plans.

The Board was organized in May, 1916, to provide a bureau of scientific research, a clearing house of information, a forum for discussion and the means whereby co-operative action may be taken on matters that vitally affect the industrial development of the country and all engaged in industry. It is constituted of persons designated by and from National and State industrial associations for the purpose of making or assisting in economic investigations, promoting friendly industrial relations, and promoting American industry.

Compensation rates and accident prevention

This issue of the LABOUR GAZETTE contains an article showing the provisional rates of assessment of each class of industry in Ontario for 1926 under the Workmen's Compensation Act, with the figures for the previous year for the purpose of comparison. Similar information in reference to the Province of New Brunswick was given in the January issue. These rates are based on the accident experience of each group, indicating the extent of the risks inherent in the various occupational groups.

Accident prevention campaigns have reduced accidents in some industries, with the result that the rates of assessment have been reduced correspondingly. An example of this tendency will be found on comparing the rates for the logging operations in the pulp and paper industry, $1.75, with the general logging rate of $3. Mr. A. R. White, Chief Sanitary Inspector of Ontario remarks in this connection that the pulp and paper industries are controlled by intelligent business men who promote safety organization as an integral part of their industrial equipment. Mr. Byron O. Pickard, of the California Bureau of Mines, pointed out recently that where schedule rating is used in the coal mining industry the largest individual credit is given for a safety organization, education and inspection service, as statistics based on the law of averages in that industry show that a large percentage

of the accidents can be prevented through systematic effort. The same result should be seen in other industries in proportion to occupational risks of each group and to the success attained by the management in holding accidents down. Bulletin 301 of the United States Bureau of Labour Statistics estimates that, for example in the State of Pennsylvania, the compensation benefits amount to not more than 20 per cent of the economic loss of occupational accidents, to say nothing of diseases. Applying this estimate to the rates of assessment for workmen's compensation Mr. Pickard suggests that the assessment rates should be multiplied by five in order to reach a figure that would be a true rate for the total economic loss per $100 of payroll caused by industrial accidents:

"Can any employer," he asks, "afford not to do all possible to prevent accidents to his employees when he is contributing to the world's economic loss to an extent equivalent in value to five or more times the amount he is paying out annually in premiums for accident insurance? By the same reasoning, can an employee afford not to co-operate to the fullest extent by doing his big part in accident elimination when the workers as a whole receive only about one-third of the actual wage loss? The worker has it in his power to save himself and family a large share of his wages through working safely."

Employment conditions improving in Canada

President Tom Moore of the Trades and Labour Congress of Canada, speaking on May Day at Montreal, said: "May Day conditions in the Canadian labour world, generally speaking, show an improvement this year over those prevailing at similar times during the past few years. The Canadian labour world appears to be emerging out of the depths of unemployment. This does not mean, however, that conditions are by any means entirely satisfactory, as there is still considerable unemployment. For one thing, though, there are no serious industrial disputes pending; and there appears to be greater agreement between organizations and their employees. The disturbance in the automobile industry may perhaps accentuate unemployment in the metal trades. Employment on Canadian railways shows improvement, and conditions in the mining industry are better in the east this year than they were last year. Prospects for improvement in building lines are fairly good in Western Canada, and all round there are indications that labour conditions are on the upgrade."

Economic crises and unemployment

The report of a Joint Committee of the League of Nations on Economic Crises was submitted by the Economic Committee of the League of Nations to the Council of the League, and was approved by the Council on March 15. The resolutions adopted by the Joint Committee are as follows:—

1. "In order to enable the business world, and especially those responsible for the guidance of economic and credit policy, to base their action on full and correct indices permitting fluctuations of economic activity to be measured and diagnosed, and, further, to ensure that any public or private action that may be taken towards diminishing the violence of such fluctuations should be based on adequate knowledge, it is highly desirable that the Government should collect and publish at intervals as short and regular as possible, adequate statistical data to serve as the basis of such indices.

II. Among the data most essential for this purpose, but which are at present defective in many countries, are statistics of industrial output, not only those which result from a periodic census of production, but also current figures with regard to the principal industries which should be collected monthly to serve for the compilation of a continuous series of indices of production, for use in conjunction with the results of enquiries made at longer intervals.

III. The Joint Committee therefore request the Council to address a strong representation to the various States calling their attention to the great importance attached, especially for the above reasons, to the collection of statistics of production.

IV. At the same time, the Committee reaffirm their opinion, already expressed in the report of May, 1924, that it is of the greatest importance to supplement statistics of production by more complete data as to stocks. They would be glad if their views on this point could be communicated to the special Preparatory Committee on statistical methods which is now engaged in studying this question.

V. The Joint Committee consider that a Committee of Experts could with advantage be convened to advise as to the scientific and technical aspects of the compilation of indices and economic barometers, and the elucidation of the economic criteria resulting from their methodical study.

Family allowance considered in British coal dispute

The Royal Commission on British Coal Industry, in their report which was outlined in the last issue of the LABOUR GAZETTE, among many other proposals for improving relations within the industry recommended the introduction of a family allowwance system. Family wages were actually introduced last year in the coal fields of South Wales (LABOUR GAZETTE, September 1925, page 864), and the system has made considerable progress on the continent of Europe, especially in France and Belgium.

The British Coal Commission proposes that the minimum wage should be based on the needs of a married couple without children, on the ground that the single man, though he has fewer direct responsibilities, has to pay for service, and is usually engaged in saving with the idea of marriage. Discussing family endowment in connection with this proposal the *New Statesman* (London) points out that, in theory, the logical case for such a system is strong as it corresponds to the principle of distribution of income in accordance with real human needs, but at the same time there are very strong objections to it in the form in which it is proposed for Great Britain and has actually been adopted in other countries. It suggests that the proposed additional family income should be separated entirely from the payment of wages, and that it should be a separate and distinct allowance made by the State on the ground of public expediency. The objections to making family allowances a part of wages are, first, that employers would be deterred from giving work to men with families; and, second, that their powers of disciplinary control over their employees would be unduly strengthened. For these reasons the *New Statesman* believes that family endowment would not be workable, except for certain groups of public employees, unless organized and financed directly by the State.

Family allowances in Germany

The family allowance system was widely introduced in Germany during the years immediately following the war, by means of collective agreements. At first such agreements often did no more than provide for higher wages for married workers; but later a distinction was drawn between the basic wage and the allowances. Generally the system adopted was that of additions in respect of wife and children to be made to the hourly wage, or, in certain occupations, to the shift, daily, weekly or monthly wage.

The system of family allowances was most widely applied in Germany during the period of distress caused by the depreciation of the currency, especially in 1922 and 1923. Its adoption was, however, unequal as between the different industries. It became of predominant importance for manual workers in the mining, metal, chemical, paper manufacturing, stone, earthenware and glass, and printing industries, and also in the public services. It covered most non-manual workers in private industry, and was in general application in the agreements and salary scales of officials in the public services. The system was also introduced to a considerable extent, without becoming of predominant importance, in the case of manual workers in the textile, food and drink and tobacco industries, as also in commerce and transport. In other industries, including the leather, oils and fats, wood-working, building, clothing, dyeing and cleaning, sale of drinks and artistic trades or industries, the system was little in application for manual workers. Under the more stable economic conditions of 1924 and 1925, examination of collective agreements now in force will show that for manual workers the family allowance system has declined considerably in importance. Nor has its earlier importance been maintained in the case of non-manual workers in private industry. Only in the case of non-manual workers in the public service has the system held its ground. The allowances now being paid in industries where the system is still of some importance vary according to industry and district. On an average, allowances for manual workers in private industry are at the rate of 1 pfennig an hour in respect of the wife and each dependent child. Non-manual workers in private industry generally receive a family bonus of 10 per cent on the monthly salary, although in some cases an allowance of 10 marks per month is paid for the wife and for each child. Allowances for manual workers and officials in the public services are about double those paid in private industry.

Notes on family allowances in various countries were given in the LABOUR GAZETTE for December, 1924; June, 1924; May, 1924, etc.

Unemployment insurance in Great Britain

The current issue of the *American Labour Legislation Review* contains an article giving the results of a study of the experience of Great Britain with unemployment insurance. The writer, Dr. Leo Wolman, was the director of the investigations which resulted in the establishment of unemployment insurance in the industries represented by the Amalgamated Clothing Workers of America (LABOUR GAZETTE, July, 1923). Dr. Wolman corrects some erroneous impressions that have gained currency regarding British unemployment insurance, one of the "great adventures in social legislation." The system has been in effect for over thirteen years and the figures of income and expenditures over the whole period are large. From the beginning to the close of 1925 the total cost of unemployment insurance has been roughly £250,000,000, of which amount £233,000,000 has been

paid in benefits, most of the rest going to administrative expenses. Contrary to prevailing belief, the whole burden of these expenditures has not fallen on the English taxpayer. In fact the contribution of the government to the unemployment fund has averaged over the thirteen years of its existence 25 per cent of the total income of the fund, while the remaining 75 per cent was contributed by employers and employed. In Canadian currency, without correcting for changed in pound parity, the total contributions to the fund from July 15, 1912, to December 31, 1925, amounted to roughly $1,200,000,000; of this the employers contributed something more than $450,000,000, the employees about $430,000,000 and the State about $305,000,000. During the current year, aggregate expenditures of the fund for both benefits and administration is running at the rate of about 50 million pounds.

The history of the fund falls into three periods; (1) from July 1912, to the Armistice, when the numbers insured varied from two to three and one-half millions, and the fund accumulated a balance of £15,000,000; (2) from November 11, 1918, to November, 1919, during which the government to meet the problems of demobilization organized a system of "Out of Work Donations," or unemployment benefits paid to demobilized ex-service men and civilians. During this period the regular system of unemployment insurance was virtually suspended and the surplus of the fund grew to nearly £22,000,000; (3) from the period of the Out of Work Donations to the present time. During this five-year period £229,000,000 were paid in benefit out of the total of £232,000,000 paid during 13 years. So great were the claims on the fund that it became necessary to resort to borrowing from the government. To meet the unemployment crisis the government had to choose between unlimited Poor Relief and an extention of unemployment insurance. "The first," Dr. Wolman says, "would have meant reckless and uncontrolled spending of vast sums by local and central public authorities; while the insurance scheme has assured an orderly and systematic payment of benefits from funds largely contributed to by its beneficiaries." The writer has no fault to find with unemployment insurance administration. It has done its work with a "high degree of efficiency," the present rates of administration expenses to revenue being below 10 per cent. "Almost without exception charges of administrative laxity and inefficiency have been found to be either gross exaggerations or wholly without foundation."

The Canadian Council of Child Welfare has issued recently Publication No. 17: "The Juvenile Court in Canada: origin, underlying principles, governing legislation, and practice," by Helen Gregory MacGill, judge of the Juvenile Court, Vancouver. Its purpose is to promote a better understanding of such courts, and to convince those who are inclined to depreciate them that juvenile courts are in reality a remarkable outgrowth of the Chancery Courts of England. The publication is an authoritative source of information for all who are interested in child welfare and more especially in the problem of delinquent children.

The Board of Education of Hamilton, Ontario, inserts in school construction contracts a clause stipulating that local labour is to be employed. The *Hamilton Herald* points out that this policy is preferable to that followed in some other cities where the right to tender is confined to firms within the province, and suggests that it should be generally followed by industrial organizations in placing their contracts for construction work.

President John L. Lewis, of the United Mine Workers of America, following a meeting of the international board in April sent out a letter to all district presidents stating that all members of the organization who join the Communist party or any of its branches are liable to suspension of their membership in the union.

The United States Public Health Service (Treasury Department) has published Bulletin No. 157: "Health Hazards of Brass Foundries," giving the results of field investigations of the health hazards of the brass foundry industry, and of laboratory studies relating to the pathology of brass foundrymen's ague.

The members of the Federal Letter Carriers and the Postal Employees Association at Montreal, including 225 letter carriers and 725 other postal employees, have joined the Catholic and National Union, according to an announcement on May 1 by an official of the latter organization.

A "Magistracy of Labour" was established in Italy at the end of April for the settlement of disputes between employers and employees. Strikes and lockouts are forbidden both in public services and in connection with private enterprises.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of April was as follows:—

Conditions generally throughout the country, in so far as industry was concerned, showed considerable improvement, due to the finer weather and stimulated outdoor activity. This condition was practically uniform in all of the several provinces and was largely what is customary at this time of year.

From the Province of Nova Scotia the fishing industry was reported as brisk with good returns. Work provided in the logging industry was fair, although river driving was being held up in some places as streams were not yet open. Construction prospects, particularly in Halifax, were bright, although no large work had been started as yet. The manufacturing industry, which was active, showed a decided tendency toward increases in staff. The coal mining industry was gaining in momentum, owing to the increased business made possible by water shipments.

The fishing industry was busy in New Brunswick, with large catches reported. Construction was rapidly increasing in volume. The logging industry however, was quiet, except for river driving. Conditions generally showed a fair improvement.

Increased demands for farm workers were reported from the Province of Quebec. In the same Province prospects for logging were bright, due to the fact that river driving was about to commence. From Montreal, Quebec, Sherbrooke and Three Rivers manufacturing was reported as normally active with some minor improvements. Building and construction were increasing in volume, and employment offices reported making several placements of construction workers. Backward weather had held up railroad construction, but toward the end of April this industry had begun to open up.

In Ontario orders for farm workers were plentiful and were in excess of applicants at many points. Full time and increasing staffs seemed to be the order of the day with manufacturing plants. These increases, following similar previous increases, though not spectacular, were fairly substantial and seemed general throughout the manufacturing districts of the Province. The iron and steel and textile industries were particularly mentioned. The usual spring revival of building was reported. River driving in the logging industry was just starting in earnest. Metal mining continued normal.

After heavy demands for farm workers, with correspondingly heavy placements, the demands for such workers fell off in Manitoba. Construction was not very busy, though prospects were fair. It was reported from this Province that the demands for female domestic workers were brisk as usual.

The earlier heavy demands for farm workers in Saskatchewan were decreasing, though slight shortages were reported from some districts. Railroad construction was opening up, but other construction was quiet. There were fair demands for general labour for short jobs, but plenty of applicants were available. The supply of domestic workers was not sufficient to care for the demands.

Like Manitoba and Saskatchewan, Alberta reported that the heaviest demands for spring farm workers had begun to subside. In this Province the construction industry was active —construction including railroad, highway and building. The coal mining industry, as well as manufacturing, was quiet. Edmonton reported a brisk demand for logging and mill workers.

In British Columbia, while nothing substantial had yet materialized, there were indications of improvement in the logging industry. Coal mining was dull. Construction of various kinds was fairly active. Employment conditions generally showed some improvement, and prospects for an increased volume of it were not wanting.

EMPLOYERS' REPORTS.

According to reports on employment furnished by 5,730 leading firms in Canada, there was practically no general change as compared with the preceding month, but the situation was better than on April 1 in any of the last five years, in four of which a downward trend was indicated on that date.

Firms in Quebec and British Columbia recorded increased activity, but elsewhere there were declines. In the Maritime Provinces, manufacturing and transportation employed a larger number of workers, while logging, mining and railway construction registered curtailment, partly seasonal in character. In Quebec, further improvement was indicated; iron and steel and other manufactures, mining, transportation and building construction were decidedly more active, but logging was seasonally slacker and there were decreases in railway construction gangs. In Ontario, pronounced seasonal losses in logging camps offset increases in employment in manufacturing, notably in iron and steel, lumber and textile factories, and in construction. In the Prairie Provinces, curtailment in logging operations

was the chief factor in the reduction, which was smaller than on April 1 of any year since the record was begun in 1920. Manufacturing and construction, on the other hand, were decidedly busier. In British Columbia, manufacturing, especially of lumber products, transportation and construction reported heightened activity; the general increase exceeded that of April 1 in any previous year of the record.

Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the other border cities and Vancouver reported improvement, while in Winnipeg there was a slight decrease in personnel. In Montreal, manufacturing, construction and transportation were busier. In Quebec, there were further gains, chiefly in manufacturing. In Toronto, continued increases were shown, construction, manufacturing, trade and services reporting the greatest expansion. In Ottawa, general but moderate additions to staffs were indicated by the co-operating firms. In Hamilton, iron and steel plants afforded increased employment and there was a minor increase in construction. In Windsor and the other border cities, automobile works were busier, while little general change was shown

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending May 1, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturers and construction. Manufacturing includes consumers' goods and producers' goods.

in other industries. In Winnipeg, small gains in manufacturing were offset by similar declines in trade and construction, the result being a very small decrease in employment. In Vancouver, lumber mills showed decided improvement and other branches of manufactures also reported heightened activity, as did transportation, construction and telephones.

Within the manufacturing industries, the largest increases were again in iron and steel; lumber, textile and building material plants also added considerably to their staffs, while the only pronounced reductions were in rubber works and were mainly due to a partial close-down in one factory. Logging camps reported extensive seasonal losses. Mining as a whole was also slacker. On the other hand, communication, transportation, construction and services reported improvement, that in construction being especially noteworthy. There was a slight decline in trade, which was partly owing to the unseasonable weather that prevailed generally on April 1.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of April, 1926.

TRADE UNION REPORTS.

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Better conditions prevailed among trade union members at the end of March than at the close of the preceding month, and in comparison with the reports for March, 1925, employment was also on a higher level. Returns were tabulated from 1,547 labour organizations at the end of March, having a combined membership of 152,234 persons, 11,069, or 7.3 per cent of whom were idle, as compared with percentages of 8.1 in February and 8.5 in March of last year. The improvement was rather general and may be attributed to recovery from the seasonal depression which has existed during the past few months. Slight declines in employment were reported in New Brunswick and Ontario, while in the remaining provinces there was greater activity, chiefly in British Columbia. In comparison with the corresponding month last year more work was afforded unions in Quebec, Manitoba, Alberta and British Columbia, but in the other provinces the situation was less favourable. Unemployment in the manufacturing industries at the end of March, as reflected by 413 unions with an aggregate membership of 39,636 persons, remained on the same level as in the preceding month, the percentage of idleness in both cases standing at 5.2. Within the manufacturing industries fluctuations occurred, the expansion in the textile and printing trades and among bakers, wood workers, metal polishers and glass workers being offset by reductions in the remaining groups, principally by cigar makers, papermakers, leather and fur workers. In comparison with March, 1925, the situation in the manufacturing industries as a whole improved considerably. Coal miners in Nova Scotia continued to show much unemployment, owing to a shutdown for repairs, though the percentage out of work was lower than in February. Alberta miners were more active, but in British Columbia there was a small adverse change. Quarry workers in Nova Scotia reported a slightly better situation than in February. Owing to seasonal development in the building and construction trades, employment was brisker during March than in the previous month, the improvement being nearly 6 per cent. The situation for carpenters and joiners was decidedly more favourable, and plumbers and steamfitters, painters, decorators and paperhangers, steam shovel and dredgemen and electrical workers also reported gains. In the remaining trades employment was at a lower level. As compared with March last year all tradesmen with the exception of bricklayers, masons and plasterers, electrical workers and granite cutters were afforded more employment. Returns from 628 unions of transportation workers with a membership of 56,982 persons, showed an unemployment percentage of 4.5 as compared with 5.0 per cent in February and with 5.4 per cent in March last year. Steam railway employees whose returns constitute 83 per cent of the entire group membership reporting, were more active than in February. Employment for navigation workers increased considerably, but street and electric railway employees, however, were not quite so active. Retail shop clerks were busier than in the preceding month. Hotel and restaurant employees and stationary engineers and firemen reported a better situation, but less activity was indicated by theatre and stage employees and barbers. Fishermen and lumber workers and loggers were more fully engaged.

An article elsewhere in this issue gives a summary of unemployment as reported by trade unions during the quarter ending March 31st, 1926.

EMPLOYMENT OFFICE REPORTS.

During the month of March, 1926, the references to employment made by the offices of the Employment Service of Canada numbered 26,036, while the placements effected totalled 24,521. Of the latter the placements in regular employment were 12,692 of men and 3,716 of women, a total of 16,408 and the placements in casual work were 8,113. Applications for work reported at the offices numbered 37,664 of which 26,983 were of men and 10,681 were of women workers. Employers notified the Service during the month of 17,764 vacancies for men and 10,038 for women, a total of 27,802. An increase was shown in the volume of business transacted when the above figures are compared with those of the preceding month and also with those of the corresponding period last year, the records for February, 1926, showing 19,823 vacancies offered, 29,414 applications made and 18,157 placements effected, while in March, 1925, there were recorded 24,510 vacancies, 38,028 applications for work and 22,130 placements in regular and casual employment. A report in detail of the work of the offices for the month of March, 1926, and also for the quarterly period January to March, will be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES.

Some figures indicating the movement of trade and industry in April and in previous months are given in the table on page 430.

The Dominion Bureau of Statistics reported that March production of coke pig iron in Canada amounted to 53,251 long tons. This was 7 per cent over the 49,746 tons of February, but 6 per cent under the January tonnage and 17 per cent less than the total reported for March a year ago. Foundry and malleable grades showed a loss in March at 18,800 tons as against 19,733 tons in the preceding month; this loss was more than offset by the basic iron output advancing to 34,451 tons from 30,013 tons.

For the three months ending March, the cumulative production of all grades was 159,641 tons or about 31 per cent over the 121,740 tons reported for the first quarter of last year. This year's production was composed of 109,213 tons of basic iron, 42,243 tons of foundry iron and 8,185 tons of malleable iron; about 63 per cent of the total was made for the further use of the producers and the balance was intended for sale.

Blast furnace charges for March included 96,306 long tons of iron ore, 60,234 short tons of coke and 30,629 short tons of limestone. For each long ton of pig-iron produced this represented a furnace charge of 4,051 pounds of iron ore, 2,262 pounds of coke and 1,150 pounds of limestone.

During the month one additional furnace was blown in at Sault Ste. Marie, resulting in 6 furnaces being in blast on March 31st. The active furnaces had a daily capacity of 2,375 long tons or about 47 per cent of the total Dominion capacity and were located as follows: 2 at Sydney, N.S.; 2 at Hamilton, Ont., and 2 at Sault Ste. Marie, Ont.

Production of ferro-alloys at 3,463 tons showed an increase of almost 50 per cent over the 2,343 tons produced in the previous month. The March output consisted mostly of the grade having about 15 per cent silicon content. For the first quarter of this year the total output of ferro-alloys was 8,030 tons as compared with 5,433 tons during the first three months of last year.

In March the Canadian production of steel ingots and castings rose to 58,765 long tons, an advance of 10 per cent over the 53,157 tons of February but about one-half the output of 107,605 tons reported for the same month last year. As compared with February, the March gain in output was largely accounted for by the increased production of basic open hearth steel ingots; this grade at 54,841 tons was 9 per cent over the 50,207 tons reported for the previous month. Direct steel castings at 3,924 tons showed a gain of 33 per cent cent above the total of 2,950 tons reported in February.

For the three months ending March, the cumulative production amounted to 180,458 tons or about 9,500 tons over the output of 171,952 tons made in the first quarter of last year. This quarter's output was composed of 171,269 tons of steel ingots made for the further use of the producers and 9,189 tons of steel castings, 94 per cent of which was intended for sale.

Pig-iron prices showed no change in March as compared with February, No. 1 Foundry at Toronto still being quoted at $26.85 and No. 2, at $26.35 per ton. At Montreal both grades were $29.25. The Bureau's index number for Iron and Its Products (1913 prices=100) declined from 146.8 to 145.7 mainly because of lower prices for scrap.

Full statistics of coal production during March are not yet available.

The output of coal from Canadian mines during February was 13 per cent less than the production for the preceding month, and 14 per cent less than the average for February in the past five years. The figures were 1,068,184 tons in February as against 1,225,988 tons in January and an average of 1,305,376 tons for the month during the five preceding years.

New Brunswick was the only coal-producing province of the Dominion which showed a gain in output in February over the preceding month, and Saskatchewan was the only coal-producing province which showed an increase over the average for the month in the five preceding years.

Exports of Canadian coal for the month of February were 46 per cent lower than in January. The quantities were: February, 35,517 tons; January, 65,047 tons; there was thus a decrease of 29,530 tons. Exports from the eastern provinces totalled only 4,362 tons; those from the western provinces amounted to 31,155 tons. Comparison of February exports with the preceding five-year average showed a decrease of 65 per cent. Total exports for the first two months of the calendar year amounted to 100,564 tons or 58 per cent less than the five-year average.

Computed from the figures on output, imports and exports the quantity of coal made available for cousumption was 13 per cent below the figures for the previous month. During February, the total was 1,858,170 tons, as against 2,129,416 tons made available during the month of January; in comparison with the five-year average for the month, the February available tonnage was lower by 22 per cent. The total coal made available for consumption during the twelve months ending February 28, 1926, was 28,462,490 tons as compared with 29,266,824 tons a year ago.

Men employed in the coal mines of Canada during February numbered 25,653, of whom 19,413 worked underground and 6,240 on surface, as compared with a total of 28,682 in January of whom 22,075 worked underground and 6,607 on surface. Production per man was 41.6 tons in February as against 42.6 tons per man in January. During February, the production per man-day was 2.5 tons, the same as in January. The tonnage lost was largely due to "lack of orders."

External Trade.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in March, 1926, the merchandise entered for consumption amounted to $100,854,640, as compared with $84,608,344 in March, 1925. The domestic merchandise exported amounted to $112,263,910 in March, 1926, as compared with $87,512,147 in February, 1926, and $94,815,802 in March, 1925. Foreign merchandise exported amounted to $1,701,899 in March, 1926, and $1,072,334 in March, 1925.

The chief imports in March, 1926, were: Iron and its products, $22,971,101, and fibres, textiles and textile products, $20,485,280.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $38,016,882, and wood, wood products and paper, $27,917,033. In the twelve months ending March, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $540,110,515; wood, wood products and paper at $279,066,579, and animals and animal products at $192,473,577.

Building permits

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty cities in Canada during the month of March, 1926, indicated an increase of 48.3 per cent, as compared with the preceding month, and of 22.3 per cent over the corresponding month last year. The total value for March, 1926, was $10,538,423; for February, $7,104,343, and for March, 1925, $8,613,732.

The *Maclean Building Review* estimates the total value of the contracts awarded in Canada in April at $37,291,600, as compared with $19,779,300 in March, and $24,886,900 in April, 1925. Of the contemplated new construction in Canada during April, 1926, $14,743,900 was for residential building; $18,049,400 for business building; $11,661,000 for industrial building, and $17,246,400 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). By classification the construction contracts awarded during April, 1926, were divided as follows: residential building, $11,759,200, or 31.5 per cent; industrial building, $9,909,000, or 26.6 per cent; business building, $9,562,400, or 25.6 per cent, and public works and utilities, $6,061,000, or 16.3 per cent. The apportionment by provinces was: Quebec, $16,649,400, or 44.7 per cent; Ontario, $13,790,400, or 37 per cent; British Columbia, $3,433,300, or 9.0 per cent; Prairie Provinces, $2,439,000, or 6.5 per cent, and the Maritime Provinces, $979,500, or 2.6 per cent.

Strikes and Lockouts

The time loss due to industrial disputes in April was greater than during March, 1926, but less than during April, 1925. There were in existence during the month 13 disputes,

involving 796 employees and resulting in a time loss of 13,908 working days, as compared with 14 disputes in March, involving 898 workpeople and resulting in a time loss of 12,697 working days. In April, 1925, there were recorded 13 disputes, involving 12,149 employees, and resulting in a time loss of 297,949 working days. Three of the strikes and lockouts commencing prior to April, and two of the strikes and lockouts commencing during April, terminated during the month. At the end of the month, therefore, there were eight strikes and lockouts affecting 516 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices.

Retail food costs showed little change in the average, being, however, slightly lower than in March due mainly to a seasonal decline in the price of eggs. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.36 at the beginning of April, as compared with $11.46 for March; $10.56 for April, 1925; $10.16 for April, 1924; $10.64 for April, 1923; $10.26 for April, 1922; $12.68 for April, 1921; $15.99 for April, 1920; $16.92 for June, 1920 (the peak); $12.57 for April, 1918; and $7.51 for April, 1914. Besides the seasonal decline in the price of eggs less important declines occurred in the prices of beef, veal, mutton, pork, milk, cheese and flour. Slight advances occurred in the prices of butter, rice, evaporated apples, potatoes and tea. Including the cost of fuel and rent with that of foods the total budget averaged $21.64 for April, as compared with $21.77 for March, $20.82 for April, 1925; $20.58 for April, 1924; $21.21 for April, 1923; $20.66 for April, 1922; $23.31 for April, 1921; $25.34 for April, 1920; $26.92 for July, 1920 (the peak); $20 for April, 1918; and $14.32 for April, 1914. Fuel was again slightly lower due to a slight decline in the price of coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly higher at 160.6 for April, as compared with 160.1 for March; 156.5 for April, 1925; 151.1 for April, 1924; 156.9 for April, 1923; 153.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; 256.7 for May, 1920 (the peak); 198.1 for April, 1919; and 195.0 for April, 1918. In the grouping according to chief component materials only one of the eight main groups advanced, while six were lower and one was unchanged. The Vegetables and their Products group was substantially higher due to increased prices for grains, flour and milled products, and potatoes. The Animals and their Products group and the Fibres, Textiles and Textile Products group both declined substantially, the former due to lower prices for fresh meats, butter, cheese, eggs and fish, which more than offset higher prices for live stock and smoked meats, and the latter due mainly to declines in the prices of cotton, cotton fabrics, silk, wool, jute and hessian. The other groups which declined slightly were: the Iron and its Products group, due to lower levels for pig-iron and wire nails; the Non-Ferrous Metals and their Products group, due to lower prices for copper, lead, silver, tin and spelter; the Non-Metallic Minerals and their Products group, mainly because of a decline in the price of cement; and the Wood and Wood Products group. The Chemicals and Allied Products group was practically unchanged.

"Land Settlement in Canada" is the subject of a comprehensive article by Mr. H. P. Desjardins in the current number of the *International Review of Agricultural Economics*. The writer points out that Canada, which is recognized as constituting the world's last great reserve of arable land should adopt the most economic methods of cultivation and exercise prudence in disposing of the remaining public lands. The different methods of land allocation adopted by the Federal Government are described in detail, by provinces, under three categories: (1) Homestead, with or without pre-emption; (2) grants of lands to railway companies by way of subsidy; and (3) sales, public or private, made directly to the settlers or by contract with settlement companies to be disposed of by them.

The following motion was made in the House of Commons on April 19 by Mr. J. S. Woodsworth (Winnipeg north centre):—

"That, in the opinion of this House, measures should be taken to regain for the use of the people the coal mines and water-powers which are now being exploited in the interest of private corporations rather than for the needs of the people."

The motion was subsequently withdrawn at the suggestion of the Minister of the Interior who pointed out that it would be difficult for Parliament to take any action on the subject without appearing to encroach on provincial prerogatives.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

THREE applications for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, have been received recently in the Department, as follows:—

(1) from certain employees at the Rail Plant of the Canadian National Railways, members of the Fort Rouge Unit of the One Big Union.

(2) from certain employees of the Canadian National Electric Railways, members of the International Brotherhood of Electrical Workers. After this application came to hand further direct negotiations were commenced which resulted in an adjustment of the dispute.

(3) from certain employees of the Winnipeg Electric Company, being motormen and conductors, members of the Street Railway Employees Unit, One Big Union.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1926

THE number of strikes and lockouts in existence during April was 13, as compared with 14 in March. The time loss for the month was less than during April, 1925, being 13,908 working days, as compared with 297,949 working days in the same month last year. The considerable time loss and number of employees involved in April, 1925, were chiefly due to a strike of coal miners in Nova Scotia.

Date	Number of disputes	Number of employees involved	Time loss in working days
April, 1926	13	796	13,908
March, 1926	14	898	12,697
April, 1925	13	12,149	297,949

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Nine disputes, involving 315 workpeople, were carried over from March, and four disputes commenced during April. Three of the strikes and lockouts commencing prior to April, and two of the strikes and lockouts commencing during April, terminated during the month. At the end of April, therefore, there were on record eight strikes and lockouts as follows: boot factory employees, Toronto; hat and cap makers at Montreal; men's clothing workers at Montreal; pressmen and bookbinders at Montreal; stage hands at Vancouver; musicians at Vancouver; moulders at Vancouver and New Westminster, and painters at Vancouver.

The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet declared them terminated. Information is available as to five such disputes, namely, cigarmakers at Montreal, commencing March 24, 1925; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Owen Sound, January 19, 1925, and upholsterers at Montreal, June 27, 1925. During the month information reached the Department that the strike of women's clothing workers at Montreal, which commenced December 9, 1925, had been called off March 6, as the strikers had all been replaced by other workers.

Of the strikes and lockouts commencing during April, one was for increased wages, another was for increased wages and other changes, and of the remaining two, one was for the dismissal of the superintendent, and the other was a strike against the dismissal of workmen. Of the strikes and lockouts which terminated during the month, three terminated in favour of the employers; one was in favour of the employees, and in the fifth case the employees were substantially successful.

During April a dispute was reported at Fraser Arm, B.C., when several employees refused to work Saturday afternoon, which would

be in excess of 48 hours per week. The employer had received permission, as required, to do so that week, from the Chairman of the Board of Adjustment administering the Hours of Work Act, the Board having issued an order restricting hours of work in that industry to 48 per week. The men who refused to work were dismissed and replaced.

In the issue of the LABOUR GAZETTE for March, a strike was reported involving 80 rubber factory employees at Montreal owing to a reduction in wages, piece rates. The dispute arose out of a tentative arrangement for payment for a new method of work, under which there was a bonus and a guaranteed minimum wage of 46 cents per hour, nine hours per day. After two weeks the employees demanded a straight piece rate of 15 cents and when it was refused, went on strike. After negotiations they returned to work at a piece rate of 12 cents. The duration of the strike was from February 26 to March 2.

The following notes give particulars in regard to certain disputes in addition to information given in the tabular statement.

BOOT FACTORY EMPLOYEES, MONTREAL, QUE.—Fifty-nine employees went on strike on February 4, against a reduction in wages, piece rate, stated by the employer to be from two to twenty per cent, and by the employees to average 30 per cent. By April 14, the company had replaced the strikers by other workers and the strike was called off.

FUR WORKERS, MONTREAL, QUE.—This dispute, lasting over a year, commenced on April 1, 1925, when about 75 fur workers ceased work and were joined by several hundred other fur workers on May 27. The trouble arose out of the failure of the union and the association of employers to renew an agreement which expired at the end of 1924, and in which the employees had wished to include provisions for better wages and working conditions, with preference in employment for union members. The employers were willing to renew the old agreement but declined to agree to the changes proposed. Later some of the employers required their employees to sign individual agreements, or contracts, for the balance of the year. Some who refused were dismissed and the union then called a strike in all shops not under an agreement. The employers gradually replaced the workers to a great extent. These shops were picketed and some of the picketers were arrested on charges of intimidation and assault. Thirteen of these were sentenced to a fine of $10 and costs or 30 days in jail, in March, 1926. Early in April, as the new season commenced, negotiations were opened and a settlement was reached on the basis of the previous agreement being renewed for three years with some modifications of certain sections to be arranged later. Work was resumed April 21.

MILLINERY WORKERS, TORONTO, ONT.—Fifty-nine millinery workers in the employ of five establishments ceased work February 12, when a proposal for a signed agreement was refused by the employers. Soon after the dispute occurred one employer signed the agreement, but the other four employers refused to sign. Later negotiations were carried on and a settlement was arrived at April 17, when the workers' demand was granted.

MOULDERS, OWEN SOUND, ONT.—Information was received in the Department during April that the nine moulders who had been on strike at Hamilton, Ont., since January 19, 1925, against a reduction in wages, had secured work elsewhere and employment conditions were no longer affected, but the union had not declared the strike to be over.

COAL MINERS, GLACE BAY, N.S.—A cessation of work occurred at Glace Bay, N.S., on April 12, when 36 miners, out of about 300, refused to work because two miners had been dismissed for refusing to perform work they held did not fall within their duties. The union ordered the men back to work so that the strike lasted only one shift. The mine, however, was not opened for some days as there was no outlet for the coal, until a steamer arrived.

MOULDERS, VANCOUVER AND NEW WESTMINSTER.—A strike of 207 moulders occurred at Vancouver and New Westminster on April 1, for an increase in wages. Prior to the cessation of work the employees had been receiving $5.70 per day and about March 15, a demand was made for $7 per day. A few days later this demand was reduced to $6.50 per day. About March 20, the employers advanced the wages from $5.70 to $5.85 per day and again on the 31st of March made a further increase making the rate $6 per day. The men refused to accept these terms and ceased work. The Fair Wages officer of the Department of Labour interviewed both parties. The strikers desired to meet in joint conference with the employers. The employers stated that each employer would be willing to meet a committee of his own employees. This was not agreed to by the union and at the end of the month the strike remained unsettled.

MACHINISTS, RENFREW, ONT.—Eighteen machinists ceased work at Renfrew, Ont., on April 14 for one day, demanding the removal of the superintendent owing to a ruling as to piece work. After negotiations with the managing director work was resumed on April 15, without any change in conditions.

PAINTERS, VANCOUVER, B.C.—On April 12, 220 painters at Vancouver stopped work for an increase in wages, to $7.50 per day, a 5-day week and closed shop. The prevailing rate had been $6.50 per day for an 8-hour day and a 44-hour week. Some of the employers agreed to pay $7 per day and to negotiate further as to the 5-day week and closed shop. About twenty-five per cent of the painters returned to work under these conditions, but the others remained on strike and at the end of the month no further settlement had been reported.

STRIKES AND LOCK-OUTS DURING MARCH, 1926

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lock-outs commencing prior to April, 1926.			
MANUFACTURING—			
Boots and shoes (other than rubber and felt):			
Boot factory employees, Toronto, Ont.	40	1,000	Commenced January 13, against changes in wages and working conditions alleged to be in violation of agreement. Unterminated.
Boot factory employees, Montreal, Que.	59	590	Commenced February 4, against reduction in wages. Strikers' places filled April 14.
Fur and leather products (other than boots and shoes):			
Fur workers, Montreal, Que...	120	2,040	Commenced April 1, 1925, failure to renew agreement and proposed substitution of individual agreements. Settled by negotiations and work resumed April 21, 1926.
Clothing (including knitted goods):			
Millinery workers, Toronto, Ont.	47	84	Commenced February 12, to secure a signed agreement. Settled by negotiations and work resumed April 17.
Hat and cap makers, Montreal, Que.	10	250	Commenced March 4, against alleged violation of agreement. Unterminated.
Men's clothing factory employees, Montreal, Que.	9	225	Commenced March 19, against alleged violation of agreement. Unterminated.
Printing and publishing:			
Printing pressmen and bookbinders, Montreal, Que.	17	425	Alleged lockout commenced March 9, of members of certain unions. Unterminated.
Iron, steel and products:			
Moulders, Owen Sound, Ont...	....	....	Commenced January 19, 1925, against a reduction in wages. Information received indicates employment conditions no longer affected.
SERVICE—			
Recreational:			
Stage hands, Vancouver, B.C..	7	175	Commenced January 9, against alleged violation of agreement. Unterminated.
Musicians, Vancouver, B.C....	6	150	Commenced January 11, in sympathy with strike of stage hands and alleged violation of agreement. Unterminated.
(b) Strikes and lock-outs commencing during April, 1926.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Glace Bay, N.S...	36	36	Commenced April 12, against discharge of employees. Strikers discharged and work resumed April 19.
MANUFACTURING—			
Iron, steel and products:			
Moulders, Vancouver and New Westminster, B.C.	207	5,175	Commenced April 1, for increased wages. Unterminated.
Machinists, Renfrew, Ont.....	18	18	Commenced April 14, for dismissal of superintendent. Settled by negotiations. Work resumed April 15.
CONSTRUCTION—			
Buildings and structures:			
Painters, Vancouver, B.C.....	220	3,740	Commenced April 12, for increased wages, 5-day week and closed shop. Unterminated.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

FIVE new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This Board was established under an Order in Council dated July 11, 1918, while the war was still in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods.

Case No. 267—Canadian National Railways (Atlantic region) and Brotherhood of Maintenance of Way Employees.

A bridge and building foreman, New Glasgow division, was transferred to St. John division, where the work in which he was engaged was suspended, and he was given work as carpenter under another foreman. The employees contended that under the terms of the wage agreement he should have been allowed to exercise his seniority rights, and that being the senior employee he should have had the position of foreman at St. John. The Railways alleged that he was not competent for this work, but as they admitted that he was senior to the acting foreman the Board sustained the employees' claim.

Case No. 268—Canadian National Railways (western region) and Brotherhood of Maintenance of Way Employees.

A pump repairer was dismissed for irregularities in connection with his expense account, and was reinstated later, with his old seniority, but only in the capacity of pumpman, such employees having no expense accounts. When a position for a pump repairer became vacant in another subdivision the man applied for it, but a junior employee was appointed. The employees contended that the seniority rule should have governed the appointment, there being no question of the qualifications of the senior applicant. It developed at the hearing that both parties understood that the re-engagement of the dismissed employee was to be as a pumpman only. The Board therefore denied the employees' claim.

Case No. 269—Temiskaming and Northern Ontario Railway Commission and Order of Railroad Telegraphers.

An operator claimed seniority rights in connection with a certain position for which he had applied but to which a junior had been appointed. The Commission stated that when he applied for the position he had not answered certain questions satisfactorily. It was admitted however that, on the order of the chief commission he had been given a trial at the work and appeared to give satisfaction. The Board sustained the employees' claim, allowing him an amount equal to the difference between the wages he had earned and the wages he would have received in the position applied for. They held that while merit, fitness and ability should be considered, the operator under the circumstances was entitled to the position when it was bulletined.

Case No. 270—Canadian National Railways (central region) and Brotherhood of Railroad Trainmen.

A brakeman was dismissed on account of alleged unsatisfactory service and giving wrong information at an investigation of a case of pilfering from freight cars. He was arrested on a charge of being concerned in the pilfering, but was acquitted by the Court. The employees contended that in view of his acquittal the man should be reinstated in his position. The Board denied the claim of the employees.

Case No. 271—Canadian National Railways (central region) and Brotherhood of Railroad Trainmen.

A brakeman was arrested on December 28, 1925, under a criminal charge and after a preliminary hearing on January 5 was committed for trial, which was held on March 12, 1926, when he was acquitted. After the preliminary hearing he reported for duty but was held out of service pending further consideration. After the trial he was not notified to report for duty. On March 18 he reported for duty, but was not reinstated until March 29. The employees contended that he should be paid for all the time lost by him up to March 27, when he received notice to report for duty. The Board decided that the reinstatement should have been decided by March 19, and that the brakeman should be paid for the time he lost from and including March 20 until placed. The claim for payment for time previous to March 20 was denied.

According to press despatches the Male Minimum Wage Act of British Columbia will begin to operate early in June when a minimum rate will be enforced in the lumber industry. It is stated that the new law is having a marked effect in curtailing the number of orientals employed in this industry.

ALBERTA COAL COMMISSION

THE Alberta Coal Commission appointed by the Provincial Government in December, 1924, to investigate and report upon the mining industry in its various aspects, presented their report in February, and it was issued later in printed form.

The appointment of the Commission was noted in the Labour Gazette for March, 1925, the subjects proposed for investigation being enumerated. The commissioners were Mr. M. E. Evans, of Edmonton, chairman; Mr. R. G. Drinnan, a mining engineer of Edmonton, representing the operators, and Mr. Frank Wheatley, a practical miner, of Blairmore, and President of the Alberta Federation of Labour, representing the miners. The original order in council appointing the commission was amended so as to place the inquiry exclusively in the chairman's hands in so far as it was concerned with the subjects of the capitalization, and profits and losses of the industry, the information received on these matters from the operators being treated as confidential.

The report is a volume of about 400 pages giving the results of an exhaustive study of mining conditions in the Province, and concluding with a number of important recommendations. The chairman, in a brief "foreword," lays stress on the fact that the commissioners, representing elements in the industry that are often opposed, were able to agree on so many points, "That general feature of the report," he considers, "is more significant than any particular thing contained in it, more full of hope that the men of good will on both sides may combine to ensure that peace within the industry which is incomparably its greatest need."

Coal Resources and Ownership

The commissioners estimate the coal resources of the province as being roughly thirty-one and a half billion tons of bituminous, eleven and a half billion tons of sub-bituminous and fourteen and a half billion tons of lignite coal, or enough to continue the highest annual output yet reached for thousands of years. The control rights at the present time, including leases as well as ownership in fee simple, are held as follows: 60 per cent for the Dominion Government, 14 per cent by the mine operators, 5 per cent by land companies, and 21 per cent by others.

Mining Development and Operation

The report analyses the production of coal in 1923, the last normal year, according to the relative importance of the several mines, the result showing that over 95 per cent of total production in the province in that year was contributed by 69 mines, which were less than one-fifth of the total number of mines operating in the province. The daily capacity of Alberta mines at the present time is about 50,000 tons, of which 24,000 is bituminous. Allowing for seasonal operation in the lower grades this would mean an annual capacity of 10,000,000 tons, or about half as much again as the biggest output yet reached. Moreover the present capacity of the mines could be rapidly increased.

Operating Conditions and Practice

Examination of the natural and operating conditions in the mines leads the commission to the conclusion that there is great scope for further improvement in the industry in Alberta, by the increased use of labour-saving devices especially adapted to local conditions, and by increased efficiency in the management. The roof, floor and gas conditions of each division are described briefly. Bad ventilation is noted in some lignite districts. Among labour-saving devices particular attention is given to mechanical loaders. The increasing use of such loaders is one of the features of mining practice in the United States and elsewhere. The recent United States Coal Commission goes so far as to conclude that, in the next decade, there will be a further reduction of 25 per cent in the man-power required to produce a ton of bituminous coal, through better mining, more extended use of machinery and particularly by replacing hand loading. The commission found that the use of such machines had been carefully considered in the Drumheller field and the conclusion come to that they were not suitable. Not only were the seams too low and the roof for the most part too poor; but it was thought by the operators that the use of such a loader would tend to increase the breakage of the coal. In the parts of the province where the seams might be suitable for some adaptation of the mechanical loader, the intermittent operation is a factor. There are loading machines of the conveyer belt type in successful operation in some mines in the province and the commission thinks the use of such machines should be extended.

Timber supplies are discussed at length, it being found that the disturbing factor in all estimates as to the available supply is the danger of destruction by fire. Tables are given

of the production per employee per shift in the various classes of mines, with similar figures for certain districts in the United States. The commission criticises the method sometimes employed for showing the number of tons produced per employee, the percentage being based on the average number of employees on the payroll without regard to the number of shifts worked. The commissioners base their calculations on the production per shift of mines producing over 2,000 tons per annum. On this basis the production per employee, per shift in tons, in the year 1923, was as follows:

Bituminous mines..	3.03 per cent
Sub-butminous mines..	3.07 per cent
Lignite mines..	3.04 per cent
All mines..	3.07 per cent

The United States figures show that the daily production of a miner varies with the size of the mine from 2.70 tons in smaller mines, to 4.73 in larger mines, the average for all mines being 4.19 in 1921.

The commissioners lay stress on the subject of short time operation, the report tabulating the results of an inquiry as to the number of days operated at the several mines during the four years 1921-24, with the following results:—

The average number of days worked in each of these years at two-fifths of the capacity of the mines, or over, was 145, while the average of complete idleness was 138 days in the year. Similar figures are given for the principal coal producing countries of the world, but strict comparisons are not found to be possible. The causes of lessened output are examined under the following heads: lack of orders (want of market being one of the main causes, though unequally felt); lack of railway cars (a minor cause); lack of labour (negligible); climatic conditions (causing about 10 per cent loss); accidents to employees (serious in some mines); mine disability (causing 1 to 4 per cent loss); absenteeism (10 per cent in larger mines); labour disputes (ranging from about 20 per cent to 89 per cent in strike years); labour turnover (negligible); and other causes.

The impression left on the commission through the hearings and otherwise is that the various operators in the province are alive to the advantages of using labour-saving devices and would be only too willing to employ them if they had the means, or if in their opinion they had the conditions that would make their application successful.

The attitude of the mine workmen on this question varied, but the prevailing opinion appeared to be that as many labour-saving devices as possible should be used to help to cut down the hours of labour. The report states however that "it is undoubtedly true that, in the past at least, the opposition of labour has been a handicap to the introduction of new machines. Where the use of them is not opposed, there is often a struggle as to the appropriate rate of pay for the machine runners."

Capitalization and Profits and Losses

This chapter gives an account of the position of the Alberta coal industry on its financial side. The aggregate result of the four years' operations of all mines was, as nearly as possible, an even break. This remarkably balanced result was, however, made up of nearly half the number of mines making a profit in the four years of two and a half million dollars, and over half the mines losing nearly as much. On a tonnage basis, but taking the results of individual mines for the whole four years period, nearly sixty per cent of the output was produced at a profit, averaging about twenty-six cents a ton, and a little more than forty per cent of the tonnage was produced at a loss, averaging about 32 cents a ton. All mines in the grand aggregate made profits in 1921 and 1923 of about a million and a half dollars and losses in 1922 and 1924 of a like amount.

The commissioners are unable to draw definite conclusions from the disparity of the results of the operations of the various mines. "It is always easy to be wise after the event," they say: "Obviously, a much more satisfactory showing could have been made if it had been possible, in some way, to dispense with the operations that, for the four years, were carried on at a loss, adding that much to the tonnage of the profitable operations and thereby enabling them to make a still more favourable showing. But, even if the machinery had existed for doing this, there would have been the difficulty of selecting in advance which were going to prove the profitable operations. Even in retrospect, it must remain an unanswered question as to whether the disparity in financial results, as between companies, was due entirely to natural conditions or may be ascribed in part, to differences in management and salesmanship."

Marketing

In regard to the markets for Alberta coal the commissioners state that taking the totals for 1923, the latest year approaching the maximum production, and using round figures, Alberta coal went, forty-five per cent to railroads; twenty per cent to Alberta; eighteen per cent to Saskatchewan; eight per cent to

Manitoba; four per cent to colliery boilers; and the remaining five per cent to all other markets. The railroad market is by far the most important single market and the outlook in it is encouraging. The home market in Alberta is disturbed by the operation of the multitude of small mines and suffers from the competition of natural gas. Improvement will come chiefly with increase of population and industries. Saskatchewan already takes almost as much coal as Alberta itself and should afford a stable and growing market. Sales in British Columbia have so far been less than one-tenth of the home consumption or the shipments to Saskatchewan. In general, sales of Alberta coal to the United States have declined rapidly since 1920 and prospects are not very bright for recovery. The market in Manitoba is pre-eminently the market that should be captured, in its entirety, for Alberta coal, save only for such competition as lower mining and transportation costs may enable the Saskatchewan lignites to offer, in that part of the market for which such coals are used.

It was not proved to the satisfaction of the commissioners what price relation the various Alberta coals can maintain in a normal Ontario market or that the proposed seven-dollar freight rate is the correct one. They suggest that, as a first step the railways, the mines and the governments should combine to effect large scale summer shipments to Ontario at such prices as will induce the consumer to take delivery at that time. Depending on the season and the railways' programme, the time for such shipments would be somewhere from April 1 to August 15. The amount which could thus be transported in the railways' slack time has been variously estimated at 350,000 to 500,000 tons. Thus the market, they believe, can be developed and proved without additional capital expenditure by railways or mines, and without increasing the peak numbers of the working force, with the concomitant of unemployment later on. It would, also, be highly desirable for the next and all subsequent stages of the Ontario market to maintain such a relation between prices and freight rates as will preserve the balance between shipments in the summer and those in the autumn and winter. With even more force than in the Manitoba market, operators are urged to make a combined campaign in Ontario, giving particular care to the selection of coals and their preparation. The governments that are giving their assistance to this movement will have a right to supervise it.

The commissioners reserve full discussion of transportation in view of an approaching hearing before the Railway Commission.

Marketing methods are discussed under various heads. Particular attention is given to the subject of co-operative marketing, and the conclusion is reached that, while not a remedy for all the ills, co-operative marketing should result in considerable economies as well as in increased efficiency. As to the number of pools, in the lignite fields alone, there would probably have to be at least three; northern, central and southern. The most urgent needs are for co-operative methods in the Manitoba and Ontario markets, before attempting to control the business nearer home. In any case, the pools should undertake the retailing of coal, if at all, with very great caution.

The various competitors of Alberta coal are discussed under such heads as United States and Saskatchewan mines, coke, oil, hydro-electric power and natural gas.

The methods and use of by-products are discussed, the subjects treated being power stations at coal mines, pulverized coal, carbonization, and by-products and briquetting. Low temperature carbonization, about which much has been published is found to be still in the experimental stage. Huge sums have been spent on it; and the conclusion is that Alberta can very well wait until the low temperature process has been commercially proved elsewhere.

Mine Workmen and Labour Relations

This chapter deals with subjects of direct concern to the employees. The total number of coal mine employees on the payrolls on December 31, 1924 was 12,061 (9,055 inside and 3,006 outside). The opinion is given that there are too many men endeavouring to follow mining as a means of living. The present lower wage scale may correct this condition, it is thought. Miners of British origin (including Canadians) predominate throughout, but a large proportion are of foreign birth.

The various organizations of operators and of workmen are described and the constitutions of the two chief bodies—the Western Canada Coal Operators' Association and District 18 of the United Mine Workers of America—are summarized, article by article. In a section on Wages, Working Conditions and Agreements, a full list is given of the various agreements between the two organizations just mentioned and also the wage changes from 1909 to 1925, with a brief account of the negotiations accompanying these changes.

As an example, the rates of pay for miners on day work have been as follows: 1909, $3; 1911, $3.30; August 1916, $3.55; November, 1916, $3.84; April, 1917, $4.08; August, 1917, $4.28; December, 1917, $4.42; April, 1918, $4.62; August, 1918, $4.87; December, 1918, $5; December, 1919, $5.70; April, 1920, $6.35; October, 1920, $7.50; October, 1924, $6.56; April, 1925, $5.40. There follows a complete memorandum of all the agreements now in force at the chief mines in the province, analyzed under the various provisions of those agreements, with the full scale of the present wages.

The commissioners find that many of the agreements fail in clearness of expression, the ambiguity being in some apparently intentional. The advantages cannot be overestimated of having agreements so definitely and clearly expressed that no dispute can possibly arise as to their meaning in any particular. Owing to the present agreements having for the most part been made by individual mines and not by associations, there is considerable lack of uniformity in the wage scales and working conditions; and this situation is thought by some to portend a troublesome readjustment some time in the future. The information as to non-union wages and working conditions is very incomplete and suggestions are made for supplementing it.

The Alberta wage scale at the time the information was compiled was a little higher than British Columbia, much higher than Nova Scotia and Tennessee and Kentucky, but much lower than Montana, Wyoming, Washington and the mid-continental field in the United States, which includes Illinois, Indiana, Iowa, Ohio, and West Pennsylvania. Compared with the scale in other trades in the province, mining wages, for the last five years, have shown the most rapid decrease; and now seem to be more on a parity with other occupations, except in respect of unclassified mine labour, which is still paid considerably more than general common labour.

The commissioners next discuss various subjects which often lead to disagreements between miners and operators. They recommend that such difficulties shall not be allowed to accumulate, but should be disposed of as they arise.

"What the commission wishes to emphasize above all is the supreme importance to that peace within the industry, which is its prime need, of so managing the day to day relationship as to reduce to a minimum the friction and discontent over these conditions. Too often they are disregarded and disputes concerning them allowed to accumulate. It is just this accumulation of comparatively petty grievances that adds the bitterness to the periodic struggle over the making of a new agreement. If everything else could be disposed of currently and nothing left to be determined in the new agreement but the rate of wages, there would be far more chance of a dispassionate and prompt settlement of that major item."

After discussion of the subject of irregular or seasonal employment, which is the workman's side of the problem of short-time operation, the commissioners state that while the situation is undoubtedly difficult, it is by no means hopeless. "The problem must be attacked in two main ways; first, to remove the cause by seeking new markets, such as the summer market in Ontario and Manitoba; by stopping further over-development; by co-operative methods to regularize delivery; in fact by applying all the means for the stabilization of the industry, which have suggested themselves in the course of this inquiry. The second line of attack should consist in organizing migrations of the working force back and forth between the bituminous mines and the lignite mines and harvest fields; and also between the lignite mines and the farms and other summer employment."

An important section of this chapter relates to Earnings and Cost of Living. The report states that the official union cost of living budget of a little over $1,800 a year has not, in practice, been equalled by the average earnings for the four years examined.

Many sources of information were examined for the purpose of securing a correct statement of earnings during the years 1921-1924. The average earnings of all employees in the bituminous mines in 1924 is set at $849.93 and in the lignite mines at $735. Half the employees appeared on the payrolls for periods ranging from five to twelve months.

The report contains a brief history of strikes in the province, and the damage to the industry resulting from past disputes is found to have been very great. "The coal industry as a whole, it is stated, for the four years 1921 to 1924, would, but for the strikes, have realized a fair profit; and the average earnings of workmen would have come much nearer reaching the budget which they have laid down as the minimum."

The machinery for adjusting the minor matters which cause these strikes is well designed; and all that remains is to use it. Anything more elaborate, following such models as the Adjustment Board of the railways, is out of the question in the mines, they consider, unless and until both operators and men form

province-wide and well disciplined organizations. Even that Adjustment Board does not attempt to deal with wages; but it does handle promptly and effectively all minor matters.

Legislation and Governmental Problems

The conclusions reached in this section are summarized in the list of recommendations given below. The commissioners criticize the conflict of regulations under the Workmen's Compensation and Mines Acts and recommend a single control. A partial analysis is made to show the predominance of shorter term disabilities and the consequent importance of the statutory waiting period before compensation begins. The difficulty is recognized of arriving at "average weekly earnings," 62½ per cent of which is the compensation in cases of permanent or temporary total disability; but it seemed to the commissioners to be very questionable whether the method of computing earnings adopted by the Board is the one best calculated to give effect to the intention of the Act. This question is discussed in the report at considerable length (under Section 56 of the Act) and one solution suggested is a return to the flat rate basis of compensation. The demerit ratings, which have been imposed recently by Resolution No. 11, are thought to be vexatious out of all proportion to the revenue obtained. These demerit ratings are not based on inspections and have no ascertainable relation to the safety precautions taken. It seems, therefore, doubtful whether this particular regulation conforms to the Act.

Sundry Problems

The remedies that have been suggested for the problems of the industry are found to suggest state control in three stages: first, to prevent new openings and let the situation work itself out; secondly, not only this but to close down some of the present mines. thirdly, to nationalize the industry. For reasons that are given at length, none of these schemes seems to be feasible nor could the commission device any modifications of them that it was willing to put forward at this time.

The commission refrains from making a definite pronouncement on the subject of nationalization, concluding that the government should first exercise the powers of control which it at present possesses, with the modification of those powers and the stricter enforcement of them suggested in this report, before contemplating any fundamental change in the whole system.

Recommendations

The various recommendations contained in the report are summarized as follows:—

(1) *A mines' department of the province of Alberta;* the deputy minister to be a thoroughly competent and experienced mining engineer of high standing; the mines' department to exercise all the executive functions of the government in connection with the coal industry and to co-ordinate and control all its activities relating thereto, such as the mines' branch, all work on coal of the research council, the trade commissioner, the labour commissioner, as well as administering the coal resources and controlling the mining development if and when these come into the possession of the province.

(2) *A Coal Industry Advisory Council* composed of the deputy minister of mines as chairman, two operators, two mine workmen, a coal dealer and one other representing the general public, to advise the government on all matters concerning the industry.

(3) *As gradual remedies for over-development.*—Enforcing the terms of present leases and withholding new leases until warranted; this policy should be worked out in conjunction with other owners of mineral rights; seeking new markets and improving the present marketing methods; and strict enforcement of all the powers for regulating the opening and running of mines.

(4) *To avoid further complications.*—The immediate suspension of all general coal mining regulations of the Dominion Government pending the final decision as to the transfer of coal mining rights to the province and thereafter pending the determination by the province of its policy; meantime each application for a lease to be dealt with by the government on its merits. New leases to run for a term or be open for revision at a time that will conform with the expiry of existing leases so as to permit of amendment throughout; the present right of unconditional reinstatement of a defaulting leaseholder to be amended to make the renewal lease subject to changes in regulations.

(5) *As to seasonal unemployment:* co-operation by dealers and consumers to spread demands more evenly throughout the year; summer storage by dealers and consumers; regulation by consultation between the parties, if necessary under government auspices,

of the program of deliveries of coal for railway use; organization through the labour department of the government of a seasonal migration of the surplus working force between the bituminous and lignite mines and vice versa and between the bituminous mines and the harvest fields.

(6) *As to labour relations within the industry:* clearness of expression in agreements; simplification of wage scales and the making of rates commensurate with the skill and experience as well as the energy required; an earnest determination on both sides to use existing machinery for adjusting minor disputes, such disputes to be disposed of promptly instead of being allowed to accumulate to add bitterness to the main struggle over the renewal of wage agreements; in general the utmost simplification of the decision to be made at the time of negotiating the new agreements; the fullest possible publicity of the facts during the discussion of agreements; notice of any change desired by either party in existing agreements to be given at least 60 days prior to their termination; if a new agreement has not been made 30 days before the termination of the old agreement the appointment of a conciliation board under the industrial disputes investigation act of Canada (or a provincial substitute for that act) to be compulsory; a compulsory ballot by the rank and file of the mine workmen's unions on the finding of any such conciliation board; if the foregoing fail to obviate serious labour disturbances the appointment of an independent commission continuously investigating and publishing the facts which affect the labour relations of the industry.

(7) *As to the operation of mines:* enforcement on all mines irrespective of size of proper methods of mining; more thorough inspection of mines and more rigid enforcement of the mines act and regulations disregarding for the future the plea of pioneering conditions; provision for compulsory inspection of mines by committees of the men. the phrase "Not Mining Engineers" to be deleted from the section referring to the composition of workmen's inspection committees; improvements in standards of mining practice and increased use of labour-saving devices such as mechanical loaders. A study of the supply of mine timber; increased recognition of the importance of good service to the men at the face in the way of supply of mine cars, timber, ventilation, etc.; certificates of competency for certain classes of mine workmen; the removal of any legislative and other impediments that may stand in the way of properly conducted amalgamations of mining interests.

(8) *As to marketing in general:* co-operative methods or "pools," in the first instance for the Manitoba and Ontario markets; incidentally restricting the number of dealers and eliminating dealers' difficulties. Recognition by operators and workmen of the supreme importance of regularity of supply for the railway market for the Manitoba market and generally; legal sizes for coal for the domestic trade; accurate information regarding coals as prepared for market and as they reach the consumer; expert samplers and proper sampling equipment for this purpose; reductions in freight rates; provision of bunkering facilities at Prince Rupert as soon as sufficient shipping is established at that port and a case made out for Alberta coal being able to compete successfully; preparation of a comprehensive scheme for power stations at coal mines well in advance of the need arising as it may in the not distant future; but as to low temperature carbonization to leave it to others to prove the commercial feasibility of this process.

(9) *As to the Ontario market:* large scale summer shipments of coal at special mine prices and special freight rates to induce off season purchases thereby balancing up mine and railway operation, the future development in this market to be kept similarly balanced by the same methods; a dominion government subsidy, carrying with it the right to supervision by the federal government.

(10) *As to the market in Manitoba and Saskatchewan:* the securing of accurate figures of the annual consumption of coal in each of these provinces, to the end that the coals of Saskatchewan and Alberta may capture the entire prairie market, campaigns by governments, boards of trade, and other public bodies as well as by the coal industry; increased duties on coal; reductions in freight rates, and special summer freight rates.

(11) *As to non-payment of wages:* provisions for ascertaining the situation more promptly and to hold the mine as well as the operator responsible, with precautions against recurrences by requiring guarantee deposits.

(12) *As to the comfort and health of mine workmen:* abandonment of the plea of pioneering; the improvement in living conditions cannot be postponed until the industry becomes more stable but on the contrary will help to make it so; better standards for housing accommodation, water supply, and

sanitation in mining camps; much higher standards set and enforced in health matters generally; same standards to be enforced on older mining communities under the procedure of the Town Planning Act with any necessary amendments; special study by experts to work out all the details of these living and housing standards; provision in closed camps available to the workmen under certain building restrictions; opportunity for full investigation by committees of the workmen in cases of complaint regarding the cost of living in closed camps; improvement in the wash-house accommodation provided and in care of wash-houses; man trips where possible.

(13) *As to miscellaneous operating conditions:* Acceptance by mine workmen of semi-monthly instead of fortnightly pay or, in the alternative, government returns to be based on thirteen reporting periods in each year, each period consisting of two fortnightly pay periods; right of workmen's representatives to examine books recording the times of raising and lowering of men; notices of the time and place of holding coroners' inquests; government inspection of mine scales every three months and in the presence of representatives of the workmen; use of electric headlights where safety lamps are required; blanket rates to be replaced by separate rates for mining and for the various kinds of deadwork; special permits for old workmen in connection with minimum wage clauses.

(14) *As to the Workmen's Compensation Act (accident fund) and the Workmen's Compensation Board:* Repeal of the power to make safety regulations for mines, substituting therefor the right to make recommendations for such regulations to be imposed by order in council as under the Mines Act; flat rate basis of compensation instead of the present percentages of earnings; trial of the plan of having the Workmen's Compensation Board appoint its own salaried accident doctors, abolition of demerit ratings at least on the present basis; reports of accidents to be made only to the Compensation Board and by it made available to the Mines Branch.

(15) *As to official publications and reports:* Modification of the claim for the percentage of the world's resources of coal situated in Alberta so as to correspond with later knowledge, making that percentage at most three per cent, and not fourteen per cent as formerly; discontinuance of the descriptive term "domestic coal" as a substitute for lignite coal; compilation and publication of non-union rates for certain standard classes of workmen, as well as the union rates that have been published heretofore.

Forty-Four-Hour Week in New South Wales

A 44-hour week was established in New South Wales for all industries, except coal mining and shipping (vessels trading beyond the limits of a port), by an Act (to be cited as the "Forty-four Hours Week Act, 1925") assented to on December 16, 1925. In addition to regulating hours, this Act further regulates arbitration awards and industrial agreements, and amends the Industrial Arbitration Act of 1912.

Section 6 (1) of the new Act prescribes:—

> The ordinary working hours in all industries other than coal mining and shipping with respect to vessels trading beyond the limits of a port, to which the Principal Act* applies, shall be as prescribed in or under this section, and the following directions shall be observed by the court and the boards in making awards, and by the parties in making agreements—
>
> (a) In all industries subject to the provisions of this section, the number of ordinary working hours of an employee shall not exceed—
>
> (1) 8 hours during any consecutive 24 hours; or
>
> (2) 44 hours per week; or
>
> (3) 88 hours in 14 consecutive days; or
>
> (4) 132 hours in 21 consecutive days; or
>
> (5) 176 hours in 28 consecutive days . . .

All workers in New South Wales are covered by industrial agreements or awards of the industrial courts or boards, so that, in practice, the 44-hour week will be regulated by such agreements or awards, which may provide for overtime.

A 48-hour week was legally fixed in New South Wales by a law passed in April, 1916. The Eight-Hours (Amendment) Act, 1920, made possible the application of a 44-hour week in individual industries. A further Eight-Hours (Amendment) Act of 1922 repealed the 1920 Act, and the 48-hour week was again made the legal working week in industry. The Forty-four Hours Week Act, 1925, repeals this last Act, as well as the Act of April, 1916.

*The Industrial Arbitration Act of 1912, which applies to trade and industry generally.

The Prussian Ministry of Commerce and Industry has established a department for industrial diseases in a large hospital at Berlin. A similar clinic has been in operation at Milan, Italy, since 1912.

RECENT LABOUR LEGISLATION IN ALBERTA, MANITOBA AND ONTARIO

Alberta

THE sixth session of the fifth legislature of the Province of Alberta opened on February 11, and the main legislative programme was completed on April 8, when the Royal Assent was given to some important labour legislation. The House adjourned on April 8 in order to await action by the Dominion Parliament in the matter of the agreement between the Dominion and Provincial governments providing for the return to the province of its natural resources.

The opening speech from the Throne referred to the improved economic conditions prevailing in Alberta, the total value of all agricultural products last year having exceeded that of any other year in the history of the province. There was still however a certain amount of temporary unemployment during the winter, necessitating special efforts by the government to alleviate distress and provide work.

Factories Act

Perhaps the most important labour measure of the session was the new "Act for the Protection of Persons Employed in Factories, Shops and Office Buildings." As originally introduced the bill proposed to establish a working week of 48 hours in the establishments coming under the Factories Act, but as a concession to employers throughout the province who expressed their disapproval of the legal "8-hour day," it was decided to establish, by order in council, a commission of two persons to investigate the subject of a 48-hour working week with regard to any or all of the industries carried on in a factory, shop or office; this commission to be appointed by the Lieutenant Governor in Council and to report at the next session of the legislature. In the meantime it is provided that "the hours of labour for any person employed in a factory, shop, office or office building shall not exceed nine in the day and fifty-four in the week. Provided, however, that the inspector may in individual cases permit employment for a longer period for reason of occupation, trade, accident or other necessity." The preceding provisions, however, do not apply to employment in repair shops, creameries, cheese factories, grain elevators or sawmills unless such factories are situated within a city or town having a population exceeding 5,000.

Another important amendment introduced the principle of male minimum wages providing that wherever a minimum wage has been fixed for female workers in any class of employment, no male workers shall be employed in such class of employment at a less wage; provided that such wage shall not apply to apprentices who have been duly indentured and who are receiving proper instruction from the persons to whom they are apprenticed. All employers shall pay wages to such male workers at not less than the said minimum wage, and if any employer fails to do so he shall upon summary conviction be liable to a penalty of not more than $500 and not less than $25 and shall also upon conviction be ordered to pay to the worker concerned the difference between the wages actually received by him and the said minimum wage.

Some other provisions of the new act are given below:—

The definition of the term "factory" remains the same as under the old act, but hotels, formerly excluded, are included under the term "shop." The provisions of the act, as formerly, apply to shops, offices, etc., in cities and towns having a population over 5,000 persons, and to all factories in the province.

The registers kept by employers of the names and employments of their employees, to include particulars of their working hours and their actual earnings, the penalty for each contravention of this section being from $10 to $30.

The new act requires that the Commissioner of Labour, appointed under the Bureau of Labour Act, is to approve the plan of any proposed factory.

The factory inspectors are the inspectors of the Bureau of Labour, who like the former factory inspectors, are appointed by Order in Council. The duties of the inspectors remain as under the former act. For obstructing inspectors in the exercise of their duties minimum penalties are provided, in addition to the existing maximum penalties. A minimum penalty of $10 is also fixed for non-compliance on the part of the employers with the requirements as to the fixing of notices in factories, shops, etc., setting forth the respective requirements of the act.

The section of the act relating to "employment" is amended, as stated above, by the addition of a section making the women's minimum rate, under the Minimum Wage

Act, the minimum rate also for male workers in the same class of employment. This new section takes the place of the former section, added to the act in 1917, fixing $1.50 per shift as the general minimum for all employees, and $1 per shift for apprentices.

The section requiring employers to provide a seat for each female employee, for use when she is not at work, is enlarged by requiring the provision of seats to be used by those who can work equally well sitting or standing.

The provisions contained in the former act as to the proper guarding of elevators and hoists are rescinded. Such regulations will henceforth be issued in the form of orders in council.

Notification of accidents must in future be sent by the employer to the Bureau of Labour, instead of to the Chief Inspector.

Labour Disputes Act

In the Act to provide for the Settlement of Labour Disputes which took effect on April 8, provision was made to meet the situation arising out of the recent decision of the Judicial Committee of the Privy Council declaring invalid those sections of the Dominion Industrial Disputes Investigation Act, 1907, which deal with matters coming properly within provincial jurisdiction. The Dominion Parliament in 1925 enacted legislation making the application of these sections conditional upon the enactment of enabling acts by the several provinces concerned, and such legislation has been already enacted in other provinces, for example, in British Columbia, Saskatchewan (LABOUR GAZETTE, February, 1926), and Manitoba. The legislature of Alberta however preferred to retain full authority within the province in regard to the settlement of disputes within the exclusive jurisdiction of the province.

The Labour Disputes Act follows the main lines of the Dominion Act, the principal difference being that the machinery established for adjusting disputes is provincial instead of federal. The act is to be administered by the Provincial Minister of Public Works. It provides that the Lieutenant Governor in Council shall appoint a Registrar of Boards of Conciliation and Investigation, who shall have the powers and perform the duties described. Whenever any dispute exists between an employer and any of his employees and the parties are unable to agree, either of the parties may make application to the Minister for the appointment of a board to which the dispute may be referred. Whenever an application is made for the appointment of a board the Minister shall within fifteen days establish such board if satisfied that the provisions of this act apply. The decision of the Minister as to the granting or refusal of a board shall be final. Every board shall consist of three members who shall be appointed by the Minister; one on recommendation of the employers, and one on the recommendation of the employees respectively who are parties to the dispute and the third on the recommendation of the members so chosen, and if they cannot agree within five days the Minister shall appoint a fit person to be such third member. The third member shall be the chairman.

The Act makes full provision for the procedure for reference of disputes to the board, for inspection of premises, the subject of references, for sittings of the board, for amicable settlement of disputes where possible, for the procedure to be followed in case a settlement cannot be arrived at, for the summoning and hearing of witnesses, for report and recommendation of the board to the Minister and the publication of same. The members of a board will receive such remuneration for their services as may be from time to time fixed by the Lieutenant Governor in Council, with expenses. The Registrar will receive all applications for Boards and keep records of all proceedings under the act. The procedure for the enforcement of penalties is that prescribed by Part 15 of The Criminal Code relating to summary convictions.

Either party to a dispute may agree in writing to be bound by the recommendations of the board in the same manner as parties are bound by an award at arbitration and either agreement so to be bound made by one party shall be forwarded to the registrar, who shall communicate it to the other party and if the other party agree to be bound, then the recommendation shall be made as a rule of the court on the application of either party and shall be enforceable in like manner to an order of the court of record.

Where in any industry any strike or lock-out has occurred or seems to the Minister to be imminent, he may on the application of any municipality interested or of the mayor, reeve, or other head officer or acting head officer thereof or of his own motion, without application of either of the parties to the dispute, strike or lock-out constitute a board under this act, or may in such case recommend to the Lieutenant-Governor in Council the appointment of some person or persons under the provisions of The Public Inquiries Act to inquire into the dispute, strike or lockout or into any matters or circumstances connected therewith.

The Lieutenant-Governor-in-Council is given power to make regulations as to any matter or thing which appears to him necessary or advisable for the effectual working of the provisions of the act.

All charges and expenses incurred by the government in connection with the administration of the act are to be defrayed out of special appropriations by the legislature."

Mothers' Allowances

The Mothers' Allowance Act was amended so as to make eligible for an allowance the wife of a husband who is unable to support his family by reason of total disability which may reasonably be expected to continue for at least one year, resulting from sickness or accident. The allowance is to be conditional upon the husband's residence in the province at the time when the sickness or accident occurred. The amending act will become effective on proclamation.

Boilers' Act

The Boilers' Act, which was amended in 1922 in the section defining the boilers to which it applies, was further amended in the same section, the act now applying to every boiler having a capacity of one horse power for each ten square feet of the superficial heating surface of the boiler. The former minimum capacity was 12 square feet for boilers externally fired, and 9 square feet for those internally fired.

Pensions of Public Servants

The Superannuation Act was amended so as to make it applicable to members of the Workmen's Compensation Board and persons employed by the Board. For this purpose a contribution will be made from the Accident Fund established under the Workmen's Compensation Act in lieu of the government contribution otherwise required under the terms of the Superannuation Act.

Arbitration for School Teachers

Provision was made, under an amendment to the School Act, for the establishment of a permanent Board of Reference for the settlement of disagreements arising between school trustees and teachers. The act formerly provided for the appointment by the minister of separate boards to deal with each dispute. The amending act provides as follows:—

"The provisions of the act with reference to a board of conciliation has been struck out and the following substituted therefor.

(1) There shall be constituted a board to be known as the Board of Reference, to serve as a board of conciliation or as a board of arbitration, as the case may be; and the said board shall consist of three members to be appointed by the Lieutenant Governor in Council, one member to represent the school trustees of the province, one to represent the school teachers of the province, and a third member who shall be neither trustee nor teacher and who shall act as chairman of the board.

(2) When any dispute or disagreement arises between a school board and its teacher or teachers, either party to the dispute or disagreement may make application to the Minister to refer such dispute to the Board of Reference.

(3) All such applications to the Minister shall be accompanied by a full and complete statement of the nature of the complaint or dispute, verified by a statutory declaration on the part of the party or parties making the said application.

(4) Upon receipt of such application the Minister shall refer the dispute or disagreement in question to the Board of Reference, which shall institute such investigations as may seem to be warranted and necessary and shall deliver a report of its findings to the Minister, who shall transmit a copy of same to the several parties to the dispute or disagreement.

(5) The Board of Reference shall have power also to act as a board of arbitration, upon the request of both parties to any dispute between any board of trustees and its teacher or teachers and when so acting the Board of Reference may, for the purpose of procuring the attendance of any person as a witness at such arbitration, serve such person with a notice requiring him to attend thereon, which notice shall be served in the same way and have the same effect as a notice requiring the attendance of a witness and the production by him of documents at the hearing or trial of an action, but no such person shall be compelled under any such notice to produce any document on the trial of an action, and the award of the Board in such cases shall be binding upon both parties and have the same force and effect as an award made under the Arbitration Act.

(6) The Board of Reference shall have power also to deal with such other matters as may be referred to it from time to time, by the Lieutenant Governor in Council.

(7) The members of the Board of Reference shall receive such remuneration as the Lieutenant Governor in Council may, from time to time, determine."

School Grants for Poorer Districts

The School Grants Act was amended so as to make additional grants to rural school districts whose total assessed valuation is less than $75,000 per teacher. These grants are according to a graduated scale ranging from $2.80 per day where an assessment is less than $10,000 per teacher to 20 cents per day where it is over $70,000 per teacher.

Old Age Pensions

The following resolution, adopted unanimously on April 7, was noted in the last issue of the LABOUR GAZETTES—

"Whereas the Acting Minister of Labour on March 18, 1926, moved in the House of Commons that the House go into Committee to consider a plan to provide a system of Old Age Pension, based on the reports of the special Parliamentary Committee of 1924, which report contemplated joint action by the Federal Parliament and Provincial Legislatures.

"Therefore, be it resolved that this House endorses an Old Age Pension scheme, but believes that a conference should be called by the Federal authorities with the Provincial Government immediately, in order to complete financial arrangement satisfactory to each party before the passing of the proposed Act."

Manitoba

The Seventeenth Legislature of Manitoba held its fifth session from January 25 to April 23, 1926. It was announced that during the preceding year progress had been made in the development of industries using the natural resources of the province, and that a large new industry had been opened, making use of pulpwood as its raw material, which was expected to provide employment for a great number of workers, especially in winter. Reference was made also to the precent creation of an Industrial Development Board for the province (LABOUR GAZETTE, May, 1925, pp. 443 and 461). The legislature further developed the same policy by extending similar aid to agriculture by undertaking a survey of the vacant lands in the surveyed areas and the encouragement of settlement on lands that are capable of being farmed economically.

Industrial Disputes Investigation Act

An Act was passed respecting the investigation of industrial disputes within the province, its purpose being the same as that of the Alberta act mentioned in the preceding section, namely, to supplement the Federal Act of 1925, which made provision for the passing of special legislation by the several provinces making the Industrial Disputes Investigation Act of the Dominion applicable to industrial disputes that would be otherwise within the exclusive legislative jurisdiction of the province. The Manitoba act is in the same form as the acts already passed in British Columbia and Saskatchewan (LABOUR GAZETTE, January and February, 1926).

Mechanics' Liens

The title of the "Mechanics' and Wage Earners' Lien Act" was amended by the omission of the words "and wage earners." The Act was amended to permit action to enforce a lien to be taken within two years instead of within ninety days, as formerly, but anyone interested can compel a lienholder to commence action by notice mailed to him after 30 days following the registration of the lien.

Statute Labour

Under amendments to the Assessment Act statute labour, where not commuted, was fixed at two days for an assessment of property from $200 to $500, and one day for each additional $900. Statute labour is to be based on the aggregate value of all lands owned or rented by the same person in the same section.

Child Welfare

The Child Welfare Act was amended to make the allowances to mothers in respect of bereaved and dependent children in Manitoba applicable also to a child over 14 incapable of self support, to the child of a father who at his death was a British subject by birth or naturalization, as well as to any other child within the statutory age who was born in Canada.

Municipal child welfare committees were authorized; where a child born of unmarried parents requires attention and no prosecution has been taken against the father to bring the case into court the Director of Child Welfare or a Children's Society may bring the mother before a magistrate or judge of a Juvenile Court who may require of her the same services respecting the child the Act would authorize if the case were before him on a prosecution of the father; all adoption agreements made before September 1, 1921 (three years before the Child Welfare Act came into force) are validated; all others may be validated by a County Court Judge; a feeble minded child in custody may be further detained after coming of age if the circumstances so warrant; a new section penalizes disclosure of information respecting children to whom the Act applies; special inquiry is authorized of certain institutions having custody of children.

Agriculture

The maximum grant which may be made to an agricultural society was increased to $3,500.

The Dairy Act was amended to bring milk and cream distributing plants under Departmental regulations, to permit assessing costs of milk and cream testing and grading upon owners of the creamery, cheese factory, etc., to make certificates of analysis available as evidence and to require that milk and cream received by creameries, cheese factories, etc., shall be paid for on the basis of butter fat content.

The Produce Dealers Act was amended to include in the licensing provisions, all purchasers of produce (agricultural and farm products and cordwood, grain excepted) who buy to resell same in a place other than a retail store. This Act is to come into force by proclamation in the near future.

By the Seed Grain Act, 1926, rural municipalities may borrow up to $50,000 to spend in distribution of seed grain (which includes potatoes) and the Minister of Agriculture may spend up to $25,000 for the same purposes in unorganized territory.

By the Wheat Board Money Trust Act $128,800 received by the province out of the surplus of the Dominion Wheat Board is vested in trustees for the advancement of co-operation amongst agricultural producers in Manitoba.

War Relief Act

The War Relief Act of 1918 was amended to limit the protection to pensioners and dependents from November 1, 1926. After December 31, 1927, this protection is only to apply to the homestead. Actions on the land contracts of war veterans are restricted.

Motor Vehicles

The Motor Vehicle Act was amended to give the government authority to regulate motorbusses not using streets of cities; a special license to operate is required (no fee) and the operation must be subject to certain statutory provisions looking to public safety and also to regulations restricting or prohibiting the use of the highways.

Liability of Companies for Wages

The Companies' Act was amended to provide that persons holding shares in trust may be directors without personal liability for employee's wages.

Income Tax Exemption

The Income Tax Act is amended to provide a $2,000 exemption for all married persons and persons with a dependent parent or grandparent, daughter, sister, son or brother under 21 or incapable of self support who resides with the taxpayer. A deduction of $500 is allowed for a child under 18 or a parent grandparent, sister or brother and a son or daughter over 18 incapable of self support who is dependent on the taxpayer and respecting whom $2,000 exemption is not allowable.

Bills Not Passed

A bill to extend the provisions of the Minimum Wage Act to boys as well as to girls under the age of 18 years was dropped as impracticable on the ground that many of the boys who would come under the bill are apprentices working under special conditions.

Another bill which proposed to establish a weekly 30-hour rest period for industrial employees was not proceeded with.

Ontario

The third session of the Sixteenth Legislature of the province of Ontario opened on February 10 and concluded on April 8, 1926. The only enactment of immediate interest to labour was an amendment to the Workmen's Compensation Act adding the disease known as silicosis of the lungs, which is incidental to the mining industry, to the list of diseases that are compensable when they result from employment.

The opening speech from the Throne stated that the efforts of the Department of Labour of the province to improve the conditions of employment in industrial establishments were meeting with encouraging co-operation, and noted the advance made in the prevention of accidents in factories and the continued improvement in general working conditions. Valuable work, it was pointed out, is also being accomplished by the Department of Health, with the aid of a number of national organizations to secure better health conditions. This department has established a Health Branch and is conducting a School Medical Service.

A number of measures were adopted for the benefit of agriculture, including acts for the improvement of the dairy industry, the protection of sheep, the destruction of the cornborer, etc. Steps were taken also to increase the resources of the Hydro-Electric Power Commission. In the field of education facilities were provided for training pupils in the remote sections of the province by means of correspondence courses and itinerant schools along the railway lines in the Northern province.

Workmen's Compensation

"Silicosis" was added to the list of industrial diseases enumerated in Schedule 3 of the Act, the "process" to which this disease is incidental being given as mining. The amendment provides that "A person is deemed to have, or have had, silicosis (i) In the anteprimary stage, when it is found by the board that the earliest detectable specific physical signs of silicosis are or have been present, whether or not capacity for work is or has been impaired by such silicosis; (ii) In the primary stage, when it is found by the board that definite and specific physical signs of silicosis are or have been present, and that capacity for work is or has been impaired by that disease, though not seriously and permanently; (iii) In the secondary stage, when it is found by the board that definite and specific physical signs of silicosis are or have been present, and that capacity for work is or has been seriously and permanently im-

paired by that disease or when it is found by the board that tuberculosis with silicosis is or has been present."

It is provided further that "nothing in this Act shall entitle a workman or his dependents to compensation, medical aid, or payment of burial expenses for disability or death from silicosis unless the workman has been actually exposed to silica dust in his employment in Ontario for periods amounting in all to at least five years preceding his disablement."

A government bill to amend the Workmen's Compensation Act by making provision for deaths that are due only in part to employment, was withdrawn on representations of labour organizations for the reasons given below. The proposed amendment was to make a provision that "where death does not wholly result from an injury, but, in the opinion of the board, partially results therefrom, or is contributed to or hastened thereby, the board may make a payment or award a pension to the dependents commensurable with the extent to which, in the opinion of the board, such injury causes, contributes to or hastens such death."

The Honourable W. F. Nickle, attorney general, who introduced the bill, explained its withdrawal as follows:—"The basic principle of the Workmen's Compensation Act is that as far as possible it removes the claims of the workmen from controversy or litigious discussion, and those interested in labour, while they realize that at the present time there are many phases where possibly full justice cannot be done under the act, and the conditions of these cases might be ameliorated by passing the legislation I have introduced, fear it might open the door to controversy, and, relying on that faith they have always had in the act and the sincerity of those administering it, they ask that the bill be not pressed, but left until after the recess or prorogation until those interested in labour might have opportunity to give consideration to it."

Vocational Education

The Vocational Education Act of 1921 was amended in regard to the constitution of the advisory industrial committees under the act. This act requires that such committees shall include representatives of the Board of Public School Trustees and of the Board of Separate School Trustees. The amendment makes provision to ensure full representation on the advisory committees. An amendment to the Public School Act provided for the continuance of the salary of teachers absent from their duties under quarantine.

Married Women's Property

The Married Women's Property Act was consolidated and amended, among the amendments being a provision that a married woman shall have the same remedies against all persons, including her husband, and the same security of her own property, as though she were a single woman owning property, but no wife or husband shall be entitled to sue the other for a tort. Appeal to the Appellate Division is provided from any court order concerning property in dispute between husband and wife.

Ottawa Police Benefit Fund

The Ottawa Police Benefit Fund Association was given authority to undertake any class of insurance for which a fraternal society may be licensed under the provisions of the Ontario Insurance Act, to re-adjust its rates and to amend its constitution accordingly.

Industrial Disputes Bill Withdrawn

A bill respecting the investigation of industrial disputes within the Province was introduced early in the session, but was withdrawn on the second reading. This act, if passed, would have made the Federal Industrial Disputes Investigation Act applicable to disputes within the exclusive jurisdiction of the province.

Soldiers' Settlement in Canada

A return giving figures in connection with the administration of the Soldier Settlement Act of 1918 was tabled in the House of Commons on April 22. The return showed that soldier settlers still on the land were in arrears to the Government $1,596,442 on March 31, 1926. Of the original soldier settlers, 11,329 were in arrears. Holdings had been abandoned by 6,659 settlers. Of those 2,246 farms were resold at a total price of $7,881,898, which is about $270,000 more than the original price to the soldiers.

The 4,413 farms remaining unsold at the end of last year have a total amount of $13,485,307 outstanding against them; the Government last year rented 2,827 of these at a total rental of $291,787, which represents three per cent of the Soldier Settlement Board's original investment in these farms. Some of the abandoned soldier farms were disposed of to British families brought out under the Government's land settlement scheme. The 240 farms sold in this way brought a total of $964,341. The original price for the same farms to the soldier settlers was $1,029,886.,

LABOUR AND INDUSTRY IN SASKATCHEWAN

THE Bureau of Labour and Industries of the province of Saskatchewan has published its fifth annual report, summarizing the various activities of the Bureau during the twelve months period ended April 30, 1925. The functions of this Bureau, which were described in the LABOUR GAZETTE for April, 1925 (page 356), include the collection of full information in regard to industrial and labour activities, the maintaining of employment offices, the promoting of new industries in the province and securing of suitable workers to engage in them, and the administration of the Factories Act, the Building Trades Protection Act, the Electrical Workers' Protection Act, the Employment Agencies Act, the Mines Act, and the Minimum Wage Act. The present report, containing an account of these manifold activities, gives a concise view of economic conditions in the province during the period reviewed. Of special interest on the labour side is the section of the report describing the work of the inspection division of the Bureau, including factory inspection, elevator inspection, building inspection, accident prevention work, and the activities of the Minimum Wage Board. The activities of the local employment offices have been described already in the reports of the Employment Service of Canada, published from time to time in the LABOUR GAZETTE.

The report mentions some of the difficulties that are met in estimating the actual economic condition of the working population. "Some slight fluctuations occurred in the cost of living during the year, the drop in prices of commodities making it possible to say that there had been a slight decrease. This decrease could not be considered permanent or upon all lines. It has been found almost impossible to compile statistics of living costs in relation to the earnings of a worker, without the ability to obtain the amount of actual earnings. The real earnings and the amount computed on the rate for a full week's pay are frequently far apart. Some workers are regularly employed from week to week during the working portion of the year, but this cannot be taken as a standard. The greater number lose some time during the year from enforced idleness, sickness or choice. The loss of even one week's pay would make a considerable difference."

While the housing problem is not so acute in Saskatchewan as in some of the provinces, yet there is found to be a dearth of comfortable homes within the means of the lower paid workers. "A substantial increase of such homes," it is suggested, "would undoubtedly tend to prevent any labour unrest and possibly be a factor in inducing industries to come to the province."

Inspection Division

No Workmen's Compensation Board exists in Saskatchewan, but the Inspection Division discharges to the same extent the functions of a Board, making investigations into claims for compensation by employees of the provincial government in occupations covered by the Workmen's Compensation Act. The recommendations made in such cases by the Inspectorate with regard to the amount of compensation were invariably granted by the government, with the result that the recipients were satisfied that they had received as much consideration as if the results had been obtained by litigation.

Some 401 inspections of elevators in use in various establishments in the province were made during the year in addition to 46 inspections of grain elevators, and 189 recommendations were made with the view to increasing the safety of the persons using the elevators.

During the fiscal year ended April 30, 1925, 298 inspections were made of industrial establishments of the province coming under the provisions of the Factories Act. Some forty-eight recommendations were made as the result of the inspections for the safeguarding of the employees from injury by accident.

In connection with the work of building inspection the chief inspector says: "In order to reduce the cost of compensation for injury by accident arising out of the employment, these happenings must be prevented so far as possible by careful supervision of the work while in progress. The use of unsuitable appliances, scaffolds and the material so mixed and misplaced that mishaps are almost inevitable, are most frequently the cause of accidents. The deduction to be drawn from the statement of accidents in building construction during the fiscal year 1924-25 demonstrate the importance of education in this direction."

During the year 1924 periodic inspections were made of all the larger mines operating in the province in addition to inspections of the smaller mines, a number of which have no railway facilities, and supply local demand only. Investigations were also made respecting fires in the mine workings and of accidents of a sufficiently serious nature to warrant inquiry. A number of recommendations were made for better safety of the miners in the

mines. These recommendations were invariably carried out in a satisfactory manner by the operators in charge of the mines.

Causes of Accidents

The chief inspector notes with satisfaction that no fatal accidents in the coal mines of the province were recorded during the year 1924. This indicates the careful supervision exercised by the management with regard to the safety of the employees, notwithstanding that the employees were of various nationalities, many of whom had but little experience in mining. The non-fatal accidents, of which there were twenty-three, and for the happening of which it is stated, the workmen themselves in the majority of cases were mainly responsible, were due to carelessness in observing the common rules of safety and in part to ignorance of conditions. "In this respect the foreign-speaking workman was no greater offender than the English-speaking employee. Many of them take a risk in order to avoid a little extra labour. Mine props left unplaced, cars driven recklessly and explosives handled without due care to avoid possible accident, ignoring the most elementary rules of safety, the result of long experience in mine working, lack of comprehension of the dangers of mine working and the precautions necessary to make the working places safe, appear to have been the cause of most of the accident."

On the subject of accident prevention the chief inspector says: "The attitude of indifference to safety rules, which characterises a great number of workers who give but casual attention to those details upon which safety depends, is frequently the foundation of a number of the industrial accidents which happen. Safety devices are not popular with either employer or employee, and at times are regarded as a hindrance to production. This objection may be true in some cases, but frequently the objection arises through prejudice and a dislike to innovations. The unprotected line shaft, unguarded belting, open flywheel, protruding set screw, projecting keys and meshing cog wheels with their indrawing action, and inadequately guarded machine saws are some of the dangers and serious consequences for which familiarity has bred contempt. Mechanical devices are not alone sufficient to prevent accidents. It is necessary also to secure the co-operation of the worker in the effort to prevent accidents. It is claimed on good authority that safety devices at the best can prevent only from 25 to 50 per cent of industrial accidents, and that education is the only method in the effort to prevent the remainder. Searching inquiry into the circumstances and conditions surrounding each mishap should be made. The importance of complete reports of accidents showing causes, nature and severity, is not so well recognized as it should be. The necessity of securing complete data for the purpose of recommending safety measures for the prevention of similar happenings in the future is, however, gaining recognition, but more is yet to be done before they reach their full value for the purpose of safety engineering."

Saskatchewan was fortunate in having only one industrial dispute in 1924. The report recommends the settlement of disputes by arbitration rather than compulsion. "Under existing conditions there is no way of compelling an employer to run a concern in a manner he does not desire nor is the worker desirous of relinquishing his right to cease work either individually or in conjunction with his fellows, if the conditions of his employment are unsatisfactory. Arbitration is no doubt the most practical way of settling trade disputes, but it is difficult to convince the worker that the arbitrators will not become partisan, and will hold the balance even. Arbitrators can, however, be found whose good faith cannot be questioned. It is possible that the arbitration of disputes will in future be more favoured without any compelling influence to bring it about."

Minimum Wages

The report states that the effects of the orders of the Minimum Wage Board have been most beneficial to the female employees, although wages last year, owing to employment conditions, tended to fall to the level of the minimum fixed by these orders. "Two different problems," it is pointed out, "have to be considered in fixing a minimum wage. One is the 'cost of living' calculated upon some assumed or ascertained standard obtained by inquiry from any available sources of information. The other is the ability of the industry to pay the wage to be fixed. Cost of living as a principle of wage fixing must depend primarily upon a minimum standard of comfort, assumed, ascertained by investigation, or fixed more or less arbitrarily, based on the normal requirements of the average person in a civilized community. Provision must be made for variations above a rigid standard. The minimum rate should not become the maximum or the normal wage for the grade of worker to whom it applies."

The success of minimum wage policy is attributed in part to the fact that the workers themselves have some share in determining the minimum rates.

Tables are given showing the numbers of female employees, by districts, in establishments coming under the regulations of the Board. Some of the totals are shown below:—

Shops and Stores.—Number of firms, 186; number of employees, 833 (612 experienced, 221 inexperienced); employees on piece-work or part time, 75; employees on wages per week of $15 and over, 483. (The minimum rate for experienced employees in this group is $14 a week).

Laundries and Factories.—Number of firms, 122; number of employees, 789 (634 experienced, 155 unexperienced); employees on piece-work or part time, 18; employees on wages per week of $15 and over, 229. (The minimum rate for experienced employees in this group is $13 a week).

All establishments except hotels, restaurants and refreshment rooms.—Number of firms, 248; number of employees, 1,360 (1,051 experienced, 309 inexperienced); workers on piece-work or part time, 84; employees on wages per week of $15 and over, 792.

Hotels, Restaurants and Refreshment Rooms.—Number of firms, 141; number of employees, 521 (511 experienced, 10 inexperienced). The minimum wages in this group are based on a minimum weekly wage of $13, with a deduction of $5.25 allowed for full week's board of 21 meals, or $14, with a deduction of $2.50 for a full week's lodging of seven days.

Industries in the Province

Statistics of leading industries in Saskatchewan in 1922 are given in the following table:—

—	Capital Investment	Employees	Salaries and Wages	Value of Products
	$		$	$
Flour and grist mills	3,744,079	623	852,364	12,090,891
Butter and cheese	2,663,665	422	583,493	4,553,541
Printing and publishing	2,139,412	663	1,097,211	2,869,521
Electric Light and Power	8,022,915	417	607,769	2,596,769
Bread and other bakery products	1,091,767	324	357,047	1,517,151
Woodworking, sash and door factories	1,083,403	222	280,717	915,572
Dyeing, cleaning and laundry work	344,228	285	275,520	658,368
Aerated and mineral waters	618,434	72	93,284	441,525
Saw, lath and shingle mills	266,451	123	74,544	308,153
Printing, bookbinding	206,659	79	122,088	264,448
Total 10 leading industries	20,181,013	3,230	4,344,037	26,215,939
Grand total all industries	30,268,144	4,126	5,562,145	38,672,828

RATES OF ASSESSMENT OF INDUSTRIES FOR WORKMEN'S COMPENSATION IN ONTARIO IN 1925 AND 1926

THE Workmen's Compensation Board of Ontario has recently issued a table of rates of assessment of each class of industry for the current year. The provisional rates in some of these industries for 1926, together with the adjusted rates for 1925 are given below, showing some advances and also a few reductions in the new rates. (The rates of assessment under the Workmen's Compensation Act of New Brunswick were given in the LABOUR GAZETTE for January, page 20). In a prefatory note the Board explains the method followed in the fixing of rates as follows:—

For assessment and compensation purposes under the Act the industries covered are divided into 24 classes. Each class stands upon its own footing and carries its own burden, except that a very small general fund, known as the Disaster Reserve, is set aside to assist in meeting any extraordinary call that may arise in any class. With the exception of this Disaster Reserve the moneys collected are just what are considered necessary to take care of the accidents that have actually happened. Separate accounts are kept of all assessments received and all compensation and medical aid awarded for each of these classes. Each of the 24 classes of industry is thus in effect a mutual insurance association of the employers in that class. The rates for each class are fixed and the assessments made much in the same way as a municipality levies its taxes. They are governed by the requirements. The rates fixed for the year are intended to cover the burden for that year. At the beginning of the year each employer is required to furnish the Board with an estimate of his probable payroll for the year and he is assessed provisionally upon that estimate. At the end of the year the actual amount of payroll is ascertained and the assessment is adjusted accordingly, the rate provisionally fixed being also altered where the accident experience shows this to be necessary.

The rates are fixed in accordance with the accident experience. The amount of compensation and medical aid and the amount of assessments in the class for the preceding year are ascertained, an estimate being made of the amount still remaining to be paid for accidents which, by reason of continuing disability or for lack of reports, have not been finally disposed of before the end of the year, and allowance being also made for the difference between the estimates of payroll given by employers at the beginning of the year and the actual figures as ascertained and shown in their payroll statements at the end of the year. In this way the total expenditure and the total income of the class for the year are arrived at as nearly as possible, and the sufficiency or insufficiency of the rate charged determined.

If it is seen that the rate charged has produced just sufficient money, or if the surplus or deficit is small, the rate will be maintained. If there is any considerable difference, it will be increased or decreased accordingly. It is to be remembered always that any surplus to the credit of a class remains in the class funds, and this is also taken into consideration when fixing the rates.

All industries in the same class do not necessarily nor usually bear the same rate. The classes are subdivided into groups, and even within the group the rates are different where this is shown to be justified. The experience is kept for the group as well as for the class. In fixing the rates, however, regard must always be had to the fact that each class is an insurance group and that all lines of industry in the class must share to some extent the good or ill fortune of the class as a whole. The rating for each separate line of industry cannot be made to depend upon the experience in that particular line alone. This is especially the case where the total amount of the payrolls in any line of industry is small. To charge that line of industry with its own cost might place a very excessive burden upon its employers for one year while perhaps relieving them almost wholly from assessment another year. This would destroy the underlying principle of collective liability or mutual insurance which is the basis of the system.

Individual distinction between employers even in the same line of industry is made according to their accident experience by a system of merit rating. Where the accident cost exceeds or falls short of the amount of assessment by a stated percentage a merit rating charge or a merit rating refund, within specified limits, is made accordingly. The last application of merit rating was for a three-year period 1921 to 1923 inclusive.

In the accompanying table of rates the adjusted 1925 rates and the provisional 1926 rates are given in parallel columns. The rates for 1926 as now provisionally fixed will at the end of the year be adjusted in accordance with the accident experience for the year.

TABLES OF RATES FOR CERTAIN INDUSTRIES PER $100 OF PAY-ROLL

Class	Industry	1925 Adjusted	1926 Provisional
		$ cts.	$ cts.
1	Logging, woods operations, river driving, rafting, booming or loading, as a business or in an industry in this class, n.o.s..	3 25	3 00
	Saw mills, shingle mills, lath mills, or rossing plants, as a business or in an industry in this class, n.o.s.	3 25	2 75
	Cooperage stock, spokes, or veneer manufacturing, n.o.s.	3 25	2 75
	Excelsior, manufacturing	3 25	2 25
	Operations otherwise wholly in one of the above groups where the usual annual payroll does not exceed $5,000, operations otherwise partly in each of the above groups where the usual annual payroll does not exceed $10,000; if the total annual payroll in the class exceeds $10,000, that part of operations otherwise wholly in one of the above groups where the usual annual payroll does not exceed $5,000	5 00	5 00
2	Pulp mills	1 75	1 75
	Pulp and paper mills	1 60	1 60
	Paper mills, not manufacturing wood pulp	1 40	1 40
	Logging, woods operations, or river driving, in, or on the lands of, an industry in this class	1 75	1 75
3	Furniture, manufacturing	0 50	0 60
	Fixtures, manufacturing	0 75	0 90
	Canoes, skiffs, or small boats, manufacturing	0 50	0 60
4	Planing or moulding mills or sash and door factories	1 60	1 60
	Hardwood flooring, manufacturing	1 40	1 40
	Boxes or packing cases, n.o.s., manufacturing	2 00	2 00
	Turned or shaped wooden articles, wares, or toys, manufacturing	1 80	1 80
	Baskets, largely of wood, manufacturing, including veneer mfg	2 00	2 00
	Veneer goods, manufacturing	1 75	1 75
5	Silver mining	3 00	3 00
	Treatment of ores, with heat, in a gold mining industry	1 50	1 50
	Treatment of ores, without heat, in a gold mining industry	0 75	0 75
	Gold mining	3 00	3 00
	Treatment of ores, with heat, in a gold mining industry	1 50	1 50
	Treatment of ores, without heat, in a gold mining industry	0 75	0 75
	Nickel or nickel-copper mining	4 00	4 00
	Treatment of ores, with heat, in a nickel or nickel-copper mining industry	2 00	2 00
	Treatment of ores, without heat, in a nickel or nickel-copper mining industry	0 90	0 90
	Mining, n.o.s.	4 00	4 00
	Treatment of ores or minerals with heat in an industry in this group	2 00	2 00
	Treatment of ores or minerals, without heat, in an industry in this group	0 90	0 90
	Diamond drilling, as a business	1 00	1 00
	Boring or sinking artesian wells, as a business	2 00	2 00
	Shaft sinking	4 50	4 50
	Iron smelting as a business	1 50	1 50
	Treatment of ores or minerals, with heat, n.o.s., as a business	1 50	1 50
	Treatment of ores or minerals without heat, n.o.s., as a business	0 50	0 50
	Refining of nickel, as a business	2 00	2 00
	Gun-powder, nitro-glycerine, dynamite, gun-cotton, cordite, or other high explosives, manufacturing, or shell testing involving discharge or explosion	1 00	5 00
	Fireworks or torpedoes, manufacturing	0 75	4 00
6	Sand, shale, clay, or gravel pits or sand sucking	3 50	4 00
	Quarries, as a business; stone crushing	5 00	5 00
	Cement manufacturing, including quarry	2 50	3 00
	Cement manufacturing, no quarry	2 50	3 00
	Brick, tile, terra cotta, fireproofing, sewer pipe, or roof tile, mfg	1 40	1 50
	Glass, glass products, or glassware, manufacturing, with heat	1 00	1 00
	Lime burning	1 00	1 00
	Milling of lime, limestone, or other stone, as a business or in an industry of this class	1 00	1 00
	Fuel (coal briquetting and coal)	2 00	2 00

	Group-Excavation work, for or connected with buildings, n.o.c.	1 20	1 50
	Window cleaning	4 00	4 00
	General construction, where the business of the employer includes several of the operations included in this class	1 20	1 50

Unemployment in Great Britain

Unemployment and its relief have from the first taken a prominent place in the debates of the British House of Commons during the present session of Parliament. The discussions are characterized by demands for radical and far-reaching action, and by impatience with half-measures and palliatives. Few members, however, have proposed such radical measures, although the Labour Party's amendment to the Address in reply to the Speech from the Throne (defeated by 299 votes to 112) stated that "trade prosperity, with the assurance of a reasonable standard of living for all, urgently demands the fundamental reorganization of industry on the lines of public ownership and democratic control of the essential services." In defence of the Government's policy it is claimed that there is no single and practicable way of curing the present depression, and that the Government is doing all that is safely possible to help industry and relieve unemployment.

SOLDIERS' CIVIL RE-ESTABLISHMENT IN 1924-25

THE report of the Department of Soldiers' Civil Re-Establishment for the fiscal year 1924-25 lately received, tells of progress made in the rehabilitation of former soldiers in civilian life.

Employment.—The work which was formerly carried on by the employment service of the Department of Civil Re-Establishment has now been transferred to the Department of Labour and is handled by the Employment Service of Canada, with the sole exception of the province of Quebec where this work is still supervised by the former department. The report states that "the expectation that such amalgamation would be to the advantage of disabled former service men appears to have been fully borne out," although unfortunately the general employment situation as regards these men was not so good during 1924 as in the previous year. The number of disabled men who applied to the Employment Service of Canada during the period under review was 23,047, of whom 11,937 had been placed in positions at the close of the year. The report also refers to the work carried on by the Rehabilitation Committees at Toronto and Edmonton (Labour Gazette, August, 1924).

Vocational Training.—During the period 1924-5, 173 former members of the forces were accepted for training and 88 of these were still on the strength at close of the year. (An account of this branch of the work in Canada was given in the Labour Gazette for October, 1924). At the commencement of the vocational training work arrangements were made for the opening of special schools for the utilization of existing provincial and private institutions, and for the placement of men in industry, where an intensive apprenticeship to the new trade could be carried out. As an adjunct, a special employment and "follow-up" service was established. Large numbers of disabled men availed themselves of these facilities, the peak of the load being reached in March, 1920, when upwards of 26,000 were undergoing training.

Sheltered Employment.—The sheltered employment workshops operated by the department are known as Vetcraft shops, the name Vetcraft having been registered shortly after inauguration of the shops. The men engaged in the shops are classified as unemployable in the general labour market and the purpose of the shops may be defined as "To give employment under conditions where hours of work are more or less determined by the physical condition of the worker and where the opportunity and environment are of such a character as to fit in with a man's disability and mentality." Vetcraft shops are playing an important part in assisting men unable to accept ordinary employment to become to a large extent self-supporting. It is true that the shops are conducted at a loss, but if these men were not so employed the loss to the community at large through the issue of relief would be greater and further, suitable employment helps to make them better citizens.

The Vetcraft Shops in Toronto, Hamilton, Kingston, London and Saint John, N.B., are operated by the Department of Soldiers' Civil Re-establishment, and in Halifax, Montreal, Winnipeg, Vancouver and Victoria by Workshop Committees of the Canadian Red Cross Society. The agreement with the Red Cross provides that the Department shall pay 85 per cent of all capital expenditures and 75 per cent of the operating loss up to a maximum of $30 per man per month. The shops assist to a very great extent in enabling a disabled man to realize, after proper care and tuition, that his services are of some use, and he is encouraged to feel his responsibilities, the ultimate endeavour being to fit him for some form of regular employment. Up to the end of this year 1,074 men have been struck off the strength, of whom 57 per cent have been employed outside.

In Toronto, Hamilton and Winnipeg particularly, the manufacture of wooden articles is carried on to a large scale. These consist largely of substantial wooden toys, juvenile furniture and plain articles of woodenware. The other shops carry on this work to a lesser degree and in addition do a large amount of special order and repair work. The Department undertakes the manufacture of all the Vetcraft poppies and wreaths which are distributed on Armistice Day each year. The work is distributed among the workshops according to the provincial requirements and the annual production is approximately 1,250,000 small poppies, 150,000 large poppies and 2,000 wreaths.

The number of men on the strength as at March 31, 1925, was 337.

Compensation.—The Dominion Government, for a fixed period, assumes the liability that would otherwise rest upon employers on account of industrial accidents to returned

soldiers in their employment who have a war disability reckoned as being 20 per cent of their full earning power or over (LABOUR GAZETTE, October, 1924). The report states that the work under this provision continues to grow. The appropriation granted for the last fiscal year was insufficient to meet the claims which arose during that year by about $20,000 which had therefore to be carried over to the year under review. The expenditure this year is expected to reach $75,000. A Governor General's Warrant has been secured to cover the amount in excess of the appropriation granted by Parliament. Authority in respect of this provision, which is proving of great benefit in the placement of disabled men in industry, has now been extended by Order in Council to March 31, 1927.

Unemployment Relief.—The expenditure on unemployment relief during the fiscal year 1923-24 was $315,624. Notwithstanding the most careful investigation into all conditions and the need of those making application, the amount expended during the year 1924-25 was $412,324. This latter figure was slightly in excess of the amount of the relief orders issued during the year as it included certain payments left over from the previous fiscal year. The total of the relief orders issued was $406,327 and the number of individual applications for the same was 40,704. This includes many who had relief on several occasions.

Work of Department.—There are two main sections of the department's activities, the medical and the administrative. Under the former is the entire medical service of the department, including that performed in outside institutions as well as in departmental hospitals. Under the latter are the Accounting Division, which includes the payment of pensions, Canadian and Imperial; Purchasing and Stores; the collection of premiums and the payment of claims under the Returned Soldiers' Insurance Act; Vocational loans; relief; the operation of the Orthopaedic and Surgical Appliances Branch, etc.

EMPLOYEES AND SALARIES IN DOMINION CIVIL SERVICE

THE first of series of annual reports showing the number of employees of the Dominion Government and the amount of their salaries has been published by the Dominion Bureau of Statistics, the period covered by this publication being the fiscal year ended March 31, 1925. The establishment of a record of Dominion Government employees and salaries, strictly comparable throughout, both from month to month and as among the several Departments, is a work of considerable difficulty, in view of the widely differing conditions that prevail in different sections of so large a scheme of general employment. The report distinguishes between permanent and temporary employees, and also between those employed at Departmental Headquarters and elsewhere, both classes being further subdivided to show full-time, seasonal, and part-time employees, as well as those whose remuneration is in the form of fee. Throughout the tables in general, there are frequent increases or decreases shown in numbers of employees and expenditures on salaries. Such conditions are most frequently caused by seasonal employment, but in some few instances "part time" and "fees of office" employees are only reported at quarterly, or perhaps longer periods.

The report suggests that fuller information in regard to the civil service might be possible if each Department were to maintain an "establishment book" from which periodical compilations could be drawn for the entire service on uniform lines.

The total number of employees in January, 1925, was 38,645 (25,524 permanent and 13,422 temporary), and the total salaries for that month, with bonuses, amounted to $4,639,930.73. The total expenditure or salaries or wage of permanent, temporary and non-enumerated classes for the fiscal year was $74,221,243.97.

Employees at headquarters declined during the year from 10,635 to 10,091, a drop of 544, due in the main to a decline from 2,842 to 2,332 in the number of full-time temporary employees.

Permanent employees of all classes employed elsewhere than at departmental headquarters increased from 18,732 in April 1924, to 19,046 in March 1925; this increase was, however, more than offset by a reduction of temporary employees of all classes from 10,701 in April 1924 to 9,809 in March 1925. The increase in the former and the decrease in the latter class is partly attributable to "blanketing in." When both classes are taken together, however, the grand total employed elsewhere than at departmental headquarters was reduced during the year from 29,433 in April 1924 to 28,855 in March 1925.

In seasonal temporary employees other than at headquarters there are increases in expenditure each quarter owing to quarterly payments being made to such employees in the Department of Mines. The Department of Marine and Railways and Canals show increases for these employees during the navigation season and corresponding decreases when it closes.

FINANCIAL STATISTICS OF PROVINCIAL GOVERNMENTS IN CANADA, 1923-24

THE Dominion Bureau of Statistics has issued recently its third annual résumé and analysis of provincial government finance.

Part 1 gives an account of the ordinary receipts of the several governments. The combined provinces received for their fiscal years ended in 1923, the sum of $14,164,575, as Dominion subsidy, and in 1924 they received $14,494,591, an increase of $7,438,202 and $7,768,218 over 1906 respectively and of $330,016 for 1924 over 1923.

The provincial governments spend considerable money in maintaining demonstration farms, exhibits and dairy factories, in enrolment of pure-bred stock, etc., for the assistance of the farming population. The revenue derived from the sale of products amounted to $407,624 in 1924, and $471,706 in 1923.

Crown lands, except in the three Prairie Provinces, are controlled by the provincial governments, the revenues derived from sales or leases totalling $739,953 in 1924 and $800,153 in 1923.

Considerable revenue is derived from Mines and Mining, particularly in Nova Scotia, Ontario and British Columbia. These revenues are largely obtained from licenses, mining concessions, royalties and taxes. The revenues from this source totalled $2,378,335 in 1924, and $2,440,704 in 1923. Of the total for 1924, $747,597 was received in Nova Scotia, $40,639 in New Brunswick, $202,751 in Quebec, and $593,162 in Ontario.

The total receipts from forests, timber and woods totalled $12,568,530 in 1924, an increase of $2,892,747 from 1923. The 1924 total was made up of $1,121,913 in New Brunswick; $3,786,292 in Quebec; $4,229,384 in Ontario; and $3,430,940 in British Columbia.

Game and Fisheries brought in a revenue of $1,686,195 in 1924, derived from licenses, permits, leases and rentals.

The sum of $1,563,768 was derived by the combined provinces from fees paid by students in the various educational institutions directly maintained by the provincial governments.

Receipts from court fines and legal fees in 1924, totalled $6,968,257.

From charities, hospitals, and houses of correction the receipts amounted to $3,341,853 in 1924, this sum including receipts from paying patients sent to provincial hospitals for insane, and for tubercular patients, and from the sale of products of reformatory farms or workshops.

Receipts from the operation of public utilities such as power systems, telephones, highways, bridges, etc., totalled $12,942,127.

Part II gives details of the ordinary expenditure of the several provinces during the two years reviewed.

Civil government and legislation accounted for $8,415,915 in 1924, a slight increase from 1923. "Civil Government" includes all salaries, contingencies and expenses of the various administrative offices of departments, which are commonly known as "inside service." Salaries and expenses of outside service are embodied in schedules which deal with the service performed rather than the department. For example—the Public Highways branch entails considerable expense for the administration of the branch which is included under Civil Government charge. There is also a very heavy expenditure in the matter of surveys and road construction, entailing salaries and expenses of large staffs of surveyors and other employees whose work usually ends on the completion of the particular highway construction on which they are engaged. "Legislation" includes expenses of elections, referendum charges, salaries and expenses of the Ministers of the Crown, salaries, indemnity and mileage of members of the Legislative Council and of the Legislative Assembly, also cost of printing, binding and stationery of the legislatures. The salaries and expenses of the various legislative libraries are also included.

The total combined expenditure on agriculture in 1924 was $3,844,709, an increase of $350,715 over 1923.

Crown lands involved an expenditure of $821,590 in 1924.

Expenditures in connection with mining rights amounted to $393,380 in 1924, a slight increase over 1923.

The cost of fire ranging, surveying, etc., in connection with forests, timber and woods was $2,945,063 in 1924, a large increase over 1923, due largely to expenditure in connection with forest fires in Quebec and British Columbia.

Legal administration involved an outlay of $7,304,243 in 1924.

The combined expenditures on health and sanitation amounted to $952,506 in 1924, including sewage and water investigations and inspections, tuberculosis and other public health exhibits and campaigns, costs of outbreaks of communicable diseases, expenditures on laboratories, resident physicians, local officers of health and other miscellaneous grants and expenditures.

The construction, maintenance and repairs of public buildings in 1924 cost $3,707,750, and other public works in the same year cost $4,035,305.

With regard to education, while the Dominion Government may from time to time render assistance in some special way, as in technical education, the responsibility of education control is distinctly a provincial matter. An effort has been made in the last 20 or 25 years to elevate the educational status of the people and in consequence increasing expenditures from year to year have been made by all provincial governments, with the result, that to-day of the combined total ordinary expenditure of all provinces, that on education is the second largest, following close upon the first, which is for interest charges on public debt.

The total expenditures on education amounted to $25,716,519 in 1923, and $25,427,469 in 1924. A study of the table shows the following to have been the outstanding features of expenditure during the years 1923 and 1924 respectively: Public and Separate Schools, $10,538,685 in 1923 and $10,687,108 in 1924; Universities, $4,727,561 and $3,961,981; Inspection of schools, $1,092,273 and $1,057,243; Agricultural colleges, $933,387 and $966,383, and Superannuation fund, $824,481 and $840,017.

Under the heading of vocational education mention is made of a large number of institutions for the teaching of agriculture. Coal mining is taught in Nova Scotia and other mining in Ontario and forestry instruction in Quebec; while general industrial and technical classes are provided in all provinces.

The provinces expended $9,734,092 in 1924 on hospitals for the care of the feeble-minded, and $1,584,997 on correctional institutions. The sum of $1,038,702 was spent on the care of delinquents, refugees, the maintenance of orphanages, homes for the aged, incurables and benevolent institutions of one kind or another.

Pensions, gratuities and relief involved a combined expenditure of $4,234,536 in 1924, the bulk of this amount being in connection with the operation of Mothers' pensions or allowances acts in the provinces of Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, while in the province of New Brunswick in 1924 is shown for the first time a small expenditure in connection with a commission dealing with mothers' pensions.

The Dominion Government assumes control of immigration into the country, maintaining a large department to supervise its policies. The various provincial governments, however, with the exception of Prince Edward Island and Saskatchewan, expend money to encourage the settlement of their unoccupied lands, the total expenditure in 1924 being $1,021,359.

The total ordinary receipts of all the provinces for 1924 were $127,896,047, and the combined expenditures amounted to $135,159,185.

British Inquiry into American Industry

Colonel F. Vernon Willey, president, and Mr. Guy Locock, assistant director of the Federated British Industries, recently made a report to that organization on conditions in the United States, after an extensive tour of inquiry. They find that there is a nation-wide striving for efficiency and improved methods of utilizing plant and keeping it up to date, and a more rapid increase in the efficiency of production than in the number of wage earners employed. The latter condition is attributable in part, in their opinion, to the spread of general and technical education and in part to the high wages and high output of workers, and use of labour-saving devices.

"American industry," the report says, "is faced to-day with increased capital values and the necessity of earning a return on them," but "the producer has been unable to raise his prices because if he did so he could not sell his products. The American employer believes in high wages, and he pays them, but he also believes in high output and he sees that he gets it. The growth of employee ownership as an evidence of co-operation between capital and labour goes far to explain the amazing increase in the efficiency of American production."

Industrial organization in the United States was another matter for surprise to the visitors, the report pointing out "that there is far more readiness in America than in Great Britain for the different firms in one industry to co-operate for their mutual good, and even to go so far as to pool a great deal of their technical and business experience, which, it is declared" has proved to be of the greatest value to American industry. "What particularly strikes one is that the leaders of industry, finance and commerce are much more ready to take active part in the work of these associations even at great personal sacrifice."

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Rules for Explosives in British Columbia Metal Mines

NEW regulations under the Metalliferous Mines Regulations Act of British Columbia were published during April. They enumerate the conditions under which magazines for explosives may be maintained on mining properties, specifying the type of structure to be erected, etc.

No explosives in excess of a supply for 24 hours are allowed underground in a working mine, and every such store must be approved in writing by the Inspector of Mines. Naked lights and smoking are forbidden round explosives. Daily inspections by the superintendent of explosives in or about a mine are required.

"Any employee who commits a careless act with an explosive or where explosives are stored, or who, having discovered it, omits or neglects to report immediately such act to an officer in charge of the mine, shall be guilty of an offence against this Act, and the officer in charge of the mine shall immediately report such offence to the Inspector or to the constable of the county or district in which the mine is situate."

Rules are given for the thawing of explosives. The regulations forbid drilling in a hole that has been charged or blasted.

"When a blaster fires a round of holes he shall, where possible, count the number of shots exploding. If there is any report missing, he shall report the same to the mine foreman or shiftboss. If a missed hole has not been fired at the end of a shift, that fact, together with the location of the hole, shall be reported by the mine foreman or shiftboss to the mine foreman or shiftboss in charge of the next relay of workmen before work is commenced by them. In case of a miss-fire shot, or suspected miss-fire shot, no person shall be allowed to return to the place where blasting is being done until the expiry of thirty minutes from the time of lighting the fuse. Except in chute blasting, no fuse shorter than three feet shall be used in any blasting operation.

"A charge which has missed fire shall not be withdrawn but shall be blasted, and no drilling shall be done within a distance of three feet of a missed-fire shot or a cut-off hole containing explosive until it has been blasted. Every missed-fire shot shall be marked by the insertion of a wooden plug inserted into the outer end of the hole. The shiftboss shall be responsible for directing the angle of the hole and depth to which it shall be drilled.

"No person other than the holder of a blasting certificate shall remove or attempt to remove the wooden plug with which a missed-fire hole or socket of a hole has been plugged.

"In so far as possible, no blaster shall be alone when spitting fuse, and in no case shall he spit fuse without having a second light, placed conveniently close. No more than twelve holes shall be spit in any round of shots."

Electric current must be used for firing in sinking shafts and winzes, but exemptions may be granted by the inspector of mines in connection with small operations.

Every blaster must give fair warning before blasting, and be satisfied that all persons have left their working places, except their assistants, and must guard all entrances to the place of blasting. When blasting by erectricity he must disconnect the cables before re-admitting the workmen.

Other rules provide safeguards in the hoisting of explosives; specify that drill holes must be of sufficient size for the free insertion of the charge; that the charge is not to be inserted in heated material; and that explosives are to be plainly marked with the manufacturer's name. An Explosives Storage Book must be kept for recording all facts in connection with underground stores, rules being given as to the issue of supplies from magazine, etc. Detonators must be kept entirely separate from other explosives.

A blasting certificate is necessary for every person conducting blasting operations in or about a mine, but a prospector having charge of not more than twelve workmen may without having a blasting certificate obtain a special permit to carry on blasting operations for the purpose of quarrying, trench-cutting and general surface prospecting. A blaster may be assisted in preparing and firing charges by reliable persons who are not the holders of blasting certificates, provided they are under his direct supervision. Persons entering a working place at the beginning of a shift or after blasting must first obtain instructions from the mine foreman, shift boss or blaster. The regulations contain full particulars as to the issuing of blasting certificates.

Montreal Harbour Commission Hospital

The Montreal Harbour Commission have opened a hospital for the benefit of their employees and of seamen visiting the port. Furnished with the most modern surgical and

dental equipment, and with experts in constant attendance, the new hospital will serve all persons connected with or working at the harbour, and all accidents on the wharves will, in future, be cleared through it. It is fitted with modern operating theatre equipment, sufficient to allow of the handling of minor and emergency cases on the premises. Dr. W. G. Hepburn, who is in charge, states that he intends to bring every ship's master, purser and surgeon visiting the port, to see the plant during the course of the summer. Ship's surgeons will be able to send cases there, and attend and assist at their treatment. Men from ships due for minor operations will be dealt with in the new hospital and then returned to their ships, instead of being sent, as heretofore, to the civic hospital. Accident cases will be at once either sent to the Harbour Commission Hospital, or treated by Dr. Hepburn, prior to removal to city hospitals. Cases of a more serious nature will not at this stage be treated in the new premises, but it is hoped that much will be accomplished by early expert treatment.

Ontario Pulp and Paper Companies to hold Safety Convention

The pulp and paper companies of Ontario are organizing an accident prevention convention, to be held probably at Fort William in August. Mr. A. R. White, chief sanitary inspector of Ontario, whose department has now the added duty of promoting safety work in the province, referred recently to the leading position taken by this industry in regard to accident prevention:

"Our initial work," he said, is done with the pulp and paper industries, which together form Canada's biggest industry. Here we have to deal with men who are keen business men, solvent and eager to adopt economic principles, and intelligent enough to see in what direction their interests lie. We deal with the camps that are established on their limits, and it is to be noted that their contribution to the workmen's compensation funds amount to only $1.75 per $100 of their pay-rolls, while in the case of the lumber companies the contribution runs much higher. Each industry contributes in proportion to the liability against the fund which it creates. Our object is to establish such conditions in all camps that they will all come under the lower assessments."

Mr. White states that infection of wounds is the cause of a large proportion of the industrial losses caused by accidents: "six million dollars is paid into the workmen's compensation fund by industry, and one million, or one-sixth of this amount is paid out for disabilities caused by infected wounds. Personally, I would say that really $2,500,000 is more like the real sum paid for this class of disability, since more than half the accidents are reported as cuts before the infection sets in, and infection is discovered only when the victim is in the doctor's hands.

"This money is a direct tax on industry, and if this tax can be lowered, the industry affected will benefit. The natural aim of an employing company is to reduce accidents, and still more to reduce the time during which an injured man is a charge on the company. If a man cuts his hand or foot with an axe, he may think it is minor injury and go on working. The foreman does not want to have a man laid off, so the wound is wrapped with a rag, some salve is applied and he continues at work. In three or four days the wound is not healing and he reports this and possibly is laid up for weeks before the infected wound is cured. The company is responsible for him from the time he is hurt till he recovers or dies. If, on the other hand, he receives proper first-aid treatment at the time, the chances are that he recovers within a day or two and the company is relieved of payment of compensation and has its employee on the job immediately."

Accident Prevention Movement in Pulp and Paper Industry

Mr. C. Nelson Gain, chairman of the Technical Section of the Canadian Pulp and Paper Association, in his report read at the recent annual meeting of the Association, referred to accident prevention work as follows:—

"I would not want to complete this report without drawing the attention of the Association to the importance of this work in our industry. In Ontario, this work has had a great deal of attention, and it is at the present time making rapid progress. It is a question whether the time has not arrived for the Association to include Accident Prevention work among its other activities. There are several ways in which it might be done. Among those suggested are the appointment of a committee in one of the sections or the formation of an Accident Prevention Section to function as a branch of the Association. While such a move would undoubtedly be of practical as well as financial benefit, it would yield even greater returns in the promotion of the health and well-being of the operatives employed in the industry. Your consideration is invited to this subject."

Accident Prevention in Mines

Mr. Thomas F. Sutherland, chief inspector of mines of Ontario, who recently visited South Africa to study safety measures in the mines in the Rand (LABOUR GAZETTE, January

1926), attributes the good accident record of South Africa as compared with Ontario, to the following causes:—

1. The different nature of the ore bodies. The blanket is regular, not very thick and at low levels is relatively flat. There is therefore not the same danger of "gravity" accidents as in our wider and more steeply inclined slopes.

2. More government inspection. The inspectors insist on a closer observance of the mining act. Prosecutions are more numerous. This is not as important a factor as the other three.

3. Educational work done by the Chamber of Mines. This includes publication of Safety Magazine, Safety Bulletins, safety competitions. Prizes for safety ideas, moving pictures, etc.

4. The licensing of all men who have the safety of others under their care. This includes hoistmen, gangers, blasters, shift bosses, underground superintendents, and managers.

Industrial Accident Conference in United States

The Honourable James J. Davis, United States Secretary of Labour, proposes to call a 3-day industrial accident conference at Washington, D.C., next July.

The call will be issued to the governors of the States, requesting that the States be represented by the industrial accident expert of that State. The call will also be issued to the principal insurance carriers and industrial associations, as well as to the larger self-insurers.

It is hoped that the conference will develop the best methods of accident prevention, of reporting accidents, and of establishing a clearing house for definite statistical data which can be made usable by all in the work of accident prevention.

In his letter of invitation to the State Governors Secretary Davis writes as follows:—

"There is no adequate system of industrial accident reporting in the United States, but a conservative estimate indicates that the fatal industrial accidents probably exceed 23,000 per year and that non-fatal injuries total 2,500,000 per year. The number of days' labour lost is estimated to be 227,169,970 per annum, and the wage loss exceeds a billion dollars. I am advised by experts that fully 85 per cent of these accidents are preventable. In fact, many establishments and some industries, by close application of safety methods to the "danger spots" in their industrial plants, have been able to reduce their accidents by a percentage almost as great as this. The co-operation of all of the States and all other accident reporting organizations will be sought to the end that attention may be called not in general terms but by specific plans for the more general adoption of safety methods which have been so successful in a few instances."

Safe Practice in Woodworking

The Department has received a special bulletin (No. 139) published by the New York State Department of Labour, describing the results of an analysis of accidents in 300 woodworking factories, and making suggestions as to safe practice and suitable machine guards. The woodworking machine in most general use is the circular saw which is found in many factories that have no regular woodworking department, and this accounts for a part of the large number of accidents which occur on this machine. There is only one machine in industry on which more accidents occur than the circular saw and that is the power punch press. The recommendations as to general safety practice that offered as the result of the analysis, are as follows:—

Starting and Stopping Devices.—Starting and stopping devices should be provided and properly maintained on all machines. They should be so located that the operator can reach them when standing in operating position.

On stopping devices provision should be made for securing them in a fixed position. This is especially needed when the machine is belt driven, for while the belt is on the loose pulley it sometimes "rides up" on the tight pulley thereby accidentally starting the machine.

It is unsafe to have starting devices so located that the machine can be started by accidentally leaning against them, or if a foot treadle is used for starting machines an iron stirrup should be fastened to the floor over the treadle leaving only sufficient room for the operator's foot between the treadle and stirrup, so that the operator will not accidentally step on it or that it will not be struck by a falling object, thereby starting the machine.

Workmen should always stop machines before leaving them. Many serious accidents have occurred to workmen coming in contact with machines that they thought were stopped.

It is unsafe practice to reach over a running saw for a piece of stock or to use the fingers for brushing away pieces near the saw while it is in motion.

Not only is it necessary to protect workmen against contact with cutters, saws, gears, or other dangerous parts but there is an additional hazard of flying chips and sawdust. On some machines a suitable exhaust hood is sufficient to accomplish the desired result. Others may have a barrier of such size and shape as to provide ample protection.

Use of Safeguards.—Employers will find it to their advantage to provide safeguards

wherever possible for all dangerous places and for all machines whose operation unguarded is dangerous. Such devices will not always prevent accidents but they will prevent many, especially the most serious ones, and they will often diminish the injury in the case of accidents which they cannot wholly avert. In making things safer, they also conduce to better work.

To get the best results from safety devices, their use in their entirety should be insisted upon whenever the work permits and their immediate replacement should be required after completion of work for which they cannot be used. A sign to this effect should be placed in plain view of the operator of each machine equipped with a safety device.

Safe Footing Around Machines.—At all dangerous hand-fed machines such as saws, jointers, shapers, etc., secure footing should be provided in the form of rubber mats, inserts of nonslipping iron plates or the floor can be painted and while the paint is wet sprinkled with sand. There has recently come into use a leather flooring which is made of waste strips of leather. They are made in blocks and can readily be used where there is a double flooring in the factory by removing the top flooring and inserting these leather blocks.

If rubber mats are used, they should be inspected regularly to see that their usefulness is not impaired by their tearing, wearing smooth or the openings becoming filled with sawdust.

It is essential that all cutters and knives should be securely fastened. This is especially so in the case of shapers, moulders and stickers.

To Prevent Accidents Through Inspection and Sound of Machine.—In the case of bandsaws the fractured blade will manifest itself by jumping forward at the stock with a chop, chop sound as it clicks over the guide disc and into the cut. At the shaper, vibration and sound are certain signs of badly balanced and loose cutters, poor bearings and end play in the spindle.

The same is true of the planer, and as is also the case with the shaper, poorly set knives and poor bearings will show themselves in variations in depth and spacing of knife marks on the finished product.

The high speed at which woodworking machinery is operated causes excessive vibration. For this reason all woodworking machinery should be well secured in place on a substantial floor. Machines should never be so located that it is necessary for operators to stand near an aisleway, or that two operators are likely to interfere with each other. Each operator should have a well defined work place where interference is unlikely. Aisleways should be maintained of sufficient width to permit the passing of trucks and workmen without crowding.

Employment and Disease

Professor E. R. Hayhurst, M.D., of Ohio State University, contributes to *Journal of Industrial Hygiene* an article on occupational diseases reported to the Ohio State Department of Health for the five-year period ending June 30, 1925. He states that "an increase in the number and range of occupational diseases is rapidly taking place." This statement means that industrial employment is now recognized as being a chief cause of a large number of general diseases not hitherto classed as industrial diseases. The writer refers to a recent study of the incidence of illness among the policy holders of the Metropolitan Life Insurance Company of New York. "The average loss of working time was eight days per annum for gainfully employed men. Inasmuch as a great deal of illness goes unrecorded, the actual loss was probably much heavier. Furthermore, men who are engaged in industry and whose daily wages are vital to their families will often continue to work under conditions of personal health which would very properly impel clerical and professional employees to stop work and seek the advice of a medical man. Among industrial workers the death rate from accidental causes is about two and one-half times that for the non-industrial group. Tuberculosis is more important than accidents, and is responsible for a loss of between eighteen months and two years in the longevity of workers. Industrial employment is probably the most important single factor in the tuberculosis death rate. Pneumonia is twice as high among industrial as among non-industrial workers and is therefore considered an added industrial hazard. Further research is necessary, however, to show the relation between the development of pneumonia and industry. In a similar manner other conditions such as cerebral hemorrhage, Bright's disease, and organic heart disease show strikingly the effects of industrial exposure. The death rates are two and three times as high as in the non-industrial groups during the active working years of life."

Prevention of Sickness in Industry

The *Nation's Health*, Chicago, in its issue of April 15, says: "The fact that thousands of man-years are lost each year from disabilities that are largely preventable is just beginning to be appreciated by a few of the more progressive employers of labour. To the great majority medical work in industry still

is limited to the fulfilment of workmen's compensation law requirements, and in many cases such medical service as is supplied is furnished by the insurance company carrying the compensation risk. The primary interest of such companies is the early recovery of the worker following accident. The vastly greater economic loss from illness is totally disregarded. Physicians of experience in industrial work state that at least 50 per cent of the illness from which workers suffer is preventable, and the attack on this problem only waits upon the active interest of the management.

"As illness and ill-health of industrial workers are reflected largely in disturbed home and community conditions, industry should feel obligated to contribute its just share to prevention of illness.

"The agitation for additional legislation that will bring many more disease conditions under the operation of the workmen's compensation law can be rendered unnecessary if adequate medical service is provided in the factory whereby incipient disabilities can be discovered and preventive measures applied."

Industrial Risks of Young Employees

The Children's Bureau of the United States Department of Labour has published the results of a study of industrial accidents to employed minors in Wisconsin, Massachusetts and New Jersey. These three States give their young workers a considerable degree of special protection. Each has a minimum age limit for the employment of children, prohibits their employment under specified ages in certain dangerous occupations, and does educational work looking toward the prevention of accidents through continuation schools which young workers are required to attend. Moreover their minors benefit equally with their adult workers from the protection afforded through laws regulating the safety and sanitation of work places, and from the stimulus which workmen's compensation legislation, in these States as in many others, has given to efforts to reduce the risk of industrial injury.

In the three States, within twelve months, 7,478 industrial injuries occurred to employed minors under 21 years of age, 38 resulting fatally, 920 in partial disability for life, and the remaining in disability lasting for more than a week (for more than 10 days in case of injuries occurring in two of the States). Machinery—the most frequent cause of injury—was responsible for over one-third (36.2 per cent) of the injuries. In Massachusetts and Wisconsin (the two States where comparable statistics were available), it caused twice as high a percentage of the accidents to minors as of the accidents to workers 21 years of age and over, notwithstanding the fact that the employments forbidden to young boys and girls are chiefly the operation of dangerous machines.

The conclusion is reached that industrial risks for minors as well as for adults can be reduced by requiring more adequately guarded machinery and safer work places, but the findings of this study indicate that for young workers special dangers exist. One is indicated by the high proportion of injuries in which infection developed. If this proportion is to be decreased the natural carelessness of youth must be overcome. Although this would not reduce the number of injuries, it would prevent many of them from disabling the young worker. Another danger is seen in the high proportion of the injuries to minors due to machinery. The analysis which this report presents of accidents to minors in three States shows not only the large number of machine injuries but their severity. It shows also the great need of further protection for boys and girls 16 and 17 years age whose employment—particularly in the operation of dangerous machines—is far less safeguarded than is the employment of younger workers.

New British Factory Act Promised by Government

The Home Secretary announced in the British House of Commons in April that the government intended to introduce new factory legislation during the present session, and to make it one of the principal measures of the next session. The promise was made during the discussion of a Factories bill which had been introduced by Miss Wilkinson, a member of the Labour Party. The latter bill was not proceeded with being considered to be too wide in its scope for a private member's bill. Miss Wilkinson pointed out that there had been no general Factories Act since 1901. During the past 25 years there had been an extraordinary increase in accidents in factories and workshops. The number in 1924 was 159,723, involving actual absence from work, showing an increase on 1923 of no fewer than 44,000. Of fatal accidents there were 956 in 1924, showing an increase of 89 over 1923. The Chief Inspector of Factories had pointed out that all accidents were not recorded. The Industrial Fatigue Board, in their report for 1925, said the loss of time due to sickness, most of its preventable, lost the country ten times more than strikes and labour disputes. To prevent this waste of human assets and human capital was the object of the bill.

NOTES ON LABOUR UNION ACTIVITIES

Delegation of Railway Brotherhoods to the Dominion Government

THE following memorandum of proposed legislation was submitted to the Dominion Government on April 7 by a delegation on behalf of the Order of Railway Conductors, Brotherhood of Locomotive Engineers, Brotherhood of Railroad Trainmen and the Brotherhood of Locomotive Firemen and Enginemen.

The delegation was composed of members of the legislative committees of the various Brotherhoods, including Messrs. L. C. Pelletier, of the Railway Conductors; Byron Baker, of the Locomotive Engineers; W. L. Best, of the Firemen and Enginemen; and T. J. Coughlin of the Railroad Trainmen. There were also present Messrs. W. T. Turnbull, vice-president of the United Brotherhood of Maintenance of Way Employees, J. J. O'Grady, general chairman and W. Jewkes, secretary of the Canadian Pacific Railway Committee, and J. G. Jeraldi, general chairman of the Grand Trunk Committee of the same organization.

The Government was represented by the Prime Minister, the Right Honourable W. L. Mackenzie King; the Minister of Labour, the Honourable J. C. Elliott, the Minister of Justice, the Honourable Ernest Lapointe, and the Minister of Immigration, the Honourable Charles Stewart.

Careful consideration of the proposals submitted by the delegation was promised.

Text of Memorandum

1. *Canadian National Railways Act, chapter 13, 1919.*

Amend section 14 of this act by eliminating that portion of the section which excludes "maintenance" from the application of the Railway Act. The purpose of this proposal is to bring the maintenance of the railway under the jurisdiction of the Board of Railway Commissioners for Canada in the same manner and to the same extent which operation and equipment is subject to that jurisdiction.

2. *Immigration Act.*

(*a*) Amend by repealing section 41 as enacted by chapter 26 of the Statutes of 1919 (First session).*

This request has previously been submitted, and we appreciate the action of the government in passing the necessary legislation at previous sessions, but exceedingly regret and strongly resent the action of the senate in vetoing the bills passed by the House of Commons.

(*b*) Further restriction and supervision of Asiatic immigration.

3. *Criminal Code.*

Amend by repealing sections 97a and 97b, as enacted by Chapter 46, 1919, (first session.)†

This legislation, enacted concurrently with section 41 of chapter 26, 1919, is, we believe, unjustifiable and unnecessary. We appreciate, however, the government's action on this subject at previous sessions, pursuant to the requests of labour, but we again deplore the Senate's action in vetoing the bills passed by the House of Commons.

4. *British North America Act.*

We respectfully urge an amendment to the British North America Act that will restrict the powers of the Senate to veto a bill passed by the House of Commons more than twice.

5. *Protection at Highway Crossings of Railways at Rail Level.*

This request has been presented to the government on several previous occasions, namely, that, with a view to greater protection and safety to the public and the operating employees in respect of highway crossings of railways at rail level, the work of eliminating such crossings under the provisions of section 262, of the Railway Act, chapter 68, 1919 ("The Railway Grade Crossing Fund"), be undertaken as early as practicable. This proposal, if carried out, will undoubtedly reduce the appalling number of accidents at highway crossings, and the work undertaken would thus provide employment for large number of citizens out of work and materially relieve the present unemployment situation. While we appreciate the value of improving highways, generally, we respectfully submit that if the Federal and Provincial governments continue this policy of reconstruction a sufficient amount of money should be appropriated annually for the diversion of highways under or over the railway.

* Section 41 authorized the minister to deport persons advocating violence, etc., even although they should be British-born subjects.

† These subsections define as an unlawful association any organization advocating economic changes by the use of force, etc., and include such advocacy in the definition of criminal conspiracy.

6. *Measures to prevent duplication of taxation on income.*

We respectfully request that effective measures be taken, as early as practicable, to prevent the duplication of federal and provincial taxation on incomes, thus relieving some of the inequitable burden now placed upon the tax-payer.

7. *Old Age Pensions.*

We appreciate the progress report made by the Special Committee appointed to deal with this subject last session, and respectfully urge the enactment of legislation at the present session. It is our understanding, of course, that such legislation will not in any way interfere with existing or future pension on provident fund schemes covering railway employees.

8. *The Income Tax Act, 1917.*

Amend paragraph (*a*) of subsection (1) of section 4 of the act, as amended by chapter 25, 1922, by substituting the words *twenty-five* hundred for "two thousand," and the words *fifteen hundred* for "one thousand." The paragraph would then read:—

"(*a*) four per centum upon all income exceeding *twenty-five* hundred dollars but not exceeding six thousand dollars in the case of a married person, or any other person who has dependent upon him any of the following persons:—

(i) A parent or grandparent;

(ii) A daughter or sister;

(iii) A son or brother under twenty-one years of age or incapable of self-support on account of mental or physical infirmity;

and four per centum upon all income exceeding *fifteen hundred* dollars but not exceeding six thousand dollars in the case of all other persons;

And in all cases eight per centum upon all income exceeding six thousand dollars;

And in addition thereto the following surtax", etc.

National Association of Marine Engineers of Canada

The eighteenth biennial convention of the National Association of Marine Engineers of Canada met at Montreal on February 15, Grand President Eugene Hamelin in the chair. Fifteen delegates were present, representing a membership of 1,068, a gain of 172 since the last convention held in Ottawa in 1924.

The president in his address reviewed the activities of the Association during the past two years. He outlined, in detail, the manner in which the instructions received from the previous convention had been carried out in regard to legislation. The legislative program had been presented to and approved by the Trades and Labour Congress of Canada, which body appointed a delegation, of which the president of the association was a member, to wait on the Federal Government and present their demands.

Among the demands made was one protesting against the continued payments of subsidies to the Royal Mail Steam Packet Company, operating between the Maritime Provinces of Canada and the West Indies, and urging the Government to equip the Canadian Government Merchant Marine steamers with the required passenger accommodation, freight and refrigerator equipment to carry perishable goods and fruit between these points, or build new ships suitable for the trade, so as to enable them to comply with the terms of the Canada-West Indies treaty of 1920.

The president informed the delegates that his attention had been called to the fact that the Association was not an incorporated body, and further he had been asked by one council on what authority they acted or could act. This matter had been taken under consideration by the Executive and it was decided to have the Association incorporated. The president suggested that two organizers be appointed, one for the West Coast and the other to have charge of the territory from the head of the Great Lakes east.

The most important and also the most contentious item on the agenda was the application for incorporation under the Company Act. The discussion on the memoranda of agreement occupied practically three days. One of the outstanding features of the proposed bill is that subordinate councils will enjoy local autonomy and have complete control over their own finances and assets, except in so far as they are liable for per capita tax to the Grand Council. The basis of representation was also changed so as to allow subordinate councils a delegate or vote for each fifty members or major fraction thereof, but the expenses of only one delegate to be paid by the Grand Council. The expenses of additional delegates would have to be paid by the subordinate councils. It was also provided that the first delegate may cast the full vote to which his council is entitled. The proposal to raise the minimum initiation fee was re-

jected and will remain at $10 as heretofore, but subordinate councils may increase this fee to whatever sum suits their purpose. The annual dues were also left as at present, to be arranged by each subordinate council, local conditions to govern, and to be payable monthly, always in advance. The executive of the Grand Council was increased by the addition of a second vice-president. The Dominion was divided into four districts, viz. (1) Atlantic, (2) St. Lawrence, (3) Great Lakes and (4) Pacific, with an executive officer to be chosen from each district. The executive of subordinate councils was also increased by the addition of a third vice-president. It was decided to give an additional delegate to whatever council the Grand President was a member of, so that that council might be represented on the floor of the convention. The Executive of the Grand Council was given the right to engage the services of a chartered accountant at any time they thought it was necessary. The proposal made by a western delegate for "associate membership," young men who are preparing to become engineers but who had not secured their certificate of competency, was defeated by a considerable majority.

The following resolution was unanimously adopted:—

Information having come through the press that the Government is calling for tenders for two lines of steamships to carry on the West Indies service under the new arrangement, this Grand Council in session assembled supports the tender of the Canadian Government Merchant Marine, Limited, or in any case a line of Canadian ships. And further in the event of additional ships being required to be built for this service, such ships shall be built in Canadian Shipyards and manned by a Canadian personnel, and further resolved, that this resolution be circulated by the National Secretary for the purpose of educating our people to protect their own interests.

The officers elected for the next two years are as follows:

Grand President, Eugene Hamelin, Montreal, Que.; Grand Vice-President, H. J. Hutchinson, Vancouver, B.C.; Grand Secretary-Treasurer, W. A. MacDonald, Halifax, N.S.; Grand Conductor, Thomas O'Reilly, Sault Ste. Marie, Ont.; Grand Doorkeeper, Eugene Baucher, Sorel, Que.; Grand Auditors, D. G. Holmes, Victoria, B.C., and Henri Lamoureux, Montreal, Que.

Trade Unions and Migration

As this issue goes to press a "world migration conference" is being held at London under the auspices of the International Federation of Trade Unions. The draft agenda of the congress shows that there is a definite feeling that uncontrolled migration has had many bad consequences and that an international organization is required to draw up regulations and exercise supervision for the protection both of the worker migrants and the workers in the countries to which they go. It is held that the various problems cannot be solved without trade union help. The claim will be made that the trade unions must have a voice in the control of recruiting and in the determination of the general principles guiding the migration policy of their respective countries. One suggestion is that the governments and the national trade union centres of the various countries should co-operate to establish a national migration office. In addition there should be an international migration office, also with adequate trade union representation, to draw up international regulations.

A regulation has been framed which would commit the International Federation of Trade Unions to the drafting of "definite proposals for the setting up of an international body which will be capable of organizing the control of the development, production, and distribution of foodstuffs and of raw materials of industry and power and their transport in accordance with economic principles and in furtherance of the spirit of international brotherhood."

Coming Conventions

Canadian Bodies—

Provincial Federation of Ontario Fire Fighters in June.

Canadian Carpet Weavers' Beneficial Association, at Guelph, Ont., on July 13.

International Organizations—

Amalgamated Lace Operatives of America, at Philadelphia, Pa., on June 7.

Amalgamated Meat Cutters and Butcher Workmen of North America at Louisville, Ky., on June 14.

Pattern Makers' League of North America, at Cleveland, Ohio, in June.

National Woolsorters' Association of the United States, at Lawrence, Mass., June 25-26.

American Flint Glass Workers' Union of North America, at Philadelphia, Pa., July 5.

National Brotherhood of Operative Potters, at Atlantic City, N.J., in July.

International Association of Marble, Stone, and Slate Polishers, Rubbers and Sawyers, Tile and Marble Setters' Helpers, at Detroit, Mich., July 12-17.

International Brotherhood of Bookbinders, Des Moines, Ia., July 12-19.

International Plate Printers, Die Stampers and Engravers' Union of North America, at Chicago, Ill., July 19.

International Stereotypers and Electrotypers' Union of North America, at Los Angeles, Cal., July 19-24.

Stove Mounters' International Union, at Newark, N.Y., July 20.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the Labour Gazette relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Sudbury Mining School

The Sudbury Mining and Technical School recently issued a prospectus of 32 pages giving full details of the four-year course in mining. Its mining graduates are admitted to Queen's University without further examination to complete any course of Applied Science and Engineering. Two teachers have been employed in the Mining Department since 1917. The following extracts are taken from the latest prospectus.

General.—The work of this department is intended particularly to take care of the needs of technical education in Northern Ontario. Its aim is to provide a sound secondary education, with a technical outlook on the practical sciences of engineering. While the tendency is to stress somewhat those branches of science relating to mining and its allied industries, as is right and fitting in a mining area, much of the work, e.g., in mathematics, physics and in chemistry, is of the foundational nature common to all branches of engineering science. For this reason the work of the Mining Department offers a preparation for the other branches of practical science, such as electrical, mechanical, civil and chemical almost equally as good as it does for the more strictly related branches of mining, metallurgy and geology.

Organization.—The course of study covers a period of four years. The work of the first two years is confined largely to the study of academic subjects that afford the basis of a broad general education. In the third and fourth years, the work is largely of a scientific and technical nature. The study of English, both for its practical and great cultural value, is continued throughout the entire course. The academic subjects are handled by several qualified teachers of high school assistant and specialist standing. The technical work is in charge of two graduates in practical science, both of whom have had practical experience in their respective fields.

The course is well organized and this department has already to its credit a record of achievement. In the past this work has attracted to it some of the best ability among the students entering high school. A high standard of scholarship is insisted on throughout the course.

Objective.—The work of the Mining Department has a twofold objective,—

1. To give to students intending to enter college and take up engineering courses, a fuller and more practical preparation for this work than is offered by the ordinary matriculation course. Since 1917 the School of Mining and Applied Science at Queen's University has recognized and accepted our course in lieu of the ordinary science matriculation, and this arrangement continues to function with entire satisfaction to both parties. We have also good reasons to expect that in the near future similar recognition of our work will be given by the Engineering Faculties of Toronto and McGill Universities.

2. The second and much more important phase of the work of the Mining Department is to meet the needs of the much larger number of boys who do not go to college. The mining course functions here by offering such specialized technical training as will interest the boys in the broad field of industry generally, and more particularly in the chief industry of the district. At the same time it fits them, in a useful and intelligent way, to participate in it.

Without any doubt the next generation is destined to see an enormous development in Northern Ontario, in which development the boy now entering high school will be called on to play a man's part, and in which he will find his life work. Much of this work will be the work of the pioneer, and in this development the engineering sciences will be called on to play a major part. The most important part of the educational equipment of such a boy is a practical training in those sciences—practical chemistry, applied electricity, the elementary principles of general engineering, drafting, surveying, mineralogy, geology, metallurgy and mining. Such a training will be useful to the boy in afterlife, re-

gardless of the sphere in which he may eventually find his life work. Such a training, too, has a cultural value fully equalling, and a practical value far exceeding, the time-honoured training afforded by the ordinary academic course of study.

Considering only the mining and metallurgical industry, not merely of our own district, but of the North generally, this offers many positions and jobs that require a certain amount of technical knowledge and skill. To fill these positions efficiently the ordinary workman has not the necessary technical training nor the interest nor the urge to get it. Such positions offer to the boy with technical training the necessary points of contact with industry—the begining or stepping-stone into industrial life. Since they will have an intelligent interest in, and the proper outlook on, their work, such young men offer the finest material from which to train on the job, men fitted for positions of higher responsibility. Given such a start, the boy's future is then in his own hands.

The new Mining and Technical School with its modern equipment, which is not excelled anywhere, offers exceptional opportunities for carrying out the work of the Mining Department in a practical way. In addition to lecture rooms the department is provided with modern and completely equipped chemical, physical, mining and metallurgical laboratories, together with drafting and blue-printing rooms. The students, in addition, have the advantage of training in the well-equipped woodworking department in connection with the school.

Peaceful picketing in New Jersey

The State of New Jersey, at the session of the legislature just adjourned, enacted the following statute:

"No restraining order or writ of injunction shall be granted or issued out of any court of this State in any case involving or growing out of a dispute concerning terms or conditions of employment, enjoining or restraining any person or persons, either singly or in concert, from terminating any relation of employment, or from ceasing to perform any work or labour, or from peaceably and without threats or intimidation recommending, advising or persuading others so to do; or from peaceably and without threats or intimidation being upon any public street or highway or thoroughfare for the purpose of obtaining or communicating information, or to peaceably and without threats or intimidation persuade any person or persons to work or abstain from working, or to employ or to cease to employ any party to a labour dispute, or to peaceably and without threats or intimidation recommend, advise or persuade others so to do, provided said persons remain separated one from the other at intervals of ten paces or more.

"All acts and parts of acts inconsistent with the provisions of this act are hereby repealed."

Work—A Factor in the Education of Minors

Robert O. Small, director of Vocational Education for the State of Massachusetts, in a recent address before the Vocational Education Society at Boston, made a survey of educational methods in the various civilizations of the past, drawing the following conclusions:—

1. Play work of school (whether in a manual training department or an industrial school) cannot take the place of real work.

2. Industry, business, the needs of the world, exact recognition of certain work standards up to which hour youth should learn to measure at an earlier age than most of us seem willing to admit.

3. They should work for pay or for the equivalent; the "pay envelope" may be made to teach surely and quickly sound lessons of character and citizenship.

4. The idea that by setting a child to suitable labour you thereby necessarily deprive him of an education is wrong. For some this may be the open door to an education. Up against reality they see things differently. Work does not dull—it sharpens the faculties. In many cases it is the spur needed; it saves the wasting of time in idleness.

New regulations were issued in April under the Moving Pictures Act of British Columbia (Revised Statutes, 1924, chapter 178), superseding the regulations dated July 7, 1922. They include rules governing the construction and methods of conducting moving picture theatres; the censoring of films; film exchange and theatre licenses; and the licensing of projectionists. The cost of a projectionist's license is $10. These licenses are in three classes according to the degree of knowledge required. Apprentice projectionists may apply to the censor for a license, provided the application of each applicant is accompanied by the written consent of the licensed projectionist under whom he is to serve, with a fee of $5.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Eighth and Ninth Sessions of the International Labour Conference

TWO sessions of the International Labour Conference (League of Nations) are being held this year in Geneva, Switzerland, one (the Eighth) opening on May 26, and the other (the Ninth) opening on June 7. The Ninth Conference will be devoted entirely to the consideration of matters affecting seamen. The agenda of these two sessions are as follows:—

(1) Simplification of the inspection of emigrants on board ship.

(2) International codification of the rules relating to seamen's articles of agreement.

(3) General principles for the inspection of the conditions of work of seamen.

The International Labour Office has issued a report on each of these subjects, giving the replies of the various governments to questionnaires submitted by the Office, and a general survey of the question in the light of these replies, together with the conclusions arrived at and the text of proposed Draft Conventions and Recommendations concerning the three items on the agenda.

A survey of the proposed simplification of the inspection of emigrants on board ship showed that no government was opposed to the suggestion that the Conference should examine the possibilities of simplifying the existing methods of inspection. Eleven governments in their replies to the questionnaire favoured the adoption of a Draft Convention. Two other governments intimated that they would not oppose the adoption of a Draft Convention if the other countries desired it. Six governments, including those of Great Britain and Canada, expressed a preference for a Recommendation. The majority of the governments agreed that as a general rule an inspector should be appointed by the government of the country whose flag the vessel flies. In the light of the replies to the questionnaire, the International Labour Office has drawn up the text of a proposed Draft Convention concerning the simplification of the inspection of emigrants on board ship, and a recommendation concerning interpreters and women supervisors on emigrant vessels.

After careful consideration of the replies of the Governments, the International Labour Office has considered it best to abandon the idea of a codification of the rules governing the engagement of seamen, and to submit to the Conference three proposed Draft Conventions concerning respectively seamen's articles of agreement, the repatriation of seamen, and criminal and disciplinary penalties.

As respects the general principles for the inspection of the conditions of work of seamen, the inquiry made by the Office showed that a majority of the countries from whom replies were received were in favour of the various functions suggested, though clearly the variety of customs and institutions make it difficult to frame a Recommendation in detail. The Draft Recommendation which has been prepared by the International Labour Office for the consideration of the Conference is therefore drawn up in very general terms. It provides for enforcement of the laws and regulations dealing with the conditions of work and the protection of seamen while so employed (hours of work and rest periods, night work, conditions of admission to employment at sea and as trimmers or stockers, hygienic condition of the crew's quarters, prevention of accidents, hygienic condition and general safety of the vessel, engagement, discharge and repatriation of seamen, obligations with regard to sick, injured, or deceased seamen, unemployment indemnity in the case of loss or foundering of the ship).

Canadian Delegates

The following are the Canadian representatives who have been appointed to represent the Government, the employers and the workers of Canada at the Eighth and Ninth Sessions of the International Labour Conference, opening in Geneva, Switzerland, on May 26 and June 7, 1926, respectively:—

Government Delegates: Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland.

Mr. Lucien Pacaud, Secretary, Office of the High Commissioner for Canada, London, England.

Advisers to Government Delegates: Hon. Forbes Godfrey, M.D., Minister of Health & Labour, Toronto, Ontario.

Mr. Thomas Poulin, of the Federation of Catholic Workers of Canada, Quebec, Que.

Employers' Delegate: Mr. Thomas Robb, Manager and Secretary, Shipping Federation of Canada, Montreal, Que.

Adviser to Employers' Delegate: Mr. R. W. Gould, Canadian Manufacturers' Association, Montreal, Que.

Workers' Delegate: Mr. Tom Moore, President, Trades and Labour Congress of Canada, Ottawa, Ont.

Adviser to Workers' Delegate at Eighth Session: Mr. Bertram Merson, President, Toronto Division 113, Amalgamated Association of Street & Electric Ry. Employees of America, and Vice-President, Trades & Labour Congress of Canada, Toronto, Ont.

Adviser to Workers' Delegate at the Ninth Session: Mr. Eugene Hamelin, Grand President, National Association of Marine Engineers of Canada, Montreal, P.Q.

Seamen's Conventions Ratified by Canada

Reference was made in the October, 1925, issue of the LABOUR GAZETTE (pp. 966-970) to the proposed ratification by Canada of four Conventions of the International Labour Conference affecting seamen. All of these Conventions are designed to improve the employment conditions of seamen and their provisions are briefly as follows:—

1. *Unemployment Indemnity in Case of Loss or Foundering of the Ship.*—It is provided in this Convention that in the case of the loss or foundering of vessels engaged in maritime navigation, the seamen who were employed thereon shall continue to receive payment from their employers of their regular rate of wages during any period of unemployment which may result from the shipwreck, not exceeding two months.

2. *Minimum Age for the Admission of Children to Employment at Sea.*— This Convention prohibits the employment of boys under the age of 14 years on vessels engaged in maritime navigation.

3. *Minimum Age for the Admission of Young Persons to Employment as Trimmers or Stokers.*—This Convention prohibits the employment of young persons under the age of 18 as trimmers or stokers on vessels engaged in maritime navigation.

4. *Compulsory Medical Examination of Children and Young Persons Employed at Sea.*—This Convention requires the production of a medical certificate of fitness in the case of all young persons under 18 years of age before employment on vessels engaged in maritime navigation. The continued employment of such persons at sea is also subject to repetition of the examination at intervals of not more than one year. The Convention does not apply to vessels on which only members of one family are employed. In urgent cases the engagement of young persons under 18 years of age may be permitted on condition that the medical examination shall be undergone at the first port of call.

Amendments were made to the Canada shipping Act by legislation in 1924, on motion of the Minister of Labour, in order to bring the Canadian law governing shipping matters into conformity with the requirements of these Conventions. A proclamation was also issued in October last bringing the amendments to the Canada Shipping Act into effect from January 1, 1926.

The ratification by Canada of these Conventions was registered by the Secretary-General of the League of Nations on March 31, 1926.

Inspection of Emigrants on Board Ship

A meeting of the Permanent Emigration Committee of the International Labour Office was held in Paris on March 22-23, for a preliminary discussion of technical aspects of the question of inspection of emigrants on board ship. Apart from the three permanent members of the Committee, the meeting was attended by a number of experts. The latter pronounced unanimously against the presence of several inspectors on board the same emigrant ship, considering that a single inspector would be preferable. They were also, generally speaking, of opinion that this inspector should be chosen by the state under whose flag the ship sails, and that he should secure the enforcement of the legislation of such state. Various solutions were also suggested for special cases; for example, in event of the state in question failing to appoint the inspector, or in the event of there being special agreements between the emigration country and the navigation company concerned. The experts agreed that the inspector should be entitled to submit complaints to the master of the ship but without in any way infringing on the latter's prerogatives, and also to report to the government of the state appointing him. The report would be communicated to the governments of the other countries concerned and to the master of the vessel. During the discussion a recommendation in favour of the consideration of an international agreement fixing standardized minimum conditions to be demanded as regards all vessels, in respect of the treatment of all emigrants, was supported by the majority of the experts and approved without opposition.

Replies to Questionnaire.—Some months ago a questionnaire was issued by the International Labour Office dealing with the simplification of inspection of emigrants on board ship, as stated in the previous note. The

answers of twenty-two governments which have replied to the questionnaire have since been issued in the form of a booklet, together with a Draft Convention and Recommendation based thereon which were prepared by the International Labour Office.

The object of the Conference in discussing this question would be, in the words of the questionnaire, "to lay down rules by which it might be possible to simplify the administrative formalities connected with the inspection of emigrants proceeding overseas, so as to avoid the duplication and the disputes regarding competence which have hitherto resulted from the fact that inspection has been carried out by officials belonging to various different States."

The fact that twenty-two governments, including the governments both of all the principal maritime States Members and of the chief countries of emigration, had by March 8, 1926, sent replies to the questionnaire, and that none of these replies questioned either the competence of the International Labour Organization to deal with the question or the desirability of bringing it before the Conference is encouraging evidence of the general approval which, notwithstanding the doubts mentioned above, the Governing Body's choice of a subject for the Eighth Session of the Conference has encountered. The twenty-two governments whose replies were received in time for inclusion in the above mentioned booklet are those of Argentina, Austria, Belgium, Canada, Czechoslovakia, Denmark, Esthonia, Finland, France, Germany, Great Britain, India, the Irish Free State, Italy, Japan, Latvia, the Netherlands, Norway, Poland, Spain, Sweden and Switzerland.

The present report is divided into three chapters, the first reproducing the replies of the various governments to the questionnaire, the second containing a general survey of the question in the light of these replies, and the third containing the text of the Draft Convention and Recommendation which have been drawn up in the International Labour Office for the consideration of the Conference.

Ratifications of Conventions

Three ratifications of Conventions of the International Labour Conference were notified by Great Britain to the League of Nations during the month of March. These three Conventions relate to employment on board ship and are respectively as follows:—

Draft Convention Fixing the Minimum Age for the Admission of Young Persons to Employment as Trimmers or Stokers.

Draft Convention Concerning the Compulsory Medical Examination of Children and Young Persons Employed at Sea.

Draft Convention concerning Unemployment Indemnity in Case of Loss or Foundering of the Ship.

The total number of ratifications of conventions of the International Labour Conference registered with the League of Nations is now 186. Ratifications in sight will, however, soon bring this total up to more than 200, or double the number of two years ago.

South Africa and Conference Decisions

In a letter dated January 14, 1926, the Prime Minister of the Union of South Africa forwarded to the International Labour Office a memorandum setting out the policy of the Union Government with regard to the Draft Conventions and Recommendations adopted by the first three Sessions of the International Labour Conference.

The letter draws special attention to the difficulty in ratifying many of the Conventions which arises out of the mixed nature of the population in the Union of South Africa, comprising as it does Europeans, coloured people, Asiatics and natives. "While," says the letter, "the Union Government might, and in many cases would, be prepared to extend to the European section of the population the principles incorporated in certain of the Conventions, such Conventions have to be ratified in their entirety and without any reservations, so that, in the absence of any special exemptions for the Union of South Africa similar to those extended to India and Japan in the 1919 Convention fixing the minimum age for the admission of children to industrial employment, ratification by the Union Government in most cases is not feasible."

Hours of Labour of Seamen

The Seamen's Section of the International Transport Workers' Federation, at a meeting held in Amsterdam on March 30, 1926, proposed, in agreement with the International Association of Mercantile Marine Officers, that a request should be made to the International Labour Conference to include in the agenda of its 1927 session a draft convention relative to hours of work of seamen.

Reference to Permanent Court of International Justice

The Council of the League of Nations, at the request of the Governing Body of the International Labour Office, has consented to a reference being made to the Permanent

Court of International Justice for an advisory opinion based on the question raised in the following resolution which was adopted by the Governing Body of the International Labour Office in January last:—

The Governing Body of the International Labour Office having before it a request of the Employers' Group for the submission to the Permanent Court of International Justice of the question of the jurisdiction of the International Labour Organization in regard to the personal work of the employer, decides, although the majority considers that the International Labour Organization is competent in the matter to which the request refers, and declaring that the present decision shall not constitute a precedent, to transmit the request to the Council of the League of Nations in application of Article 14 of the Treaty of Peace, and to state the question to be referred to the Court as follows:

"Is it within the competence of the International Labour Organization to draw up and to propose labour legislation which in order to protect certain classes of workers also regulates incidentally the same work when performed by the employer himself."

International Economic Conference

Representation has been given to the International Labour Organization on the Preparatory Committee for the International Economic Conference, which is to be held in accordance with a decision of the Assembly of the League of Nations. Technical organizations of the League itself will also be represented. Two members of the Governing Body of the International Labour Office have been invited to sit on the Committee as follows: Mr. Francois Hodac (Czechoslovakia) and Mr. Leon Jouhaux (France). Three representatives of the working classes were also chosen, after consultation with the workers' group of the Governing Body of the International Labour Office, as follows: Mr. Jan Oudegeest (Holland), Secretary of the International Federation of Trade Unions; Mr. Eggert (Germany), Member of the Executive Committee of the German Federation of Trade Unions; and Mr. Pugh, Member of the General Council of the British Trades Union Congress. The Council of the League of Nations also designated Mr. Pauwels, General Secretary of the Belgian Federation of Christian Trade Unions, to take part in the work of the Committee as an additional workers' representative.

"Occupation and Health"

Reference has been made previously (LABOUR GAZETTE for January, 1926, p. 35) to an encyclopaedia of hygiene, pathology and social welfare, which is being issued by the International Labour Office, entitled "Occupation and Health." A further instalment of this work has been issued containing eight brochures covering the following industries and processes, studied from the point of view of labour and industry: poisonous woods; calcium cyanide; superphosphate industry; ankylostomiasis or hookworm disease; rubber or india-rubber industry; asbestos; felt hat industry; methyl bromide.

"International Labour Review"

The April number of the *International Labour Review* contains, in addition to the usual summaries of official reports, statistics, bibliography, etc., the following special articles: "The American Labour Movement and Scientific Management," by Paul Devinat; "The Compilation of Wage Statistics," by Umberto Ricci; and "The New British Pensions Act: II." Among the "Reports and Enquiries" summarized in this issue are: Industrial Inspection in Germany in 1923 and 1924; Industrial Diseases; Analysis of Factory Inspection Reports, 1920-1922, III.

Ontario Workers International Association

President R. M. McIvor was re-elected president of the Workers' Educational Association of the University of Toronto at the annual meeting of the association in April. Other officers were: first vice-president, Principal W. L. Grant, Upper Canada College; second vice-president, James Cunningham, and Secretary-treasurer, Alfred McGowan. Mr. McGowan is a member of Local 91, International Typographical Union, and has been successful in creating a wide interest in the organization among trade unionists. A number of changes were made in the constitution of the association to give wider representation upon its executive council. It was decided also to establish an advisory council composed of prominent men and women. It was reported that the day classes in the university had been successful, and derived support chiefly from postal clerks and printers.

A note on the work of this organization was given in the LABOUR GAZETTE for November, 1925.

While the number of accidents reported to the Ontario Workmen's Compensation Board during the month of April was 4,449 as compared with 4,342 during April a year ago, the total benefits awarded were slightly lower, the figures for April this year being $475,199.70 as compared with $481,442.21 during April of 1925. The benefits awarded this month are greater than last month, the figures for March being $461,792.14, but the accidents reported have decreased from 5,215 in March to 4,449 in April.

DISPUTE IN THE COAL MINING INDUSTRY IN GREAT BRITAIN RESULTING IN A GENERAL STRIKE

A GENERAL strike in Great Britain on May 3 in sympathy with a strike or lockout of coal miners on May 1, followed the failure to secure a settlement of a dispute in July, 1924, when a similar strike was threatened, the dispute being referred to a Royal Commission, the Government giving subsidy to the coal mining industry in the meantime. The report of the Royal Commission on the Coal Mining Industry in Great Britain, appointed as a result of a proposed wage reduction in the summer of 1925, was summarized in the issue of the LABOUR GAZETTE for April, 1926, p. 393. The Commission had recommended that the subsidy granted by the Government for the nine months ending April 30, 1926, should be discontinued and that it would be necessary for the continuance of the industry that wages should be reduced or longer hours worked. The Commission also recommended certain improvements in the operation of the mines.

The Report of the Commission was published March 10 and the Premier requested the parties concerned to give it careful attention before taking any action. On March 24 the Premier announced that the Government had decided to accept the report and to enact such legislation as was required to carry it out, provided the operators and the coal miners would also agree to carry it out. In meeting the representatives of both parties the Premier stated that it was considered probable that some temporary financial assistance from the Government would be necessary to maintain suitable conditions in some of the districts. The miners and the operators met in conference on April 8 and the operators offered to negotiate a national agreement covering only principles and providing for the division of the surplus between the profits and the wages, to be followed by district negotiations on the minimum rates in each district. The miners called a conference of the districts on April 9 and resolutions were passed against accepting any wage reductions, against longer hours and against any district agreements. Negotiations between the two parties were resumed on April 13 but without result and the operators proposed to enter into district negotiations. On April 15 the operators announced they had decided to post notices that week-end ending existing contracts with their employees on April 30 but stated that they were not terminating negotiations and were drafting a national wage agreement for submission to the miners' representatives.

At this time a cessation of work appeared to be imminent. The maintenance men in the mines who are organized in the National Federation of Colliery Engineers, Boilermen and Mechanics, decided they would continue to work caring for the mines after a cessation of work provided no changes in wages or working conditions were made, and they were not required to perform or assist in the work of any other classes of employees. The Minister of Labour then interviewed representatives of the operators and the Premier met the representatives of the Trade Union Congress.

Negotiations were re-opened toward the end of April, members of the Government meeting both parties and stating that the Mines Department was drafting a plan for financial assistance to the industries in the form of a temporary loan the interest on which would be paid, one-third each by the Government, the operators and the miners. On April 30 the operators presented their final terms to the Government and the miners, namely: an eight-hour working day until the year 1929 when further terms should be determined by Commission; that the minimum rate of pay should be twenty per cent above the "basic" rate instead of thirty-three and one-third per cent. The miners refused these terms and negotiations broke down, the work ceasing shortly after midnight of April 30. On May 1 the Council of the Trades Union Congress decided to declare a general strike calling out at midnight, Sunday, May 2, railway employees, dockers and other transportation workers, and certain other classes including the printing and engineering trades. The Government then announced that this constituted a challenge to the authority of the Government and that the Government would not be a party to any further negotiations until the general strike was called off.

The number of miners involved in the cessation, termed by them a lockout, was reported as 1,120,000. On Monday, May 3, it was reported that about 2,500,000 other workers were involved in the general strike and a number of other industries were shut down for lack of coal or transportation facilities. Employees in these were reported to be entitled to payment from the unemployment insurance fund. The Government had arranged for volunteers to operate railway trains, busses, motor trucks,

etc., to some extent and to provide for the distribution of food and the necessaries of life. At the end of the first week in May other workers including butchers, flour millers, etc., came out and it was estimated that this brought the number involved up to 5,000,000 employees.

At noon on May 12 the representatives of the Trades Union Congress called upon the Premier and stated that the general strike was called off. It was arranged that the miners were to meet in conference to consider a basis of settlement, drawn up by Sir Herbert Samuel, the Chairman of the Commission on the Coal Mining Industry, after consultation with the chairman of the Trade Union Congress and several of the chief coal mine operators. The terms of this proposal as reported in press cables were that: the coal subsidy was to be renewed for such reasonable period of time as might be required; the creation of a National Wage Board including representatives of the miners, mine owners and neutrals, with an independent chairman, to revise the miners wages; no revision of the previous wages to be made, without sufficient assurances that re-organization of the coal industry as proposed by the Royal Commission was to be executed; a committee to be named by the Government with representation for the miners to prepare legislation and execute measures necessary to effect the reconstruction of the coal industry. It was also suggested that the revised wage scales should be on simpler lines than formerly and that they should not adversely affect the wages of the lowest paid men; that measures should be adopted to provide against the recruitment of of workers over eighteen years of age if unemployed miners were available and that workers displaced by the closing of uneconomic collieries should be transferred with Government assistance as recommended by the Royal Commission.

British Coal Industry in First Quarter of 1926

A statistical summary of the output, and of the costs of production, proceeds and profits of the British coal mining industry for the quarter ended December 31, 1925, prepared by the Mines Department, shows that at undertakings which produced 62,662,455 tons of saleable coal, or about 98 per cent of the total quantity raised in this quarter, 57,194,540 tons were disposable commercially.

The net cost, after deducting the proceeds of miners' coal, amounted to £49,882,278, equivalent to 17s. 5.32d. per ton. Of this sum £8,667,117 was met by subvention, leaving net costs of £41,215,161, or 4s. 4.95d. per ton, to be borne by the owners. The proceeds of commercial disposals amounted to £45,672,037, equivalent to 15s. 11.65d. per ton. There was thus a credit balance of £4,456,876, or 1s. 6.70d. per ton. An analysis by districts shows that there was a credit balance, after crediting subvention, in all districts, except Kent, where there was a debit balance of 1.09d. per ton. The credit balance ranged from 8.24d. in Durham to 2s. 8.75d. in Lancashire, North Staffordshire and Cheshire.

The number of workpeople employed was 1,041,997, and the number of man-shifts worked was 68,444,385. The average output per man-shift worked was 18.31 cwt., the average for the districts ranging from 11.74 cwt., in the Bristol coalfield to 20.42 cwt., in Yorkshire and the East Midlands. The average earnings per man-shift worked were 10s. 5.14d.

Unemployment in Germany

The latest returns show a total of over 2,000,000 unemployed in receipt of relief in Germany. Unemployment relief legislation has been amended in two particulars which will involve a considerable increase of expenditure for the State. One of these changes concerns the scale of unemployment relief, and the other the question of relief for the partially unemployed. The cost of unemployment relief to the Reich, the States and the municipalities is calculated at 141 million marks per month for recent months, of which some 40 million marks fall upon the Reich. The inclusion of partially unemployed persons, and the raising of the rate of relief will, in all probability increase this sum to 50 million marks per month. For 1926, the present budget provides in its unemployment chapter for a total sum of 100 million marks, of which 40 million marks is for unemployment relief, and 60 million marks for "productive relief"; but in view of the present crisis, and of the further charges which have been imposed on the Reich, this sum will certainly be considerably increased during the third reading of the budget.

MINIMUM WAGES FOR BRITISH FARM WORKERS

THE British Ministry of Agriculture and Fisheries has issued a report of proceedings for the year ending September 30, 1925, under the Agricultural Wages (Regulation) Act, 1924. This act provided for the establishment of local agricultural wages committees and of an Agricultural Wages Board, all these bodies being composed of representatives of the employees (nominated by the National Union of Agricultural Workers and the Workers Union). The Board includes five impartial members, including the chairman, appointed by the minister of Agriculture, the parties concerned being represented by eight members each. The committees include two impartial members appointed by the minister and a chairman appointed by the committee. The number of representative members on each committee is not specified, but taking the Agricultural Wages Committees together there are 48 chairman, 98 impartial members, 323 representatives of employers and 323 representatives of workers, making a total of 792 in all.

The Agricultural Wages Board, and the local committees, were established in October, 1924. The duties of the Agricultural Wages Committees in connection with the issue of proposals and orders under the act fall into three main classes, viz. (1) the fixing of minimum rates of wages for all workers in agriculture, including the fixation of overtime rates; (2) the definition of the employment which is to be treated as overtime employment; and (3) the definition of the benefits or advantages which may be reckoned as part payment of minimum rates of wages in lieu of payment in cash. The first duty of the committees is to fix minimum rates of wages for all workers employed in agriculture, but as it is essential that full publicity should be given to the proposals, several preliminary stages have to be gone through before an Order is finally made. When a committee has decided upon the rates of wages at least 14 days' notice has to be given of the proposals, and any objections to the proposals which may be lodged within that period must be considered by the committee before the rates of wages are finally fixed. The necessary notice is given by inserting an advertisement in several local newspapers quoting the main provisions of the proposals and by displaying copies of the proposals in full in all Post Offices and Employment Exchanges in the area of the committee. Copies of the proposals are also obtainable in all cases from the secretary of the committee. After the above procedure has been carried out the committee forward to the Agricultural Wages Board copies of the original resolutions, a certificate that due notice of the rates has been given in the local papers and a certified copy of the final resolution, and the Board then proceeds to make an Order giving effect to the committee's decisions.

The duty of fixing the date at which rates shall come into operation rests with the Wages Board to determine when making the Order giving effect to the committee's decision.

Minimum rates have been fixed in all cases, but 26 of the committees have fixed flat rates for all classes of adult male workers on farms, while in 21 areas special rates in addition to the general minimum rates have been fixed for workers employed in tending animals.

The general minimum weekly rate for adult workers during the summer of 1925 varied according to district from 29 shillings to 37 shillings and six pence. Male workers under 21 years of age receive from nine pence to 28 shillings a week, according to their age. The rates for women range from three pence to six pence per hour, and for young girls, according to age from 2 pence to five pence per hour.

Whilst the Agricultural Wages Committees have no power to fix hours of work there is naturally a tendency for the number of hours specified in the Orders as the basis of the weekly minimum wage to become the standard in the case of ordinary agricultural workers. The majority of the committees have made a distinction between summer and winter hours, winter usually being defined as November-February inclusive and summer the remainder of the year. In over half of the areas a week of 48 hours has been specified as the basis for the weekly wage in winter, whilst a further 10 committees have specified 50 hours, the remaining committees ranging up to 54 hours.

The act provides that committees shall, so far as possible secure a weekly half holiday for agricultural workers, and in 42 districts overtime rates are applied to all employment in excess of a specified number of hours.

The committees have all fixed overtime rates for male workers. Apart from special class workers for whom special rates have been fixed, all committees except eight have defined overtime employment as (*a*) all time in excess of the weekly hours on which the minimum rate is based; (*b*) Employment in excess of a specified number of hours on the weekly short day, and (*c*) all employment on a Sunday.

Power is given to committees under the act to fix minimum rates of wages for piecework if they consider it desirable, but up to the present none of the committees has considered it necessary to fix such rates.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF APRIL, 1926, AS REPORTED BY EMPLOYERS TO THE DOMINION BUREAU OF STATISTICS

EMPLOYMENT at the beginning of April showed practically no general change as compared with the preceding month, but the situation was more favourable than on April 1 in any of the last five years, in four of which a downward trend was indicated on that date. The 5,730 firms making returns for the date under review employed 749,223 persons, or 127 less than in their last report; the index stood at 91.4, as compared with 91.5 on March 1, and with 87.2, 89.3, 87.6, 80.6 and 84.1 on April 1, 1925, 1924, 1923, 1922 and 1921, respectively.

Manufacturing showed improvement and transportation and construction registered greater expansion than is usual at the time of year. On the other hand, logging camps reported the heavy losses always registered in the spring, and trade, largely owing to the unfavourable weather, was dull.

Employment by Provinces

Firms in Quebec and British Columbia recorded increased activity, but elsewhere there were declines.

Maritime Provinces.—Manufacturing and transportation employed a larger number of workers, but logging, mining and railway construction registered curtailment, partly seasonal in character; in the last named the losses were due to the release of men temporarily taken on to clear the tracks after the heavy snowfalls at the beginning of March. Statements were received from 491 firms having 62,184 employees, compared with 65,152 on March 1. Gains were noted on April 1, 1925, when the index number was rather lower.

Quebec.—Further improvement was indicated in Quebec, according to 1,241 employers whose staffs aggregated 209,810 persons, as against 205,995 in their last report. Iron and steel and other manufactures, mining, transportation and building construction were decidedly more active, while logging was seasonally slacker and there were decreases in railway construction gangs, which had been enlarged in the preceding month to cope with the snowfalls. Very much smaller gains were registered on April 1, 1925; the index then stood at 89.8, while on the date under review it was 95.7.

Ontario.—Pronounced seasonal reductions in logging camps offset increases in employment in manufacturing (notably in iron and steel, lumber and textile factories) and in construction. The payrolls of the 2,655 co-operating employers totalled 312,297 workers, compared with 316,086 on March 1. Although the decline also recorded at the beginning of April last year was smaller, employment then was in less volume.

Prairie Provinces.—Employment in the Prairie Provinces showed a smaller falling off than on April 1 in any year since the record was begun in 1920; 329 persons were let out from the working forces of the 726 reporting firms, who employed 92,892 workers on the date under review. Curtailment in logging operations largely accounted for the reduction. Manufacturing and construction, on the other hand, were decidedly busier. The situation was more favourable than on April 1, 1925.

British Columbia.—Manufacturing, especially of lumber products, transportation and construction reported heightened activity, the general gain being greater than on April 1 in any previous year of the record. The index number, at 108.3, was higher than on that date of any year since 1920. Statistics were received from 617 employers who had 72,040 persons on their payrolls, as compared with 68,896 on March 1.

Table I gives index numbers of employment by economic areas.

Employment by Cities

An analysis of the returns by leading industrial cities shows that firms in Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the other Border Cities and Vancouver reported greater activity, while in Winnipeg there was a slight reduction in personnel.

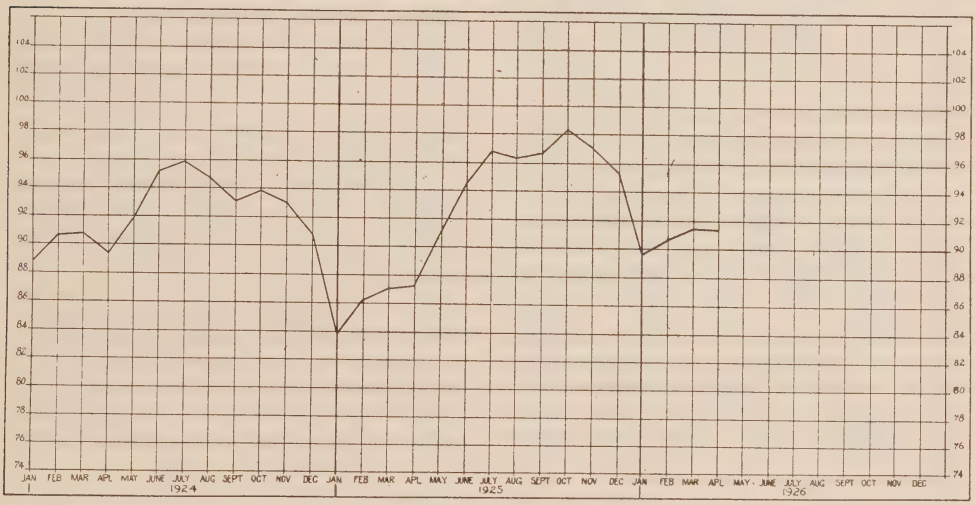
Montreal.—Manufacturing, especially of iron and steel products, afforded decidedly more employment, and construction and transportation were also busier. The working forces of the 683 reporting employers aggregated 105,667 persons, which was 4,132 more than their March staffs. This increase was nearly twice as large as that noted on April 1, 1925, when the index was lower.

Quebec.—Further gains (chiefly in manufacturing) were recorded in Quebec, where the firms making returns enlarged their payrolls by 199 persons to 7,988 at the beginning of April. Employment on the same date last year was in somewhat greater volume.

Toronto.—Continued improvement was shown in Toronto, according to statistics from 775 employers having 94,282 workers, as compared with 93,316 in the preceding month. Construction, manufacturing, trade and services reported heightened activity. The index was slightly higher than on April 1, 1925, when larger increases were registered.

Ottawa.—General but moderate additions were indicated by the 123 co-operating firms, whose staffs totalled 9,067, or 150 more than on March 1. Small losses were recorded at the beginning of April a year ago.

Hamilton.—Iron and steel plants afforded increased employment and there were minor gains in construction. Statements were received from 197 employers with 27,340 workers, as against 26,870 in the preceding month. The situation was very much better than on April 1 last year, when an insignificant gain was noted.



Windsor and Other Border Cities.—Automobile works in Windsor were busier, while little general change was shown in other industries. The working forces of the 79 establishments making returns aggregated 11,186 employees on April 1, as compared with 10,803 at the beginning of March.

Winnipeg.—Small increases in manufactures were offset by similar declines in trade and construction. The result was a decrease of 28 persons in the staffs of the 271 firms furnishing information, who had 24,943 workers. Employment was in greater volume than on April 1, 1925.

Vancouver.—Lumber mills showed decided improvement and other branches of manufactures also recorded gains, as did transportation, construction and telephone. A combined payroll of 24,434 persons was reported by the 225 employers whose returns were received and who had 23,298 workers in the preceding month. Practically no change was noted at the beginning of April a year ago, when the index was some 10 points lower.

Index numbers by cities are given in Table II.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Employment by Industries

Manufacturing.—Employment in the manufacturing industries continued to increase; the largest gains were in iron and steel, lumber, textile and building material plants, while the only pronounced reductions were in rubber works and were mainly due to a partial close-down in one factory. A combined working force of 437,938 persons was employed by the 3,708 reporting manufacturers, who had 429,912 operatives in the preceding month. The index number was higher than on April 1 of any of the last five years. Improvement was also shown on that date in 1925 and 1924.

Animal Products—Edible.—Employment in these industries showed the increase usually indicated on the first of April, but the gain this year was rather larger than in previous springs, and the index number was higher than on April 1 in any year since 1921. Fish canning and curing establishments in the Maritime Provinces and British Columbia afforded a greater volume of employment, while dairies and meat packing establishments were rather slacker. The 154 firms in the edible animal product group whose returns were tabulated reported 13,182 workers, as compared with 12,936 at the beginning of March.

Leather Products.—Moderate improvement in boot, shoe and glove factories was offset by a reduction in leather tanneries. The result was a decrease of eight persons in the staffs of the 193 establishments reporting, which had 17,158 employees on April 1. The index number was some three points higher than on the same date in 1925, when the situation was also practically unchanged.

Lumber and Products.—Seasonal increases rather exceeded those noted on April 1 of the last four years were indicated in the lumber group. Rough and dressed lumber mills registered most of the gain, but container and furniture factories were also somewhat busier. Statements were received from 692 manufacturers having 42,602 persons on payroll, or 1,913 more than at the beginning of March. Firms in Ontario, British Columbia and the Prairie Provinces recorded additions to staffs, while elsewhere further though slight curtailment was shown. Employment continued to be more active than on the corresponding date in 1925.

Plant Products—Edible.—Flour and other cereal mills, starch and glucose and fruit and vegetable canning plants reported a larger number of employees, but there were decreases in chocolate, confectionery, biscuit, coffee and spice factories. The working forces of the 301 co-operating manufacturers included 24,987 hands, as compared with 24,945 in the preceding month. Gains were made in the Maritime and Prairie Provinces, while there were contractions in Ontario and British Columbia. More pronounced expansion was reported on April 1, 1925; the index number then was practically the same as on that date of this year.

Pulp and Paper Products.—The trend of employment in pulp and paper mills was upwards, but printing and publishing shops were rather slacker. There was a net increase of 276 persons in the staffs of the 447 firms whose statistics were received, and who had 52,526 employees at the beginning of April. Additions to payrolls were made in Quebec, while the largest declines were in the Prairie Provinces. Employment was in greater volume than on April 1 last year, when improvement was also reported.

Rubber Products.—Chiefly owing to a temporary shut-down in a large factory in Quebec, there was a decline in employment in the rubber group on April 1; there were also however, slight reductions in Ontario. Returns were compiled from 30 firms having 12,384 persons in their employ, as against 13,176 at the beginning of March. Heightened activity was noted on the corresponding date in 1926, but the index number on April 1, 1926, was higher than on April 1 in any other year of the record.

Textile Products.—Further and larger additions to staffs were registered in textile factories; garment, personal furnishing, cotton, woollen, knitting and carpet factories reported improvement. Quebec, Ontario and the Maritime Provinces showed the greatest gains. The working force of the 507 establishments covered comprised 72,353 persons, or 1,150 more than at the beginning of March. Slightly greater expansion was noted on April 1, 1925, but the situation then was not quite so favourable.

Chemicals and Allied Products.—Further additions to staffs were noted in the chemical industries, chiefly in Quebec and Ontario; 110 firms throughout the Dominion enlarged their payrolls by 118 workers, to 6,471 on the date under review. Improvement was also noted at the beginning of April, 1925.

Clay, Glass and Stone Products.—Seasonal activity on a large scale was reported in building material factories, 110 of which increased their staffs from 7,923 workers on March 1 to 8,780 at the beginning of April. Brick plants reported the bulk of the gain, in which all provinces shared. The expansion noted on April 1 a year ago was somewhat smaller and the index number then was several points lower.

Iron and Steel Products.—Employment in iron and steel factories continued to expand, according to statistics from 632 manufacturers having 124,748 employees; this was 3,262 more than in their last report. Rolling mills, railway car, automobile, steel shipbuilding, heating appliances, general plant machinery and agricultural implement works afforded more employment. The most pronounced gains were in Quebec and Ontario, but all provinces shared in the upward movement. The situation was a good deal better than at the begin-

ning of April a year ago, when considerable improvement was also indicated.

Non-ferrous Metal Products.—Statements compiled from 105 employers in these industries showed that they had 13,836 workers, as against 13,532 in the preceding month. Smelters and refineries registered most of this increase, which was confined to Ontario and British Columbia. Increased activity was also reported on the corresponding date in 1925; the index number then was nearly 14 points lower than on April 1, 1926.

Logging

The number of persons on the payrolls of the 220 firms making returns declined from 30,593 on March 1 to 17,352 at the beginning of April. With the exception of British Columbia, all provinces shared in this contraction, which was, however, most extensive in Ontario. The decrease was slightly smaller than that reported on April 1 a year ago, when employment was greater.

Mining

Coal.—Continued losses were noted in coal mines in the Maritime Provinces, while in the Western coal fields little general change was shown. A combined payroll of 23,569 persons was employed by the 88 operators making returns, who had 24,036 workers in the preceding month. A much smaller reduction was registered on the corresponding date in 1925 and the index number then was higher.

Non-metallic Minerals (other than Coal).—The commencement of seasonal activity in asbestos mines, quarries and other divisions of this group caused an increase of 411 persons in the staffs of the 66 co-operating firms; they had 5,534 employees. Expansion on much the same scale took place on April 1 last year, but the situation then was less favourable.

Communication

Telephones afforded slightly more employment, while telegraphs showed no general change. The staffs of the 181 employers reporting aggregated 23,063 persons, as compared with 22,931 on March 1. Although larger gains were indicated at the beginning of April, 1925, the index number then was below its level at the date under review.

Transportation

Street and Electric Railways and Cartage.—Another slight increase in personnel was recorded in this division, in which 115 companies enlarged their payrolls by approximately 100 persons to 18,530 on April 1. The improvement took place in Ontario and British Columbia. A downward tendency was in evidence on the corresponding date of a year ago, when employment was somewhat less active.

Steam Railways.—There was a further but smaller decrease on steam railways, according to statistics from 102 employers, whose forces stood at 72,602 persons, as against 72,901 at the beginning of March. There was a more pronounced falling off in employment on April 1, 1925, on which date the index number was below its level at the time of writing.

Shipping and Stevedoring.—The commencement of seasonal activity in water transportation and around the harbours accounted for an increase of 1,307 persons in the staffs of the 46 firms from whom reports were received and who had 11,338 employees at the beginning of April. The gains which were widely distributed exceeded those noted on April 1 last year; the index number then was lower.

Construction and Maintenance

Building.—Considerable expansion generally was reported in construction work on April 1, the largest increases being in Quebec. Statements were received from 307 contractors, having 24,568 employees, or 4,475 more than on March 1. The index stood at 130.6, as compared with 99.7 on April 1, 1925, when less marked improvement was noted.

Highway.—There was a gain of 277 men in the working forces of the 83 firms reporting, who had 3,161 employees. Increases in Ontario, the Prairie Provinces and British Columbia more than offset reductions in Quebec. Curtailment was registered at the beginning of April of a year ago.

Railway.—Following the expansion that, owing to the heavy snowfalls in the eastern areas, was indicated on March 1, employment on railroad construction and maintenance declined largely. Thirty-one contractors and divisional superintendents reduced their forces from 31,243 in the preceding month to 30,285 on April 1. The Maritime Provinces and Quebec registered a decided falling off, but in Ontario and the four Western Provinces substantial improvement was noted. Employment on April 1, 1925, showed a contraction; it was then in much smaller volume.

Services

Activity in this division increased, according to 173 firms who had 13,914 employees as compared with 13,635 in their last report. The bulk of the gain, which was greatest in Ontario, was in laundries. Expansion was also shown on the corresponding date last year, but the situation then was rather less favourable.

NOTE.—The number employed by the reporting firms in Jan. 1920, is taken as 100 in every case. The "relative weight" in Tables I, II and III shows the proportion of employees in the indicated district or industry to the total number of employe es reported in all districts and industries on the date under review.

Trade

Slight reductions were made in both retail and wholesale trade, partly owing to the unfavourable weather that prevailed at the beginning of April. The 559 firms making returns reported 56,606 workers, as against 56,685 on March 1. Minor fluctuations in all provinces produced this result. Although employment in trade had increased on April 1, 1925, it was generally slacker than on the date under review, when the index stood at 96.2 as compared with 93.6, 91.0, 90.2, 88.6 and 92.0 on April 1, 1925, 1924, 1923, 1922 and 1921, respectively.

Table III gives index numbers of employment by industries as on March 1 and April 1, 1926, and as at April 1 of the last four years. The column headed "relative weight" shows the proportion that the number of employees reported in the indicated industry bears to the total number of employees reported in Canada by the firms making returns on April 1, 1926.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industry	Relative weight	April 1, 1926	Mar. 1, 1926	April 1, 1925	April 1, 1924	April 1, 1923	April 1, 1922

NOTE.—The relative weight column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING MARCH 31, 1926, AS REPORTED BY UNIONS MAKING RETURNS

UNEMPLOYMENT as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Percentage of unemployment as reported by trade unions—Quarterly 1916-17-18-19-20-21. Monthly 1922-23-24-25-26.

The present article on unemployment among members of local trade unions deals with the situation reported during the quarter ending March 31, 1926, and is based on returns of the locals reporting at the end of each month during the quarter. At the close of January the percentage of idleness stood at 8.1 per cent, or .2 per cent higher than in December. The situation remained unchanged in February, but during March improvement was reported, 7.3 per cent of the members being idle. Conditions were better throughout the quarter under review than in the corresponding period of last year, and at the end of the quarter there was an increase of 1.2 per cent.

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters from 1916 to 1921 inclusive, and by months from 1922 to date. During January the curve continued in the upward course of the last two months of 1925. In February the same level was maintained as in the previous month, but in March the projection was slightly downward.

During January, Quebec, Alberta and New Brunswick were the only provinces to register improvement over December. In British Columbia the situation was unchanged, and the declines in the remaining provinces slightly more than offset the gains. Nova Scotia reported the most substantial reduction, due to lessened activity in the coal mining regions. Workers in the manufacturing industries were considerably better employed, the textile and garment trades contributing largely to the increase. In the building trades nearly 6 per cent more idleness was recorded. Employment in the transportation industries also declined. Lumber workers reported no inactivity as compared with 80 per cent in December. Fishermen were decidedly slack.

The percentage of unemployment in February remained the same as that reported in January, though changes occurred throughout the various provinces and industries. New Brunswick, Quebec, Ontario and British Columbia unions were more fully engaged than in January, but in the other provinces there were counteracting reductions. Fishermen were much better employed than in January, but lumber workers and miners were considerably slacker. Employment in the manufactur-

ing industries was in greater volume, papermakers, tobacco, wood, garment, glass and iron and steel workers showing more activity, while printing tradesmen, textile and leather workers and bakers reported greater unemployment. The transportation industries improved slightly, and the building and construction trades registered no change.

During March employment in all provinces, except New Brunswick and Ontario, increased in comparison with February, and the reductions in these two provinces were slight. Fishermen, coal miners and lumber workers reported improvement. The situation in the manufacturing industries as a whole remained on the same level as in February, though within the group there were fluctuations. The building and construction trades indicated a considerably better situation, and employment in the transportation industries was also in greater volume.

Table I on this page summarizes the returns by provinces for each month from January, 1922, and Table III on page 490 shows the percentages of unemployment reported in the different groups of industries also by months from January, 1922.

During January of this year unions in the manufacturing industries registered over 6 per cent more employment than in the corresponding month of last year. The garment trades were much busier, and in the textile and iron and steel trades also, the gains were pronounced. Employment for unions in the building and construction trades was slightly better, and in the transportation industries the change was merely nominal. Fishermen reported more slackness as did coal miners, but the change among the latter was less pronounced.

The percentages of unemployment in the manufacturing and transportation industries were smaller during February than in the same month of last year. In the former group employment for iron and steel workers increased to quite an extent, and greater activity was also reported by printing tradesmen, woodworkers, papermakers, garment workers and hat and cap makers. Building and construction workers on the other hand were slightly slacker. Employment for retail clerks also declined. Coal miners reported a much larger percentage of idle members. The situation for lumber workers and loggers improved greatly, and more work was also afforded fishermen.

Increased activity was reported in the manufacturing industries during March, when compared with March of last year. Garment and glass workers registered very substantial gains, and employment for wood workers, printing tradesmen and iron and steel workers was also in greater volume. Miners continued to be slack. Lumber workers were much busier, and fishermen also reported greater activity. The situation in the building trades and among transportation workers was more favourable.

The accompanying tabulation, Table II, shows the percentage of unemployment for the months of January, February and March for all Canada, and also by provinces for the month of March. For this month reports were received from 1,547 locals, with a combined membership of 152,234 persons, of whom 11,069, or a percentage of 7.3, were unemployed.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

EMPLOYMENT OFFICE REPORTS FOR MARCH, 1926

SUBSTANTIAL increases were noticeable in the volume of business transacted by the offices of the Employment Service of Canada during the month of March, 1926, when the figures are compared with those of the preceding month and also with those for the corresponding period of last year. The percentage of gain in the former instance was over six per cent, while in the latter comparison it was much larger, showing an increase of 20 per cent, these gains in the average daily placements being largely due to an increased demand for farm labour in the Prairie Provinces.

A summary of the reports from the offices showed that the average number of applications reported during the first half of March, 1926, was 1,295, as compared with 1,203 during the preceding period and with 1,413 daily in the corresponding period in 1925. Applications for work during the latter half of the second half of March, in contrast with the ratio of 61.6 and 66.8 during the same period of 1925. The ratio of placements to each 100 applications during the period under review was 63.0 and 66.8, as compared with 56.4 and with 59.6 during the corresponding month last year.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - - - - - - - - Placements o—o—o—o—o—o

The accompanying chart shows the trend of employment since January, 1924, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. The curves of vacancies and placements in relation to applications rose steadily during the month and at the close of the period, the levels shown by both were considerably higher than those registered at the close of the corresponding period of 1925. The ratio of vacancies to each 100 applications was 69.1 and 77.6 during the first and

month registered 1,488 daily, in contrast with 1,506 during the latter half of March a year ago. Employers notified the Service of a daily average of 895 vacancies during the first half and 1,156 during the latter half of the month under review, as compared with a daily average of 870 and 1,006 vacancies during the month of March, 1925. Vacancies offered to the Service during the latter half of February this year averaged 826 daily. The Service effected an average of 816 placements during the first half of March, of which 526 were in regular employment and 290 in work of one week's duration or less, as compared

with a total average placement during the preceding period of 756 daily and with 798 daily during the first half of March, 1925. During the latter half of the month under review placements averaged 995 daily (684 regular and 311 casual) as compared with an average of 898 daily during the corresponding period a year ago.

During the month of March, 1926, the offices of the Service referred 26,036 persons to vacancies and effected a total of 24,521 placements. Of these the placements in regular employment were 16,408, of which 12,692 were of men and 3,716 of women, while the placements in casual work totalled 8,113. The number of vacancies reported by employers numbered 17,764 for men and 10,038 for women, a total of 27,802, while the applications for work totalled 37,664, of which 26,983 were from men and 10,681 from women.

The following table gives the placements to date in the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926 (3 months)	40,435	21,252	61,687

Nova Scotia

Opportunities for employment as indicated by orders listed at employment offices in Nova Scotia during the month of March declined over 8 per cent from February, but were nearly 28 per cent in excess of the corresponding month last year. Placements during March were nearly 11 per cent lower than in the preceding month, but nearly 20 per cent higher than during March, 1925. The most noteworthy gains over last year were recorded in services, although all groups except farming, where practically no change was recorded, showed improvement under this comparison. Industrial divisions in which most of the placements were effected during the month were manufacturing industries 72; logging 66; services 286; and trade 108. Regular employment was secured for 164 men and 92 women during the month.

New Brunswick

There was a decline of nearly 24 per cent in the number of orders received by New Brunswick offices during March when compared with the preceding month but a gain of almost 22 per cent in comparison with the corresponding month last year. Placements were nearly 25 per cent less than during February, but nearly 21 per cent higher than in March, 1925. Gains over March last year were recorded in services, transportation and manufacturing, offset in part by reductions in logging and construction and maintenance. Industrial groups in which most of the placements were effected during the month were construction and maintenance 64 and services 511, of which 421 were in personal and household services. Placements in regular employment numbered 98 of men and 82 of women.

Quebec

Orders listed at the employment offices in Quebec during the month under review were over 39 per cent higher than during February, and nearly 81 per cent in excess of March, 1925. Placements during March were nearly 34 per cent above February and over 48 per cent higher than in March last year. All industrial divisions, except logging and services participated in the gains over the corresponding month last year, those in the manufacturing industries and construction and maintenance being the most pronounced. Placements by industries included manufacturing 154; logging 72; construction and maintenance 527; services 519 and trade 82. During the month 816 men and 483 women were placed in regular employment.

Ontario

Ontario offices were notified of nearly 16 per cent more vacancies during March than in the preceding month, but over 2 per cent less than during the corresponding month last year. Placements were over 11 per cent in excess of February, but over 7 per cent less than during March, 1925. The declines from last year all occurred in the highway division of construction and maintenance and more than offset the gains which were recorded in all other industrial groups. In farming, orders were about 10 per cent higher, but placements nearly 14 per cent less. Industrial groups in which most of the placements were effected during the month were manufacturing 1,327; logging 1,229; farming 779; transportation 223; construction and maintenance 1,783; services 3,309, of which 2,239 were of household workers and trade 344. During March 4,433 men and 1,139 women were placed in regular employment.

Manitoba

Employment opportunities as indicated by orders listed at employment offices in Manitoba were over 56 per cent greater during

March than in the preceding month, but about 2 per cent less than in March last year. Placements were nearly 46 per cent higher than in February and over 4 per cent above March, 1925. Increased farm and bush placements were mainly responsible for the gains in placements over March last year. Industrial groups in which most of the placements were effected during the month were manufacturing 101; logging 334; farm 1,058; services 1,538 and trade 167. Placements in regular employment during the month numbered 1,457 men and 644 of women.

SASKATCHEWAN

There was a substantial increase in the number of orders received at Saskatchewan offices during March when compared with the preceding month, a gain of nearly 149 per cent being recorded. Vacancies were also nearly 41 per cent higher than in March last year. The number of placements effected during March was nearly 124 per cent higher than in February and almost 33 per cent more than during March, 1925. Increased demand for farm workers was mainly responsible for the gains over the corresponding month last year. Farm placements numbered 1,958 and placements in the services group 838. Regular employment was secured for 1,970 men and 563 women during the month.

ALBERTA

During March Alberta offices received over 85 per cent more orders than in February and nearly 41 per cent more than during March last year. The percentage of gain in placements was one per cent less in both comparisons than that recorded in vacancies. Increased farm orders were mainly responsible for the gains over March last year, although increases were also recorded in the manufacturing industries, construction and maintenance and services. These gains were offset in part by reductions in bush orders and placements. Industrial groups in which most of the placements were effected during the month included manufacturing 255; logging 108; farming 1,508; construction and maintenance 293 and services 751. During the month of March regular employment was secured for 2,096 men and 446 women.

BRITISH COLUMBIA

Opportunities for employment as indicated by orders listed at British Columbia offices during March were over 59 per cent better than in February and nearly 13 per cent in excess of March last year. Placements increased nearly 64 per cent over February and were more than 13 per cent above March, 1925. Improvement was general, all industrial divisions except construction and maintenance participating in the gains recorded. Placements by industrial groups included manufacturing 452; logging 420; farming 360; transportation 209; construction and maintenance 647 and services 1,068. During the month under review 1,658 men and 267 women were placed in regular employment.

Movement of Labour

During March, 1926, the offices of the Employment Service of Canada made 16,408 placements in regular employment, of which 10,282 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,568 were granted the Employment Service reduced transportation rate, 995 going to points within the same province as the depatching office and 573 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of $4, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Offices in Quebec issued 13 certificates, all interprovincial, and of these the Quebec City office granted 8 to bushmen travelling to North Bay. From Montreal, 3 moulders were sent to Kingston, one cook to Timmins and one farm worker to Saskatoon. In Ontario 358 certificates were granted, 248 provincial and 110 interprovincial. Provincially, the transfers included 172 bushmen and 59 railway and construction labourers going to Northern Ontario points. In addition, Ottawa transferred one cook to Sudbury, Fort William, one civil engineer to a point within its own zone, North Bay, 5 carpenters to Guelph, and 2 painters to Timmins, and Sudbury, 4 labourers to Timmins and 3 miners and one edgerman within its own zone. Of those travelling to employment in another province Toronto sent one electrical worker to the Quebec zone and the remainder were shipped by Sudbury, Port Arthur, North Bay and Cobalt to Hull. These included 42 bushmen, 14 railway and construction workers, 51 station workers and 2 surface men. The certificates issued in Manitoba totalled 614, the Winnipeg offices effecting all the transfers, 347 of which were provincial and 267 interprovincial. To Brandon were despatched 284 farm labourers, 28 farm

*14 Placements effected by offices since closed.

domestics, 4 cooks and 6 hotel and household workers, to Dauphin, one saw mill labourer and to the Winnipeg zone 22 farm labourers, one farm housekeeper and one cook. The interprovincial movement included 107 farm hands, going to various points in Saskatchewan, 2 farm generals, 3 housekeepers, one cook, one waitress and one painter to Regina, one kiln setter and 4 farm domestics to Saskatoon, 2 farm generals to Estevan, one general to Swift Current, one farm housekeeper to Moose Jaw, 2 farm labourers, 132 bush workers, five cooks and 3 waitresses to the Port Arthur zone, and one farm labourer to Edmonton. Saskatchewan offices issued 169 certificates all provincial, 139 of which were for farm labourers and 16 household workers. Moose Jaw despatched 2 rock pickers to points within its own zone; Prince Albert sent one carpenter to Regina and 9 saw mill labourers to points within its own zone. Regina transferred one mechanic to Moose Jaw, and Saskatoon one labourer to North Battleford. The offices in Alberta granted 229 certificates, 176 to workers travelling to employment within the province and 53 to other provinces. Of the latter, Saskatoon received 47 farm labourers and 2 housekeepers and North Battleford one farm labourer, all from Edmonton. Swift Current received one cook and Saskatoon two farm labourers from Calgary. The provincial movement included 15 mill hands, 60 farm labourers, 2 blacksmiths, one plasterer, 2 engineers, one plumber, 12 bushmen, 3 labourers, 4 cooks, one janitor, 2 teamsters, 2 clerks, one electrician, 2 electric welders, one porter, one housekeeper and one chambermaid going from Edmonton to points within its own zone and 3 farm labourers travelling to Lethbridge, 10 farm hands and one labourer to Calgary and one farm labourer to Drumheller also from Edmonton. From Calgary 26 farm hands and one housekeeper and one porter were transferred to Drumheller, 2 farm labourers to Lethbridge, one bushman and 5 farm labourers to Edmonton and 12 farm labourers, one farm housekeeper and one ranch rider within the Calgary zone. In British Columbia 185 special rate certificates were issued, 55 to points within the province and 130 to other provinces. Vancouver transferred one engineer and one electrician to Cranbrook, one farm worker, one miner and three labourers to Kamloops, one cook to Revelstoke, 4 farm labourers, 3 flunkeys, 2 sawyers, and one dogger to Penticton, one miner, 3 sawyers and 3 engineers to Prince George, one engineer to Nelson and 2 cooks, 2 labourers and one engineer within the Vancouver zone. Nelson sent 2 miners to Cranbrook and 2 bushworkers and one labourer within its own zone. Prince Rupert despatched one miner, Penticton 2 farm labourers and Prince George 11 bushmen, one cook, one lumber piler, one edgerman and one tail sawyer to their respective zones. In addition one railway foreman was transferred from Prince George to Kamloops. Except for 2 cooks travelling from Vancouver to Calgary and Drumheller respectively all the interprovincial transfers were for farm hands including 35 to Alberta, 91 to Saskatchewan and 2 to Manitoba.

Of the 1,568 workers who benefited by the Employment Service reduced rate 762 were carried by the Canadian National Railways, 781 by the Canadian Pacific Railway, 17 by the Temiskaming and Northern Ontario Railway, 6 by the Pacific Great Eastern Railway and 2 by the Kettle Valley Railway.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1926

THE volume of business transacted by the offices of the Employment Service of Canada during the quarter January to March, 1926, was somewhat less than that effected during the corresponding quarter of 1925 as there was a decrease of 4 per cent in the vacancies offered and of 6 per cent in the placements effected in regular and casual employment. This reduction in both instances was due to lessened activity in highway construction, and was partially offset by substantial gains in both vacancies and placements in all the other industrial divisions. All provinces, except Ontario, Manitoba and British Columbia showed increases in both vacancies and placements. Although Manitoba showed a decrease in positions offered, placements registered were higher, while Ontario and British Columbia were the only provinces where losses were shown in both cases. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period January to March, 1926.

From the chart on page 491 which accompanies the article on the work of the employment offices for the month of March, it will be seen that the trend of the curves representing the ratio of vacancies and placements to applications has been generally upwards since the first of the quarter, and

though a lower level was registered during January, 1926, than in the same month of last year, yet the upward trend was so steadily maintained throughout the three months of the current year that at the close of the quarter, the ratios of both vacancies and placements to applications were higher than those shown at the close of March, 1925.

positions offered 899 and of placements effected 812, in contrast with a daily average of 1,469 applications, 942 vacancies and 869 placements in regular and casual employment during the first quarter of 1925.

During the three months, January to March, 1926, the offices of the Service reported that they had made 65,665 references to positions and had effected a total of 61,687 placements, of which 40,435 were in regular employment and 21,252 in casual work. Of the placements in regular employment, 31,229 were of men and 9,206 of women, while casual work was found for 11,348 men and 9,904 women. A comparison with the same period of 1925 shows that 66,025 placements were then made, of which 39,143 were in regular employment and 26,882 in casual work. Applications for employment during the period under review were received from 74,747 men and 28,319 women, a total of 103,066, in contrast with a registration of 111,624 during the same period of 1925. Employers notified the Service during the first quarter of 1926 of 68,324 positions, of which 44,555 were for men and 23,769 for women, as compared with 71,557 opportunities for work offered during the corresponding period of 1925.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of March.

BUILDING PERMITS ISSUED IN CANADA DURING MARCH, 1926

THE value of the building authorized in 60 cities during March, standing at $10,538,423, was 48.3 per cent greater than the total of $7,104,343 in the preceding month, and 22.3 per cent above the aggregate of $8,613,732 in March, 1925. The total for the month under review was larger than for March of any other year since 1920, with the exception of 1922, when the projected building in the cities was estimated to cost $10,595,196. At the same time, the index number of wholesale prices of building materials was lower in March, 1926, than in any other month of those years.

Some 50 cities furnished detailed statements showing that they had authorized the construction of nearly 1,200 dwellings valued at approximately $5,300,000 and of over 1,900 other buildings estimated to cost more than $4,800,000. In February, permits were issued for some 600 dwellings and 1,000 other buildings, valued at approximately $2,570,000 and $4,200,000, respectively.

As compared with February, 1926, all provinces except Quebec and Saskatchewan registered increases in the value of the permits issued; in those two provinces there were losses of 22.3 per cent and 15.6 per cent, respectively. Ontario cities reported the largest absolute gain of $2,800,960, or 135.0 per cent, but the proportionate increases in New Brunswick, Manitoba and Alberta were greater.

All provinces except Manitoba recorded higher aggregates of building permits issued than in March, 1925. The increases of $871,335 or 56.7 per cent in Quebec and $441,427, or 10.0 per cent, in Ontario were the most pronounced absolute gains, but New Brunswick, Saskatchewan and Alberta registered larger percentage increases.

Toronto and Winnipeg reported greater totals of proposed building than in either February, 1926, or March, 1925. In Montreal, there was a decline in the former and an increase in the latter comparison. On the other hand, Vancouver reported building at a higher estimated cost than in the preceding month, but there was a slight falling off as compared with the same month of last year. Sydney, Fredericton, St. John, Quebec, Westmount, Chatham, Fort William, Galt, Guelph, Hamilton, Niagara Falls, the Townships of York, Welland, Windsor, Sandwich, Brandon, Moose Jaw, Saskatoon, Calgary, Edmonton, Lethbridge, Nanaimo, Point Grey, South Vancouver and Victoria reported higher building permits than in either February, 1926, or March, 1925.

Cumulative Record for First Quarter, 1926. The table following shows the value of the building authorized during the first quarter of each year since 1920. The average index numbers of wholesale prices of building materials during the first three months of those years are also given. (1913=100).

Year	Value of permits	Average indexes of wholesale prices of building materials
	$	
1926	22,251,454	152·3
1925	19,934,360	153·8
1924	18,000,669	167·3
1923	19,441,159	164·9
1922	18,643,948	161·1
1921	13,426,227	207·8
1920	18,866,351	208·1

It will be noted that the aggregate for March, 1926, was higher than in any other year since 1920, except 1922, when it was 0.5 per cent greater; the index number of wholesale prices of building materials was then, however, nearly 9 points higher. The total for the first quarter of this year was the largest on record for the 60 cities, being 11.6 per cent greater than in 1925, the previous high level, and 65.7 per cent higher than in 1921, when building was at its lowest ebb in these six years and when building costs had only commenced to decline from the peak of 1920.

The accompanying table gives the value of the building permits issued by 60 cities in February and March, 1926, and March, 1925. The 35 cities for which records are available since 1910 are marked with asterisks.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest:—

Manufacturing: Pulp and Paper

FORT WILLIAM, ONTARIO.—THE FORT WILLIAM PAPER COMPANY AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS.

This agreement is the same as that for Sault Ste. Marie, which follows.

SAULT STE. MARIE, ESPANOLA AND STURGEON FALLS, ONTARIO.—SPANISH RIVER PULP AND PAPER MILLS, LIMITED, AND LOCAL UNIONS OF THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS.

Agreement to be in effect from May 1, 1926, to May 1, 1927, and from year to year subject to thirty days' notice in writing.

Questions of jurisdiction shall conform to the regulations as fixed by the American Federation of Labour.

When hiring men the company shall give preference to union members in good standing; when laying off men, preference shall be given to employees belonging to the union, among equally efficient employees. A new man shall be instructed to join the union within fifteen days. All permanent employees shall maintain membership in good standing in the union.

Operation of paper mills shall be not more than six days per week, from 8 a.m. Monday to 8 a.m. Sunday. No work Sunday except washing screens, oiling dryer boxes, and repair work, except as set forth or mutually agreed. Work on Sunday, time and one-half. Manual labour on machines such as operating machines and putting on clothing shall be done only by union members except when helped by swipers, labourers or mechanics, when necessary.

Paper makers may be required to come on duty at 7.30 a.m. Monday to prepare machines to make paper at 8 p.m., but not to put on new wires, nor take paper over machines.

Day workers' hours, eight per day, six days per week. Overtime, time and one-half. Not less than four hours' pay to an employee called out for repair work.

Hours for tours to change, 8 a.m., 4 p.m. and midnight, except as agreed. Overtime, at other than tour work, time and one-half. On vacancies after two weeks, time and one-half. Work on holidays, time and one-half.

Wages to be as per 1926 paper makers' standard classification and wage schedule as adopted by the Montreal Conference, March 9 to 13, 1926.

No strikes or lockouts during life of agreement.

Rules governing mill employees shall become a part of the agreement.

Members putting on wires other than regular shift, six hours' time.

Matters for adjustment are to be reported to the General Superintendent in writing if required; if reply is unsatisfactory to men, question shall be referred to the general manager, or his assistant; if no agreement is reached, question shall be referred to the president of the International Brotherhood, or his representative, and on failure of these to agree within fifteen days case shall be left to arbitration, one man being selected by each party, and a third to be selected by them within fifteen days, or, if they fail to agree, by the Minister of Labour, decision to be final and binding.

If it is believed a man has been unjustly discharged or laid off, facts shall be reported to the General Superintendent; if discharge is found unjust, employee shall be reinstated.

Matters for adjustment shall be taken up by the company with officers and adjustment committee of the union, or by the general manager and the international president, and matter shall be referred to arbitration if necessary.

The mutual interest board shall continue in operation, consisting of an equal representation of management and men, to consider matters of mutual interest, exclusive of wages.

The schedule of rates of wages shows the minimum speed classification for each paper machine. Above the minimum speed, rates for boss machine tenders, machine tenders, back tenders and third hands shall increase or decrease according to the 1926 standard classification and wage schedule. In case of machines upon which rates of pay in effect at time agreement goes into force would be reduced, by application of the 1926 classification and wage schedule, decrease will not be made except through reduction in machine speeds, provided that the rate paid will be three cents more than called for by the classification.

When machines make hanging paper, news rates, in effect when machines go on hanging, plus five cents.

Schedule of rates for paper machine room: Soo, 4th hand, 63 and 65 cents; 5th hand, 60, 63 and 64 cents; Espanola, 4th hand, 53, 61 and 62 cents; 5th hand, 52, 60 and 61 cents; rewinderman, 73 cents. Sturgeon Falls, 4th hand, 62 cents; news, 52 cents; on hanging, 57 cents; 5th hand, 57 cents; news, 58 cents; on hanging, 54 cents. Hand cleaner, 71 and 73 cents; handyman, 64 cents.

Board Mill (Soo), machine tender, 90 cents; back tender, 68 cents; 3rd hand, 54 cents; 4th hand, 45 cents; 5th hand, 44 cents; beater engineer, 68 cents.

SAULT STE. MARIE, ESPANOLA AND STURGEON FALLS, ONTARIO.—SPANISH RIVER PULP AND PAPER MILLS, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, THE INTERNATIONAL ASSOCIATION OF MACHINISTS, AND THE INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS.

Agreement to be in effect from May 1, 1926, to May 1, 1927, and from year to year thereafter, subject to not less than thirty days' notice of change prior to May 1.

Provisions for jurisdiction and membership are as in previous agreement.

Pulp mills to be on a standard week of not more than six days per week, unless necessary to provide stock. Work between 8 a.m. Sunday and 8 a.m. Monday, double time.

Day workers, eight hours per day, six days per week. Overtime, time and a half. Overtime for workers not covered by the schedule, regular rate for first two hours, thereafter, time and one-half. Employees called out and required to go on duty for repair work to have not less than four hours' pay. Sunday work, not less than four hours' pay.

Hours for tour workers to change at 8 a.m., 4 p.m. and midnight, except as agreed.

Tour workers, overtime other than tour work, time and one-half.

Holidays, time and one-half.

No strikes or lockouts shall occur during the life of this agreement.

An apprentice system is in effect in the mechanical trades throughout the mills, where youths may learn trades. Wages as follows: 1st year, 35 per cent of journeymen's minimum rate; 2nd year, 45 per cent; 3rd year, 65 per cent; 4th year, 85 per cent.

In event of cessation of work or a strike through failure to renew this agreement, unions shall supply competent men to do the following work: electrical work, unloading of incoming freight purchased prior to cessation of work; power house operation; operation of dam or regulation of river flows; and any other work of a similar nature; until it is agreed to recommence operations.

Common labour shall not be included in the wage schedule, rate for this class being set by the company, being for the three months commencing May 1, 1926, at 40 cents per hour; company to discuss any alteration with representatives of this class of labour.

The mutual interest board shall continue in operation.

Rates of wages—Soo Mill, per hour: slasher and wood yard, sawyer, powder man, 63 cents; wood room, assistant tour foreman, 46 cents; knife setter, 44 cents; knife grinder, 43 cents; knife barker, chipperman, splitterman, 44 cents; oiler, 43 cents. Groundwood Mill: head grinderman, 61 cents; assistant head grinderman, 47 cents; stone sharpener, 63 cents; grinderman, wood loader, 45 cents; screens and deckers, 47 cents. Groundwood wet press: pulp handler foreman, 50 cents; wet machines, 43 cents. Sulphite mill: cook, 88 cents; first helper, 61 cents; second helper, blow pits, 46 cents; limestone foreman, 45 cents; acid makers, 73 cents; sulphur burners, 50 cents. Wet press sulphite: tour foreman, 69 cents; oilers, 43 cents; stock runners, 46 cents. Rogers wet machine, back, 44 cents; weighers, 59 cents; screen tenders, 42 cents; sulphite machine men, 43 cents; oil and glue maker, 45 cents. Beater room: helper, broke beater man, 44 cents. Finishing room: head finisher, 46 cents; finisher's helper, car preparer, core makers, 42 cents; car loaders, 46 cents; weighers, 60 and 63 cents; truckers, 44 cents; head core maker, 60 cents; tier, 44 cents; cullerman, 59 cents. Boiler house: water tenders, 66 cents; fireman, 62 cents; firemen's helpers, 47 cents; ashmen, cleaner, 44 cents; head coal handler, 64 cents; oilers, 43 cents; steam engineers, 71 cents. Yard and tracks: teamster, 44 cents; train crew conductor, train crew engineer, 70 cents; train crew firemen, 52 cents; train crew, 1st brakeman, 54 cents; train crew 2nd brakeman, 52 cents; crane engineer, 81 cents; crane fireman, 44 cents; track foreman, 50 cents. Sample testers, 44 cents. Board Mill: beater helper, 42 cents; oilers, 43 cents; labourer foreman, 62 cents. Electrical: motor tender, 80 cents; repairman, armature winders, 72-82 cents. Mechanical: machinists, carpenters, blacksmith, pipe fitters, pattern makers, painters, millwrights, saw filer, roll grinder, cylinder coverer, tinsmith, 72-82 cents; helpers, 60-69 cents. Paper Machine Room: tour oilers, 61 cents; cleaners, 42 cents.

Rates are also given for these and certain other classes at Espanola and Sturgeon Falls.

Manufacturing: Printing and Publishing

HAMILTON, ONTARIO.—HAMILTON PUBLISHERS' ASSOCIATION AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, NO. 176.

Agreement to be in effect from April 1, 1925, to December 31, 1926.

Union members are to be employed on presses except as provided for in apprentice regulations.

Hours, 8 per day; 7½ per night.

Wages, journeymen pressman, minimum wage per week, April 1, 1925, $39; December 1, 1925, $40; January 1, 1926, $40.50.

Apprentices are to be registered and to take the correspondence course of the International Union in their fourth year.

The agreement specifies the minimum number of men to be employed on each type of press.

Overtime, to 10 p.m., time and one-half. Thereafter and Sundays and holidays, double time.

If competent help cannot be furnished by the union, employers may secure a man who may be employed until a union man is supplied for the position.

The head pressmen of a web pressroom shall hire and discharge all help over which he has charge.

Construction: Buildings and Structures

WINDSOR, ONTARIO.—EMPLOYERS CONTRACTORS' ASSOCIATION, AND INTERNATIONAL ASSOCIATION OF OPERATIVE PLASTERERS AND CEMENT FINISHERS, NO. 345.

Agreement to be in effect from May 1, 1926, to May 1, 1927.

Wages, per hour, $1.50. Hours, 8 per day, 4 on Saturday, 44 per week.

Overtime, and work on Sundays and holidays, double time. No work on Labour Day.

Members hired to go out of town to work shall receive full board and expenses. Members working outside the city limit shall receive car fare both ways and travelling time.

No person shall help a journeyman except an apprentice or employer. Only members of the association shall act as foremen. They must have power to hire and discharge, and receive at least $1 extra per day.

On jobs done by contractors who are not local men, fifty per cent of employees must be members of the local union.

Transportation and Public Utilities—Street Railways

TORONTO, ONTARIO.—TORONTO TRANSPORTATION COMMISSION WITH AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISION NO. 113, FOR SUCH OF THE RAILWAY EMPLOYEES AS ARE MEMBERS THEREOF, AND WITH ITS OTHER EMPLOYEES IN THE SAME CLASS WHO ARE NOT MEMBERS THEREOF.

Agreement to be in effect from March 31, 1926, until March 31, 1928.

This agreement is similar to that published in the LABOUR GAZETTE for March, 1925, on page 304, in effect from March 31, 1924, to March 31, 1926. A few minor clauses have been omitted, and an item of 5 cents extra per hour for one-man bus drivers, and one of 56 cents per hour for operating trackmen added. Various clauses of the agreement are specified as applying to bus drivers in addition to conductors, motormen, etc.

Water Transportation

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND THE ASSOCIATION OF THE SYNDICATED LONGSHOREMEN OF THE PORT OF MONTREAL.

Agreement to be in effect from April 13, 1926, until December 31, 1926.

This agreement is similar in most respects to that in effect during the previous year, summarized in the LABOUR GAZETTE for April, 1925.

As one of the days when double time is paid, St. Jean Baptiste Day has been substituted for Victoria Day.

Hours per day, 7 a.m. to 12 noon and 1 p.m. to 6 p.m.—62 cents per hour; hours per night, 7 p.m. to 11 p.m. and midnight to 5 a.m.—72 cents per hour.

For handling the following cargoes the rate shall be 77 cents per hour for day work and 87 cents for night work: nitrate, bulk sulphur, full cargoes of china clay and fertilizer, full cargoes of coal, shifting bunker coal and handling frozen goods.

For the following work, 77 cents per hour for day work and 87 cents for night work: grain trimming and bagging. Running of grain in the pipes to be stopped when men go down in the hold to work; two men to stand on deck during the time if necessary.

In case of work performed in open 'tween deck where there is grain running in a hatch connected with the said open deck, the whole gang is to be paid 77 cents per hour, day, and 87 cents per hour, night. This not to apply to men working other cargo in open hold.

To men ordered out on Sunday and not commencing work, a minimum of one hour's pay at prevailing rate.

Mails and baggage to be handled on Sundays, week days at all times and holidays (except Labour Day).

at the prevailing rate, time to count from the time the men are ordered.

The following note is attached to the above clause in the new agreement: The companies agree under reservation to this clause in view of section 125, chapter 66, of the Revised Statutes of Canada, which states as follows: "125. Every one who abandons, or obstructs, or wilfully delays the passing or progress of any mail, or any car, train, locomotive engine, tender, carriage, vessel, horse or animal employed in conveying any mail on any railway, public highway, river, canal, or water communication is guilty of an indictable offence."

The remainder of the agreement is unchanged.

MEDICINE HAT, ALBERTA.—CITY OF MEDICINE HAT AND THE CIVIC EMPLOYEES' FEDERAL LABOUR UNION NO. 46.

Agreement to be in effect from January 1, 1926, until December 31, 1926, and thereafter except when terminated by thirty days' notice.

The city council is to appoint a committee upon proper notice being given to receive a grievance committee from the union. No discrimination against union members. Heads of departments are not to use their positions to solicit donations from employees. Men are to receive pay for public holidays except hourly or daily employees. Wages not exceeding one month are to be paid in cases of sickness after twelve months' service, on production of certificate. Members may have leave of absence without pay to attend union conventions as delegates. Copies of resolutions of the council affecting civic employees shall be forwarded to the secretary. Senior men shall be given preference for promotion if efficient. Reasonable expenses to be allowed for out-of-town work.

Hours for outside labour, 8 a.m. to 5 p.m. from October 1 to April 1, and 7.30 a.m. to 5 p.m. from April 1 to October 1, with one hour for lunch. Saturday, 7.30 a.m. to 1 p.m.

After one year all outside men (except daily men), fourteen days holidays. No employee on leaving the service or on being discharged shall be entitled to two weeks' wages in lieu of holidays.

Overtime, time and one-half for men employed by the hour or day.

Monthly men working overtime on Saturday afternoons from April 1 to November 1 to be allowed time off for same when convenient.

Former employees who are returned soldiers will be given preference of employment if efficient, other former employees next. Returned soldiers, resident in Medicine Hat at time of enlistment, and engaged by city on discharge may count service overseas as service with the city. If alteration in hours, pay or conditions comes up during the year, council will confer with a committee of the union.

The remaining provisions of the agreement are similar to those in effect in the previous year, summarized in the LABOUR GAZETTE for October, 1925, page 1026.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING April the Department received information regarding three contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed thereunder. In two of these contracts the general fair wages clause is inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

The remaining contract contained a schedule of rates and hours based on the current standards of the districts in these respects. The schedule is given below.

The following general labour conditions sanctioned by the Fair Wages Order in Council appear in the three contracts above referred to:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen

employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contract containing schedule of wages and hours.—Alterations, additions and renovations to factory buildings at H.M.C. Naval Dockyard, Esquimalt, B.C., and repairs to the jetty, boat houses, landing stages, gangway and Bickford Tower, Esquimalt, B.C. Names of contractors, John Harkness and Hy. Harkness, Victoria, B.C. Date of contract, February 8, 1926. Amount of contract $1,275 for alterations, etc., to factory building and $1,249 for repairs to jetty, etc. A fair wages schedule is inserted in the contract as follows:—

Trade or class of labour	Rates of wages, not less than	Hours per day
	$ cts.	
Bricklayers and masons	9 00 per day	8
Carpenters and joiners	7 00 "	8
Concrete workers	0 55 per hour	8
Electrical workers	7 50 per day	8
Labourers	0 45 per hour	8–9
Lathers	0 07 to 0 09 per yard	8
Lathers	8 00 to 10 00 per day (According to efficiency)	8
Marble setters	9 00 per day	8
Marble setters' helpers	5 50 "	8
Painters and Glaziers	6 50 "	8
Plasterers	9 00 "	8
Plumbers and steam fitters	8 00 "	8
Plumbers and steam fitters' helpers	5 00 "	8
Roofers	6 50 "	8
Sheet metal workers	8 00 "	8
Structural steel workers	9 00 "	8
Teamsters one horse and cart	7 00 "	9
Teamsters two horses and wagon	9 00 to 10 00 per day	9

Contracts containing the general Fair Wages Clause.—Supply and installation of interior fittings (in oak) in the Post Office at South Nelson, N.B. Name of contractors, Geo. Burchill & Sons of South Nelson, N.B. Date of contract, March 15, 1926. Amount of contract, $850.

Supply and installation of interior fittings (in oak) in the Post Office at Chipman, N.B. Name of contractors, the Office Specialty Manufacturing Company, Limited, of New Market, Ontario. Date of contract, March 23, 1926. Amount of contract, $945.

POST OFFICE DEPARTMENT

The following is a statement of payments made in April, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of orders
	$ cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals	878 21
Making and repairing rubber stamps, daters, etc.	203 46
Making up and supplying letter carriers' uniforms, etc.	3,659 66
Stamping pads, ink, etc.	83 14
Mail bag fittings	7,396 57
Scales	593 50
Repairs to letter boxes, etc.	19 25

FAIR WAGES ON PROVINCIAL PUBLIC WORKS IN MANITOBA

IN compliance with the provisions of the Fair Wage Act of Manitoba of 1916 (chapter 121 with amendments) the Bureau of Labour, which is in the Department of Public Works, has issued new fair wage schedules of rates of wages and maximum number of working hours in connection with the execution of public works, the schedules to be in effect from May 1, 1926, to April 30, 1927. The first schedule relates to the city of Winnipeg and a radius of thirty miles around it, and the second to the rest of the province.

The Fair Wage Board is composed of two representatives of the employers and two for the workers with an official of the Department of Public Works. The schedules are drawn up after public hearings at which evidence is heard from parties interested, the rates being based on union or current rates in the district affected.

The changes in the rates in the following tables, as compared with the tables in last year are as follows: Bricklayers' rate per hour changed from $1.25 to $1.35; stonemasons' rate from $1.25 to $1.35; marble setters' rate from $1.20 to $1.30 and mosaic and tile setters from $1.15 to $1.25; plasterers from $1.07½ to $1.25; wood, wire and metal workers from 80 cents to $1; plumbers, $1 to $1.12½; steamfitters from $1 to $1.12½; operating engineers on construction (*a*) engineers in charge of machines of three or more drums from $1 to $1.10, (*b*) engineers in charge of double drum machines from 90 cents to $1, (*c*) engineers in charge of single-drum machines from 85 to 95 cents, (*d*) fireman from 60 to 65 cents; painters from 75 to 85 cents; asbestos workers, (*a*) from 80 to 90 cents, (*b*) first-class improvers from 70 to 75 cents, and carpenters from 85 cents to $1. The rate for teamsters in the province outside of Winnipeg is not stated.

Last year's schedule was printed in the LABOUR GAZETTE for June, 1925.

	Winnipeg		Manitoba	
	Rate per Hour	Hours per Week	Rate per Hour	Hours per Week
	$ cts.		$ cts.	
1. *Labourers:*—				
(*a*) Skilled—Comprising the following:—Unloading, piling, and handling face brick, cut stone, architectural terra cotta, marble (real or imitation), roofing slate, plaster castings, ornamental bronze and iron, interior joinery, laying drain tiles, mixing concrete by machinery, puddling concrete in forms or levelling and finishing in slabs, bending and placing reinforcing material, movable scaffolding and runways	.50	50	.45	50

Sea School for Boys

The Gravesend Sea School near London, since it was established in 1919 has turned out 5,623 seamen. This institution takes boys without any previous experience of the sea, and in ten weeks' training teaches them knotting, splicing, heaving the lead, steering, preparing and serving mess and every other practical duty connected with employment at sea, on deck, or in the victualling department.

Three weeks of the course are spent on the training ship *Triton,* where sea conditions are reproduced and duties aboard ship are carried out by the students. The course is recognized by the Board of Trade of Great Britain as a month's service at sea, and with a year's service as an ordinary seaman at the prevailing wage, and after three years' sea service he is entitled to the rating and pay of able seaman. The school also finds places for its graduates.

The local units of the Amalgamated Civil Servants of Canada at Winnipeg, Moose Jaw, Fort William and elsewhere recently adopted resolutions recommending certain changes in the Dominion Civil Service Superannuation Act, the suggestions being that the age of voluntary retirement be reduced from 65 to 55 years, or on completion of thirty years of service, whichever is the earlier; that the ten-year forfeiture clause (under which contributions must be paid for ten years before any benefits are drawn) be amended to provide for the return of all contributions, with interest, in the event of withdrawal from the service at any time; and that on the death of a contributor who has no dependents, the whole of the contributions and interest be refunded to such person as he may designate, or in the event of no person being named his next of kin.

Fatal Industrial Accidents in Great Britain

The number of workpeople, other than seamen, reported as killed in the course of their employment in Great Britain and Northern Ireland during March, 1926, was 234, as compared with 227 in the previous month and with 241 in March, 1925. Fatal accidents to seamen numbered 68 in March, 1926, as compared with 175 in the previous month; comparable figures for March, 1925, are not available.

The accidents shown by industries are as follows:—Railway service, 24; mines, 110; Quarries (over 20 feet deep) 6; places under factory act, 91; seamen, 68; total, including seamen, 302.

PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight. The weekly family budget in terms of retail prices was somewhat lower, while the Dominion Bureau of Statistics index number of wholesale prices was slightly higher. In the former the decline was mainly due to a seasonal fall in the price of eggs, while in the latter the upward movement was mainly due to higher prices for grains, flour and other milled products, and potatoes.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was $11.36 at the beginning of April, as compared with $11.46 for March; $10.56 for April 1925; $10.16 for April 1924; $10.64 for April 1923; $10.26 for April 1922; $12.68 for April 1921; $15.99 for April 1920; $16.92 for June 1920 (the peak); $12.57 for April 1918; and $7.51 for April 1914. Besides the seasonal decline in the prices of eggs less important declines occurred in beef, veal, mutton, pork, milk, cheese and flour. Prices of butter, rice, evaporated apples, potatoes and tea were slightly higher. Including the cost of fuel and rent with that of foods, the total budget averaged $21.64 at the beginning of April, as compared with $21.77 for March; $20.82 for April 1925; $20.58 for April 1924; $21.21 for April 1923; $20.66 for April 1922; $23.31 for April 1921; $25.34 for April 1920; $26.92 for July 1920 (the peak); $20 for April 1918; and $14.32 for April 1914. Fuel was again somewhat lower, due to a further decline in the price of anthracite coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was slightly higher at 160.6 for April, as compared with 160.1 for March; 156.5 for April 1925; 151.1 for April 1924; 156.9 for April 1923; 153.7 for April 1922; 179.5 for April 1921; 251.0 for April 1920; 256.7 for May 1920 (the peak); 198.1 for April 1919; and 195.0 for April 1918. The index number was slightly higher, due mainly to the higher prices for grains, flour and other milled products, and potatoes. There were more declines than increases, but many of the former were slight. Thirty-four prices quotations were higher, sixty-nine were lower, and one hundred and thirty-three were unchanged.

In the grouping according to chief component material six of the eight main groups were lower, one was higher, and one was unchanged. The group which advanced was the Vegetables and their Products, mainly because of higher prices for grains, flour and other milled products, and potatoes. The Animals and their Products group, and the Fibres, Textiles and Textile Products group both declined substantially, the former due to lower prices for fresh meats, butter, cheese, eggs and fish, which more than offset the advances in the prices of live stock and smoked meats, and the latter due mainly to declines in the prices of cotton, cotton fabrics, silk, wool, jute and hessian. The other groups which declined were the Iron and its Products group, due to lower levels for pig iron and wire nails; the Non-ferrous Metals and their Products group, due to lower prices for copper, lead, silver, tin and spelter; the Non-metallic Minerals and their Products group, due to a decline in the price of cement; and the Wood and Wood Products group. The Chemicals and Allied Products group was practically unchanged.

In the grouping according to purpose, both consumers' goods and producers' goods advanced. In consumers' goods declines in fish, fresh meats, butter, cheese and eggs, were more than offset by increases in the prices of flour, potatoes, smoked meats, tea and foreign fruits. In producers' goods materials for the textile and clothing industries, for the fur industry, for the leather industry, for the metal working industries, and for the chemical using industries declined, while materials for milling and other industries, the meat packing industries, as well as miscellaneous producers' materials advanced.

In the grouping according to origin raw or partly manufactured goods advanced, higher levels for grains, potatoes, live stock, foreign fruits and tea, more than counterbalancing the lower levels for hides, fresh meats, eggs, textiles, rubber and non-ferrous metals. Fully or chiefly manufactured goods declined, increases in the prices of flour and smoked meats, being more than offset by declines in dairy produce, linseed oil, cotton fabrics, hessian, nails, and non-ferrous metal products. Domestic farm products were substantially higher, while articles of marine origin and articles of mineral origin were somewhat lower. Articles of forest origin were practically unchanged.

The Canadian Bank of Commerce index of wholesale prices of imports fell from 158.98 for March to 157.58 for April. That for exports rose from 162.93 for March to 164.81 for April. The combined index of both imports and exports rose from 160.95 for March to 161.19 for April.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, declined in April, being 177.8, as compared with 179.5 for March, 174.7 for April 1925; 268.4 for April 1920; and 115.1 for April 1914. The index number of twenty food stuffs was slightly higher at 200.9 for April, as compared with 199.3 for March. The index of twenty manufacturers' goods was down from 159.7 for March to 154.7 for April.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on 'Prices and Price Indexes 1913-1924," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Prices of beef for the most part were somewhat lower, sirloin steak averaging 28.8 cents per pound in April, as compared with 29 cents in March; rib roast 21.8 cents in April and 21.5 cents in March; and shoulder roast 15.7 cents in April and 15.8 cents in March. Veal declined in most localities, averaging 18.7 cents per pound in April, as compared with 19.3 cents in March. Mutton also was slightly lower, averaging 29.4 cents per pound. Both fresh and salt pork declined, the former averaging 29.6 cents per pound in April and 29.7 cents in March, and the latter 27.2 cents per pound in April and 27.4 cents in March. In fresh fish cod steak, halibut and whitefish advanced. Salt herrings and salt cod fish also averaged slightly higher. Lard was steady.

Eggs showed a substantial seasonal decline, fresh averaging 39.8 cents per dozen in April, 46.4 cents in March, 50.5 cents in February and 62.8 cents in January, and cooking averaging 34.8 cents in April and 38.7 cents in March. In milk lower prices were reported from Halifax, St. John, St. Hyacinthe, Montreal and Lethbridge. Butter showed a general advance, dairy averaging 46.3 cents per pound in April and 45.6 cents in March, and creamery averaging 51.5 cents in April, as compared with 50.7 cents in March. Cheese averaged slightly lower at 32.6 cents per pound.

A decline in the price of bread was reported from Drumheller. Soda biscuits were slightly lower, averaging 18.3 cents per pound in April, as compared with 18.4 cents in March. Flour was down from 5.4 cents per pound in March to 5.3 cents in April. Decreases occurred in most localities. Rice was slightly higher, averaging 11 cents per pound. Canned tomatoes declined from an average of 16.7 cents per tin in March to 16.4 cents in April. Canned peas and corn were also slightly lower, the former averaging 17.5 cents per tin and the latter 16.4 cents. Potatoes showed little change at an average of $2.95 per ninety pounds, increases in some localities being offset by declines in others. Evaporated apples rose from an average of 19.6 cents per pound in March to 19.9 cents in April. Prunes showed little change. Raisins and currents were slightly higher. Marmalade was down from an average of 73.3 cents per four-pound tin in March, to 70.4 cents in April. Corn syrup averaged slightly lower at 45.5 cents per five-pound tin, as compared with 46 cents in March. Sugar was unchanged in the average. Coffee and tea averaged slightly higher. Pepper continued to advance, averaging 54.3 cents per pound.

Anthracite coal averaged lower at $17.76 per ton in April, as compared with $18.03 in March, and $18.93 in February. Lower prices were reported from Windsor, N.S., Fredericton, Sherbrooke, St. John's, P.Q., Montreal, Kingston, Belleville, Peterborough, Toronto, St. Catharines, Hamilton, Galt, Cobalt and Fort William. Bituminous coal also declined, averaging $10.31 per ton in April, as compared with $10.52 in March. Coke declined from an average of $14.62 per ton in March, to $14.10 in April. Wood was practically unchanged. Coal oil was slightly higher in the average at 30.3 cents per gallon, as compared with 30.1 cents in March. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to higher levels during April, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaging $1.56⅔ per bushel, as compared with $1.48⅓ in March. The low price for the month was $1.50¼ at the beginning, and the high $1.62⅛ about the middle. An improvement in export demand, reports of damage to Argentine crops, and a smaller exportable surplus than was expected were said to be the causes of the advanced prices. Towards the end of the month, however, prices were somewhat lower. Coarse grains, for the most part, moved in sympathy with wheat. Western oats rose from 47⅓ cents per bushel to 53 cents; Western barley from 58½ cents to 63½ cents; and flaxseed from $1.91¾ per bushel to $1.96. Flour at Toronto advanced from $8.63 per barrel to $8.81. Shorts were up from $31.25 per ton to $32.85. Lemons and oranges advanced, the former being up from $4 per box to $4-$4.50, and the latter from $5.50-$5.75 per box to $5.75-$6.75. Tea continued to advance. Pepper was down from 38 cents per pound to 35 cents. Potatoes again advanced, the price at Montreal being $3.94 per bag, as compared with $3 in March; the price at Toronto in April was $4-$4.25 per bag, as compared with $3.20 in March; at Winnipeg $1.72 per bushel, as compared with $1.34½ in March; and at New Brunswick $8.10 per barrel, as compared with $6.75 in March. The downward movement in rubber continued, Ceylon declining from 58⅓ cents per pound to 51 cents. Turpentine advanced from $1.47 per gallon to $1.53. Linseed oil declined slightly, being 97 cents per gallon, as compared with

$1.01 in March. Western cattle at Winnipeg rose from $6.66 per hundred pounds to $6.78, and choice steers at Toronto from $7.12½ per hundred pounds to $7.25. Hogs at Toronto rose from $13.77 per hundred pounds to $13.90. Sheep were up from $8 per hundred pounds to $8.20. Beef hides declined from 10-10½ cents per pound to 9½-10 cents, and calf skins from 15-16 cents per pound to 14-15 cents. Sole leather was down from 40 cents per pound to 38 cents. Veal fell from 22 cents per pound to 19 cents. Bacon advanced from 32½-33½ cents per pound to 35 cents. Butter was substantially lower, creamery at Montreal being 38 cents per

(Concluded on page 517)

(Continued from page 509)

pound, as compared with 48 cents the previous month, while at Toronto the price also declined, being 46 cents per pound, as compared with 49 cents in March. The decline was said to be due to the large supply of Australian butter. Cheese at Toronto declined from 22 cents per pound to 21 cents. Eggs continued to decline, fresh at Montreal being 36-37c. per doz., as compared with 40-42 cents in March. Raw cotton at New York was slightly lower, averaging 19¼ cents per lb., as compared with 19⅓ cents in March. Several lines of cotton fabrics were also lower, denim being down from 61 cents per pound to 56 cents; ticking from 62.7 cents per pound to 57 cents; shirting from 75 cents per pound to 74 cents; and Saxony from 85 cents per pound to 76¾ cents. Raw silk fell from $6.45 per pound to $6.05. Wool also showed a decline of 1 cent per pound. Jute fell from $13.22 per hundred to $12.46, and hessian from $12.25 to $11.75. Iron and steel markets were slightly weaker, following recent declines in the United States. Basic pig iron declined from $23 per ton to $22; steel bars from $2.03 per hundred to $1.98; wire nails from $3.60 per keg to $3.55. Non-ferrous metals were lower, copper being down from $16 per hundred to $15.80; copper sheets from 21¾ cents per pound to 21½ cents; lead from $8.60 per hundred to $8.50; tin from 66 cents per pound to 65¼ cents; spelter from $8.85 per hundred to $8.67½; and silver from 65⅝ cents per ounce to 64⅓ cents. Cement showed a substantial decline, the price at Montreal being $1.62 per barrel, as compared with $1.97 in March.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The trend of wholesale prices and of the cost of living continued downward in the principal countries, with the exception of France where the cost of living during the first quarter of 1926 was higher than for the previous quarter.

Great Britain

Wholesale Prices.—The *Statist* index number (in continuation of Sauerbeck's figures), base period 1867-77=100, was 126.1 for March, a decline of 1.4 per cent for the month. Both foodstuffs and materials declined. All food groups declined, animal food falling 2.8 per cent. Minerals and sundries showed declines and textiles rose slightly.

The Board of Trade index number, on the base 1913=100, was 144.4 in March, a decline of 3.0 per cent. Foods declined 5.0 per cent and non-foods 1.8 per cent. All groups were affected by the downward movement; cereals declined 2.7 per cent; meat and fish, 3.7 per cent; other foods, 8.2 per cent; cotton, 5.0 per cent; other textiles, 2.5 per cent. Other groups fell slightly.

The *Times* index number for March was 143.7 (1913=100), a decline of 1.5 per cent from the level for February. The index for food prices was 0.9 per cent lower for the month at 146.7, and industrial materials prices were 1.8 per cent lower at 142.0. Of the eight groups of commodities, only two were higher in March, namely cereals and meat and fish. Other food declined 4.4 per cent. Iron and steel declined 0.5 per cent and other metals and minerals, 2.0 per cent. Cotton declined 4.0 per cent and other textiles 1.9 per cent. Other materials declined 0.8 per cent.

Belgium

Wholesale Prices.—The index number of the Ministry of Industry and Labour, on the base April, 1914=100, was 556 for February, a decline of one per cent from the January level. Then were declines shown by food products, fertilizer, textiles, resins, hides and leather and raw rubber, and advances by fuels, tar, and clay products. Other groups remained almost stationary.

Cost of Living.—The index number of retail prices for the Kingdom, April 1914=100, was 521 for March, a decline of 5 points from the February level. The index number of cost of living, on the base 1921=100, for a working class family of the lowest category was 138.71 in March, a decline of 2.1 points from the February level. Foods were responsible for the decline but other groups remained unchanged. The cost of living index for a middle class family declined 2.5 points, owing almost entirely to a decline in foods.

Finland

Cost of Living.—The index number of the Ministry of Labour, July 1914=100, rose from 1149.0 in January to 1156.9 in February and

fell back to 1152.9 in March. Rent, newspapers and taxes showed no change during the period. Foods and clothing rose and lighting and fuel and tobacco declined slightly.

France

WHOLESALE PRICES.—The index number of *Statistique Générale,* on the base July 1914=100, was 645 in March, a decline of 4 points from the February level. Foods rose slightly on the whole and materials declined slightly, no marked change being shown by any group.

COST OF LIVING.—The index number of cost of living, Paris, on the base 1914=100, compiled by committees of studies on the cost of living rose to 451 in the 1st quarter of 1926 as compared with 421 in the last quarter of 1925. Food rose 8.2 per cent to 473; heat and light rose 11.2 per cent to 447; clothing rose 2.7 per cent to 524 and sundries rose 1.1 per cent to 495. Rent was unchanged at 220.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100 (gold prices), was 118.3 for March, almost the same as the February figure, 118.4. Since the autumn of 1925 all groups have shown a decline, with the exception of farm products. Of these the rise in cereals was alleged to be due to the holding back of supplies, the granting of credits and the improved position of agriculture owing to favourable weather. The index of farm products rose from 111.3 at the beginning of March to 121.9 at the middle of April, while industrial materials during the same period fell from 128.5 to 126.7. Goods produced continued to rise, reaching 118.1 on April 14, while goods imported declined to 150.9 at the same date.

COST OF LIVING.—The index number showed little change during March, being 138.3 (1913-14=100), as against 138.8 in February. Food and clothing declined slightly, sundries rose slightly and heat and light and rent showed no change.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was in January 658.88; in February, 654.74; and in March, 640.30. Foods declined from 681.32 in January to 681.15 in February and 672.13 in March, and industrial materials declined from 649.66 January to 643.94 in February and 627.38 in March.

COST OF LIVING.—The index number of cost of living, Rome (new series) issued by the Municipal Statistical Office, was 156.83 for February (July 1920=100). This was a decline of 0.5 per cent, following an upward movement extending over several months. Foods and clothing declined slightly and heat and light noticeably; sundries rose slightly, and rents were stationary.

The index number of 21 articles of food in the principal towns of Italy rose from 644.9 in October to 651.5 in November, 652.7 in December, and 658.3 in January, 1926.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics for March was 151.5 (1913=100). This showed a decline of 2.3 per cent. Declines were shown by all groups except house furnishing goods, which remained unchanged.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was $12.8619 on May 1, the lowest recorded on the first of any month since September 1, 1924. The decrease for the month was 1.8 per cent. Eight groups of commodities declined, three advanced and two remained unchanged. Responsibility for the net decline rested with the miscellaneous, textile, hide and leather and naval stores groups.

The *Annalist* recently published a new weekly index of wholesale commodity prices covering the period from January 6, 1925. It has been linked with the United States Bureau of Labour Statistics monthly wholesale commodity price index for January, 1925, and the new index therefore records the weekly movements of wholesale prices relative to average prices in 1913. The monthly averages of weekly index numbers were as follows: 1925, January, 160.0; February, 160.8; March, 161.2; April, 156.0; May 155.0; June, 158.3; July, 162.3; August, 161.2; September, 158.9; October, 157.9; November, 158.4; December, 157.8. 1926: January, 156.6; February, 155.5; March, 151.1; April, 150.9.

COST OF LIVING.—The index number of the National Industrial Conference Board was 169 in March (July, 1914=100) as against 170 in January and February. In March foods fell two points to 160 and fuel and light fell three points to 166. Other groups showed no change, with shelter at 177, clothing at 176 and sundries at 175.

The index number of the Special Commission on the Necessaries of Life, of the cost of living in Massachusetts, on the base 1913=100, was 163.9 in March compared with 166.6 in February, a decrease of about $1\frac{5}{8}$ per cent. This decline was due to lower food and fuel prices. Foods dropped about 3 per cent, and fuel and light, dropped $7\frac{2}{5}$ per cent because of the resumption of normal anthracite receipts and the announcement of Spring prices in March.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1926

THE number of fatal accidents recorded in the Department as occurring during the first quarter of 1926 was 204, there being 68 in January, 63 in February, and 73 in March. Reports are received from the Workmen's Compensation Boards, the Board of Railway Commissioners, and certain other official sources; from certain large employers of labour; and from the correspondents of the LABOUR GAZETTE. Reports of accidents are also taken from newspapers.

The fatal accidents by industrial groups occurred as follows: transportation and public utilities, 49; mining, non-ferrous smelting and quarrying, 37; manufacturing, 29; construction, 25; logging, 23; agriculture, 21; service, 7; fishing and trapping, 4; trade, 3; unclassified, 6.

The supplementary list of accidents occurring in 1925 contains 22 accidents not previously recorded, which, if added to the total, 1,044, given in the tables in the LABOUR GAZETTE for March, raises the total for 1925 to 1,066. By months these occurred as follows: April, 1; July, 1; August, 2; September, 1; October, 1; November, 7; December, 9. By industrial groups, there were 8 in logging; 8 in transportation and public utilities; 2 in manufacturing; 2 in services; 1 in trade; and 1 unclassified.

Four victims of accidents occurring in 1925 died in 1926, and these four accidents are included in the supplementary list for 1925. One victim, a labourer in a factory in Manitoba, was drawn by a conveyor into machinery, suffering a broken back on September 14, 1925, and died on January 6, 1926. The second was a longshoreman in Vancouver, who fell and twisted his knee on November 11, 1925, dying of septic arthritis on January 13, 1926. The third, a hydrographic surveyor, fell through a hatch on a survey steamer in July, 1925, and died on March 15, 1926, of injuries. The fourth was a firefighter in Manitoba, who was injured while fighting a fire on December 27, 1925, and died of cerebral hemorrhage on January 3, 1926.

The tables showing various details of the accidents follow.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1926

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Farmer	Aberdeen, Sask.	Jan. 2	28	Caught in saw when cutting wood.
Farmer	La Sarre, Que.	" 2	.....	Drawn by belt into woodcutting machine.
Farmer	Elora, Ont.	" 22	43	Struck by falling tree limb.
Farmer	Coaldale, Alberta	Feb. 15	.....	Struck by plank while moving house.
Farmer	Loreburn, Sask.	" 18	.....	Kicked by horse.
Farmer's son	Waterville, Que.	" 22	Under 21	Struck by falling tree.
Woman farmer	Waldhof, Ont.	" 22	.....	Gored by a bull.
Woman farmer	Valcartier, Que.	Mar. 2	65	Kicked by a cow, while milking.
Farmer (boy)	Rouleau, Sask.	" 6	15	Crushed between hay rack and barn door when team ran away.
Farmer	Canton, Ont.	" 8	30	Struck by falling tree.
Farmer	Clearview, Alberta	" 9	60	Fell from ladder.
Farmer	Sherbrooke, Que.	" 10	70	Fell from loft.
Farmer	Mitchell, Ont.	" 10	37	Kicked by horse.
Farmer	Onslow, N.S.	" 13	54	Struck by train.
Farm hand	Wexford, Ont.	" 15	24	Struck by falling heavy milk can.
Farm hand	Birmingham, Sask.	" 20	28	Stood on double-tree and team ran away, throwing him off.
Farmer	Willoughby, Ont.	" 20	.....	Struck by falling tree.
Farmer's wife	Kintonell, Sask.	" 23	51	Lost in snow storm when driving cows.
Farm hand	Markstay, Ont.	" 23	45	Crushed under falling load of ties.
Farmer	Matheson, Ont.	" 26	.....	Explosion of blasting material.
Farmer	Mission, B.C.	" 31	.....	Premature explosion; struck by tree stump.
FISHING AND TRAPPING—				
Fisherman	Riverport, N.S.	Feb. 4	17	Washed overboard in gale.
Trapper	Barwick, Ont.	Mar. 9	.....	Accidentally shot.
Trapper	McGregor River, B.C.	" 24	.....	Killed by bear.
Fisherman	Halifax, N.S.	" 24	40	Fell overboard, drowned.
LOGGING—				
Blacksmith	Alleo, B.C.	Jan. 3	50	Run over by logging train.
Labourer	Collin's Inlet, Ont.	" 6	19	Struck by log.
Logger	St. Henri, Que.	" 13	37	Struck by falling tree.
Logger	Granby, Que.	" 16	52	Struck by falling tree limb.
Bushman	Spurfield, Alberta	" 23	.....	Septic meningitis resulting from bruise.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1926—Con.

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—*Con.*				
Labourer	Glendale, Ont.	Jan. 23	26	Struck by falling tree.
Bushman	Collin's Inlet, Ont.	" 27	21	Crushed by logs.
Labourer	St. Gerard, Que.	" 28	26	Struck by falling tree.
Bushman	Osaquan, Ont.	Feb. 1	40	Crushed by a tree.
Bushman	Rock Bay, B.C.	" 10	70	Explosion of dynamite charge.
Log driver	Courtenay, B.C.	" 15	29	Drowned; fell from log.
Logger	York Co., N.B.	" 17	24	Struck by falling tree.
Logger	Duckmeadows, B.C.	" 20	34	Struck by falling tree.

Logger	Frederick Arm, B.C.	" 17	.....	Struck by falling tree.
Logger	Haney, B.C.	" 23	56	Struck by falling tree.
Logger	Flanders, Ont.	" 24	.....	Crushed between logs.
Logger	Rouyn, Que.	" 26	.....	Struck by falling tree.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous mining:				
Drill runner	Cobalt, Ont.	Jan. 5	.....	Explosion, short fuse.
Helper	Cobalt, Ont.	" 5	.....	
Labourer	Cobalt, Ont.	" 13	34	Struck by rock.
Shaftman	Schumacher, Ont.	" 17	50	Struck by rock falling from bucket.
Miner	Montauban, Que.	" 23	.....	Premature blast.
Miner	Mayo, Y.T.	Feb. 9	45	Fell under tractor.
Labourer	Timmins, Ont.	" 9	37	Struck by bucket.
Miner	Britannia Beach, B.C.	" 9	27	Without apparent cause, let go his plugger drilling machine and fell.
Miner	Bestel, Ont.	" 9	21	Explosion.
Switchman (on Nickle Co. railway)	Coniston, Ont.	" 26	46	Slipped from footplate of shunting engine and was run over.
Shaftman	South Porcupine, Ont.	" 27	29	Struck by timber falling down shaft.
Shaftman	Schumacher, Ont.	Mar. 14	33	Fell down shaft.
Foreman (on Nickle Co.'s locomotive)	Copper Cliff, Ont.	" 20	23	Crushed by locomotive owing to faulty coupling.
Miner's Helper	Framboise, N.S.	" 24	32	Struck by falling timber.
Labourer	Coniston, Ont.	" 29	42	Threw water on red hot slag pot which exploded; piece struck head.
Miner	Timmins, Ont.	" 30	36	Shovelling ore, struck missed charge of dynamite.
Coal mining:				
Miner	Edmonton, Alberta	Jan. 21	32	Struck by rock from roof.
Miner	Brulé Mines, Alberta	" 29	46	Caught by slip of coal.
Miner	Stellarton, N.S.	Feb. 1	31	Hit on head by falling chuck.
Miner	Wayne, Alberta	" 2	37	While loading coal, top bench came down striking him on head.
Miner	Springhill, N.S.	" 3	.....	Crushed by fall of stone.
Miner	Nanaimo, B.C.	" 4	60	Struck by falling coal.
Miner	Westville, N.S.	" 19	50	Found dead in mine.
Miner	New Glasgow, N.S.	" 27	58	Caught in flow of coal.
Yardmaster	Sterco, Alberta	Mar. 12	46	Pushing up dump cars which jumped track and caught him.
Miner	Dysart, Sask.	" 14	40	Buried by coal from roof.
Miner	Lethbridge, Alberta	" 17	42	Crushed between cars.
Miner	Cassidy, B.C.	" 25	47	Buried under coal following explosion.
Non-metallic mineral mining and quarrying, n.e.s.:				
Miner	Thetford Mines, Que.	Jan. 19	20	Taking snow off roof of mill, when ladder broke.
Labourer	St. Samuel de Horton, Que.	" 20	22	Loading gravel, buried in slide.
Labourer	Aylmer, Que.	" 27	20	Crushed in collapse of gravel pit.
Labourer	Lumsden Township, near Sudbury, Ont.	Feb. 25	24	Struck by fall of rock from face.
Miner	Thetford Mines, Que.	" 25	26	Cave in; struck on head by rock.
Labourer with Salt Co.	Sandwich, Ont.	Mar. 2	58	Crushed by bucket while unloading car of coal.
Labourer	Little Current, Ont.	" 4	.....	Buried in earth slide.
Electrical Engineer	Madoc, Ont.	" 23	38	Charge failed to explode and engineer struck it with a pick axe. Explosion; miner died later of injuries.
Miner	Madoc, Ont.	" 23	.....	
MANUFACTURING—				
Non-metallic mineral products:				
Fitter with oil company	Sarnia, Ont.	Feb. 2	49	Cut thumb; infection.
Employee of oil company	Brandon, Man.	Mar. 30	45	Explosion of oil tanks.
Labourer	Montreal, Que.	" –	34	Crushed by load lowered from truck.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1926—Con.

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—*Con.*				
Animal foods:				
Partner in dairy	Canmore, Alberta	Feb. 1	60	Kicked by horse.
Labourer	Toronto, Ont	" 25	43	Cut knee—infection.
Chemical and allied products:				
Labourer	Brantford, Ont	Mar. 27	29	Scalded, stepped into vat of glue.
Iron, steel and products:				
Watchman with motor company	Toronto, Ont	Jan. 24	26	Burned.
Millwright with steel company	Hamilton, Ont	Feb. 8	41	Cut head—infection.
Labourer in machine shop	Verdun, Quebec	" 24	67	Slipped and struck against machine.
Labourer	Stratford, Ont	Mar. 15	46	Moving an engine, crushed between steam engines.
Pulp and paper products:				
Beaterman	Ocean Falls, B.C	Jan. 7	18	Slipped and fell into beater.
Labourer	Thorold, Ont	" 7	.....	Hurt chest.
Fireman	Ottawa, Ont	" 15	44	Burned—cleaning boiler when water striking hot ashes exploded.
Fireman	Ottawa, Ont	" 15	51	
Labourer	Windsor Mills, Que	" 30	60	When clothing caught in a belt, was carried to main shaft.
Pulp mill employee	Val Jalbert, Que	Feb. 4	.....	Buried by pulp wood falling from a pile.
Employee	Ottawa, Ont	" 10	63	Oiling engine, struck elbow—blood poison.
Carpenter	Powell River, B.C	" 12	44	Fell from scaffold.
Employee	Iroquois Falls, Ont	" 14	49	Installing pipe when scaffold fell.
Helper	Kenora, Ont	" 26	43	Fell off roof.
Back tender	Thorold, Ont	Mar. 19	30	Slipped while operating machine; drawn into machinery.
Saw and planing mills:				
Labourer	Elmwood, Ont	Feb. 11	46	Crushed by logs.
Sawyer	Sardis, B.C	" 17	49	Struck by circular saw which flew off shaft.
Machinist	Listowel, Ont	Mar. 3	28	Cut thumb—infection.
Saw mill worker	Wapske, N.B	" 13	40	Fell on carriage; carried onto saw.
Labourer	Lachute, Que	" 18	25	Lever moved accidentally and carriage carried man onto saw.
Textiles:				
Machinist	Welland, Ont	Jan. 27	.....	Injury to chest—pneumonia.
Vegetable foods, drink and tobacco:				
Labourer	Toronto, Ont	" 4	.....	Cleaning vats, touched live wire.
Bakery driver	St. Agapit, Que	Mar. 3	33	When vehicle capsized, was caught underneath and frozen.
CONSTRUCTION—				
Buildings and structures:				
Carpenter	Montreal, Que	Jan. 11	28	Fell from roof.
Bricklayer	Banff, Alberta	" 12	58	Thumb pierced by piece of brick—blood poison.
Labourer	Ottawa, Ont	" 14	67	Fell when demolishing warehouse after fire.
Lineman	Temiskaming, Ont	" 20	25	Killed.
Carpenter (elevator construction)	Prince Rupert, B.C	" 26	.....	Struck by derrick boom.
Labourer	Norman, Ont	Feb. 6	21	Electrocuted.
Iron worker with contractor	Cardinal, Ont	" 10	34	Fell off scaffold.
Foreman plasterer	Vancouver, B.C	" 24	46	Struck by descending hoist.
Labourer	Toronto, Ont	Mar. 2	.....	Fell when scaffold collapsed.
Labourer	Toronto, Ont	" 2	.....	
Labourer	Sarnia, Ont	" 5	43	Fell to ground when framework collapsed.
Carpenter	Crane Valley, Sask	" 15	48	Fell when scaffold broke.
Teamster	Winnipeg, Man	" 18	35	Thrown on head when frightened team bolted.
Highway and bridge:				
Labourer	Arthabaska Co., Que	Jan. 18	20	Buried under slide of gravel.
Shipbuilding:				
Foreman	Esquimalt, B.C	" 27	52	Fell into dry dock.
Miscellaneous:				
Labourer	St. Catharines, Ont	" 16	18	Crushed under lumber while unloading from car.
Labourer	Port Arthur, Ont	" 22	.....	Struck on head by tree.
Labourer	Chelsea, Que	Feb. 20	.....	Crushed when gasoline engine (with defective brakes) plunged off trestle.
Carpenter	Near Kemnay, Man	" 24	40	Fell off ladder.
Teamster	Welland, Ont	" 27	21	Crushed under lumber while unloading from car.
Conductor on ship canal railway	St. Catharines, Ont	Mar. 18	33	Thrown under wheels of train which jumped track.
Labourer	Chelsea, Que	" 22	22	Man in charge of big scoop, having flu, fainted; scoop fell on the victim.
Labourer	Chelsea, Que	" 26	40	Fell from 150 ft. tower.
Superintendent	Walkerville, Ont	" 26	36	Struck by train.
Labourer	Young's Point, Ont	" 30	36	Cave in at power dam.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1926—Con.

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam railways:				
Brakeman	Melfort, Sask.	Jan. 1	35	Caught between coach and engine.
Trainman	Aldersyde, Alberta	" 4	24	Struck by engine.
Engineer	Mulock, Ont.	" 5	44	Collision.
Labourer	Vancouver, B.C.	" 6	76	Sweeping shed, was run over by bus.
Foreman	Toronto, Ont.	" 8	39	Struck by engine.
Teamster	Vancouver, B.C.	" 10	.....	Run over when trying to board moving train.
Yardman	Fort Erie, Ont.	" 12	35	Crushed by cars.
Brakeman	Dobson, Alberta	" 16	.....	Slipped while switching and was run over.
Brakeman	Pickerel, Ont.	" 18	39	Thrown from engine when turning switch—run over.
Engineer	Slocan Siding, B.C.	" 20	52	Pinned under engine in derailment.
Trainman	Vancouver, B.C.	" 20	39	Struck by engine after stepping off another engine.
Trainman	Montreal, Que.	" 21	34	Fell between cars.
Carman	Montreal, Que.	" 22	39	Fell from roof of car.
Fireman	Stephen, B.C.	" 24	38	Turned aakle—infection.
Car inspector	Lindsay, Ont.	" 27	29	Caught between couplers.
Brakeman	Montreal, Que.	" 29	40	Slipped while coupling and crushed.
Section foreman	Roland, Man.,	" –	.....	Strained by lifting motor car off track.
Labourer	Farnham, Que.	Feb. 5	.....	Crushed by coal from car.
Porter	London, Ont.	" 11	42	Slipped while stepping across platform, and was caught between cars.
Trackman	Montreal, Que.	" 11	37	Struck by train.
Sectionman	Quebec, Que.	" 11	38	Struck by train.
Sectionman	Aldersyde, Alberta	" 13	38	Struck by train.
Flanger operator	Sydney, N.S.	" 15	29	Buried in snow slide.
Snow shoveller	Ford, Ont.	" 20	50	Run over by yard engine.
Car inspector	Campbellton, N.B.	Mar. 4	52	Crushed while coupling cars.
Watchman	Cascade Sound, B.C.	" 8	51	Struck by train.
Trainman	Rivière du Loup, Que.	" 10	19	Fell while jumping from one car to another.
Brakeman	Windsor, Ont.	" 12	27	Leg crushed by steel on car.
Carpenter (operating saw in shops)	Niagara Falls, Ont.	" 13	54	Struck by flying timber from saw.
Section hand	Ridgetown, Ont.	" 14	41	Jigger crashed into train which had broken in two.
Section hand	Ridgetown, Ont.	" 14	40	
Yard foreman	Toronto, Ont.	" 17	60	Run over by yard engine while coupling cars.
Sectionman	Cavell, Ont.	" 23	.....	Killed by bricks falling from burning house.
Section hand	St. Boniface, Man.	" 27	44	Struck by an engine, while removing hand car from track.
Switchman	Medicine Hat, Alberta	" 30	33	Slipped when coupling cars.
Brakeman	St. Thomas, Ont.	" 31	50	Knocked off pilot of engine.
Water:				
Fireman	St. John, N.B.	Jan. 13	32	Hit on head by piece of coal coming down chute.
Crane hook-tender	South Vancouver, B.C.	" 23	20	Struck by load when top ring of sling broke.
Lumber handler	St. John, N.B.	Feb. 22	57	Struck on head by deal falling from sling.
Longshoreman	Halifax, N.S.	" 26	.....	Struck by falling plank.
Stevedore	Vancouver, B.C.	Mar. 30	.....	Placing hatch, fell into hold.
Local:				
Teamster	Yarmouth, N.S.	Jan. 14	.....	Run over by tank sled.
Teamster	Brandon, Man.	" 28	65	Fell off sleigh, striking head.
Electric railways:				
Street car inspector	Sydney, N.S.	Jan. 24	.....	Fell and broke leg.
Labourer	Toronto, Ont.	Feb. 27	.....	Cleaning switches; was struck by truck.
Electricity and gas:				
Labourer on construction work	Montreal, Que.	Jan. 19	60	Struck by falling plank.
Engineer in electric light plant	Carbon, Alberta	Feb. 27	41	Clothing caught in shaft.
Lineman	Sydney, N.S.	" 28	32	Electrocuted; had not waited for generator to run down.
Telegraphs and telephones:				
Lineman	Bird's Hill, Man.	Mar. 27	28	Electrocuted—fell from pole.
SERVICE—				
Public administration:				
Policeman	St. John, N.B.	Jan. 1	.....	Fell down stairs, on duty.
Bridge tender	Little Bras d'Or, N.S.	" 6	70	While lashing bridge in gale was blown into river.
Fish and game inspector	near Whitney, Ont.	" –	.....	Burned in shack while on inspection trip.
Guide	near Whitney, Ont.	" –	.....	
Secretary, municipal hospital	Grande Prairie, Alberta	" 23	62	Horse ran away; man thrown from cutter.
Personal and domestic:				
Nurse maid	Smith, Alberta	Mar. 22	19	Burned, saving children.
Maid	Windsor, Ont.	" 23	19	Electrocuted when operating electric washer.
Trade:				
Salesman with dairy company	Toronto, Ont.	Feb. 3	.....	Fell on street.
Butcher	Edmonton, Alta.	" 25	26	Struck by automobile when stepping off car.
Labourer	Hull, Que.	Jan. 26	37	Drowned in river on way to cut ice.

Logger	Northumberland Co., N.B.	Dec. 7	31	Struck by falling tree.
Logger	Carleton Co., N.B.	" 8	18	Fractured leg.
Sawyer	Donald, B.C.	" 10	27	Pinned against tree by falling tree.
Bucker	Sydney Bay, B.C.	" 11	22	Struck by falling log.
Labourer	Valhalla Centre, Alberta	" 31	64	Struck by falling tree.
MANUFACTURING—				
Pulp and paper products:				
Labourer	Powell River, B.C.	Dec. 10	35	Fell from ladder.
Non-metallic mineral products:				
Labourer	Tuxedo, Man.	Sept. 14	.....	Sleeping on conveyor belt, was drawn into machinery. Died Jan. 6, 1926.
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam railways:				
Labourer	Kalmar, Ont.	April 25	.....	Struck by train.
Machinist	Niagara Falls, Ont.	Nov. 12	.....	Struck in groin by board.
Section labourer	Winnipeg, Man.	Dec. 28	32	Fell from railway car.
Water transportation:				
Longshoreman	Vancouver, B.C.	Nov. 11	70	Septic arthritis resulting from a fall. Died Jan. 13, 1926.
Longshoreman	Kent County, N.B.	" 21	74	Caught between cargo hook and hatch.
Electricity and gas:				
Lineman	Vancouver, B.C.	Aug. 20	35	Struck by railway train.
Lineman	Vancouver, B.C.	Nov. 30	36	Electric shock; fell from pole.
Lineman	Lockport, Man.	Dec. 24	31	Electric shock; fell from pole.
TRADE—				
Fireman	Toronto, Ont.	Aug. 15	.....	Crushed by truck.
SERVICE: PUBLIC AND MUNICIPAL—				
Surveyor	St. Lawrence River, Que.	July –	35	Fell down hatchway. Died March 15, 1926.
Civic firefighter	Winnipeg, Man.	Dec. 27	.....	Hurt while fighting fire. Died Jan. 3, 1926.
UNCLASSIFIED—				
Teamster	Queen's Co., N.B.	Oct. 22	55	Run over by runaway horse.

The salaries of rural postmasters will be affected by the reduction of the letter postage rate to 2 cents. In reply to a question in the House of Commons on May 6 the Minister of Justice said: "It is realized that the adoption of the two-cent letter rate on July 1 next will result in a substantial decrease in the revenue of rural post offices. As rural postmasters are paid on a commission basis, there would be a corresponding decrease in their salaries, unless their rates of compensation are increased. As postmasters' salaries are based on the revenue of the previous year, two-cent postage would not affect their salaries in any event until 1927. In the interval, the question of an upward revision of the rates of compensation of rural postmasters will receive sympathetic consideration by those who are charged with the duty of fixing the rates."

RECENT LEGAL DECISIONS AFFECTING LABOUR

Prerogative Right of King in Council to Hear Criminal Appeals

A chauffeur employed by a firm of carriers at Fernie, British Columbia, was driving an automobile containing a consignment of intoxicating liquor from Fernie through the province of Alberta to Sweetgrass, Montana, U.S.A. While in Alberta he was arrested by the Alberta provincial police and brought before a police magistrate on two charges, (1) under the Government Liquor Control Act of that province, and (2) under the Canada Temperance Act. He was convicted and fined $200 and $500 under the two charges respectively. He carried both decisions to the Supreme Court of Alberta, which dismissed the appeal, but granted leave to appeal the case to His Majesty in Council. The respondent thereupon presented a counter petition to His Majesty in Council, asking that the appeals might be quashed or dismissed as incompetent, mainly on the ground that they were brought in criminal cases, and that by virtue of section 1025 of the Criminal Code, no court in Canada had jurisdiction to grant leave to appeal to the King in Council in criminal cases. This section is as follows:—

1025. Notwithstanding any royal prerogative, or anything contained in the Interpretation Act or in the Supreme Court Act, no appeal shall be brought in any criminal case from any judgment or order of any court in Canada to any court of appeal or authority, by which in the United Kingdom appeals or petitions to His Majesty in Council may be heard.

The judgment of the Judicial Committee of the Privy Council was delivered in February, 1926, by the Viscount Cave. This judgment declared section 1025 to be invalid if, and so far as, it is intended to prevent the King in Council from exercising the prerogative right to grant special leave to appeal from a Canadian Court. This prerogative can be excluded only by an Imperial Statute. On this point Lord Cave said:—

"The practice of invoking the exercise of the royal prerogative by way of appeal from any court, in His Majesty's Dominions has long obtained throughout the British Empire. In its origin such an application may have been no more than petitory appeal to the Sovereign as the fountain of justice for protection against an unjust administration of the law; but if so, the practice has long since ripened into a privilege belonging to every subject of the King. In the United Kingdom the appeal was made to the King in Parliament, and was the foundation of the appellate jurisdiction of the House of Lords; but in His Majesty's Dominion beyond the seas the method of appeal to the King in Council has prevailed and is open to all the King's subject in those Dominions."

After citing the Judicial Committee (1833 and 1844) which provide for the admission of any appeal or appeals to Her Majesty in Council from any judgments, decrees or orders of any court of justice within any British Colony or possession abroad, his Lordship proceeded:—

"Under what authority then, can a right so established and confirmed be abrogated by the Parliament of Canada? The British North America Act, 1867, chapter 3, section 91, empowered the Dominion Parliament to make laws for the peace, order and good government of Canada in relation to matters not coming within the classes of subjects by that Act assigned exclusively to the Legislatures of the provinces; and in particular it gave to the Canadian Parliament exclusive legislative authority in respect of "the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters." But however widely these powers are construed they are confined to action to be taken in the Dominion; and they do not appear to their Lordships to authorize the Dominion Parliament to annul the prerogative right of the King in council to grant special leave to appeal. Further, by section 2 of The Colonial Laws Validity Act, 1865, chapter 63, it is enacted that: 'any colonial law which is or shall be in any respect repugnant to the provisions of any Act of Parliament extending to the Colony to which such law may relate, or repugnant to any order or regulation made under the authority of such Act of Parliament or having in the Colony the force and effect of such Act, shall be read subject to such Act, order or regulation, and shall to the extent of such repugnancy, but not otherwise, be and remain absolutely void and inoperative.'"

"In their Lordships' opinion section 1025 of the Canadian Criminal Code, if and so far as it is intended to prevent the Sovereign in council from giving effective leave to appeal against an order of a Canadian Court, is repugnant to the Acts of 1833 and 1844 which have been cited, and is therefore void and inoperative by virtue of the Act of 1865. It is true that the Code has received the Royal Assent, but that assent cannot give

validity to an enactment which is void by Imperial statute. If the prerogative is to be excluded, this must be accomplished by an Imperial statute; and in fact the modifications which were deemed necessary in respect of Australia and South Africa were effected in that way."

Having reached the conclusion that the leave to appeal granted by the Supreme Court of Alberta was ineffective, Lord Cave said further:—

"It remains to consider whether in the case of the two judgments now under consideration His Majesty should be advised to grant special leave to appeal. Their Lordships have no hesitation in answering this question in the negative. It has for many years past been the settled practice of the Board to refuse to act as a court of criminal appeal, and to advise His Majesty to intervene in a criminal case only if and when it is shown that, by a disregard of the forms of legal process or by some violation of the principle of natural justice or otherwise, substantial and grave injustice has been done."

The appeals were therefore dismissed, but (in the circumstances) without costs.

—*Judicial Committee of the Privy Council—Rex versus Nadan, and Attorney General for England and Attorney General for Canada, interveners.*

Independent Contractor Held Not to be a "Workman"

A contractor at Thetford, Quebec, undertook to remove the deposit of soil and gravel overlying the asbestos-bearing rock, preliminary to mining operations, and for this purpose he engaged a number of carters at a fixed rate of 15 cents per cart-load, the carters to supply horses and carts and do the work of loading and dumping the material removed. One of the carters while loading his cart was buried by a slide of land and gravel, sustaining personal injuries. He claimed compensation under the Quebec Workmen's Compensation Act to the amount of $1,917. The Superior Court for the District of Beauce maintained the carter's action for approximately the full amount claimed. The contractor appealed to the Court of King's Bench, submitting that he was not responsible under the provisions of the Act, for two reasons:—First, because the relation of employer and employee did not exist between himself and the carter; and, second, because the work which the carter was carrying on, and in which the contractor himself was engaged, was not an enterprise to which the Act applies.

Mr. Justice Howard, in considering the contractor's contentions, surveyed English, French and American practice in reference to the definition of "workman," neither this term nor "employee" being defined in the Quebec Act. He then proceeded as follows:—

> Now, what are the essential elements of employment to be deduced from these authorities for our guidance in the present appeal? To begin with, the relation of master and servant, or of employer and employee, rises only out of a contract by which the latter leases his services to the former, upon such terms and conditions as the parties may see fit to make. The employer—and this is an especially important factor—must retain the power not only of supervising the work generally, but also of controlling it both as to the method or means of doing it and the time or times at which it shall be done. Another factor, which, though not conclusive, is at least indicative of the true relationship between the employer and the workman, is the manner in which the services are to be paid for, that is, whether by the time occupied or for a lump sum, or for a sum proportionate to the amount of work done. Still another factor is whether the employer furnishes in whole or in part the tools or other equipment for doing the work, or whether the workman furnished his own equipment.
>
> In addition to these, we should, in my opinion, consider whether the workman is bound by the contract to perform the work himself or whether he is free to employ someone else to do it in part. In the latter case, he is almost certainly an independent contractor. Moreover, the contract of hiring of services must be for a stated or ascertainable period of time, unless the contrary appears from the contract itself or from the nature of the work and, if the contract is silent with regard to its duration, it is terminable by notice. The employer may terminate the contract for cause, that is, he may discharge the employee, but only for a valid reason, but there may be justifiable causes apart from the way in which the employee performs his work, such as disobedience, intoxication and other forms of moral turpitude, or even illness on the part of the employee; whereas a contract by the job, that is, with an independent contractor, can be terminated only because the workman is not doing the work properly.

As to the appellant's second plea the Court found that the Quebec act does not apply to the stripping of the rock preparatory to mining operations, where such work is carried on under an independent contract.

The appeal was therefore sustained.

—*(Quebec—Blanchette versus Lambert.)*

Blacksmith Shop not Under Quebec Compensation

A horseshoer in a blacksmith shop where only one other assistant was employed, met with an accident which resulted in the loss of one eye. When he took action under the Workmen's Compensation Act the proprietor of the shop submitted to the Superior Court at Montreal the question whether or not the Quebec Act applied to the workmen in an establishment where only three persons, including the proprietor were engaged. The court held that the expression "factories, manufactures or workshops" ("usines, manufactures et ateliers"), is intended by the Act

to describe establishments of the same nature as factories, that is, places in which raw materials are transformed into finished products. A horseshoe shop however, was held not to belong to this category. The plaintiff's action was held therefore to be wrongfully brought under the Workmen's Compensation Act, and his recourse, if any, to be under common law.

—(Quebec—Lesperance versus Howard.)

Co-operative Association is Not a Combine

The Supreme Court of the State of Louisiana recently decided that a co-operative marketing association was not a combine in the sense of being a corporation for the purpose of forcing up or down the price of an article of necessity for speculative purposes, a corporation of the latter kind being forbidden under the Constitution of the State. The association in question was organized under the Co-operative Marketing Act of 1922, in regard to which the Court said:—

"It is clear that the avowed purpose of any association organized under the act is to stabilize the price of cotton, or other agricultural products, so that such price will be uniform throughout the year, and not to force up or down the price of such products for merely speculative purpose. The act, apparentiy, does not contemplate any monopoly to corner the market, but merely permits associations organized under it to handle cotton produced or controlled by its own members, solely upon a co-operative marketing plan or basis. Upon its face, Act 57 of 1922 does not authorize the making of a contract or the forming of a conspiracy or combination in restraint of trade. It is therefore incumbent upon defendant to prove that a monopoly has been created, or that trade has been restrained by plaintiff, association, in order to annul the agreement signed by him. This defendant has failed to do."

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] JUNE, 1926 [NUMBER 6

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

EMPLOYMENT as reported by employers in a wide range of industries showed a substantial increase at the beginning of May when compared with the previous month. Although the gains were not so large as those reported on May 1, 1925, when more seasonable weather prevailed, the situation was considerably better than it was at the same period last year. Reports received by the Dominion Bureau of Statistics from 5,866 firms showed that they were employing 773,471 workers on May 1, as compared with 750,323 at the beginning of April, 1926. The employment index number (the base 100 representing the number of employees of the same firms in January, 1920) rose to 94.3 at the beginning of May from 91.4 on April 1; 90.8, 91.8, 91.4, 83.3 and 84.1 were the figures for May 1, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada showed substantial increases in the volume of business transacted during April as compared with the preceding month, but in the comparison with April last year a nominal decline was recorded in the number of applications for work, and of placements effected. At the beginning of May the percentage of unemployment among members of local trade unions was 7.3 as compared with percentages of 7.3 at the beginning of April, 1926, and 8.7 at the beginning of May, 1925. The percentage for the month under review are based on returns received by the Department of Labour from 1,512 local trade unions with a combined membership of 151,972 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.29 at the beginning of May, as compared with $11.36 for April; $10.48 for May, 1925; $9.89 for May, 1924; $10.36 for May, 1923; $10.22 for May, 1922; $12.25 for May, 1921; $16.65 for May, 1920; $16.92 for June, 1920 (the peak); $12.66 for May, 1918; and $7.43 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 declined to 157.0 for May, as compared with 160.6 for April; 158.8 for May, 1925; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); 201.4 for May, 1919; and 194.6 for May, 1918.

The time loss caused by industrial disputes in May was greater than in April, but less than in May last year. Sixteen disputes were in progress at some time during the month, involving 4,016 employees and resulting in the loss of 59,936 working days. Corresponding figures for April were as follows:—13 disputes, 796 workpeople, and 13,908 working days; and for May, 1925, 19 disputes, 13,240 employees, and 307,229 working days (due chiefly to a dispute in the Nova Scotia coal mining industry).

Industrial Disputes Investigation Act, 1907

During May the Department received two applications for the establishment of Boards of Conciliation and Investigation, and Boards were established in both cases. A Board was also established in connection with one of the applications mentioned in the last issue of the LABOUR GAZETTE, but a chairman had not been appointed as this issue goes to press. Details of the proceedings under the act during the month are given on page 540.

Senate rejects old age pension Bill

The Senate, on June 8, rejected, by 45 to 21 votes, a motion for the second reading of Bill 21, "an Act respecting Old Age Pensions." This Bill had been passed by the House of Commons on May 28 without a division. The bill followed the lines of the resolution adopted by the House in March, which was reprinted in the LABOUR GAZETTE for March, on page 214. Briefly, it was proposed to establish a system of old age pensions in Canada, under which the Dominion Government would contribute to the various provinces one-half the net amount paid out by them in pensions, the payment of pensions being contingent upon the passing of legislation in the individual provinces to take advantage of the federal act,

making it effective in their respective areas. Old age pensions were to be granted to British subjects of the age of 70 years or over resident in Canada for 20 years, and resident for five years in the province in which application is made. The maximum pension was to be $240 a year, subject to reduction by the amount of the pensioner's income, if any, in excess of $125 a year. The Honourable Raoul Dandurand, Government leader, introducing the measure in the Senate, said:

"There are two main classes of persons who are in need of such assistance. The larger class comprises those who are dependent upon relatives, friends or strangers when they have become enfeebled and are incapable of earning their own living. Such people—and we have them all about us, throughout the country—constantly feel that as dependents they are a burden upon those who volunteer to care for them. The other class, less numerous, but representing a considerable number, is composed of those who have made an effort to save during their lifetime, and have succeeded in accumulating and setting aside sufficient to provide themselves with a home in the town or city, but who when their autumn days are drawing to a close feel unable to maintain themselves and their family." He pointed out that "the aged poor in our country have been supported partly by private effort and partly by public institutions established by the municipalities and the provinces. The problem, he said, was not solved by the various agencies affording protection to the aged such as mutual benefit societies, trade unions and other organizations, and state action had been invoked in many countries, including Great Britain, Australia, New Zealand, Uruguay and Belgium, the beneficiaries not being called on to make contributions towards pensions. Referring to the position of the provinces under the Bill, Mr. Dandurand said:

"No province can be coerced under this Act; each may come voluntarily under it. The question has been asked why this scheme is embodied in an Act before being submitted to the various provinces. The reason given is that it would be difficult, if a conference of the nine provinces took place to-morrow, to have them agree upon the text of an arrangement which would be absolutely satisfactory to them all. Under these circumstances, and in view of the necessity of uniformity, the Parliament of Canada is justified in enacting legislation which seems fair, and which will be presented to the various provinces. They may separately study the Act and its conditions, and come to individual conclusions. On the other hand, they may get together to see if they could agree to the Act as it stands, or agree to some modification of it, which would then be discussed at the next session of this Parliament. Personally I am rather favourable to the idea of crystallizing into an Act the offer of the Dominion of Canada, because the provinces will thus know what the Dominion is ready to do, what it is offering, to what it has bound itself by its offer—which will not be simply a tentative offer, but a reality. The provinces will have to examine minutely into the scheme and decide, either individually or collectively, to come under it. There is no question that to-day's provisions for the care of men of 70 who are in need are inadequate. I have had occasion to state, and I desire to repeat, that most of the present systems are imperfect; that none cover all the cases of need that exist; and that I believe there is enough spirit of solidarity in the population of Canada to decide to do the fair thing by the men who have carried most of the heavy load and done the hard and heavy work which helps to make this nation."

Some of the reasons given by various speakers in the Senate for the rejection of the Bill were that the provision of pensions for the aged was a matter falling under provincial rather than federal jurisdiction; that before the federal measure was introduced a definite understanding should have been reached with the provinces that the latter would co-operate in the scheme; that the proposed pensions were to be on a non-contributory basis; that the eastern provinces would be required to bear an undue burden owing to the large proportion of aged persons resident there; and that state pensions would be an invasion of the sphere of family and civic responsibility.

The Bill embodies the recommendations of the Parliamentary Committee appointed in 1924, whose final report was given in the issue of the LABOUR GAZETTE for July, 1924, page 580.

Government policy concerning immigration of foreign workmen

The Minister of Labour, replying to a question in the House of Commons on May 25, stated the policy of the Dominion Government in regard to the admission of workmen from countries outside Canada. The question concerned requests stated to have been made to the Government by coal companies in Nova Scotia for permission to import coal miners from Europe, as the production of coal in the mines of the province was rapidly increasing.

The Department of Labour having ascertained that sufficient workers were available in Canada to meet the requirements of the industry it was not deemed necessary or advisable to comply with the request for additional workers from outside Canada. The policy of the Government in regard to such applications is to secure an estimate of the labour now available in this country before sending outside for help. The Acting Minister of Immigration also stated that before a request for the importation of outside labour is granted, a full investigation is usually made to decide whether labour of the kind required is available in Canada.

Workmen's compensation in Prince Edward Island

With the passing of the Railway Employees' Compensation Act in Prince Edward Island all the provinces of Canada now have acts providing for the payment of indemnities to workmen for injuries arising out of and in the course of their employment. The new act, which is outlined on another page of this issue, applies only to railwaymen, who form the only considerable group of workmen in the province, outside of those in the industry of agriculture. As the only railways in the island are owned by the Dominion Government, the railwaymen are "employees in the service of His Majesty" and eligible for the benefit provided under the Dominion Workmen's Compensation Act of 1918. The latter act, however, provides that "an employee in the service of His Majesty" shall receive compensation for an industrial injury at the rates of Workmen's Compensation which generally prevail in the province where the accident has occurred. In the absence of a provincial compensation act Dominion Government employees in Prince Edward Island have been hitherto debarred from the benefits of the Dominion Act. This anomaly is now removed by the enactment of the Railway Employees' Compensation Act.

Supreme Court decision on peaceful picketing

The decision of the Supreme Court of Canada in the case of *Reners versus The King,* rendered on June 14, is given in this issue in the section "Recent Legal Decisions Affecting Labour." The circumstances of this case were outlined in the April issue of this GAZETTE, on page 418. The employees of the Alberta Block Coal Company having disagreed among themselves on the question of accepting a new wage contract between the company and the officials of the United Mine Workers, a number of the men broke away from the United Mine Workers and formed an independent union. Members of the new union picketed the mines with the object of persuading the miners not to go to work, no violence, it was claimed, being either used or intended. The Supreme Court of Alberta held however that the picketing as carried out in this case constituted a menace and practical compulsion by moral force, even if no physical force was contemplated. Appeal was taken against this decision, which has now been upheld by the Supreme Court of Canada.

Lack of uniformity of child labour laws in Canada

The *Canadian Child Welfare News,* published by the Canadian Council of Child Welfare, contains in its issue for May 15 an account of the recent meeting, reported on another page of this issue, of the Child Welfare Committee of the League of Nations (This Committee is entrusted with the work formerly carried on by the International Association for the Protection of Children, LABOUR GAZETTE, November, 1924, page 960). In regard to child labour, it is stated: "An interesting report was presented from the International Labour Office on the ratifications of the Child Labour Conventions, and the reasons why certain countries have not ratified. Canada is placed in a most invidious position in this respect. There is hardly a province in the Dominion in which the existing laws on child labour are not at as high or higher standard than the conventions themselves. Yet because we lacked provincial uniformity, in many cases attainable by minor amendments to the provincial statutes, Canada is classified with many non-European countries (Persia, China, etc.) in her standards of child labour, and Roumania, Poland and many of the European countries, who have not yet recovered from the war, are ranked high above us. The situation places Canada in a most unenviable light, and is due entirely to the lack of public interest in the matter. The Federal Department of Labour has done all that a government department could do to bring about a national expression of our child labour standards by uniformity of provincial statutes. Some of the provinces have attempted to do their part, but Canadian public opinion has shown little or no interest. It is incumbent upon every Canadian interested in the Dominion's good name abroad to become familiar with the conventions, and exert every effort to obtain provincial uniformity, permitting federal adherence.

"It is interesting to learn that practically every country was faced with the difficulties facing the province of Ontario at the present time, viz., the question of keeping at school

the increased school population resulting from the higher age of admission to employment. Also, a peculiarly difficult situation has arisen as the result of some countries having ratified the conventions without raising the school-leaving age to correspond."

The child welfare committee adopted a resolution expressing the hope that the International Labour Office would continue to make representations to the governments with a view to the ratification by every country of the International Conventions on the admission of children to labour. It also drew attention to the fact brought out by the investigation of the International Labour Office with regard to the relation between the laws on school attendance and labour legislation, and emphasizes the importance of extending the age of compulsory school attendance so as to correspond with the age fixed by International Conventions as being the earliest at which children may be allowed to work.

Recent bulletins on vocational education

The Technical Education Branch of the Department of Labour issues from time to time bulletins dealing with various problems and phases of secondary vocational education. These publications are issued at the request of the provinces as expressed in a resolution of the First National Conference on Technical Education held at Ottawa in October, 1920. To date, sixteen bulletins have been published in addition to the annual reports, and a few special publications prepared for limited distribution. The vocational education series deals with such topics as courses of study, vocational guidance, apprenticeship, teacher-training, teaching methods, etc.

The three latest publications deal respectively with mechanical drawing; teaching shopwork in vocational schools; and the relation between vocational schools and industry in Canada. The first two bulletins were distributed in May and th last was ready early in June.

The bulletin on mechanical drawing deals with the purpose and value of this subject in vocational schools and gives an outline of a suggested course of study for industrial pupils in day vocational schools. Other courses are suggested and a fairly complete analysis of mechanical drawing is included for the guidance and assistance of teachers in formulating new courses and checking up those now in use. A complete list of equipment and supplies for a drafting room of ordinary size is given with approximate prices and total cost. A brief list of suitable references and text-books concludes the bulletin.

The publication on teaching shopwork in vocational schools consists of three papers prepared by shop instructors in Ontario schools and read at the first annual meeting of the technical section of the Ontario Educational Association in Toronto on April 7 and 8, 1926, as follows: "Teaching Machine Shop Practice" by F. W. Kirkpatrick, London Technical and Commercial School; "Getting Results with the Machine Shop Course During the First Year" by R. M. Durnford, Sarnia Collegiate and Technical School; and "Production in School Shops" by F. H. Pugh, Kitchener-Waterloo Collegiate and Technical School. These papers deal with the methods and problems of teaching machine shop practice and woodworking, but should be of interest to teachers in general.

The latest bulletin to be completed is a compilation of articles and extracts dealing with the efforts which have been made in each province to link the work of vocational schools with industry. Information has been gathered from those in charge of the work in all parts of Canada and has been arranged under three headings or divisions, first, The Work of Vocational Schools; second, Training in Industry; and third, Training in Schools and Industry. Some of the most important developments described are the correspondence instruction in Nova Scotia, itinerant teaching in New Brunswick, the pulp and paper school at Three Rivers, the printing school in Montreal, apprentice classes and agreements in Hamilton, Windsor and Ottawa, the co-ordination work in Toronto, the apprenticeship systems of the Canadian National Railway and the Canadian Pacific Railway, the mining and stationary engineering correspondence courses of Alberta and British Columbia, and apprenticeship in the building trades of Vancouver.

Technical education in P.E.I.

The speech from the Throne at opening of the recent session of the General Assembly of Prince Edward Island referred to the work that is being carried on in the province under the Dominion Technical Education Act, "The Federal Grant for Technical Education which is operated through the Department of Agriculture (i.e., of the province) was, by arrangement with the Technical Director, applied in the widest measure possible and work of great value to the province has been initiated.

"It is gratifying to note that the percentage of attendance of pupils in the schools last year attained its highest record, and that owing to a surplus of teachers all the schools in the province are now in operation, and

the proportion of high grade teachers is steadily increasing.

"The opening of Night Schools and providing of Short Courses in various technical subjects, with the assistance of the Federal Grant for Technical Education, have met with a splendid response and very gratifying results."

Industrial disputes legislation in Japan

Information has been received in the Department of Labour indicating that legislation very similar to the Industrial Disputes Investigation Act of Canada, better known as the "Lemieux Act," has been adopted by the Parliament of Japan. The bill on this subject was introduced by the Japanese premier, and provides, as in the case of the Canadian law, for the appointment by the Government of boards of conciliation to deal with labour disputes. These boards may be granted on request of either party to any dispute which arises in connection with public utility enterprises such as railways, tramways, shipping, water, gas and electricity supply, telephones, telegraphs, the postal services and other enterprises which directly concern the daily life of the public. The Government may also establish boards of conciliation in connection with disputes involving public utility industries when it is deemed necessary, without formal request from either of the parties concerned. The Japanese legislation permits of the establishment of boards to deal with disputes in other than public utility industries, but in this case, as in the Canadian Act, it is required that the application shall be made on behalf of both the employers and workers concerned.

Boards of conciliation in Japan, as in Canada, are given authority to call witnesses and to inspect the premises in which the dispute has occurred. The report of boards of conciliation in Japan will be submitted to the Government as in Canada, and provision is made under certain conditions for their publication. There is also a provision forbidding persons not directly concerned in the disputes to instigate a suspension of work.

The Japanese law will come into force on a date to be fixed by Imperial ordinance.

Protection of workmen on building construction

The Vancouver Trades and Labour Council, at a meeting early in May, called attention to the unsafe conditions alleged to prevail on many large building construction works, especially in the matter of the construction of temporary floors. It was suggested that additional regulations on this subject should be made by the Workmen's Compensation Board. Secretary Bengough stated that the Compensation Board had informed him that it had no jurisdiction over temporary floors, cribbing for excavations, ropes, etc., but that if a complaint were made regarding derricks or hoists the Board could act.

It may be noted that the existing regulations requiring the construction of temporary floors on buildings under construction are those contained in the Building By-law of the City of Vancouver, No. 1606, which provides as follows:—

Section 71 (1). In any building over two storeys in height where permanent floors are not constructed as the erection of the same proceeds, temporary floors, laid close, shall be erected and maintained on the uppermost tier of beams, and as soon as such uppermost tier of beams is completed, and thereafter as erection proceeds, such temporary floors shall be erected and maintained for each two succeeding storeys upon the uppermost tier of beams of the same, as soon as such uppermost tier of beams is completed. Such temporary floors shall be of sufficient strength to support any and all weights and loads which are or may be imposed on them during building operations.

The Winnipeg Trades and Labour Council also took action during May in the matter of the risks incurred by workmen on building construction, deciding to request the Provincial Minister of Public Works to appoint an experienced scaffold inspector, in view of the fact that a number of building tradesmen have been injured in accidents during the present building season.

Opinion divided as to protective legislation for women

A note in the April issue stated that the Women's Bureau of the United States Department of Labour had undertaken an investigation into the effects of the special laws which regulate the employment of women. An advisory committee was appointed later to conduct the inquiry, composed of six members, three representing the "equal rights" group, who deny the necessity for any distinction between laws as affecting men and women, and three representing the party which holds that the actual facts of industry call for special protective legislation for the benefit of female employees. When the committee met a division of opinion arose as to the methods to be employed in the investigation, the members of the Women's Party demanding public hearings, and the others insisting upon a fact-finding study by experts of the Federal Department. As the result of this disagreement the three representatives of the women's organizations favouring protective legislation withdrew from the committee, alleging that the other members, representing the National Women's Party, were attempting to bring political pressure to bear on the Federal Women's Bureau.

Health standards for female employees in United States

The seventh annual report of the Director of the Women's Bureau of the United States Department of Labour, recently received, describes the progress made in the last fiscal year in the work of promoting the establishment of safety standards for women in industry. In this work the Bureau was assisted by women's organizations in all parts of the country. Briefly, the standards which the Bureau seeks to establish are as follows:—

The eight-hour day; Saturday half holiday; one day of rest in seven; adequate time allowance for meals; rest periods at stated intervals; and the prohibition of night work, are the hour standards advocated. A living wage without discrimination because of sex is the recommended wage standard. The workroom conditions advocated include clean workrooms; lighting without glare; adequate ventilation; cool and accessible drinking water, with individual drinking cups or sanitary bubble fountains; washing facilities with hot and cold water, soap, and individual towels; an adequate number of clean, accessible toilets (one to every fifteen women); cloak rooms; lunch rooms; and rest rooms. For correct posture at work it is recommended that seats have backs and foot rests, and that they be adjusted to fit the machine and worker; also that, where possible, seats be so adjusted to machines and worktables that workers can sit or stand at work. Careful protection from machinery risks, from danger of fire, and from exposure to dirt, fumes, and other occupational hazards, is also recommended. The prohibition of home work is another standard. In administration it is recommended that there be provided a satisfactory personnel department to have charge of employing and discharging, that there be competent women with responsibility for conditions affecting women workers, and finally that co-operation of these workers be secured in establishing standards.

Lawyers' services for poor clients

The LABOUR GAZETTE for October, 1925, contained a note on an address delivered before the Canadian Bar Association at Winnipeg, by Lord Buckmaster, formerly Lord Chancellor of England, in which he referred to the disadvantage of poor clients in legal proceedings owing to their inability to engage the best legal advice. Lord Buckmaster suggested that lawyers might remedy this inequality of rich and poor by voluntarily devoting part of their time to handling the cases of poor clients. The Honourable W. H. Taft, Chief Justice of the United States Supreme Court, in a preface to a bulletin on "Legal Aid Work in the United States," published by the United States Department of Labour, refers to the same condition as existing in that country. After a reference to the good work of the legal aid societies now maintained in various centres by the bar, by local social societies, and by municipalities, the Chief Justice proceeds:—

"I think that we shall have to come, and ought to come, to the creation in every criminal court of the office of public defender, and that he should be paid out of the treasury of the county or the State. I think, too, that there should be a department in every large city, and probably in the State, which shall be sufficiently equipped to offer legal advice and legal service in suits and defenses in all civil cases, but especially in small claims courts, in courts of domestic relations, and in other forums of the plain people. A great deal has been done to promote the achieving of justice for the poor and unfortunate in workmen's compensation acts. They have expedited just recoveries and have relieved the burdened courts, enabling them to dispose of other litigation heretofore long delayed. It may be necessary, in order to prevent unwise or improper litigation, to impose a small fee for the bringing and carrying through of a suit by such free agencies. The department of free legal aid should be charged with the duty of examining every applicant and looking into his actual poverty and necessity and the probably just basis for his appeal. It may be well to unite both civil and criminal cases and make the public defender a part of the general department of free legal service. The growth of these legal aid organizations is the most satisfactory proof of their necessity."

Group payment of wages in factories

Some of the new methods of paying factory workers on this continent are described in a recent publication of the Policy Holders' Service Bureau of the Metropolitan Insurance Company, under the title "Methods of Compensation; a practical Synopsis for Business Men." One of most interesting recent developments is the growing practice of considering workers in groups rather than as individuals. The group system has been described in recent issues of the LABOUR GAZETTE in connection with its application to life insurance (June 1924, etc.). As applied to wage payments it is claimed that the group method makes for better co-operation and for simplicity in the computation of wages. Some examples are given of various methods now in use, including some that are formed on the

group plan, and others on the plan of "individual incentive."

Among large companies paying their employees on the group plan are the Packard Motor Car Company, the Hudson Motor Car Company, and the Westinghouse Electric and Manufacturing Company. Mr. G. D. Piper, assistant general auditor of the Westinghouse Company, supplies an account of the system as practised by this firm. This may be quoted as it contains most of the essential features of the group form of wage payment.

"We use groups of moderate size, not over twelve workers in a group, which we have found, from experience, increases rather than lessens individual initiative. This result we believe to be largely due to the speedier workers being willing to put forth their best efforts in a group, where their individual performances are more or less submerged in the performance of the whole group, whereas working as individuals the tendency is to limit their rate of production so as not to invite the ill-will of their less ambitious fellow-workmen. Furthermore, much of our group work consists of several grades, i.e., work requiring low, medium and high rated men, and we believe our group system tends to stimulate more interest on the part of the lower rated men toward qualifying for the more highly paid grade of work performed in the group than when working by themselves. Our system is inherently easy of computation, due to the fact that the worker knows that if he completes a job without exceeding the standard time limit he is paid for limit time at his standard time rate. For example, if the standard time for the job is, say ten hours and the worker completes it in exactly ten hours or less, he knows his earnings on that job are ten times his standard time rate an hour. Conversely, if he expends more than ten hours on such job, he knows his earnings are the number of hours actually taken at the day work rate.

"Quality is essential to eligibility for the higher earnings offered under the standard time wage system. Adequate inspection is our insurance for receipt of quality. Our standard time wage system renders feasible to a considerable extent discontinuance of detailed product or job costs, because the cost of work done thereunder—on which time expended does not exceed the standard time limit—is practically a piece work cost. Deviations from the standard time limit are taken care of by a so-called 'fall down' report, which is referred to the supervisory force promptly after this knowledge reaches the cost department for explanations as to the causes for the 'fall downs.' There may be, of course, deviations from the standard time hourly rates in that high rated workmen are assigned to low rated jobs, and when this occurs the unit cost is increased; in these cases the extra cost is reflected in our periodical average costs if on standard product, or in the cost of the individual order if on special product."

Methods of wage payment of city policemen

The Police Commissioners of Victoria, British Columbia, are considering two alternative proposals for a better system of recognizing meritorious service in the city police force. One plan is to reclassify the members of the force according to general proficiency; and the second is to recognize individual proficiency and advance the salary, but not the rank, of the most efficient policeman. Under the first plan, the men could be reclassified according to ability and service rendered, five classes as established and a maximum pay say of $150 per month for the first-class men and a minimum pay of $100 for the fifth class men. Commissioner Staneland said he favoured this plan because under the present system of municipal government it was a difficult matter to dismiss a man who had given faithful service for many years, but was not capable of doing so, as years gathered over his head. Under this plan he would still be retained on the staff, but would be placed in a lower class, with an accompanying reduction in salary. It was pointed out that the second plan of giving special recognition to individual proficiency was also a great incentive for men to improve themselves by study, to be alert as to their respective duties, and to maintain a high standard of efficiency.

The *Alberta Gazette* of May 15 announces the appointment of Dr. Walter S. Scott, of Edmonton, as Registrar of Boards of Conciliation and Investigation under the Labour Disputes Act (LABOUR GAZETTE, May, 1926, page 447).

A new series of Regulations governing the installation, operation and maintenance of freight and passenger elevators has been issued in Alberta under the provisions of the Factories Act. These regulations prescribe the requirements with respect to the construction and use of elevators and hoists. As stated in the last issue of the LABOUR GAZETTE, the new Factory Act of Alberta rescinded the provisions contained in the former act as to the proper safeguarding of elevators and hoists and made provision for the future issue of such regulations by order in council.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of May was as follows:—

The late spring had delayed farm work in Nova Scotia, although before the end of the month it was being proceeded with. The fishing industry was reported as good, with markets favourable. Manufacturing industries were normally busy, although the iron and steel industry reported a slackening off. Logging was quiet and summer cutting had not been started as yet. In Halifax construction was fairly active, but elsewhere in the Province this industry was rather dull. Coal mining was reported as steadily improving, the increased output being due to the requirements necessary to satisfy orders being filled by water shipment. During May the tonnage mined, time worked, and workers employed all showed increases. Trade was somewhat improved over the preceding month.

Weather conditions in New Brunswick were retarding the agricultural industry. Fishing was reported as fair. In the logging industry summer pulp wood cutting was getting underway. Manufacturing industries seemed to be normally active. Construction, though not in extraordinary volume, was steadily increasing. Trade was fairly good.

From Quebec general improvement was reported, especially in the manufacturing and construction groups. Spring logging activities were in full sway. In Montreal textile, rubber and metal trades reported more activity; in Quebec an industrial dispute had ceased practically all activity in the boot and shoe industry, but other industries were active. Building construction throughout the province was very active and demands for workers were in considerable volume. Transportation was improving, as was also trade. The demands for female domestic workers, particularly in Montreal, were in considerable excess of the supply.

Throughout the southern section of Ontario, demands for farm hands were general, with shortages reported in not a few cases. Manufacturing industries in this Province were decidedly active in nearly every centre; in this industry increases in staffs, though not spectacular, were general, and in some cases increased working time was reported. These increases in the manufacturing industry appear to affect nearly all lines, while from a couple of centres it was reported that new industries were about to commence operations. Railroad and highway construction work was developing, while building construction was increasing steadily in most centres, and the number of tradesmen for this class of work who remained unemployed was rapidly diminishing. A contract on the work in the viaduct in Toronto for an amount in the vicinity of $1,500,000 was just let, and active work was being started. The mining industry in the northern portion of Ontario remained active. Logging was quiet, although summer bush activities were coming along.

With the cessation of seeding in Manitoba, demands for farm hands had diminished considerably. Building construction was fair, while railroad and highway work were opening up. The employment offices reported very few calls for casual labourers and plenty of workers to take on such vacancies offering.

The Saskatchewan superintendents reported farm demands as satisfactory for the season, and applicants, although sufficient, were not too numerous for the vacancies offering. Railroad construction was taking a fair number of men. Tradesmen in the building lines seemed to be nearly all employed, as considerable work was in progress. Demands for general labour were not numerous and were exceeded by the corresponding applicants.

Demands for farm hands in Alberta were decreasing, although still plentiful, but with a sufficient number of applicants to fill all orders. Demands for railroad construction labour were fair. Building construction was active, with most of the tradesmen employed and with calls for building labourers rather steady. The coal mining industry was slack. From Edmonton some demand for logging workers was reported. General labour conditions throughout this Province appeared fairly satisfactory.

Logging in the Province of British Columbia seemed to be rather quiet, with very small demands for workers. Railroad construction showed some activity, while building construction registered a more favourable situation. The coal mining industry was dull. Metal mines were active, and this industry showed some increases, which were contributed to by some small development works. General conditions throughout British Columbia were fair, and the number of unemployed reported earlier in the year has been considerably lessened.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics Except Where Noted)

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending May 29, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

EMPLOYERS' REPORTS.

Employment statistics were furnished to the Dominion Bureau of Statistics by 5,866 firms, who, on May 1, had 773,471 workers on their payroll, an increase of 23,148 as compared with April 1. Activity continued to be greater than on the corresponding date in any of the last five years.

All except the Maritime Provinces reported increased employment, the gains in Quebec and Ontario being most pronounced. In the Maritime Provinces improvement was registered in manufacturing, coal mining and highway construction, but larger losses in railway construction, logging, and shipping and stevedoring reduced the general level of employment. In Quebec, further gains were indicated, especially in the iron and steel, tobacco, lumber, building material, pulp and paper and mineral product divisions of manufacturing, and also in logging, transportation, and construction. In Ontario, practically all industries showed a better situation, except logging, in which there were heavy seasonal losses. Manufacturing (notably of iron and steel and lumber products), mining, communication, transportation, construction, services and trade made important advances.

In the Prairie Provinces, expansion exceeded that recorded on the corresponding date last year; manufacturing, communication, trade and construction indicated the greatest gains. In British Columbia, the most pronounced increases were in construction and manufacturing, notably in lumber and fish-preserving establishments. Logging, transportation and trade also afforded more employment, but coal mining was decidedly slacker.

Firms in the eight cities for which separate tabulations are made increased their staffs; Montreal, Toronto and Hamilton showing the greatest absolute gains. In Montreal, manufacturing, transportation and construction were decidedly more active. In Quebec, shipping and stevedoring and building afforded increased employment. In Toronto, manufacturing, construction, trade and communication registered the largest expansion. In Ottawa, pulp and paper and other branches of manufacturing, as well as construction were busier. In Hamilton, manufacturing, especially of iron and steel, and construction registered the bulk of the gain, which exceeded that noted on May 1, 1925. In Windsor and Other Border Cities there were continued increases, chiefly in automobile plants, while construction, services and other groups were also busier. In Winnipeg, general expansion was recorded in manufacturing, construction and trade. In Vancouver, construction, manufacturing, transportation and trade shared in the upward movement indicated by the reporting firms.

An analysis of the returns by industries shows that the largest advances within the manufacturing group were in the lumber, iron and steel, fish-preserving, pulp and paper, tobacco, building material and mineral product divisions. On the other hand, rubber, textile, leather and edible plant product works were slacker. There were continued but less extensive reductions, on the whole, in logging camps. In mining, metallic ores and non-metallic minerals afforded more employment, while coal mines, on the whole, were slacker. In communication, transportation, construction and maintenance, services and trade marked improvement was also registered.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of May, 1926.

TRADE UNION REPORTS

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation among members of local trade unions at the end of April as shown by reports tabulated from 1,512 labour organizations with an aggregate membership of 151,972 persons, remained unchanged as compared with the previous month, 7.3 per cent of the members being idle at the end of both months. A higher level of employment, however, was maintained than in April, 1925, when 8.7 per cent of the members were unemployed. Owing to curtailment in the garment trades of Quebec, the unemployment percentage in that province was somewhat higher than in March and in British Columbia idleness among lumber workers and loggers caused the situation there to be unfavourable. No change in the percentage of inactivity was reported in Alberta and of the remaining provinces in all of which improvement was reported, that recorded in Ontario being the most pronounced. As compared with April of last year Nova Scotia, Saskatchewan and British Columbia unions were afforded less employment while all other provinces showed a better situation. Reports were received from 390 unions in the manufacturing industries with 41,977 members indicating an unemployment percentage of 9.8 as against 5.2 per cent in March and 12.3 per cent in April last year. Unemployment among garment workers in Quebec was mainly responsible for the contraction in comparison with March, though textile, iron and glass workers also contributed to some extent. Cigarmakers, on the other hand, were more active and employment for printing tradesmen, papermakers and metal polishers also increased. The coal mining industry in Nova Scotia showed a little improvement, but in Alberta there was reduced activity, and in British Columbia practically no change occurred. Quarry workers in Nova Scotia reported the same number of members out of work as in March. The building and construction trades showed considerable expansion, 12.5 per cent of the members being unemployed as compared with 20.9 in March. All tradesmen with the exception of bridge and structural iron workers were considerably better employed. In comparison with April of last year the situation in the building trades as a whole was also more favourable, bridge and structural iron workers, and granite and stonecutters alone reporting adverse changes. Transportation workers as shown by reports from 607 unions with a combined membership

of 56,234 persons, were slightly more active than in March. In the steam railway division, the returns of which constitute over 82 per cent of the entire group membership reporting, improvemnet was registered, but employment in the shipping and stevedoring and electric railway divisions was at a lower level. A more favourable situation was reported in the transportation group, as a whole, than in April last year, the bulk of the gain again being recorded in the steam railway division. Employment for retail shop clerks remained on the same level as in March, but slight gains were reported when compared with April last year. Less work than in March was afforded hotel and restaurant employees, theatre and stage employees and stationary engineers and firemen, but barbers were more active. Fishermen were not quite so busy and employment for lumber workers and loggers declined considerably.

Employment Office Reports

During the month of April, 1926, the references to employment made by the offices of the Employment Service of Canada numbered 33,090, while the placements effected totalled 31,772. Of the latter the placements in regular employment were 18,711 of men and 3,674 of women, a total of 22,385 and the placements in casual work were 9,387. Applications for work reported at the offices numbered 42,029, of which 31,169 were of men and 10,860 of women workers. Employers notified the Service during the month of 25,366 vacancies for men and 10,800 for women, a total of 36,166. A substantial increase is recorded in the transactions when the above figures are compared with those of the preceding month, while a nominal decline in applicants and placements is registered when a comparison is made with the records of 1925, the number of vacancies listed for April, 1926, being slightly greater than that recorded a year ago. The records for March, 1926, show 27,802 vacancies offered, 37,664 applications made, and 24,521 placements effected, while in April, 1925, there were recorded 35,563 vacancies, 43,166 applications for work and 32,188 placements in regular and casual employment. A report in detail of the work of the offices for the month of April, 1926, may be found elsewhere in this issue.

Production In Certain Industries.

Some figures indicating the recent movements of trade and industry are given in the table on page 535.

The Dominion Bureau of Statistics reported that April production of coke pig iron in Canada amounted to 67,607 long tons. This was 27 per cent over the 53,251 long tons produced in March. While the output of malleable iron at 3,744 tons was slightly below the 5,517 tons of the previous month, this loss was more than offset by increased production of the basic and foundry grades; basic iron at 39,209 tons was 14 per cent above the 34,451 tons of the previous month and the 24,654 tons of foundry iron was 86 per cent above the 13,283 tons reported for this grade in March.

For the four months ending April the cumulative production of pig iron in Canada totalled 227,248 tons, an increase of 25 per cent as compared with 181,805 tons made during the same period last year. This year's output was composed of 148,422 tons basic iron, 66,897 tons of foundry iron and 11,929 tons of malleable. In the first four months of 1925, production included 150,587 tons basic, 18,621 tons foundry and 12,597 tons of malleable iron.

Blast furnace charges were composed of 122,383 long tons of imported ore, 76,892 short tons of coke and 37,213 short tons of limestone. For each long ton of pig iron made, the furnace charges in April were: 4,055 pounds of ore, 2,278 pounds of coke and 1,101 pounds of limestone.

There was no change in the number of active furnaces the same six being in blast on April 30 as at the end of March. The active furnaces had a capacity of 2,375 long tons per day which represented about 47 per cent of the total capacity of all blast furnaces in the Dominion. Two working furnaces were located at each of the following points: Sault Ste. Marie, Ont., Hamilton, Ont., and Sydney, N.S.

Production of ferro-alloys at 2,487 tons showed a drop from the 3,463 tons of March but was slightly higher than the 2,262 tons reported for April a year ago. The cumulative production amounted to 10,517 tons, an increase of 37 per cent over the 7,695 produced in the same four months of last year.

Reflecting the higher output of pig iron, the production in Canada of steel ingots and castings advanced to 79,936 long tons, an increase of 36 per cent over the 58,765 tons of March, which in turn was 10 per cent in excess of the February output of 53,157 tons. This increase was wholly accounted for by the greater production of steel ingots; this grade at 76,046 tons showed an advance of 38 per cent over the 54,841 tons of the previous month, while the output of direct steel castings remained firm, the actual tonnages being 3,890 in April and 3,924 tons in March.

Cumulative production for the year to date at 260,394 tons showed little change from the 260,307 tons reported for the same four

months a year ago. Taking the output by grades, steel ingots at 247,315 tons showed a drop from 253,808 tons, but this was balanced by the gain in output of steel castings which stood at 13,079 tons as compared with 6,499 tons last year.

Most pig-iron prices were unchanged in April. No. 1 foundry at Toronto was still quoted at $26.85 and No. 2 foundry at $26.35 per ton. At Montreal both grades were again quoted at $29.25. Basic pig iron at mill declined from $23 to $22 per ton. The Bureau's index number for iron and its products, based on prices at the middle of the month (1913 prices=100) declined from 145.7 to 145.0 due mainly to the lower levels for basic pig iron and wire nails.

Full statistics of coal production during April are not yet available. The output of coal from Canadian mines during March was 1 per cent less than the production for the preceding month, and 18 per cent less than the average for March in the past five years. The figures were 1,065,561 tons in March as against 1,072,452 tons in February and an average of 1,291,108 tons for the month during the five preceding years.

Nova Scotia, New Brunswick and British Columbia showed a gain in output over the preceding month, but Saskatchewan was the only coal-producing province which showed an increase over the average for the month in the five preceding years.

Men employed in the coal mines of Canada during March, numbered 24,065, of whom 18,207 worked underground and 5,858 on surface, as compared with a total of 25,653 in February of whom 19,413 worked underground and 6,240 on surface. Production per man was 44.3 tons in March as against 41.6 tons per man in February. During March, the production per man-day was 2.4 tons, as against 2.5 tons in February. The tonnage lost was largely due to "lack of orders."

EXTERNAL TRADE.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in April, 1926, the merchandise entered for consumption amounted to $67,801,253, as compared with $59,104,651 in April, 1925. The domestic merchandise exported amounted to $60,166,868 in April, 1926, as compared with $112,263,910 in March, 1926, and $59,909,377 in April, 1925. Foreign merchandise exported amounted to $748,209 in April, 1926, as compared with $799,173 in April, 1925.

The chief imports in April, 1926, were:—Iron and its products, $16,705,307, and fibres, textiles and textile products, $12,778,967.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $17,887,185, and wood, wood products and paper, $17,589,025.

BUILDING PERMITS.

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty cities in Canada during the month of April, 1926, indicated an increase of 80.2 per cent, as compared with the preceding month, and of 23.0 per cent over the corresponding month last year. The total value for April, 1926, was $18,988,755; for March, $10,538,423, and for April, 1925, $15,442,855.

The *Maclean Building Review* estimates the total value of the contracts awarded in Canada in May at $57,139,700, as compared with $37,291,600 in April, and $34,052,100 in May, 1925. Of the contemplated new construction in Canada during May, 1926, $14,647,000 was for residential building; $12,697,500 for business building; $3,463,500 for industrial building, and $15,490,700 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). By classification the construction contracts awarded during May, 1926, were divided as follows:—engineering $24,013,000; residential building, $16,639,200; business building, $12,660,000 and industrial building, $3,827,500. The apportionment by provinces was: Ontario, $23,378,100 or 40.9 per cent; Quebec, $19,117,000, or 33.5 per cent; the Prairie Provinces, $12,067,500, or 21.1 per cent; British Columbia, $1,810,100 or 3.2 per cent and the Maritime Provinces, $767,000 or 1.3 per cent.

Strikes and Lockouts

The time loss due to industrial disputes in May was greater than during April, 1926, but less than during May, 1925. There were in existence during the month 16 disputes, involving 4,016 employees and resulting in a time loss of 59,936 working days, as compared with 13 disputes in April, involving 796 workpeople and resulting in a time loss of 13,908 working days. In May, 1925, there were recorded 19 disputes, involving 13,240 employees, and resulting in a time loss of 307,229 working days. Two of the strikes and lockouts commencing prior to May, and five of the strikes and lockouts commencing during May, terminated during the month. At the end of the month, therefore, there were nine strikes and lockouts affecting 3,400 workpeople, not including these strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

Retail food costs averaged slightly lower, due mainly to seasonal declines in the prices of eggs and butter, and in spite of a substantial advance in the prices of potatoes. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.29 at the beginning of May, as compared with $11.36 for April; $10.48 for May, 1925; $9.89 for May, 1924; $10.36 for May, 1923; $10.22 for May, 1922; $12.25 for May, 1921; $16.65 for May, 1920; $16.92 for June, 1920 (the peak); $12.66 for May, 1918; and $7.43 for May, 1914. Besides the declines in the prices of eggs and butter, there were slight declines in the prices of milk, cheese and lard. In addition to the substantial advance in the price of potatoes, less important advances occurred in the prices of beef, mutton, pork, bacon, evaporated apples and prunes. Including the cost of fuel and rent with that of foods the total budget averaged $21.54 at the beginning of May, as compared with $21.64 for April; $20.72 for May, 1925; $20.24 for May, 1924; $20.90 for May, 1923; $20.57 for May, 1922; $22.84 for May, 1921; $26.44 for May, 1920; $26.92 for July, 1920 (the peak); $20.09 for May, 1918; and $14.21 for May, 1914. Fuel was again somewhat lower, due to a slight decline in the price of coal. Rent was practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined to 157.0 for May, as compared with 160.6 for April; 158.8 for May, 1925; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); 201.4 for May, 1919; and 194.6 for May, 1918. In the grouping according to chief component materials seven of the eight main groups moved downward, while one remained unchanged. The Vegetables and their Products group and the Animals and their Products group both declined substantially, the former due to lower levels for grains, potatoes and rubber, which more than offset the advances in flour and other milled products; the latter because of seasonal declines in the prices of milk, butter and cheese, more than offsetting the higher prices for live stock, beef, and mess pork. The other groups which declined were: Fibres, Textiles and Textile Products, mainly because of declines in cotton, wool jute, hessian and manilla rope; Iron and its Products, due to lower prices for steel billets and pig iron; Wood, Wood Products and Paper, because of declines in some lines of lumber; Non-Ferrous Metals and their Products, because of declines in the prices of copper, tin, spelter, lead, and solder; and Non-Metallic Minerals and their Products, due to declines in the prices of bituminous coal and cement, which more than offset the advances in the prices of gasoline and coal oil. The Chemicals and Allied Products group was unchanged.

Federation of Women Teachers' Associations of Ontario

A recommendation that the Ontario Teachers' and Inspectors' Act be amended to protect the rights and interests of teachers who have taught nearly forty years and have been considered incapable of continuing, was made by the Federation of Women Teachers' Associations of Ontario, which held its annual meeting at Toronto during April. The resolution was passed as the result of the report of the superannuation committee, which stated that teachers who were nearing the age limit seemed to be threatened by the action of some boards of education and that this action was in danger of establishing a precedent. The convention favoured amending the section of the act which bases the amount of pension on the average salary during the last ten years of employment, recommending that the amount should be based upon the average salary during the ten consecutive years of highest salary.

The meeting favoured a closer co-operation between the women's and men's organizations and a Federation of Secondary Teachers was deemed advisable, though a marked feeling against amalgamation was evident. Miss Bessie Ross, of Toronto, was elected president for the coming year.

The report of the commissioners on the Teachers' and Inspectors' Superannuation Fund for the fiscal year ending October 31, 1925, as presented before the Inspectors' section of the Ontario Educational Association in April, showed that since the inception of the fund some 653 teachers and inspectors have been on the pension list, though of that number 85 are now dead.

The average pensions increased during the year, with the exception of those of the male teachers who retired owing to ill-health, which may be due to sickness occurring earlier in life than previously. The average pension granted to teachers retiring after at least 40 years of service increased, for females, from $416 to $457, and for males, from $592 to $626.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF MAY, 1926

DURING the month of May the Department received two applications for the establishment of Boards of Conciliation and Investigation, as follows:—

(1) From certain employees of the Canadian National Railways (Montreal and Southern Counties Railway) being conductors, trainmen and motormen, members of the Brotherhood of Railroad Trainmen. The dispute involved rates of pay and working conditions, and 75 employees were said to be directly affected. The Minister established a Board, constituted as follows: Mr. Bernard Rose, K.C., Montreal, P.Q., appointed by the Minister in the absence of a recommendation from the other Board members; Mr. Arthur Gaboury, Outremont, P.Q., the company's nominee, and Mr. Albert McGovern, Toronto, Ont., the employees' nominee.

(2) From certain employees of the Canadian National Express Company, members of the Canadian Brotherhood of Railroad Employees. The dispute involved the interpretation of a certain section of an agreement already in effect. The number of employees affected was given as 3,150. A Board was established by the Minister, Mr. U. E. Gillen, Toronto, Ont., being appointed on the recommendation of the company, and Mr. David Campbell, K.C., Winnipeg, Man., on that of the employees. At the close of the month the chairman had not been appointed.

Other Proceedings Under the Act

Reference is made in the May issue of the LABOUR GAZETTE to an application in connection with a dispute between the Winnipeg Electric Railway Company and certain of its employees being motormen and conductors, members of the Street Railway Employees Unit, One Big Union. During the month of May a Board was established, Mr. J. B. Coyne, K.C., Winnipeg, Man., being appointed by the Minister on behalf of the company in the absence of a recommendation from the latter, and Mr. Fred F. Dixon, Fort Garry, Man., on the recommendation of the employees. At the time of writing the chairmanship has not been filled.

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1926

THE number of strikes and lockouts in existence during May was 16 as compared with 13 during April. The time loss for the month was less than during May, 1925, being 59,936 working days, as compared with 307,229 working days in the same month last year. The considerable time loss and number of employees involved in May, 1925, were chiefly due to a strike of coal miners in Nova Scotia.

Seven disputes, involving 204 workpeople, were carried over from April, and nine disputes commenced during May. Two of the strikes and lockouts commencing prior to May, and five of the strikes and lockouts commencing during May, terminated during the month. At the end of the month, therefore, there were on record nine strikes and lockouts as follows: boot factory employees at Toronto; hat and cap makers at Montreal; men's clothing factory workers at Montreal; bookbinders at Montreal; moulders at Vancouver and New Westminster; boot and shoe workers at Quebec; firemen and engineers at Queensborough, B.C.; sheet metal workers at Ottawa, and dock labourers at Port Alfred, Que.

Date	Number of disputes	Number of employees involved	Time loss in working days
May, 1926	16	4,016	59,936
April, 1926	13	796	13,908
May, 1925	19	13,240	307,229

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected

thereby, although the unions or organizations concerned have not yet declared them terminated. Information is available as to five such disputes, namely, cigarmakers at Montreal, commencing March 24, 1925; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Owen Sound, January 19, 1925, and upholsterers at Montreal, June 27, 1925.

Of the strikes and lockouts commencing during May, six were for increased wages; one was against a reduction in wages; another was for shorter hours; and the ninth was a sympathetic strike. Of the strikes and lockouts which terminated during the month, one was in favour of the employees; one in favour of employers, two were indefinite, and three ended in a compromise.

The following notes give particulars in regard to certain disputes in addition to information given in the tabular statement.

PRINTING PRESSMEN AND BOOKBINDERS, MONTREAL, QUE.—In connection with an alleged lockout of 40 printing pressmen and bookbinders which occurred in Montreal on March 9, the employer decided to employ only members of a certain union and discharged those belonging to any other union, replacing the latter. By May 20, the printing pressmen, having secured work elsewhere, were no longer affected, but seven bookbinders were still involved in the lockout.

PAINTERS, VANCOUVER, B.C.—In connection with the strike of 220 painters at Vancouver on April 12, for increased wages, a 5-day week and closed shop, information received during May indicated that this strike had terminated April 14, when some of the employers agreed to pay $7 per day as demanded, other employers continuing to employ men at $6.50 per day.

STAGE HANDS, VANCOUVER, B.C.—A strike of seven stage hands occurred at Vancouver on January 9, owing to the discharge of two employees, alleged to be in violation of the existing agreement. At the time of the cessation, the manager of the theatre concerned claimed to have replaced the strikers by non-union workers. The union, however, declared the strike was still in existence. Early in March an injunction was granted restraining the strikers from interfering with and damaging the business of the theatre by distributing hand bills and other printed literature, alleging the theatre management was unfair to organized labour. Towards the end of April the manager of the theatre asked to have this injunction made permanent and also asked for $700 per week damages for injury to his business. When this matter came up in court the permanent injunction was granted and damages awarded at $1,750.* At the end of May the theatre closed down for an indefinite period, but the members of the stage hands' union took procedings to appeal against the judge's decision in regard to the permanent injunction and the award for damages.

MUSICIANS, VANCOUVER, B.C.—This strike occurred at Vancouver on January 11, involving six musicians who went out in sympathy with the stage hands in the same theatre, and also for alleged violation of their agreement. At the end of May the theatre was closed down and employment conditions were no longer affected, although the union still declared the strike to be in existence.

BOOT AND SHOE FACTORY WORKERS, QUEBEC, QUE.—Following the dispute of boot and shoe factory employees in factories in Quebec City in November, causing a cessation of work from November 16 to November 30 (LABOUR GAZETTE, December, 1925, p. 1175), the Arbitration Board appointed under the Quebec Trade Disputes' Act, R.S. 1909, issued its award April 27, but some of the workers refused to continue at work under the conditions of the Arbitration award, namely, a further reduction in wages amounting to a total reduction of 15 per cent to 20 per cent from the original rates. On May 3, six shoe lasters ceased work and on May 5, the employees of another company stopped work, and by May 12, 14 companies were affected and some 3,000 boot and shoe factory employees were involved in the cessation. The union to which they had belonged had agreed to accept the award and refused to call another strike. On May 11, the boot manufacturers' association announced they would operate under open shop conditions. The Mayor of the city offered to mediate, and the offer was later accepted. Picketing was commenced about May 18, and the first disturbance occurred early that day when a striker was reported to have attacked a non-union worker. Police were posted to guard the factory of one of the employers and later in the day riots occurred and more police were called out. Five strikers were arrested and charged with intimidating non-union workers, while a sixth was arrested when he called to the others not to let the police interfere. Following this disturbance a delegation of National and Catholic Union representatives waited on the Mayor and asked his intervention in the dispute. On May 19, the six arrested strikers were up in court but were remanded until May 27, and then until May 31, when two were acquitted and in the case

* This case is reported elsewhere in this issue in the section "Recent Legal Decisions Affecting Labour."

STRIKES AND LOCKOUTS DURING MAY, 1926

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to May, 1926.			
MANUFACTURING—			
Boots and shoes (other than rubber and felt):			
Boot factory employees, Toronto, Ont.	40	1,000	Commenced January 13, against changes in working conditions alleged to be in violation of agreement. Unterminated.
Clothing (including knitted goods):			
Hat and cap makers, Montreal, Que.	10	250	Commenced March 4, against alleged violation of agreement. Unterminated.
Men's clothing workers, Montreal, Que.	9	225	Commenced March 19, against alleged violation of agreement. Unterminated.
Printing and publishing:			
Printing pressmen and bookbinders, Montreal, Que.	7	175	Alleged lockout commenced March 9, of members of certain unions. Unterminated.
Iron, steel and products:			
Moulders, Vancouver and New Westminster, B.C.	125	3,125	Commenced April 1, for increased wages. Unterminated.
CONSTRUCTION—			
Buildings and structures:			
Painters, Vancouver, B.C.....	220	.....	Commenced April 12, for increased wages, 5-day week and closed shop. Information received indicated that about April 14, some of the strikers had secured increased wages, and others had retured to work at the previous rates.
SERVICE—			
Recreational:			
Stage hands, Vancouver, B.C.	7	175	Commenced January 9, against alleged violation of agreement. Information received indicates employment conditions no longer affected at the end of May.
Musicians, Vancouver, B.C....	6	150	Commenced January 11, in sympathy with strike of stage hands and alleged violation of agreement. Information received indicates employment conditions no longer affected at the end of May.
(b) Strikes and lockouts commencing during May, 1926.			
MANUFACTURING—			
Boots and shoes (other than rubber and felt):			
Boot and shoe workers, Quebec, Que.	3,000	47,952	Commenced May 3, against reduction in wages awarded by Arbitrators. Unterminated.
Saw and planing mills:			
Firemen and engineers, Queensborough, B.C.	6	72	Commenced May 17, for increased wages. Unterminated.
Pulp and paper products:			
Makers of paper products, Cannifton, Ont.	30	15	Commenced May 13, for increased wages. Strikers replaced by other workers; work resumed May 14.
Non-metallic mineral products:			
Stonecutters Winnipeg, Man...	45	270	Commenced May 1, for increased wages. Settled by negotiations, and work resumed May 8; partial increase.
CONSTRUCTION—			
Buildings and structures—			
Carpenters, Vancouver, B.C...	250	2,250	Commenced May 1, for 5-day week. Settled by negotiations and work resumed May 12, at increased wages.
Building trades, Vancouver, B.C.	78	702	Commenced May 1, in sympathy with strike of carpenters in Vancouver; work resumed May 12; partially successful.
Sheet metal workers, Ottawa, Ont.	103	2,575	Commenced May 1, for increased wages. Unterminated.
TRANSPORTATION AND PUBLIC UTILITIES—			
Water transportation:			
Longshoremen, Charlottetown, P.E.I.	200	500	Commenced May 10, for increased wages. Settled by negotiations; increase granted; work resumed May 12.
Dock labourers, Port Alfred, Que.	100	500	Commenced May 26, for increased wages. Unterminated.

of three judgment was reserved. Several of the manufacturers met the Mayor in a conference on May 20, but refused to resume negotiations with the union until the latter accepted the wage lists authorized by the Arbitration Board, and ordered their members to resume work. On May 21, the boot manufacturers' association announced they would have no further dealings with the National and Catholic Unions. On May 24th, the president of the manufacturers' association and the Mayor met the Premier of Quebec and the Assistant Attorney. Later the Mayor suggested that the members of the manufacturers' association meet a conciliation committee, but this was refused. About this time the manufacturers took steps to train new workers, and advertised in the newspapers for workers, stating that people from the City of Quebec would be considered first. On May 26, a striker was fined $10 and costs far attacking a non-union worker. On May 27, a relief fund was opened by the union, twenty-three other organziations affiliated with the National and Catholic Union agreeing to contribute, and this was expected to amount to $2,000 per week. This dispute remained unterminated at the end of May.

FIREMEN AND ENGINEERS, QUEENSBOROUGH, B.C.—A strike of six firemen and engineers was reported to have occurred at Queensborough, B.C., on May 17, when their demand for increased wages was refused them. The rates in effect was from $70 per month to $150 per month, and they asked from $120 per month to $200 per month. This strike remained unsettled at the end of May.

MAKERS OF PAPER PRODUCTS, CANNIFTON, ONT.—A strike of 30 workers engaged on paper products was reported to have occurred at Cannifton, Ont., on May 13, for an increase in wages. As the management of the plant concerned did not increase the wages, the workers ceased work and were replaced by other workers.

STONECUTTERS, WINNIPEG, MAN.—Forty-five stonecutters in the employ of four establishments ceased work May 1, for an increase in wages from $1 per hour to $1.25 per hour. Several meetings were held and finally a settlement was arrived at whereby work was resumed on May 7, at $1.10 per hour.

CARPENTERS, VANCOUVER, B.C.—On May 1, 250 carpenters in the employ of about twenty firms ceased work when their demand for a 5-day week was refused them. Negotiations were carried on from early in February, but no settlement of the question was reached. Several of the smaller contractors conceded to the men's demands and continued to operate, but the larger contractors refused to agree to work only five days per week instead of five and one-half. On May 3, the employers met and decided to offer an increase of fifty cents per day over the prevailing rate, but would not consent to the 5-day week. This offer was made known to the carpenters who refused it by a vote of three to one. The Fair Wages Officer of the Department of Labour offered his services and arranged conferences on May 8 and 11, and on the latter date the contractors again made their offer of increased wages, which was accepted, and work was resumed May 12.

BUILDING TRADES, VANCOUVER, B.C.—Seventy-eight steam and operating engineers, plasterers, steam shovel men, electricians and structural steel workers went on strike at Vancouver on May 3, in sympathy with the carpenters who ceased work May 1, and resumed work on May 12, when the carpenters returned to work.

SHEET METAL WORKERS, OTTAWA, ONT.—On May 1, a strike occurred of 100 sheet metal workers in the employ of nine establishments for an increase in the rates of wages from 80 cents per hour to 90 cents per hour. Joint meetings were held by both parties to the dispute but no settlement was reached, and the strike remained unsettled at the end of May.

LONGSHOREMEN, CHARLOTTETOWN, P.E.I.—A strike of 200 longshoremen occurred on May 10, for an increase of 15 cents per hour. The prevailing rate was 60 cents per hour and the new rate demanded was 75 cents per hour. Both parties to the dispute met and discussed the question and finally the employers concerned agreed to pay the increased rate. Work was resumed May 12.

DOCK LABOURERS, PORT ALFRED, QUE.—One hundred dock labourers were reported to have ceased work May 26, when their demand for an increase in wages was refused them, the strike remaining unsettled at the end of May. It was also reported that the provincial police had been summoned in connection with the dispute.

The Department of Labour of the State of New York has recently published Special Bulletin (No. 140) analyzing and summarizing court decisions on questions arising in 1925 under the New York Workmen's Compensation law. This is the eleventh annual publication of this kind prepared by the Bureau of Statistics and Information of the State.

COMBINES INVESTIGATION ACT, 1923

Prosecution of Alleged Combine in Distribution of Fruit and Vegetables in Western Canada

THE LABOUR GAZETTE of April, 1926, contained an article on the prosecution and conviction of certain individuals and corporations connected with the Nash interests in Canada on various charges of conspiracy in the carrying on of a combined jobbing and brokerage business in fruits and vegetables in Western Canada. A fine of $25,000 each was imposed on four individuals, J. A. Simington, S. P. Lloyd, W. Colquhoun and W. E. Carruthers, and on four corporations, Mutual (Vancouver) Limited, Vancouver; Mutual Brokers, Limited, Calgary; Mutual Brokers, Limited, Regina, and Mutual Brokers Limited, Winnipeg.

Appeals Withdrawn

The convicted individuals and corporations gave notice of appeal against the judgment of the Court on a question of law, contending that the defendants were improperly convicted and that corporations cannot be guilty of criminal conspiracy. In order that the whole case might be reviewed by the Appeal Court, the Crown applied for leave to appeal against the sentences imposed. This application was granted by Mr. Justice M. A. Macdonald on April 12, 1926, and notice of appeal was filed accordingly. On May 26, the defence withdrew its appeal and the Crown's appeal was thereupon withdrawn.

It will be recalled that four counts in the indictment were laid under Section 498 of the Criminal Code, and that application was made by the defence to have these tried by a judge without a jury. These counts are still outstanding, and have been traversed to the Fall Assizes.

Attitude of Government toward Fruit Jobber-Broker Combine

In his charge to the jury in the prosecution of the Nash companies, Mr. Justice D. A. MacDonald stated that the jobber-broker combination maintained by the Nash interests was the main point at issue in the trial. On June 7, the Honourable J. C. Elliott, Minister of Labour, made a statement in the House of Commons in reply to a question by Mr. Grote Stirling, member for Yale, B.C., as to the attitude of the Government to the jobber-owned brokerage houses in connection with the harvesting of fruits and vegetables in the western provinces. Mr. Stirling referred to the representations made by the growers against such a combination, and to the conviction of the Nash officials and corporations by the British Columbia Court in the recent prosecution.

The statement of the Minister of Labour follows:—

Following a formal complaint under the Combines Investigation Act, a commissioner was appointed in July 1924 to investigate an alleged combine in the distribution of fruits and vegetables in western Canada. The commissioner reported on the 18th February, 1925, to the effect that a combine—called for convenient reference a jobber-broker combine—was operating in western Canada, and that its operations were against the interest of the public.

It appears that the supplies of Canadian grown fruit and vegetables consumed in the four western provinces come principally from the province of British Columbia. The grower, living in British Columbia and disposing of his products all the way from Calgary to Winnipeg, must have agents at the various centres to receive the fruit and vegetables, inspect them for quality and condition, and sell them to the jobbers, as the wholesale fruit houses are called in those provinces.

In 1906 and for some few years thereafter the system of distribution in Canada was from the grower, through his broker, to the different jobbers who sold to the retail trade, which in turn distributed to the consuming public. The jobbing houses, of which there were two or more in each town of any size, were for the most part independent of each other and in more or less friendly competition. Speaking generally and surveying western Canada as a whole, distribution was made through many independent and competing jobbers. There was a free and uncontrolled outlet for supply.

The Nash organization of Minneapolis, which first entered Canada in 1906, and now operates a chain of jobbing houses throughout the west, introduced the principle of the jobber-owned broker about 1913. The Canadian jobbers, who have admitted the harmful nature of the principle, say that in self-defence they had to follow suit.

By reason of the introduction of the jobber-broker principle, the whole aspect of the distribution of fruit and vegetables in western Canada changed. Instead of distribution

being through many unallied houses, it is now principally through two chains of jobbing houses, namely the Nash organization, and the remaining Canadian jobbers. Each of these has its chain of brokerage offices, that of the Nash being known as the Mutual Brokers Limited and that of the independents, as the Canadian houses are called, being known as the Growers Sales Agency, Limited.

The commissioner reported against the principle of the jobber-owned broker on the ground that it was an attempt to join in the one organization two opposing interests—the broker, whose interest should be solely that of the grower and to sell at the best price obtainable, and the jobber whose interest was to purchase at the lowest price and so make the largest profit and therefore was opposed to that of the grower; and he set out in his report instances in which the combine had operated detrimentally to the interest of the grower and others. Certain of these instances, which are set out on pp. 22 et seq. of the Report may be summarized under the following heads:

(*a*) Failure of the broker to sell to the jobber at the best price.

(*b*) Attempts to keep the growers in the dark—(1) as to prices at which their goods were sold; (2) the persons to whom they were sold; and (3) the allowances made to the jobbers on account of the alleged condition of the fruit on arrival.

(*c*) False returns.

(*d*) Secret profits.

(*e*) Special rebates to Nash Jobbing houses which were not given to Canadian Jobbing houses.

(*f*) Attempts to break up growers' co-operative organizations.

Following the report of the commissioner, indictments were laid against certain persons and individuals, charging inter alia (*a*) conspiracy to defraud; (*b*) offences against the Secret Commissions Act; (*c*) offences against Section 498 (The Combines Section) of the Criminal Code; (*d*) offences against the Combines Investigation Act. The trial of the accused took place under counts (*a*) and (*b*), the counts under (*c*) being traversed to the next assizes, and those under (*d*) being withdrawn.

The trial resulted in the conviction of four individuals and four companies. The individuals were sentenced to one day each in jail and to a fine of $25,000 apiece. The corporations were sentenced to fines of $25,000 each. Both individuals and corporations appealed from their conviction and the crown appealed from the sentences, suggesting that they should be more severe. Before the appeals were argued the defendants withdrew their appeals and the crown accordingly withdrew the appeal.

Numerous representations have been made to the government from time to time by growers' organizations and others, to the effect that the jobber-broker combine operates injuriously not only to the grower but also to the Canadian jobbing trade and to the consuming public; and that it should be done away with.

Following the verdict in the recent trial, the so-called Independent Jobbers, that is to say those Canadian firms which are not in what is known as the Nash organization, decided to cease the operation of the brokerage houses which they have been operating in conjunction with their jobbing business. Those firms were not among those indicted. As the result of this action of the Independents, the jobber-broker connection is now operated only by what is known as the Nash organization. Since the trial counsel for the Nash interests has made representations to the government that they would like the view of the government on this question.

The matter is of considerable public importance, and in view of the fruit season having commenced before the appeals were disposed of and of the desire of all parties for an expression of the attitude of the government on this question, this statement is made.

It is not the duty of the government to advise corporations, as to how they should conduct their business, nor is it the intention of the government to do so. But the government has found that the question of the jobber-broker combine method of doing business is of such public importance that all parties concerned are entitled to know the government's attitude toward its continuance.

The jobber-broker combine is an attempt to join in the one organization and under the same control, the broker, whose interests should be solely that of the grower, and the jobber, whose interest is opposed to that of the grower. This puts the broker in a position in which his interest conflicts with his duty. Where there is such a conflict of interest and duty it is impossible to guarantee by any external supervision that the thousands of annual shipments of the growers will be handled honestly. Such a relationship is against the established principles of our law, and it is difficult to see how the grower could hope to obtain proper returns for his goods under such a system.

The government has taken steps to ascertain the opinion of those who have a practical knowledge of the operations of the jobber-

broker combine. While some growers defend them they have found pretty general condemnation. Responsible officials in government employ condemn it; growers' organizations controlling the vast majority of the crop of British Columbia condemn it; and there is testimony from Canadian jobbers to the same effect.

In view of all these considerations, the government has decided that it must treat the jobber-broker connection as against public policy; and this announcement is made so that all parties may be aware of these views. If the law as it stands is sufficient to deal with this question, resort will be had to it should there be any disregard of its provisions. If the law as it stands is not sufficient, such appropriate legislation within the legislative competence of the Dominion will be introduced as may be necessary to give effect to this decision.

RAILWAY EMPLOYEES' COMPENSATION ACT IN PRINCE EDWARD ISLAND

AT the third session of the fortieth general assembly of Prince Edward Island, which lasted from March 6 to 31, the outstanding enactment was the Railway Employees' Compensation Act, which is to become effective on July 1, 1926. As the Honourable Premier Stewart pointed out when the bill was under discussion, the province had no Workmen's Compensation Act owing to the limited number of industrial employees on the Island apart from those on the railways. The absence of such an act, however, placed the employees on the Government railways as well as the other employees of the Dominion Government in Prince Edward Island, under a disadvantage as compared with the corresponding classes in the neighbouring provinces where Workmen's Compensation Acts are in force. This condition resulted from the fact that the Dominion Workmen's Compensation Act of 1918, in providing for the payment to employees of the Dominion Government of compensation for accidents in the same amount as they would receive if in private employment under the laws of the province in which injuries were received, made no provision for a province which has no Workmen's Compensation Act.

It is the purpose of the "Railway Employees' Compensation Act" to extend to the employees of the Federal Government in Prince Edward Island, whether on the railways or in other branches of the public service, the same privileges as are enjoyed by Dominion employees in other provinces. It may be noted that the Dominion Act was amended at the parliamentary session of 1925 to permit railway employees to enjoy the benefits provided both by the Intercolonial and Prince Edward Island Railway Employees Provident Fund Act, and by the several Provincial Compensation Acts. Formerly the employees were required to elect under which act they would come. The benefits provided were further extended so as to include hospital and medical expenses (LABOUR GAZETTE, July, 1925, page 665).

Provisions of Prince Edward Island Act

The Railway Employees' Compensation Act is subject to the provisions of chapter 15 of the Statutes of Canada, 1918, and amendments thereto, and to the expressed consent of the Government of Canada to submit to its application. It applies to all works and undertakings on or in connection with the operation, maintenance and extension of the Canadian Government Railways, and subject to the consent of the Government of Canada is to apply to all other employees of the Federal Government resident in Prince Edward Island.

The term "employer" as used in the act includes every person having in his service under a contract of hiring or apprenticeship, written or oral, expressed or implied, any person engaged in any work on, about or in connection with the railway and its undertakings, and may include the Crown as represented by the Dominion of Canada in so far as it may in its capacity of employer submit to the operation and administration of this Act. The term "Railway" includes all railways operated by steam, electricity, gas, oil or other motive power and shall include steamboats operated in connection with the railway. "Stevedoring" means the loading or unloading of steamboats operated in connection with the railway and railway cars and the handling of goods, articles and commodities on or about any dock or wharf used in connection with the railway.

The Board.—The act is to be administered by a Board consisting of one or more members appointed by the Lieutenant-Governor in Council which shall be a body corporate and shall be known as the "Compensation Board." The Board is to hold office during good behaviour, but may be removed at any

time for cause. Where the Board consists of but one member he shall be chairman of the Board. The Lieutenant Governor in Council has the power to fill any vacancy occurring on the Board.

The Board is to have jurisdiction to enquire into, hear and determine all matters and questions of fact and law necessary to be determined in connection with compensation payments under the act and the administration thereof and the management of the funds of the Board. "Questions of fact" include all the circumstances entering into the determination of the amount of compensation payable in each case, the extent of dependency, etc. The Board has full powers to summon witnesses, take evidence under oath, require production of documents, etc.

Compensation is payable for injury caused by an accident arising out of and in the course of employment unless such injury was in the opinion of the Board intentionally caused by such workman or was wholly or principally due to intoxication or serious and wilful misconduct on the part of the workman or to a fortuitous event unconnected with his employment.

Where a workman is engaged in work partly in, and partly outside the province, he is entitled to compensation, provided he is on a payroll within the province.

Reciprocity with other provinces.—The act provides that where other provinces pay similar compensation to residents of Prince Edward Island in respect to accidents within their territory, the Board may, if an order in council to that effect is passed, order that residents of such other provinces receive compensation for accidents within the province. Moreover the Board may grant permission to resident injured workmen in receipt of compensation to reside outside the province without forfeiting their rights to compensation under the act.

Waiving of Claims.—A workman and his employer may not agree to waive or forego the benefits to which the workman or his dependants may be entitled under the act, and every such agreement is declared void.

Employers are forbidden either directly or indirectly to deduct from the wages of any workman any part of any sum which the employer is or may become liable to pay into the accident fund or otherwise under this act or to require or to permit any of his workmen to contribute in any manner towards indemnifying the employer against any liability which he has incurred or may incur under this act.

Unless with the approval of the Board, no sum payable as compensation or by way of commutation of any periodical payment in respect of it is capable of being assigned charged or attached nor shall it pass by operation of law, except to a personal representative.

One year from the occurrence of an injury is fixed as the time limit for making application for compensation.

Accident Fund.—Subject to the expressed consent of the Federal Government the compensation provided for in the act is to be paid out of a fund to be known as "The Accident Fund," such fund to be created and maintained by moneys appropriated from the Consolidated Revenue Fund of Canada under the provisions of chapter 15 of the Statutes of Canada, 1918, as amended.

The general expenses incurred in the administration of the Act are to be paid out of the Accident Fund, but to assist in defraying expenses incurred for salaries of the Board or its staff in the administration of this act there will be paid to the Accident Fund out of the Provincial Treasury such annual amount not exceeding fifty dollars as the Lieutenant Governor in Council may direct.

Scale of Compensation.—The compensation payable to an injured workman or his dependants is at the following rates:—

1. In case of temporary partial disability continuing for seven days or more after the accident and diminishing the earning capacity of the workman by more than ten per cent, a payment or payments, at a rate equal to fifty-five per cent of such diminution of earning capacity calculated on a basis not exceeding one hundred and fifty dollars per month.

2. In case of total disability continuing for seven days or more after the accident a payment or payments equal to fifty-five per cent of the average earnings of the workman, but not less than ten dollars per week or more than fifty-five per cent of one hundred and fifty dollars per month, such payments to be continued during the life of the workman or the duration of such disability.

3. In case of permanent partial disability payments on a scale to be established by the Board and proportioned upon the diminution of earning capacity and the degree of disfigurement, but not less than the Board considers will represent fifty-five per cent of the difference in the earning capacity of the workman before the accident and his earning capacity after the accident.

4. (1) Where death results from an injury in addition to any payments under clauses 1 and 2—

(*a*) the necessary expenses of burial of the workman, not exceeding one hundred dollars;

(*b*) where the sole dependent is a widow or invalid widower, payments during the life of such widow or widower, at the rate of thirty dollars per month;

(*c*) where the dependents are a widow or invalid widower and one or more children, payments at the rate of thirty dollars per month, with an additional payment of 7 dollars and 50 cents per month for each of such children. Payments in respect of female children shall cease when the the child attains the age of eighteen years, or

dies; in case of male children when the child attains the age of sixteen years, or dies.

(*d*) When the dependents are children only, each child shall receive the sum of fifteen dollars per month until, if a boy, he attains the age of sixteen years, or dies; or if a girl, she attains the age of eighteen years, or dies.

(*e*) Where the dependents are persons other than those mentioned in the foregoing paragraphs, payments at a rate reasonable and proportionate to the pecuniary loss to such dependents, on a scale to be determined by the Board, having in view the scale of payments laid down in paragraphs (*b*) and (*c*).

(2) In the case provided in paragraph (*e*) of clause 4 (1), the payments shall continue only so long as in the opinion of the Board it might reasonably have been expected had the workman lived he would have continued to contribute to the support of the dependents.

(3) Where there are both total and partial dependents the compensation may be allotted partly to the total and partly to the partial dependents.

(4) Exclusive of the expenses of burial the compensation payable as provided by sub-clause (1) of clause 4 shall not in any case exceed fifty-five per cent of the average earnings of the workman, and if the compensation payable under that sub-clause would in any case exceed that percentage it shall be reduced accordingly, and where several persons are entitled to monthly payments, it shall be reduced proportionately.

(5) If a dependent widow re-marries, the monthly payments to her shall cease, but she shall be entitled in lieu of them to a sum equal to the payments for two years, provided that sub-clause shall not apply to payments to a widow in respect of a child.

5. (1) The Board may in its discretion—

(*a*) commute the whole or any part of the payments due or payable to any workman or dependent for a lump sum; or

(*b*) substitute for such payments any other scheme of periodical payments; or

(*c*) substitute for any lump sum or sums any scheme of periodical payments, as may be deemed most expedient in the interests of such workman or dependents.

(2) Where in any case in the opinion of the Board it will conserve the accident fund to provide a special surgical operation or other special medical treatment for a workman, the expense of such operation or treatment may be paid out of the accident fund.

6. (1) Every workman entitled to compensation, or who would have been so entitled had he been disabled for seven days, shall be entitled to such medical and surgical aid and hospital and skilled nursing services and transportation as may be necessary as a result of the injury.

(2) All questions as to the necessity, character and sufficiency of any medical aid furnished or to be furnished shall be determined by the Board, and shall be paid out of the Accident Fund.

Report of accidents.—Employers are required to notify the Board within three days of the happening of an accident to a workman, giving full particulars as required; and the attendant doctor is required to submit reports on each case from time to time.

Workmen are required to make application for compensation within 14 days after an accident or as soon thereafter as the claim for compensation shall have accrued.

Licenses for Refrigerating Engineers in Saskatchewan

The *Saskatchewan Gazette* of May 8 publishes a draft of proposed rules and regulations for the inspection, operation and maintenance of refrigerating plants in the province. Any person in charge of a refrigerating plant of a capacity exceeding ten tons shall be required to hold a provincial certificate of qualification as a refrigerating engineer, provided that engineers in charge of refrigerating plants on the date when these regulations come into force shall be allowed to continue to operate the said plants for a period of six months, at the expiration of which time they must hold a certificate of qualification.

Any person who holds a first, second or third class engineer's certificate of the province, and who at the date when these regulations come into force is in responsible charge of a refrigerating plant of a capacity of not less than ten tons, and who satisfies the Minister that he has operated satisfactorily a refrigerating plant of a capacity of ten tons or over for a period of not less than six months prior to the said date, may upon application and the payment of a registration fee of two dollars, be granted a certificate of qualification as a refrigerating engineer, without further examination.

Any person, having attained the age of eighteen years, may present himself for examination before an inspector of steam boilers or at the Steam Boilers Branch of the Department of Public Works, Regina, and upon satisfying the inspector that he has sufficient knowledge and experience of the operation of refrigerating plants may upon payment of a fee of five dollars obtain a certificate of qualification as a Refrigerating Engineer. Such certificate may be granted to every candidate who receives 60 per cent of the aggregate marks obtainable on a written examination and during its currency shall entitle the holder to have charge of a refrigerating plant of any capacity. Such certificate shall not authorize the holder to have charge of steam boilers and shall not be used in lieu of certificates issued for this purpose under the provisions of The Steam Boilers Act.

LABOUR LEGISLATION IN NEW BRUNSWICK IN 1926

THE first session of the ninth Legislative Assembly of New Brunswick opened on March 11 and concluded on April 30, 1926. It was intimated in the opening speech from the Throne that with a view to promoting the interests of labour in the province the existing Department of Health would be enlarged to include Labour.* This change was effected by means of an amendment to the Executive Council Act.

It was stated that "it was evident in the matter of forest resources that the lumber industry as hitherto carried on is in a state of transition towards the more highly manufactured forms of pulp and paper. A project is now well under way by which approximately $5,000,000 of private capital will be invested in the manufacture of these products at Bathurst including the provision of the necessary power and involving the employment of about 1,200 additional hands. Such enterprises should be encouraged, as it is by building up communities founded upon labour that the best results can be obtained for the province." Agriculture, it was pointed out, is still the chief industry of the province. In order to co-ordinate industrial undertakings a commissioner to deal with new industries, marketing, natural resources, and immigration, was appointed during the past recess.

Industrial Disputes Act

An Act was passed "respecting the investigation of industrial disputes within the province," being similar in form to the acts recently passed in British Columbia, Saskatchewan and Manitoba (LABOUR GAZETTE, January, February and May, 1926). All these acts were passed in order to give effect to the amendment made in 1925 to the Federal Industrial Disputes Investigation Act, providing that the latter act shall apply, among other disputes, to "any dispute which is within the exclusive legislative jurisdiction of any province, and which by the legislation of the province is made subject to the provisions of this act."

Vocational Education

The Vocational Education Act of 1923 was amended in the section relating to the appointment of the Vocational Board under the act. This Board is to consist, as formerly, of eight members, including the chief superintendent of education, the principal of the Normal Schools and the Deputy Minister of Agriculture. In the appointment of the remaining five members consideration is to be given "to the interests of farming, labour, manufacturing, commerce and other industries or vocations." Greater latitude is allowed under this provision than under the section as it read formerly, when farming, labour, manufacturing and commerce were allowed one member each on the Board.

Licensing of Chauffeurs

The Motor Vehicle law was consolidated and amended, the sections providing for the examination and licensing of chauffeurs being redrafted. A chauffeur must, after undergoing an examination, obtain a yearly license from the Provincial Department of Public Works, the age limit for licenses being 18 years, and obtain a registration number, to be worn upon his clothing. The act enumerates the offences for which a chauffeur's license may be revoked. The annual fee for such a license is $2. Rules are also given for the licensing of proprietors of public garages.

Correction

In a note contained in the April issue of the LABOUR GAZETTE, it was stated in reference to the Winnipeg Teachers' Retirement Fund that "the amount of the pension is the same for everyone, $300 per annum." It has been pointed out since that the amount of the annual allowance was raised some years ago by the Winnipeg School Board from $300 to $800 per annum.

The pilots of British Columbia have formed an organization under the title "The Federal Pilots of British Columbia, Limited," with an authorized capital of $20,000, divided into 400 shares. The headquarters of the new company are at Vancouver.

* An Act was passed in New Brunswick in 1904 (chapter 17) providing for the establishment of a Bureau of Labour. This act, however, never became effective; its purposes would have been "to collect, assort and systematize and publish information and statistics relating to employment, wages and hours of labour throughout the province, co-operation, strikes, or other labour difficulties, trades unions, labour organization, the relations between labour and capital, and other subjects of interest to working men and working women, with such information relating to the commercial, industrial and sanitary condition of working men and working women, and the permanent prosperity of the industries of the province as the bureau may be able to gather." The administration of the Factories Act of New Brunswick is now in charge of the Provincial Workmen's Compensation Board, to whom the chief factory inspector presents his reports.

WORKMEN'S COMPENSATION IN MANITOBA AND ONTARIO IN 1925

Manitoba

THE Workmen's Compensation Board of Manitoba, recently published their report for the calendar year 1925. It will be recalled that the Workmen's Compensation Act of this Province was amended last year in accordance with the recommendations of a special committee of the Legislature which had studied the act with a view to placing it on a basis that would be permanent and satisfactory to all parties concerned (LABOUR GAZETTE, May, 1925; March, 1925, etc.) These amendments made certain changes in regard to the payment of medical aid and notice of accidents; the principle of vocational training of injured workmen whose earning capacity in their regular occupation has been permanently impaired by injury was introduced; the method of compensating dependants was changed by grading the amount payable to the surviving children from $12 to $8 instead of paying as formerly, a fixed amount of $7.50 for each child under 16 years of age; the Board was given authority to pay for the medical care and burial of a workman who leaves no dependants; a minimum payment of $15 was fixed for compensation for permanent total disability irrespective of earnings; lump sum payments were authorized where the workers earning capacity has not been reduced by more than 10 per cent; the rate of compensation for temporary total disability was allowed to remain at 62⅔ per cent of the workmen's average earnings, but $12.50 was fixed as the amount of the minimum weekly allowance.

Assessments

During 1925 the Board assessed 3,911 employers in Class "G," as compared with 3,701 assessed during 1924. The various classes into which the industries of the province are divided for the purposes of the Act are given in the following table, which shows the total payrolls for all these classes for the years 1924 (actual) and 1925 (estimated) as follows:—

Class	—	1924 (Actual)	1925 (Estimate)
"A"	(Canadian Pacific Ry. Company)	$ 8,949,601 47	$ 9,236,930 01
"B"	(Grand Trunk Pacific Railway)	1,046,651 31	1,046,651 31
"C"	(Canadian National Railways)	11,000,000 00	11,000,000 00
"D"	(Provincial Government)	1,599,790 21	1,659,347 94
"E"	(City of Winnipeg)	2,742,790 21	2,572,225 05
"G"	(General body of employers)	28,373,486 00	30,000,000 00
"H"	(Winnipeg Electric Company)	2,359,907 41	2,227,289 30
		$56,072,226 61	$57,742,443 61

During 1925 thirty-seven employers had their operations brought under Part I of the Act by application approved by the Board, as compared with seventeen employers brought under on application during 1924. At December 31, 1925, there were 147 employers whose operations had been brought under the Act in this manner. Twenty-five employers made application to the Board during 1925, and were permitted coverage for themselves and their dependents, as compared with thirty such applications made and approved during 1924. At December 31, 1925, there were 86 employers carrying protection for themselves and their dependents.

As a proof that the Board had the active co-operation of employers during the year the report notes the fact that outstanding assessments payable by employers in Class "G" were only $4,486 at the end of the year.

Accidents

During 1925 the Board received report of 9,042 accidents, as compared with 8,949 reported during 1924, an increase of 93, or 1 per cent.

Whilst there was a decrease in the number of accidents reported by the self-insurers during 1925, this was offset by a very appreciable increase in the accidents recorded by the general body of employers in Class "G". During 1925 the experience of the self-insurers, comprising the railway companies, the Winnipeg Electric Company, the City of Winnipeg, the Province of Manitoba and the Dominion Government, shows 4,720 accidents, as compared with 5,147 during 1924, a decrease of 427, or 8.9 per cent; whilst the general group of employers in Class "G" during 1925 reported 4,322, as compared with 3,802 for 1924, an increase of 520, or 13.7 per cent.

There were 36 fatal accidents in the various classified industries during 1925, as compared with 24 during 1924. Of these 15 were reported by self-insurers during 1925, as compared with 17 during 1924; whilst Class "G" recorded 21 during 1925, as compared with 7 during 1924.

The Board received report of 9,015 accidents which occurred in industries under Part One of the Act during 1924. These were classified as follows:—

Medical aid only	2,022
Temporary disabilities (over three days)	3,258
Permanent partial disabilities	167
Fatal cases (awards, expense incurred)	19
Rejected claims	180
Minor disabilities (under three days, no expense)	3,369
Total	9,015

On December 31, the Board had on its books 399 dependents of workmen killed in industry during period March 1, 1917, to December 31, 1925.

Since the coming into force of the Act on March 1, 1917, down to December 31, 1925, the claims of 153 widows have been approved. By the end of 1925 five of these widows died and 26 re-married.

Under the Manitoba Act the pension of a widow ceases at re-marriage with a lump sum payment equivalent to the pension payments for two years.

Medical Aid

During 1925, 787 cases of minor injury were treated by the Board's Chief Medical Officer, as compared with 858 in 1924. The aggregate days of disability for all cases so treated in 1925 was 2,929, or an average of 3.7 days per case.

Accounts

The actual cash disbursed by the Board during 1925 in payment of compensation, including medical aid, amounted to $752,412.59 as compared with $757,148.11 disbursed during 1924, a decrease of $4,735.52. The number of cheques issued by the Board during the year totalled 23,193, as compared with 21,941 issued during 1924, an increase of 1,252.

The value of Board Orders during 1925 for the payment of compensation, which includes orders respecting Dominion Government employees, and covers amounts set aside to reserve to provide for future payments in fatal and permanent disability cases, was $731,773.34, as compared with $763,418.76 during 1924, a decrease of $31,645.42.

Pension Fund

The pension fund provides for the statutory payments to widows and other dependents of those receiving fatal injuries in industries classified under the Act, and also to those suffering permanent disabilities from accident arising out of and in the course of the employment. A favourable balance of $42,336.58 is shown in the fund at the end of the year to provide for unforeseen contingencies. The pension fund is in no sense a reserve, but is built up to meet already existing liabilities.

The report contains an analysis of the compensable accidents which occurred in 1924 (this information not being ready as yet for 1925). The first of these tables shows the number of accidents by classes, the nature of the resulting disability, the time loss involved, the average age of the workmen, and their average wage. The totals for these figures are as follows:—

Number of Accidents in 1924

Medical aid only	$2,022
Temporary disability	3,258
Permanent disability	167
Death	19

Time Loss per Accident in 1924

Temporary disability, average days	20.95
Permanent disability, average days	154.51
Death	2.16
Average age (all classes), years	35.45
Average weekly wage, dollars	24.82

The causes of accidents by classes are given in detail, the totals being as follows:—

	Cases
Prime movers	100
Working machines	286
Hoisting apparatus	34
Dangerous substances	155
Stepping on or striking against objects	399
Falling objects	127
Handling objects	1,121
Tools	359
Runaways and animals	53
Moving trains, vehicles, etc.	211
Falls of persons	387
All other causes	214
	3,444

The industries in which fatal accidents occurred in 1924 were as follows:—One death each in electric power lines (repairing); lime kilns; lumbering; planing mills; road construction; five deaths in electric railways, and nine deaths in steam railways.

Ontario

The Workmen's Compensation Board of Ontario, recently published their eleventh annual report, giving details of the work in 1925.

The total benefits awarded from the commencement of the Act to the end of 1925 amounted to $51,494,095, while the accidents reported during the same period numbered 502,014. The estimated pay-rolls for 1925 amounted to $395,619,000, with 25,681 employers, as compared with $387,085,000 in 1924 with 25,155 employers.

Some summary figures for the year are given in the following general review.

Benefits

The total amount of benefits paid in each of the last four years was as follows:—

1925	$5,565,443
1924	6,122,820
1923	6,173,862
1922	5,692,897

Of the total $5,565,443 benefits in 1925, $4,511,366 were in schedule 1 industries, where the

collective liability system prevails, and $1,054,077 were in schedule 2 industries (including Crown cases) which are under the individual liability system.

Of the $4,511,366 benefits in schedule 1, $3,635,530 were compensation and $875,836 medical aid, the medical aid being a little over 19 per cent of the total, the medical aid for the years 1924, 1923 and 1922 being, respectively, 17, 16 and 16¾ per cent. Medical aid in schedule 2 is paid by the employers directly and therefore does not appear in the above figures.

Accidents

There were 60,012 accidents in all reported to the Board in 1925, as compared with 58,675 in 1924, 61,109 in 1923, and 50,411 in 1922. The number of fatal cases was 345, as compared with 402 during the year 1924.

Cases involving medical aid only, in schedule 1 industries, paid for during the year 1925 numbered 21,986, as compared with 21,137 during 1924; temporary disability cases were 28,397, as compared with 28,076 during 1924; permanent partial disability cases, 2,036, as compared with 2,314; permanent total disability cases, 18, as compared with 31; and death cases 296, as compared with 353 during 1924. This makes the total cases in which payments have been made either for medical aid or medical aid and compensation during 1925, 52,733, as compared with 51,911 during 1924, so that there is an increase in cases which involve medical aid only and a marked decrease in death and permanent disability cases, both total and partial, showing lessened accident severity and lessened accident cost.

Assessments

The rates of assessment on the various industries in schedule 1 were given in the last issue of the LABOUR GAZETTE.

Administration Expenses

Administration expenses for the year showed a slight but normal increase, being $237,433 in 1923, $254,847 in 1924, and $269,587 in 1925, the usual increases in salaries, special moving and furnishing expenses being more than sufficient to account for the increase during the year 1925. As the compensation awarded during the year was considerably less, the percentage of administration costs to total benefits awarded was slightly higher, being 4.84 per cent as compared with 4.16 per cent in 1924.

Accident Prevention, First Aid and Rehabilitation

There are several well-known methods of reduction of accident costs which are of interest both to the workmen and employers.

Accident Prevention.—During the year 1925 grants to the various accident prevention associations* increased from $79,506 in 1924 to $97,102, these payments being made to the different associations on the requisitions of their directors. All expenditures are under the direct control and management of the directors of the various associations, the Board's function being simply to supply the money for these operations out of the funds of the employers in the different classes represented. There appears to be a much wider interest being taken by employers and workmen in accident prevention and safety work and a more intensive campaign is being carried on by these associations. Each employer, it is suggested, should assist and get the benefit of the increased expenditures made each year by these associations. The Board's records show that so far as accidents caused by machinery are concerned they have fallen from 26.06 per cent in 1922 to 20.95 per cent in 1924.

First aid.—The report points out that when an accident has happened, first aid is very effective in lessening the seriousness of the disability and preventing infection of wounds. Many employers are careful to see to the supply of hospital and first aid equipment in their plants under the charge of trained nurses or first aid men, and to encourage the training of many of their employees in first aid rules as taught by the St. John Ambulance Corps and other organizations, and do so not only by courses taken by the men but by competitions between different teams of the employees so that their interest may be aroused and the work advanced. Employers can assist very greatly in this by encouragement in the training of their men in first aid work and in seeking co-operation of their employees in this work.

Rehabilitation.—Just recently power has been given to the Board to spend up to $100,000 a year in the rehabilitation of workmen. This branch of the Board's work is being developed as opportunity arises, but the work is still in its infancy. "There is no doubt" the report states, "that the employer has the first responsibility for re-employment of the men who have been injured in his employ. The casualties of industry must be taken care of, and nothing is more important than that the injured workman should return to work as soon as possible after his disability, as it is in the interest both of the workman, who receives 100 per cent wages while at work and only an amount not exceeding 66⅔ per cent when under compensation, so that the work-

*LABOUR GAZETTE, April, 1926, page 362.

man financially benefits by return to work, also the employer, who pays compensation, medical aid and hospital cost is also financially interested in the return of the workman and his re-employment even though he is not able to give full returns for the wages when so re-employed, but a still greater benefit is that it keeps up the *morale* of the workman and makes him feel that he is earning his own livelihood and that his interests and those of his employer are one. If, however, the disability is such that a workman must change his employment by reason of it, the Board has been using the Ontario School of Occupational Therapy to restore men to the full use of their limbs and to teach new trades. The Board is also endeavouring by means of special courses to re-establish men in industry in some position where they can carry on notwithstanding such serious disability as they have suffered from. This work should grow each year in efficiency, and the co-operation of the employers is very earnestly requested in assisting the Board in re-establishing workmen and giving them employment even though they are not as fully competent to perform their tasks as before the accident."

Funds

Outside of the Disaster Emergency Fund, which amounted at the end of 1925 to $265,610 and outside of the reserve funds to meet pensions awarded and deferred compensation by reason of infancy or other similar cause, the Board endeavours to keep the accident fund for schedule 1 classes as nearly balanced each year as safety permits. This year the usual acturial revaluation of all pension liabilities was made as of October 31, 1925, and the sum of $427,215 was transferred back to the benefit of the contributing classes in the accident fund, so that at the close of the year there was only a balance to the credit of all classes of $114,774.

The reserve funds of the Board are invested only in bonds of the Province of Ontario and debentures of Ontario municipalities in first class standing and in Dominion of Canada bonds. The Board have during the year exchanged a number of bonds whose date of maturity was becoming short and have reinvested in long-term government bonds and municipal debentures so as to keep the rate of interest as nearly uniform as possible over long periods of time.

Industries in Schedule 1

A table is given showing the estimated amount of wages paid in the various classes in Schedule 1 industries in 1925:

Class	1. (lumbering)	$ 24,900,000
"	2. (pulp and paper mills)	14,810,000
"	3. (furniture manufacturing, etc)	10,480,000
"	4. (planing mills, etc.)	11,464,000
"	5. (mining and explosives)	21,592,000
"	6. (brick manufacturing, quarrying and glass works)	9,486,000
"	7. (rolling mills, etc.)	7,235,000
"	8. (foundries, etc.)	11,098,000
"	9. (fabrication structural steel, etc.)	16,151,000
"	10. (metal articles, jewellery manufacturing, etc.)	31,009,000
"	11. (agricultural implements, etc.)	32,430,000
"	12. (gas, petroleum, paint, drugs, soap, etc.)	19,560,000
"	13. (milling)	5,636,000
"	14. (abattoirs, etc.)	6,579,000
"	15. (bakeries, canning, liquors and tobacco)	26,455,000
"	16. (tanneries, leather and rubber goods)	20,386,000
"	17. (textiles)	19,491,000
"	18. (clothing, power laundries, etc.)	21,588,000
"	19. (printing and stationery)	21,768,000
"	20. (teaming, cartage, coal and wood yard, etc.)	10,537,000
"	21. (road construction, etc.)	7,050,000
"	22. (electric power, etc.)	4,201,000
"	23. (steel construction, railway and canal construction, dredging, fishing, etc.)	7,110,000
"	24. (building)	34,603,000
		$395,619,000

Particulars regarding rate making under the Workmen's Compensation Act are given in the address by Mr. V. A. Sinclair, K.C., Chairman of the Board, on page 554 of this issue.

Children's Aid Association and Mothers' Allowances

The Association of Children's Aid Societies of Ontario held their annual convention at Toronto during May. The method of having the work of the societies financed by municipal councils instead of by private donations was declared to have made for efficiency and better results. Municipal financing is already in force in the counties of Oxford, Lincoln and Waterloo, and it was recommended that other counties should be placed on a similar basis.

The Association noted that the Mothers' Allowance Act was having a valuable result in making it possible for children to be kept under the care of their parents, instead of being committed to public institutions. The extension of allowances to widows having only one child was approved.

The movement for the medical examination of all children coming under the care of the aid societies was considered, the opinion being expressed that the association should not be content with removing a child from a home of poverty and neglect, but should have a detailed record of its physical and mental condition.

RATE MAKING UNDER THE ONTARIO WORKMEN'S COMPENSATION ACT

Notes on an address delivered by V. A. Sinclair, K.C., Chairman of the Workmen's Compensation Board, at the Safety Convention of the Industrial Accident Prevention Associations, held at Toronto, May 11-12, 1926.

EMPLOYERS have their difficulties in fixing the price at which goods are sold to their customers, in the way of tariff, competition, fixing the rate of profit, etc. The Workmen's Compensation Board, while not bothered with these features, also have their difficulties. The amount of taxable payrolls upon which the rate is imposed is estimated, and the amount of the compensation awards at the time the rates are struck, must necessarily be estimates in part. Rating is done as early in the year as may be so that sufficient moneys can be secured for carrying on the work of the Board as early as possible in the year. Hence, the importance of the annual payroll statements being made by January 20 and the imposition of penalties by way of added assessment where they are not made, because the rating cannot be done until the estimated payrolls are well in. The rates, which are usually fixed for the different classes towards the end of February and through March, are the provisional rates for the ensuing year and the adjusted rate for the year just completed. The aim in connection with rating is that sufficient will be raised to provide for all claims which may arise during the year, and yet that no more will be demanded than is reasonably sufficient for a slight margin of safety for this purpose. The figures which I have used throughout this discussion are the estimated figures for the year 1925 as they will appear in our 1925 report, and on these figures for last year for all classes there was only a credit balance of $114,000 in round numbers, as close to safety as the Board could reasonably go.

While the Board grants compensation to employees under Schedule 1 employers, to those under Schedule 2, and in Crown cases (both Dominion and Provincial), rating only takes place in connection with Schedule 1 employers, as only for them is there collective liability. In connection with both Schedule 2 and Crown cases there is individual liability of the employer to the full extent of the accident and administration cost. The requirements for 1925 amounted to $4,896,000, the assessable payrolls to $396,000,000. It would be a very easy matter to make the rate of assessment on all assessable payrolls, but this would not take account of the hazards of the different lines of industry and the necessity to provide for these different risks by different rates.

There are three things which enter into the amount to be levied—first, the administration costs of the Board; second, the administration costs of the safety associations, the Association which is now meeting representing fifteen of the classes; and third, the total of the compensation awarded or to be awarded in connection with the accidents which happen during the year, and the medical aid necessary for these cases, each year being made to pay its way as nearly as possible.

The total administration costs of the Board for last year amounted to $269,000, an increase of about $14,000 over the preceding year, which is accounted for by extra moving expenses, extra equipment required in the new premises, cost of government auditor, and the usual increases of salary allowed. The work is increasing and further help is required and there is the necessity for advancement of the employees, but the Board still claim that they have the lowest administration costs in the world, in connection with compensation administration. The Schedule 2 and Crown employers bear their share of the administration expenses amounting to about 16 per cent. The remaining 84 per cent, which for last year amounted to $226,000, is borne by the employers in Schedule 1 and must be provided for in the rate.

In connection with the safety association work, the payments in connection with this work have largely increased. Their work is under the charge of their own directors, and while the money is levied by the Board the control of the expenditure is entirely with the directors of the different associations, For the present Industrial Accident Prevention Associations, representing fifteen classes, the amount paid over by the Board for the past year amounted to $73,800, an increase of about $11,000 over the preceding year, so that the increases in administration costs in the Board and in the Industrial Association are about on a par for the past year.

The third item in the rate is the compensation and medical aid costs. The principle of the Board is that the costs of all accidents happening in the year must be

borne out of the rate of the year. This immediately introduces the element of uncertainty into the calculation of rates, as at the end of the year a number of accidents have not yet been reported to the Board, a number, while reported, have not yet been inquired into or investigated, a great number are still current, temporary total disability will still continue until disabled men are able to return to work, after that in many cases permanent partial or permanent total disability will have to be awarded, involving pensions continuing during the life of the claimants ,and also death cases. These can only be estimated. There is also the question of continuing medical aid to be provided for, so that each individual case has to be carefully considered and an estimate made as to the duration of disability, as to the probable permanent disability award, and as to the awards in connection with death cases. All this can only be estimated to the best of the ability of our statistical department. To meet claims not reported or not yet completed, it is customary to add about one-sixth to the ascertained and estimated compensation as a margin of safety. Practice shows that this works out very closely. Medical aid is estimated to run about 15 per cent of the total compensation paid or to be paid.

In fixing the adjusted rate these three cost factors have to be taken into consideration and levied in some way on the different employers under Schedule 1 of the Act, and the different hazards must be considered in fixing the rate. Hence, the necessity for division of the employers into different classes. At first the industries were divided into 45 classes. These are now consolidated and reduced to 24, as the object was to make the classes large enough and financially strong enough that where there was heavy accident cost in any way the class would be sufficiently large to absorb this cost without any great change in the rate levied, the members of the different classes being as nearly as possible in similar and allied industries. These classes form the units of rating. As the hazards in the different occupations in the same class are very different, it was necessary to subdivide these again into groups, with appropriate ratings for the hazard, with a result that in the same class the rates in the different groups may vary from 50 cents to $10 per $100 of payroll. While the rate in each individual group is as nearly as possible sufficient to pay the cost of accidents in that group, the general levy in the class under the principle of collective insurance is brought to bear to aid in payment of the accident cost in that particular group, the aim being to keep the rate as steady and uniform as possible so that no particular group or class may be unduly burdened in connection with their rate. These classes are like 24 mutual insurance companies, whose funds must be kept solvent, so that all losses will be met by those paying the different rates of insurance—in life companies according to the different ages and different hazards of risk covered—but the whole class or company must be kept in solvent condition and sufficient rate levied for that purpose. The rates in the different groups can only be fixed by continued experience, and they vary according to their accident cost, but small variances are not corrected if they are gradually correcting themselves. The *minus* or *plus* standing of the class or group is carried on from year to year until they adjust themselves by the imposition of the necessary rates. This is, of course, the greatest difficulty in rating, and experience is the only gauge for fixing the rates in these classes and groups. The rates levied in Ontario, for the amount of benefits paid to the workmen, have always been, taken all together, the lowest in the world. Comparisons of rates are usually given in the literature sent out to employers so that they may understand the difference in rating, and will not be gone into on this occasion.

There are two factors which are considered in reduction of rates:

First, the Pension Fund is revalued according to its liabilities every year. The liabilities change from year to year by reason of the re-marriage of pensioners under death claims, by the death of claimants before their estimated age of death, by the death of children who are pensioners, by extra interest earned, or by commutation of pensions of foreigners who return to their own country. Any surplus left, after a reasonable margin of safety, is returned to the accident fund in reduction of rates in accordance with the amounts paid in each class to the Pension Fund. This year $427,000 was transferred from the Pension Fund in reduction of rates in the different classes. This prevents the accumulation in the Pension Fund of unnecessary funds and gives the benefit back to the classes who paid it into the fund.

Second, there is the reserve which was collected for a number of years by taking one per cent of the assessments and paying it into the Disaster Fund, but this ceased at the end of 1922. With accumulated interest, after all payments, there is in the fund at the present time $265,000. This has been used to relieve classes or groups which would otherwise have had a very oppressive burden. For instance, $35,000 was paid at the time of the Quaker Oats explosion, $35,000 at the time of the

Consumers' Gas explosion, $12,000 to a factory in Newmarket as a result of explosion, and $15,000 to a Hamilton firm in a disaster in their contracting work.

During the present year the Board have adopted tentatively a new policy, in regard to a person already injured who receives another injury, which by reason of his previous condition would unduly burden the class in which he is then employed. In order to give him the full compensation to which he is entitled resort is now had to this Disaster Emergency Fund to relieve the class from a portion of this burden. For instance, where a man has already lost one eye for which his compensation would run from 14 to 18 per cent of his earning capacity and subsequently in another class meets with another accident which puts out his other eye so that he becomes a total disability entitled to 100 per cent, it is unfair that the 80 odd per cent should be charged to this class and only 14 to 18 per cent against the other class, and the Board thought it wise to charge up some sum in relief of this class. Other methods have been suggested of meeting this condition, such as levying a lump sum of $500 on all death cases where there are no dependants, and other proposals, but the Board are trying this out for the purpose of seeing what the results may be, and if it can be carried out with little burden to the Disaster Fund I think it will meet with the approval of the employers. If it becomes too heavy a charge, then other means will have to be taken.

In connection with rating, the individual does not figure at all in the fixing of rates. His good accident experience, care, and low accident cost are only considered in merit rating, which takes place, according to the present practice of the Board, every three years, the last year being to the end of 1923. The next one will take place after the expiration of the present year's experience. In view of the principle of collective insurance, this cannot be carried to the full extent of the accident cost of each individual; otherwise there would be the principle of individual payment of risk, which is against the policy of the Act, so that the amount which is given by way of refund for merit-rating is limited to 30 per cent of the assessment, and the amount which can be charged by way of demerit rating is limited to 25 per cent, by means of percentages of allowance where the accident experience is over 10 per cent good or bad.

MINING ACCIDENTS IN ONTARIO IN 1925

A REPORT on Mining Accidents in Ontario in 1925 has been issued by the Department of Mines of the Province. Similar reports for previous years have been noted in the LABOUR GAZETTE from time to time. Special measures were taken by the Department last year to meet the increasing risks of mining accidents resulting from the development of the mining industry in the Province. The visit to South Africa of Mr. T. F. Sutherland, Chief Inspector of Mines, in order to study mining conditions on the Rand has been already noted in the GAZETTE (January, 1926, page 28). The lessons of this visit are applied to the problems of Ontario mining in the present report. Silicosis or miners' phthisis, it is stated, has been and is yet the most serious problem of South African gold operations. The amendment to the Workmen's Compensation Act of Ontario, declaring silicosis an industrial disease for which compensation is to be granted, was outlined in the last issue (May, 1926, page 450).

In South Africa three organizations are working for the control of this disease; the government, the Miners' Phthisis Medical Bureau, and the Chamber of Mines. The Government has appointed several commissions to investigate the subject and make recommendations, the last of which was the Miners' Phthisis Prevention Committee, which brought in its final report in 1919. The Miners' Phthisis Board consists of a chairman and not less than three or more than six members appointed by the Crown for a period of three years. In addition to collecting from the mining companies the necessary assessments to compensate silicotic miners and paying to the miners and their dependants the prescribed benefits, the Board has power to operate training schools in trades or industries, to establish sanatoria for silicotic miners and to establish in industry silicotic miners or their dependants. Working with this Board is a medical bureau, composed of medical men, who conduct the medical examinations. The Transvaal Chamber of Mines has done good work in studying dust conditions and developing methods to prevent miners' phthisis. Technical work in connection with this disease is now along the lines of improved ventilation and the development of a dustless rock drill.

Accidents in 1925

During the year 1925 at the mines, metallurgical works, quarries, clay, sand, and gravel pits regulated by the Mining Act of Ontario, there were 2,263 accidents reported to the De-

partment up to January 25, 1926. Thirty-seven of these accidents were fatal, resulting in the death of forty-two men. This is an increase over 1924 of two men killed. In 1924, fourteen men were killed at the quarries, clay, sand, and gravel pits, and in 1925, nine men were killed in these operations.

Of the forty-two fatalities in 1925 five occurred in the nickel mines and metallurgical works; seven in the silver mines and refineries; 18 in the gold mines and mills; three in the lead mines; seven in the quarries, and two in the clay, sand, and gravel pits.

The causes of the fatalities were as follows:—19.35 per cent were due to falls of ground; 19.35 per cent were due to shaft accidents; 25.80 per cent were due to explosives; 29.03 per cent were classed as miscellaneous underground, and 6.45 per cent as surface accidents.

The rate of fatal accidents per 1,000 employees in the mines was 3.23 in 1925; 3.20 in 1924; 2.50 in 1923; 2.72 in 1922; 2.54 in 1921; 2.61 in 1920. The total number of persons employed in 1925 in mines, metallurgical works and quarries, and in sand, gravel and clay pits in the province, is given as 13,000, of which number 11,500 were employed at metallurgical works and producing mines.

Of the 42 men killed in 1925, 17 were classed as miners; eight were labourers; three were shaftmen; two were electricians; two were shift bosses; two were blasters; two were shovellers; one was a brakeman, one a deckman, one a scaler, one a teamster, one a shovel operator, and one a trammer. The report analyzes also the causes of the non-fatal accidents. Infection followed in 8.67 per cent of the cases.

Sunday League of Quebec

The second congress of the Sunday League of Quebec was held at Hull, Quebec, on May 23, the Honourable Judge Surveyer presiding. The following resolution was adopted unanimously:—

"The Sunday League at its second congress at Hull reaffirms that all work should cease in manufactures, especially in the pulp and paper mills, during the whole of Sunday, that is to say, from midnight to midnight, and another appeal is hereby made to the provincial government to exercise its rights and insist on the strict observance of the law. The Sunday League further declares that the receipt of reliable information from various sources places it in a position to be able to say:—(1) That the large majority of workers will be satisfied with the carrying out of the provisions of the law regarding Sunday rest; (2) That it is impossible to obtain an independent expression of opinion on the subject from workers, either privately or in groups, owing to fear of reprisals or dismissal."

Reports were received from different parts of the province showing the present standing in regard to Sunday observance:

At Montreal, Sunday labour in construction work has almost disappeared. It has also greatly diminished in the Jewish trade. An inquiry is now being made in regard to Sunday labour in the manufacture of ice cream at Montreal.

The committee at Quebec has received petitions from 400 municipalities which are opposed to Sunday labour. At Granby billiard parlours are closed on Sunday.

The committee in Chicoutimi stated that Sunday labour originated in that region, and that it was also in the same district that the reaction against Sunday work took place, the situation being finally made clear after numerous lawsuits. To-day in the pulp factories there is no work during 24 hours on Sunday, and this appears to be satisfactory to every person. The new practice was inaugurated on January 2, 1925.

The committee at Sherbrooke stated that the Sunday law was fully enforced in that district.

The committee at Three Rivers reported that the situation there was far from satisfactory. As many as 427 workers were engaged in building construction on Sunday, in spite of strong protests. Employees in the pulp and paper mills work from 7 to 8 hours on Sunday mornings. As a result of the example set by the big companies, a certain amount of commercial activity on Sunday was also noticed.

A new tariff of fees to be paid under the Theatres, Cinematographs and other Amusements Act of New Brunswick was published during May. The license fee for cinematograph operators is fixed at two dollars a year, and for apprentices at one dollar.

During the month of May, 923 industrial accidents, including one fatality, were reported to the Workmen's Compensation Board of Manitoba. The victim of the fatality was a lineman who came into contact with high tension lines while working on a pole.

INDUSTRIAL RESEARCH IN CANADA

THE Alberta Coal Commission, in their report which was outlined in the last issue of the LABOUR GAZETTE, strongly recommended the further development of scientific research work in connection with the coal industry including the organization of a special advisory council. The Commission received assistance in their work from the Scientific and Industrial Research Council of Alberta, making extensive use of the Council's studies of the geology and characteristics of Alberta coal and other information derived from scientific experiments and tests. They noted among the coal operators of the province a considerable amount of scepticism regarding the value of research work to the industry; and expressed the opinion that "until the Research Council proves itself by achieving results of immediate practical importance the operators of the province can hardly be expected to bring to it their problems for solution . . . For the best results there must be a fuller measure of mutual confidence and co-operation and the hope of finding a way to secure these is one of the reasons for recommending the appointment of the Coal Industry Advisory Council of Alberta."

Scientific and Industrial Research Council of Alberta

This body originated in the autumn of 1919, as a committee appointed by the Provincial Secretary to advise him on matters relating to industrial research. By Order in Council, dated January 6, 1921, it was given definite status as The Scientific and Industrial Research Council of Alberta, consisting of five members, with power to direct research work, to engage assistants and to arrange with the University of Alberta for the necessary laboratory and other facilities and for the services of members of the University staff, as required. At present, the Minister of Public Works of the province is chairman and the other members are the president of the university, the professors of geology, of physics and of mining and the chief mines inspector. There is an honorary secretary who is also the chief chemical engineer of the council, together with a staff of part time or whole time assistants. The Council is supported by a direct grant of provincial funds, the cost to the province for the year 1924 being given in the public accounts as $52,346. Alberta was the first province to establish such an organization.

National Research Council of Canada

The National Research Council of Canada was established in 1916 by the Canadian Government acting on the request of the British Government, which had not only established a similar organization in Great Britain, but had also petitioned each of the British Dominions to take like action, with the object of developing an empire scheme for scientific and industrial research. In Great Britain this work has grown to such magnitude and is recognized to be of such importance that a separate Government Department of Scientific and Industrial Research was created several years ago, while organizations similar to the National Research Council of Canada have been established in practically every important unit of the Empire. The National Research Council of Canada keeps in close touch with the activities carried on by each of these organizations and particularly with the Department of Scientific and Industrial Research in Great Britain.

The Council is also the official Canadian representative in the International Research Council, of which organization practically every important commercial country in the world is a member. The International Research Council constitutes a focal point through which the views, on important scientific questions of general interest, of the most important scientific organizations and of the leading men of science throughout the civilized world can be reviewed and disseminated.

In July, 1924, a revised Research Council Act (14-15 George V, chapter 64) was passed by the Canadian Parliament, under which the Council was constituted a corporate body and given charge of all matters affecting scientific and industrial research in Canada which may be assigned to it, and was also charged with the duty of advising the Dominion Government on questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the natural resources of the country.

Under the Act of 1924 the Council consists of not more than fifteen members, who, with the exception of the president, hold office for a period of three years, one-third of the membership retiring each year. The Act provides that the Council shall meet at least four times a year at Ottawa and may also meet at such other times and places as the Council may deem necessary. No member of the Council, with the exception of the president, receives any payment or emolument for his services

other than to be reimbursed for the approved expenditure actually incurred in connection with the work of the Council. In addition to the above-mentioned general powers the Council is charged under the Act with the following specific duties:—

To promote the utilization of the natural resources of Canada;

To undertake researches with the object of improving the technical processes and methods used in the industries of Canada, and of discovering processes and methods which may promote the expansion of existing or the development of new industries;

To undertake researches with the view of utilizing the waste products of said industries;

The investigation and determination of standards and methods of measurements, including length, volume, weight, mass capacity, time, heat, light, electricity, magnetism and other forms of energy; and the determination of physical constants and the fundamental properties of matter;

The standardization and certification of the scientific and technical apparatus and instruments for the Government service and for use in the industries of Canada; and the determination of the standards of quality of the materials used in the construction of public works and of the supplies used in the various branches of the Government service;

The investigation and standardization, at the request of any of the industries of Canada, of the materials which are or may be used in, or of the products of, the industries making such a request;

To undertake researches, the object of which is to improve conditions in agriculture.

It is the purpose of the National Research Council in establishing a system of scholarships to develop, in Canada, a corps of highly trained research men for service not only in Canadian universities and technical schools, but also in the industries, in the technical service of the Federal and Provincial Governments and in agriculture. Three classes of scholarships are awarded by the Council, namely, bursaries, studentships and fellowships, having an annual value of $750, $1,000 and $1,200, respectively. At the end of 1925, 131 persons had completed their training in science under these awards. Of these, fifteen persons are continuing their post-graduate studies, some under scholarships from other sources and some having gone to foreign universities for special instruction or in order to continue their training in some particular branch of science; thirty-four persons are engaged in the teaching profession, thirty of these having received appointments to the staffs of Canadian universities, where the great majority of them will have an opportunity of continuing their scientific training and of engaging in research work. Twenty-four persons are employed in the industries and twenty-two have accepted positions in the technical branches of the Federal and Provincial Governments. One grantee has died and the balance have failed to furnish the Council with information regarding their present occupation.

Canadian Council of Agriculture

President W. A. Amos, of the Canadian Council of Agriculture, in his annual address at Regina in February, explained the organization and purposes of the Council: "The Canadian Council of Agriculture," he said, "was established in 1909 for the purpose of providing a channel through which the provincial farmer's organizations might combine their efforts when dealing with interprovincial and national problems. The Council represents the organized farmers in the five most populous provinces of Canada from Quebec in the east to Alberta in the west, and its affiliated bodies have a combined membership of approximately 130,000 farmers. The Council is thus national in scope and outlook and since its inception has been recognized as the body through which the principal farm organizations of the Dominion give united expression to their various views and demands on national questions.

"The necessity for a national farmers' organization, such as the Canadian Council of Agriculture, is constantly being demonstrated. Most of the larger problems which confront the agricultural industry, and whose solution is necessary to agricultural prosperity, are of a national, or at least an interprovincial character. Transportation questions, including freight, express, lake and ocean rates, the customs tariff and other forms of federal taxation, the banking, currency and financial systems of the country, the regulation of the grain trade, of the live stock industry and of other branches of agriculture, the commercial relations of Canada with other countries involving markets for agricultural produce, federal legislation, government ad-

ministration generally, are of equal importance to farmers throughout the country. In all these things the interests of the farmers in every province of Canada are usually found to be identical."

The president stated that the Council of Agriculture has never received one cent of financial assistance from any government or from any other source other than the farmers' organizations which compose its membership. It is therefore a purely farmers' organization and is entirely free from any connection with any government, either provincial or federal, or with any political party. It holds itself free at any time to criticize any government that may be in power and to endeavour to persuade it to enact the legislation which the organized farmers through their provincial organization may deem desirable.

The membership at the present time consists of the United Farmers of Quebec, the United Farmers of Ontario, the United Farmers of Manitoba, the Saskatchewan Grain Growers' Association, the United Farmers of Alberta, the Grain Growers' Guide, Saskatchewan Co-operative Elevator Company Limited, the United Grain Growers Limited, and the United Farmers of Ontario Co-operative Company. At meetings of the Council each of the companies is entitled to four representatives, consisting of its executives or their appointees. In addition, the provincial associations are each entitled to five representatives, one at least of whom must be a woman. The constitution also provides that the women representatives in attendance at any meetings of the Council may meet separately to discuss matters in which women are particularly interested, and that when so meeting shall form the Women's Section of the Council.

Among the resolutions adopted during 1925 were the following:—

Asking for the amendment of the naturalization act so as to permit married women to take out personal naturalization papers and to permit a woman who is a British subject but who marries a person of foreign citizenship to retain her British nationality unless she choose to do otherwise.

Recommending the using of the national credit to provide the agricultural industry with intermediate and long-term credit.

Asking that cadet training in the schools be discontinued and replaced by physical education of all boys and girls fit to receive same.

Asking that all immigrants be examined by mental experts at the point of embarkation instead of the point of landing.

Calling attention to the fact that substitutes were being sold as pure cream in certain eastern cities.

Urging the revaluation of soldier settlers' holdings.

A special committee on co-operative marketing was established to consider ways and means of fixing Dominion-wide uniform standards of farm produce and to develop Dominion-wide co-operative marketing facilities for the products of Canadian agriculture.

Report of Governor's Advisory Commission for the Needle Trades in New York

About two years ago Governor Al. Smith of the State of New York appointed the "Governor's Advisory Commission" to report on conditions existing in the cloak, suit and skirt industry, the members being Messrs. George Gordon Battle, Herbert H. Lehman, Bernard L. Shientag, Arthur D. Wolf and Professor Lindsay Rogers of Columbia University. The commissioners in their report published during May find that the difficulties in this industry arise from seasonal employment and wastes in the system of contract letting by jobbers. They recommend increases in wages all through the industry ranging from $2.50 to $6 a week in order to compensate for the seasonal nature of employment. Workers in the larger shops it is found are employed 37.4 weeks in the year, while those in smaller shops work about 26.8 weeks.

The report severely criticizes the growth of the jobbing system in this industry. The jobber is declared to be actually an indirect manufacturer who lets contracts to sub-manufacturing firms and allows them to shoulder the overhead expenditures. The jobbers consider themselves free from labour standards and have no incentive for lengthening the season of employment. The commission recommends limitation of the number of the sub-manufacturers and equal distribution of work. Improvement of the system of unemployment insurance, creation of a central employment bureau and continuation of the Bureau of Research were other recommendations.

The unemployment insurance fund established for garment workers in New York in 1924 was described in the LABOUR GAZETTE for September, 1924, and April, 1925.

TRADE UNION MEMBERSHIP IN CANADA IN 1925

Synopsis of the Contents of the Annual Departmental Report on Labour Organization

THE fifteenth Annual Report on Labour Organization in Canada, covering the calendar year 1925, has just been issued by the Department of Labour. The volume, which consists of 272 pages, besides showing the numerical strength of the organized workers in the Dominion, discusses the various organizations with which they are either directly or indirectly affiliated. Included also in the report are references to some of the more important incidents of labour bodies both at home and abroad. The report states that the trade unions operating in Canada consist of the following groups:—

(1) Local branches of international craft organizations having headquarters in the United States;

(2) Local branches of the Industrial Workers of the World, with headquarters in Chicago;

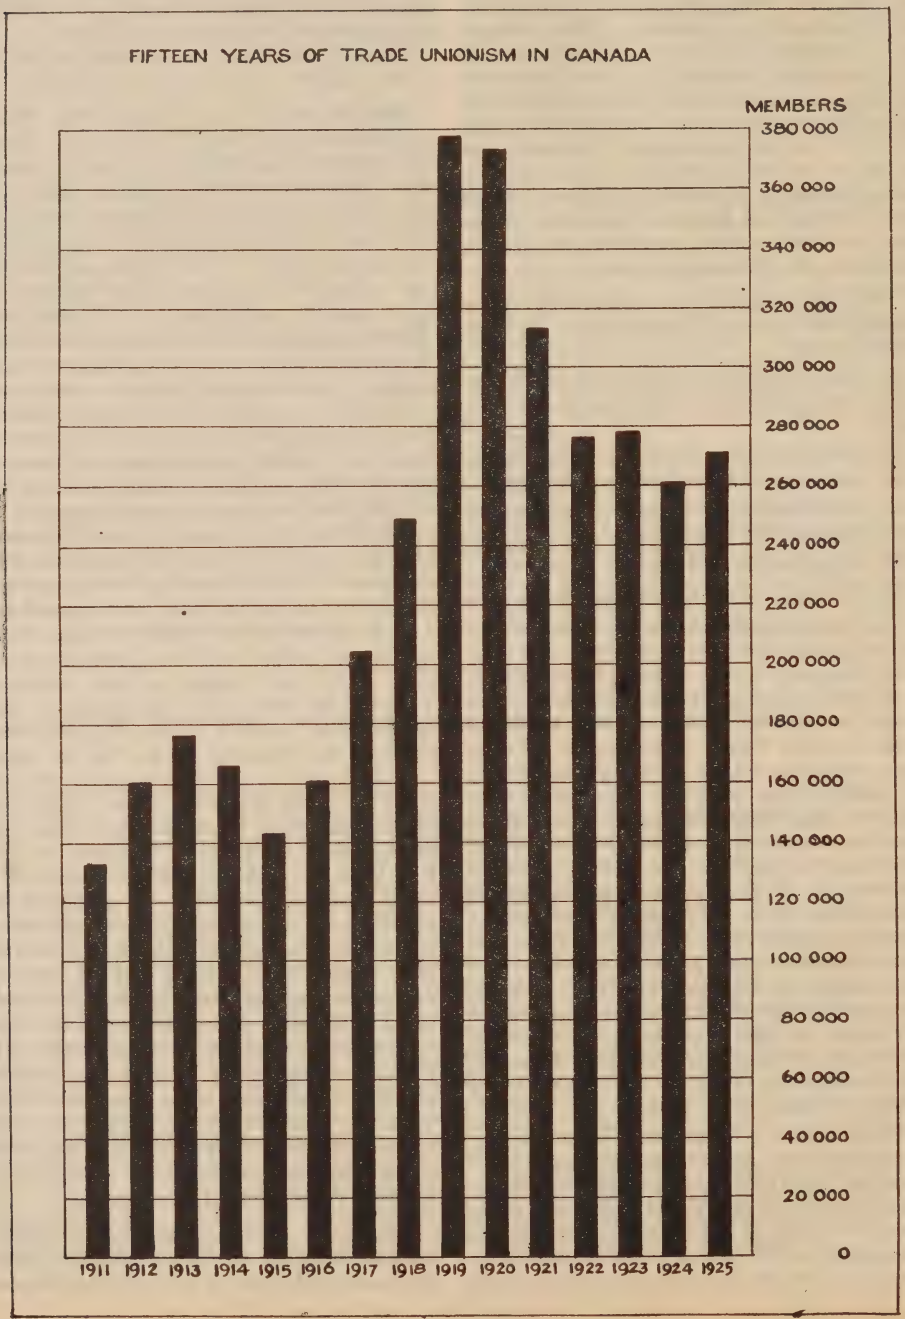
(3) One Big Union, an international industrial body with headquarters in Winnipeg;

(4) Non-international craft organizations with headquarters in Canada;

(5) Independent trade union units; and

(6) National and Catholic unions.

The 87 international craft unions operating in Canada have between them 1,985 Canadian branches, with a combined membership of 172,573, a loss of 43 branches and a decrease of 17,908 members; the Industrial Workers of the World maintained its six Canadian branches with a reported membership of 10,000, a loss of 1,500; the report from the One Big Union, the first received direct from the head office since 1919, shows 53 local units in the Dominion, with a combined membership of 17,256; the non-international organizations have 311 local branches with a combined membership of 34,070, increases of 43 in branches and 12,309 in members; the independent units number 40, a gain of seven, the reported membership of which is 12,264, an increase of 264; the National and Catholic unions increased by five, now being 99, the membership of which was stated to be 25,000, the same as in 1924.



These figures indicate that while the international craft unions had decreases of 43 branches and 17,908 members, and the Industrial Workers of the World lost 1,500 members, the gains of the four other groups amounted to 108 branches and 29,829 members, net increases for the year of 65 branches and 10,421 members, the total number of branch unions of all classes in Canada at the close of 1925 being 2,494, with a combined and estimated membership of 271,064.

This cut was used in the publication entitled "Labour Organization in Canada."

Mine Workers Leave United Mine Workers.—Because the coal operators in Alberta and South-eastern British Columbia claimed they could not meet the prices of their competitors under the scale of wages negotiated with the United Mine Workers after a strike which continued for more than six months, and closed their mines in consequence, the coal miners, members of the United Mine Workers, deserted the organization and formed independent unions for the purpose of permitting them to make separate agreements with the operators in the district, with a view to having work resumed. The secession from the U.M.W., which had its inception late in 1924 continued during the first part of 1925, the organization at the close of the year only having six branches and 1,500 members as compared with 34 branches and 8,500 members in 1924. Many of the independent unions of coal miners were later merged into a body known as the Mine Workers' Union of Canada, with which it is understood the bulk of the coal miners are now identified. To meet the demands of the operators, some of the local branches of the U.M.W. whose members had remained faithful to the organizations made a new wage contract with the operators in the Red Deer Valley. The secessionists thereupon picketed the mines and endeavoured to prevent members of the U.M.W. from working. These actions led to many disturbances, about 75 persons being indicted on charges arising out of the picketing, of whom a number were convicted. Officers of the U.M.W. alleged that the secession movement was engineered by the communists, who having failed to gain control of the union sought to disrupt the organization. The U.M.W. officers of the district union, following the withdrawal of so many members from the organization, resigned their positions, the affairs of the district being placed in the hands of provisional officers by the international president.

Labour in Politics.—The report outlines the establishment of labour political parties in Canada and refers to some of the decisions

made at their conventions. Of 20 labour candidates who participated in the Federal election held in October, 1925, only two were elected, the majority of the remaining contestants losing their election deposits. None of the ten labour candidates in the Nova Scotia election of June 25, 1925, were elected, and with the exception of two they all lost their deposits. The only labour candidate in the Saskatchewan provincial election was endorsed by the Liberal party, and he was elected. Reference is also made to

the British Commonwealth Labour Conference held in London, England, in July, 1925, at which four Canadian representatives were present, as well as to the defeat of the Labour Party in the Australian elections.

Property of Central Labour Unions.—The report gives particulars of the headquarters buildings owned by central labour organizations, included in which is the property of the Trades and Labour Congress of Canada, which is valued at $36,000. The office buildings of 28 unions which reported their property holdings amounts to $9,721,317.65.

Trade Union Benefits.—The report points out that the beneficiary feature of trade unions is yearly expanding, especially as regards international unions. Only four of the Canadian organizations reported payments for benefits during 1925, the total expenditure being $23,184, a decrease of $9,843 as compared with the previous year. Of the 89 international organizations having branches in Canada 65 had expenditures for one or more benefits, payments on account of death benefits being made by 56, unemployed and travelling by 8, strike by 33, sick and accident by 22, and old age pensions by 5. The total expenditure in Canada and the United States for benefits of central organizations was $17,397,271, a decrease of $2,903,093 as compared with the disbursements of 60 organizations in 1924. The expenditure for the various benefits were as follows:—

Death	$10,172,310
Unemployed and travelling	925,832
Strike	1,767,820
Sick and accident	1,671,807
Old age pensions and other benefits	2,859,502

The report also shows the amounts expended by Canadian branch unions to their own members, which sums were in some instances paid in addition to the benefits received from headquarters, and in other cases covered benefits not provided for by the central organizations. The total expenditure by the 658 local branches which reported was $283,212, a decrease of $75,690 as compared with the payments made by 673 branches in 1924. The disbursements for 1925 by the local branches covered the following benefits:—

Death	$ 68,019
Unemployed	19,600
Strike	101,346
Sick	124,617
Other benefits	45,320

The report also contains information concerning a class of associations of wage-earners which are in no way identified with the organized labour movement of the Dominion, the membership of which comprise school teachers, government employees, municipal employees, commercial travellers, etc. The organizations included in this group number 73, a gain of seven, the aggregate membership of which is 90,488, an increase of 4,155.

The fifteenth Annual Report on Labour Organization in Canada, like previous issues, forms a complete labour directory, containing not only the names and addresses of the chief officers of local branch unions in the Dominion, but also those of the central organizations with which the Canadian organized workers are connected, and of the various delegate bodies.

The chart on page 562, which is taken from the report, will indicate at a glance the fluctuations in Canadian trade union membership from 1911 to 1925, the period covered by the departmental Annual Report on Labour Organization.

Another chart appearing in the report shows that the 271,064 trade union members in the Dominion are divided by trade groups as follows:—

Railroad employees, 79,009.
Mining and quarrying, 26,386;
Public employees, personal service and amusement trades, 26,001;
Building trades, 23,243;
Other transportation and navigation trades, 19,630;
Metal trades, 15,121;
Printing and paper making trades, 13,005;
Clothing, boot and shoe trades, 12,707;
All other trades and general labour, 55,962.

By provinces the 2,494 local branch unions are divided as follows: Ontario, 1,009; Quebec, 444; British Columbia, 246; Alberta, 225; Saskatchewan, 172; Manitoba, 151; Nova Scotia, 131; New Brunswick, 135; and Prince Edward Island, 11.

There are 30 cities in the Dominion in which not less than 20 local branch unions of all classes are operating, and between them they represent nearly 50 per cent of the entire trade union membership of 271,064 in Canada. The cities of Montreal and Quebec, in addition to the international and non-international branch unions and independent units, have respectively 25 and 24 national and Catholic unions. Of the 1,866 branch unions which reported their membership, 22 have 1,000 or more members, the largest membership reported being 2,600.

Space is given in the report to various classes of delegate bodies which have been established as a part of the plan of labour organization in North America, and which are

designed to co-ordinate the activities of unions of closely allied or particular trades in dealing with matters of like concern to all members of the organizations represented.

Organized workers in various countries.—In addition to the information given in the report as to the trade union membership in the Dominion, figures are published showing the numerical strength of organized workers in 45 other countries, the total, including Canada, being 36,448,889. Of this number, 17,580,431 located in 33 countries are sympathetic (though not actually affiliated) towards the International Federation of Trade Unions, with which organization the Trades and Labour Congress of Canada, with its 105,912 members, is in affiliation. The following table shows the number of organized workers in the various countries:

Argentine	120,000
Australia	729,155
Austria	1,044,068
Belgium	726,126
Brazil	104,000
Bulgaria	49,803
Canada	271,064
Chili	162,000
China	300,000
Cuba	100,000
Czecho-Slovakia	1,669,456
Denmark	306,158
Dutch East Indies	60,000
Egypt	12,000
Lithuania	28,250
Luxemburg	14,087
Memel	3,894
Mexico	838,000
New Zealand	96,821
Norway	94,567
Palestine	14,835
Peru	25,000
Poland	539,089
Esthonia	30,000
Finland	47,312
France	1,068,046
Germany	6,900,000
Great Britain and Northern Ireland	5,531,000
Greece	56,680
Holland	517,914
Hungary	267,885
Iceland	4,000
India	195,800
Ireland (Free State)	148,501
Italy	2,234,520
Japan	230,000
Latvia	38,867
Portugal	36,000
Roumania	46,863
Russia	6,604,684
South Africa	27,670
Spain	453,578
Sweden	451,650
Switzerland	261,713
United States	3,923,833
Yugo Slavia	64,000

A table is also given showing the percentage of organized workers to population in 24 countries.

Revolutionary organizations.—Considerable space in the report is devoted to a group of what are classed as revolutionary labour bodies. These include the following organizations:

(1) Red International of Labour Unions, the trade union adjunct of the Third (Communist) International of Moscow;

(2) the Communist Party of Canada, an affiliate of the Communist International;

(3) the Young Communist League, protégé of the Communist Party of Canada; and

(4) the Trade Union Educational League, the official representative in Canada and the United States of the Red International.

The design of these revolutionary organizations is to organize the working mass of the whole world for the overthrow of capitalism, and the establishment of the dictatorship of the proletariat. Members of the communist bodies who are also affiliated with trade unions have been accused of using the machinery of labour organizations for the purpose of propagating revolutionary principles. To combat this procedure some of the old-established trade unions have taken steps to expel those who were advocates of what was considered to be communist doctrine. The president of one labour union, some of whose members were alleged to have aided communist meetings with union funds, issued a statement under the title of "The Communist Plague in Our Labour Unions." The document, which is given in full in the report, is stated to be the most complete account of communist policy and methods yet published.

The report states that the British Government took criminal action against twelve members of the Communist Party of Great Britain on the charge of plotting to spread communist propaganda among the army and navy. All of those indicted were found guilty, seven being sentenced to six months' imprisonment, the remaining five receiving sentences of one year. Efforts to bring about a conference of representatives of the All-Russian Central Council of Trade Unions, an affiliate of the Red International, and the International Federation of Trade Unions with a view to bringing about what is termed trade union unity were continued during 1925, but no meeting materialized. The International Federation has from the outset agreed to admit the Russian body to membership when it made application, later declaring that a conference would be held for the purpose of exchanging opinions as soon as the All-Russian Council intimated its desire to be admitted to the Federation.

NOTES ON LABOUR UNION ACTIVITIES

London Trades and Labour Council Interview Minister of Labour

A DEPUTATION from the London Trades and Labour Council waited on the Minister of Labour, the Honourable J. C. Elliott, on May 8, to ask for certain amendments to the Criminal Code and for remedies for certain other grievances of labour. Mr. Frank White, M.P., of London, Ontario, introduced the delegation, which included John Colbert, president of the Council; Secretary J. F. Thomson; A. R. Foxcroft, president of the Federated Shop Crafts; William Tite, Frank McKay, S. G. Mandell and A. Sanderson.

Four specific complaints in reference to existing conditions were made: (1) that under the order in council passed at the time of the Winnipeg strike British subjects may be deported without a trial on a charge of sedition; (2) that labour has no right to peaceful picketing in strikes; (3) the use of the injunction at the time of a strike; and (4) the low rate of wages paid for summer gangs on the Canadian National and Canadian Pacific Railways.

In connection with complaint number (4) the delegates stated that it was unjust that the two railways paid only 30 cents an hour to surface gangs hired for the summer time, but paid 38 cents an hour to men doing the same work who were on the regular schedule and were retained all the year round. They said that these men lived in living-in cars on the road while at work, paying $1 a day for board, even on the wet days when they could not work, and being docked pay for lost time.

It was claimed that 30 cents an hour for a 10-hour day, less $1 for board, six days a week, amounting to about $18 a week, was considerably below the amount required for a married man with a family, and that it did not enable a Canadian to be a good citizen at present prices.

J. F. Thomson, secretary of the Trades Council, stated that Canada was the only part of the British Empire where legislation existed for the deportation of British subjects on sedition charges. He recited the recent cases in Australia, where the Government sought to deport certain strike leaders and Miss Pankhurst, but where the Supreme Court ruled the action of the Government *ultra vires*.

"Labour to-day has a perfect system of international communication through Geneva headquarters, which was non-existent before the war," he said. "Labour knows in England or South Africa or Australia or anywhere else just what labour conditions are in Canada. The time has gone by when any social or industrial condition can be confined to any one country and workers brought in in ignorance of these conditions."

The delegation pointed out that the last time picketing occurred in the Dominion injunctions were obtained to prevent it, following United States precedents. What the labour men wanted in all these matters was the application of British laws. It was lawful to use peaceful picketing in Great Britain and it was unlawful to try a man on a sedition charge without a jury. That was the sum of their wishes in the matter of alterations to the Criminal Code in Canada.

In regard to wages in general the delegates suggested that an adequate home market could never be built up in the Dominion unless there was a fairly high wage paid to all workers. They claimed the lower wage the smaller the outlet for Canada products, and that while the Canadian manufacturer could to some extent control his export markets by tariffs, he had no control over his home market other than by the buying power of the wages received in the individual homes.

The Minister promised that careful consideration would be given to the representations of the delegates.

Montreal Trades and Labour Council

The Montreal Trades and Labour Council, at a meeting during May, considered an application from the District Council of Carpenters and Joiners for financial support in an action for damages brought by one of the members of the carpenters' organizations against a contracting firm at Montreal.

The Council after a lengthy debate adopted the recommendation "that the action having been taken under common law, it does not in the opinion of your Executive, constitute a test of any vital principle. Furthermore to assist in a case of this character would be creating a precedent that might lead to complication in the future." The taking of labour accident cases from court to court, "putting money in the hands of the lawyers who won whether we lose or not," was summarily denounced by John T. Foster, president of the Council. He pointed out that by taking labour accident cases under common law from court to court they were merely benefiting the lawyers. Experience had shown organized labour that they had nothing to gain under common law, that the other side had all the machinery to win.

Amalgamated Clothing Workers of America

The seventh biennial convention of the Amalgamated Clothing Workers of America was held at Montreal, Que., on June, 10-15, 1926, with 255 delegates present, together with a large number of visitors from local unions.

President S. Hillman in his address reviewed the various activities of the Amalgamated for the past two years, giving a detailed account of events leading up to the nineteen weeks' strike which took place in New York and Chicago.

Among the fraternal delegates present was H. A. Spence, business agent of the International Association of Machinists in Montreal, who brought the greetings of that body to the convention. Following Mr. Spence's address the fraternal felicitations of the International Ladies Garment Workers' Union were expressed by Max Amdur, vice-president of that organization, who predicted the "day coming when there will be one Amalgamated Union of Needle Workers in America."

The resolutions adopted by the convention, many of which were recommendations of the General Executive Board, included the following:—

Supporting the general strike in Great Britain, and extending financial aid to the strikers to the extent of one dollar per member.

Extending financial support to the striking furriers in New York, $25,000 being advanced as initial payment.

Urging support for the establishment of the forty-hour week in the clothing industry.

Instructing the General Executive Board to give the matter of housing for the membership careful consideration and to promote co-operative housing undertakings for the members in various cities.

Instructing the General Executive Board to further the various benefit movements within the organization: health insurance, old age pensions, life insurance and sick and death benefits.

Recording approval for the immediate institution of an unemployment insurance fund to be sustained by the employers and controlled by the union.

Declaring that the Amalgamated adheres to the position taken by the Chicago convention, and stands ready to co-operate with the other needle trade unions, either to the extent of full amalgamation or to any extent that they may be ready to go in that direction.

Instructing the General Executive Board to take measures to add to the existing services of its banks, to organize new banks in other cities and to open branches of existing banks in Chicago and New York as soon as possible.

During the course of the convention fraternal greetings were received from the workers in the needle trades of the Union of Socialist Soviet Republics.

National Marine Engineers' Beneficial Association

The fifty-first annual convention of the National Marine Engineers' Beneficial Association was held at Washington, D.C., on January 18-22, 1926, with eighty-eight delegates present, representing approximately a membership of 6,391. The president, Wm. S. Brown, in his address, recommended that the convention take under consideration the advisability of making an annual appropriation for the partial maintenance of district business managers for (1) Western and Southern Rivers, (2) The Great Lakes and (3) the Columbia River. This, he explained, had been the usual custom prior to the 42nd annual convention of the association, but at that meeting the practice was discontinued. Later in the meeting two resolutions were presented, requesting the re-establishing of business managers, one for the Western and Southern Rivers and the other for the Lakes district. These resolutions were referred to a committee which recommended the adoption of both resolutions. However, on the vote of the delegates the request for business managers for the Western and Southern Rivers was approved, and the other was rejected.

Among other resolutions adopted by the convention were the following:—

Requesting the national officers to take up with the proper authorities the question of having the employees of the engine room receive the same rate of pay in proportion to the grades of officers as that enjoyed by those on deck.

Urging all sub-associations to state the conditions that exist in their particular port in a communication to be sent to the national secretary-treasurer in support of the eight-hour day bill now before the Committee of the House on Merchant Marine and Fisheries.

Requesting the inclusion of another article in the national constitution providing for the creation of a beneficiary or insurance department within the N.M. E.B.A., in which all members of any and all local associations or the national association shall become members.

The election of officers resulted as follows:—

National president, William F. Yates, New Brighton, N.Y.; 1st vice-president, D. W. Miller, Seattle, Wash.; 2nd vice-president, W. H. Hyman, Baltimore, Md.; 3rd vice-president, George Harrison, Galveston, Texas; secretary-treasurer, Albert L. Jones, Washington, D.C.

Labour Educational Association of Ontario

The twenty-fourth annual convention of the Labour Educational Association of Ontario was held in the Labour temple, London, Ontario, on May 24, 1926, James Sullivan of Hamilton presiding.

One of the chief features of the convention was the discussion on prison-made goods, it being alleged that tile and brick products made at a Canadian prison farm had been utilized in the construction of a public building in London, Ontario. The argument was advanced by one of the speakers that the use of prison labour would be the thin edge of the wedge of what might eventually become a strike-breaking weapon in the hands of public authorities. As a result of the discussion a resolution was passed asking the Provincial Government to discontinue the competition of prison-made goods.

Another subject which was discussed at considerable length was the eight-hour day, the feeling of the convention being that the Dominion Government had not implemented its undertakings in connection with the Washington draft convention of the League of Nations International Labour Organization dealing with this subject. The association unanimously passed a resolution asking the Dominion Government to live up to its written agreements in this matter. The use of the union label was recommended in many resolutions, one of the unions asking labour men to look for the label of the local barber's union, adding that they were subject to a great deal of "unfair competition by women doing barbering work in their own homes."

Other resolutions adopted were:

(1) That the Ontario Mothers' Allowances Act be amended so that the mother with one child will be entitled to benefits, and that the limit of a mother's equity in house property be raised to $5,000.

(2) That a live union label league be formed in Ontario and kept alive.

(3) That the Provincial Mechanics' Lien Act be amended so as to give wages priority over all other claims.

(4) That a customs duty of 10 cents a pound be levied on all American magazines imported into Canada.

The election of officers resulted as follows:—

President, James Sullivan, Hamilton; vice-president, Joseph T. Marks; Executive Board —E. J. Follwell, Belleville; Larry O'Connell, Toronto; H. S. H. Mitchell, Hamilton; Fred. Ackerknecht, Kitchener; R. Foxcroft, London; J. A. P. Haydon, Ottawa.

The Convention of the Association in 1927 will be held in Toronto.

All-India Trade Union Congress

The sixth annual session of the All-India Trade Union Congress was held in the city of Madras on January 9-10, 1926. The president in his address gave a review of the history of trade unionism in India, which he stated had come into existence during the years 1918-1922. The economic crisis following the world war was responsible to a large extent for the rapid growth of trade unionism during the last few years. During this time various unions were organized in different parts of the country, such as railway, steel, seamen's, textile, transport, postal and currency unions, also employees' associations, etc. Co-operation between the unions was the next step and the Trade Union Congress came into being. There are now twenty-five unions of railwaymen and their combined membership exceeds one hundred thousand. An All-India Railway Federation was formed with which almost all the important railway unions have affiliated. The Indian Seamens' Union was organized in Calcutta in 1918 and is now one of the strongest unions of its kind. There is also an active union of the seamen in Bombay. The steel workers employed by the Tata Iron & Steel Company organized a union in 1920 and since that time this union has achieved good results. The president commended the activities of the Employees Association of Calcutta. This clerical organization was established during a conference of clerks held in Calcutta about the middle of December, 1925, and since that time has had splendid success. Another very strong union is the Bombay Textile Union, which has a membership of over 150,000. In Ahmedabad there is a federation composed of five different textile unions which gives its members strike benefits, lets tenements at cheap rates, conducts twenty schools, maintains a hospital and loans moneys at cheap rates of interest, etc. As yet this federation has not affiliated itself to the Congress. Similar to the above federation is the All-India Postal & R.M.S. Association, whose members are to be found in all cities, towns and villages in India and Burma. This association has not affiliated with the Congress, its members being employees of the government.

Among the many resolutions adopted by the congress were the following:—

Protesting against the anti-Asiatic legislation now before the South African Parliament.

Urging the government of India and all provincial governments to amend the Indian Factories Act and the Indian Mines Act so as to provide that the standard working period shall not exceed eight hours a day.

Urging upon all the provincial governments and local bodies the necessity of establishing free and compulsory primary education in order to remove the illiteracy at present prevailing among the masses especially among the working classes in India.

Requesting that provision be made to give workers engaged in industrial undertakings the necessary technical education (theoretical and practical) suited to the industries in which they work.

Urging the Government of India to take immediate steps to establish public employment bureaus in all industrial and commercial towns.

Protesting against the delay in passing legislation providing for arbitration and conciliation in labour disputes.

Urging the government to pass legislation fixing minimum wages for industrial and commercial workers.

Reaffirming a resolution of the last trade congress, calling upon the government to amend the Indian Railways Act by inserting provisions for the constitution in India of a Central Wages Board for settling disputes concerning wages and conditions of service, and for making it obligatory on railway administratons to establish joint industrial councils on the lines of the English Railways Act of 1921, with modifications to suit Indian conditions.

All-Russian Central Council of Trade Unions

Among the matters discussed at the third general meeting of the All-Russian Central Council of Trade Unions, the Council's wage policy and the facts regarding output were set out in a speech made by Mr. Dzerjinsky, President of the Supreme Economic Council, and summarized below:—

During 1924-25, said Mr. Dzerjinsky, industrial output had on the whole increased by 64 per cent in comparison with the previous year, but had not even then come to the pre-war level. In order to meet the growing demand for industrial products, the Supreme Economic Council had drawn up a plan for a 39 per cent increase in output for the year 1925-1926, but as State industry had already exhausted all its available capital, the success of this plan was largely dependent on the grant of subsidies, the opening of new credits and the importation of plant and equipment from abroad. Unfortunately, owing to the comparative failure to realize the grain export plan of the winter of 1925-1926, imports and state credits for industry had had to be curtailed, and it was hardly to be expected that industrial output during 1925-1926 would exceed by more than 25 per cent that of the previous year.

In these circumstances, continued Mr. Dzerjinsky, it was impossible to increase wages during 1926, the more so as wages had gone up during the last six months of 1925 more rapidly than output. Owing to the general adoption of piece-work rates, output had, during the period October 1924-May 1925, increased by 31 per cent, while wages had remained practically stationary, but from July 1925 nominal wages had risen by 14 per cent, and real wages by slightly less owing to an increase in the cost of living* till, in September, 1925, they had reached 50.75 chervonetz roubles per month,† although the average wage provided for in the wages budget for 1925-1926 was only 47.62 chervonetz roubles per month. Notwithstanding this increase in wages, individual output diminished by 5 per cent during the last three months of 1925. This change in the situation, said Mr. Dzerjinsky, was a very grave symptom which had resulted in a very heavy burden falling on the financial reserves of industry.

In view of this, concluded Mr. Dzerjinsky, not only was it impossible to increase wages, but it was also going to be extremely difficult to keep them at their present level, unless an increase in output permitted a reduction in prices and, consequently, in the cost of living.

In the discussion which followed, the trade union delegates, while not denying the decrease in individual output, endeavoured to show that it was due to defective industrial equipment. The representative of the metal workers' union pointed out that, during a period of three months, work had had to be suspended 41 times in the South Russian workshops on account of breakdowns in the plant. The majority of the speakers declared that industry was badly organized and that the provisions for the protection of labour were inadequately enforced. This was resulting in a relaxation of discipline, excessive fatigue, and an increase in the number of accidents and cases of illness. A further detrimental influence on the workers' output was the acuteness of the housing crisis. In most of the more important branches of industry the situation was equally unsatisfactory, while in several, the textile industry for example, it was even worse.

*The index number of the cost of living (1913 = 100) for July 1925 was 195, and for January 1926, 200.

†The legal unit of money in Russia is the rouble of 100 kopecks. In official calculations 8.47 roubles are taken as equal to the pound sterling. Chervontsi notes were issued by the State Bank in denominations of 1, 3, 5, 10 and 25.

International Transport Workers' Federation

The Seamen's Section of the International Transport Workers' Federation met at Amsterdam on March 30 to consider what attitude the organizations affiliated to the Federation should adopt towards the International Labour Conference held in Geneva at the beginning of June. The seamen's organizations of Belgium, Denmark, Germany, Great Britain and the Netherlands, and the General Council of the Federation were represented at the meeting, and delegates were also present from the International Association of Mercantile Marine Officers.

The Seamen's Section reserved its right to determine its policy in the event of the Conference not pronouncing in favour of the inclusion of the question of hours of work in the mercantile marine in the agenda of the 1927 Conference.

At a previous meeting, held at Amsterdam January last, the Seamen's Section protested against the decision of the Governing Body of the International Labour Office not to include the question of hours of work in the agenda of the 1926 Conference. The seamen wished the Governing Body to reconsider its decision and, at the January meeting, they drew up a definite program for the regulation of hours of work on board ship.

In view of the fact that it is now impossible to modify the agenda of the 1926 Conference, the Seamen's Section affiliated to the International Transport Workers' Federation, in agreement with the International Association of Mercantile Marine Officers, proposes to have submitted a resolution to the 1926 Conference in favour of the insertion of the question of hours of work in the agenda of the 1927 Conference.

Arbitration in Clothing Industry

The *Nation* (New York) notes in its issue of May 19 that "an extraordinary event took place recently in New York City that hardly a daily newspaper commented upon. It was a get-together dinner of the employers and employees in one of the greatest trades in the country, the clothing industry, in honour of Jacob Billikopf, the impartial chairman appointed two years ago to settle all disputes between the two groups. Hundreds of representatives of both groups were present to testify to their appreciation not only of Mr. Billikopf himself but of the worth of the impartial machinery. C. D. Jaffe, president of the New York Clothing Manufacturers' Exchange, voiced the satisfaction of the manufacturers with the progress made during the last two years, and Sidney Hillman expressed similar sentiments on behalf of the Amalgamated Clothing Workers of America, with a warning, however, as to the necessity of maintaining the right spirit of co-operation and good-will if the machinery is to work satisfactorily in the future."

Seamen's and Firemen's Union

Announcement was made at a meeting of the Seafarers' Union at Vancouver in February that the National Seamen's and Firemen's Union will be absorbed by the Federated Seafarers' Union of Canada, the amalgamation to take place on March 1. A ballot, taken recently, showed a three-fourths majority in favour of the merger.

Under the terms of the agreement the members of the National Union transfer to the Federated and on so doing become full members. The Federated, in taking over the National, does not assume the liabilities of the latter.

Co-operation in Russia in 1925

The fortieth congress of the All-Russian Union of Consumers' Societies, "Centrosoyus," was held at Moscow from April 5 to 12, when 600 delegates assembled from different parts of the Soviet Union and from different National Unions. There was a good representation of the Unions of other countries, no less than six delegates being present from Great Britain, representing the British Union and the English and Scottish Wholesale Societies. Sir Thomas Allen represented the International Co-operative Alliance. He said that "co-operation, as realized in Russia, is a more important factor in the life of the people than in any other country. Nothing in the history of the whole co-operative movement is so astonishing as the growth and achievements of Russian co-operation. In no other country has it developed on such a scale. The Soviet Co-operatives are playing an increasingly important part in the life and work of the International Co-operative Alliance, and mutual trust is growing. The Alliance has the fullest confidence in the Soviet Co-operatives."

The annual report, as summarized in the *International Co-operative Bulletin*, stated that during the eight years which have elapsed since the workers and peasants came into

power, and especially during the period since the close of the civil war and the transition to a period of reconstruction, the co-operative movement of Soviet Russia has greatly developed. Its role in the supply of commodities to the consuming masses and in the sale of goods of peasant production increases year by year. At present it can be said that the co-operative societies are the principal channels through which the output of state industry is passed on to the consumer, independently of capitalist intermediaries by which the agricultural products are regularly marketed. Agricultural co-operation embraces five million households.

The total membership of Russian Consumers' Co-operative Societies amounted in 1913 to 1.8 million persons, whereas on October 1, 1924, the Co-operative Movement of the Union of Soviet Socialist Republics counted seven million members. On April 1, 1925, the membership in town co-operative societies equalled 3½ million persons (an increase of 17.7 per cent since October), in village co-operative societies—4½ million persons, or an increase of 28.9 per cent, in transport workers' societies—608,000, or an increase of 10.9 per cent. The whole Consumers' Co-operative Movement on April 1, 1925, embraced 8,722,000 members (an increase of 23.8 per cent).

Assuming that, on an average, each peasant family consists of five members, it follows that approximately 23 million persons are supplied by village co-operative organizations, i.e., 20.5 per cent of the peasant population of the Soviet Union (on July 1, 1924, this percentage reached only 14.4 per cent). This increase in the development of the village co-operative movement during the given nine months must be considered a great achievement in the sphere of co-operative activities.

Ottawa Welfare Bureau and Old Age Pensions

The Family Welfare Committee of the Ottawa Welfare Bureau recently prepared a report containing criticisms of the Old Age Pensions bill introduced at the present parliamentary session. The report says:—

"In any system of old age pensions your committee would consider that the following general observations should be considered: (1) That while it is recognized that there are many old people in Canada who require assistance of some sort, we do not believe that there is any emergency at the present time; that is, most of these people are at present receiving care either from private or public sources. (2) That it is desirable that there should be some central means of assistance which will enable dependent aged people to maintain an otherwise independent existence: we mean that it would be desirable to allow these dependents, particularly in the case of man and wife, to have some amount of self-determination as to the place and manner in which they will live. (3) That a thoughtful study of the causes of dependent old age must produce a general acceptance of the fact that the government is partly responsible for the fact of dependent old age, and therefore should make some contribution toward the alleviation of contingent distress. (4) That agricultural and other occupations of a seasonal nature share in the responsibility and should make some contribution. (5) That while there may be other contributing factors, the prime responsibility rests with the individual in almost all cases and that he should therefore be the major contributor toward his own care.

"By accepting the above principles our committee cannot possibly support the present bill, which is non-contributory. A very obvious weakness in the measure proposed is the fact of selection, which is left to the provinces. We have learned from experience that other social measures do not meet with equal favour and support in all provinces. We may assume that the old age pension scheme would not be acceptable in certain provinces. It would then certainly be unfair to tax these provinces for any part of the support of the scheme from which they would derive no benefits. The old age pensions system cannot be satisfactory unless it applies to the whole Dominion."

In the notes on the recent session of the Legislature of Alberta, contained in the last issue of this GAZETTE, it was stated that the Legislature adjourned on April 8 in order to await action by the Dominion Parliament in the matter of an agreement between the Dominion and Provincial Governments providing for the return to the province of its natural resources. The House reassembled on May 20, continuing sitting until May 22, when the session closed after the Royal assent had been given to several additional acts. The Prime Minister announced in the House of Commons May 31 that it was not the intention of the Dominion Government at the present time to proceed with legislation concerning the transfer of natural resources to Alberta.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

$50,000 Addition to Calgary Technical School

More accommodation for the provincial Institute of Technology in Calgary is to be provided, the department of public works now having a building project for an addition to the workshop to cost $50,000.

The enrolment at the technical school has been so large, and the demand for training along industrial lines has been so great, that it has been found necessary to enlarge the workroom space, and an extension of the shops is, therefore, to be proceeded with at once. The building will be of brick construction, uniform with the rest of the structure, and is to be ready for the opening of the fall term in September.

Point Grey, B.C., to have Technical School

The School Board will introduce into the curriculum of the municipal schools a course in technical education commencing with the September term. The course will be established in the King George High School at Magee, and the building is now being altered to make room for the machinery and other necessities to carry on the course. The equipment will be bought over a period of three years, to take care of pupils as they present themselves. The course is the same as that outlined by the Department of Education, and meets with all requirements asked by that body. This includes woodwork, sheet metal work, machine shop practice and mechanical drafting.

Already numerous inquiries have been received from students who plan to take up this branch of work. At the present time Point Grey is paying half of the cost of tuition for its students in the Vancouver technical school. This will be eliminated as far as first year pupils are concerned, but those of second and third year standing will have to continue their course in Vancouver. The Board is planning to issue a syllabus of the new course which will be distributed through the public school principals.

Another department which the Board is developing is that of home economics. This course will be extended to include dietetics, hygiene, physiology, needlework and textile studies.

Advantages of Apprentice Training in the Building Industry

The following paragraphs are taken from an article by William L. Sullivan, secretary-treasurer of the Sheet Metal Workers' International Alliance, which appeared in the May issue of *The Plasterer*.

The plan or method of training the apprentice boy of to-day, that he may acquire within the usual four or five-year period a sufficient knowledge of his trade to become a successful journeyman in his chosen vocation, differs quite radically in our trade as sheet metal workers from the method in vogue up to a generation ago. The apprentice of former years was usually indentured, by consent of his parents, to a firm for a period of years. His employer took considerable pride in teaching him the art of his trade, giving the boy his individual attention during working hours and encouraged the journeymen in his employ to do likewise. He felt well repaid for the loss of his own as well as the journeymen's time if at the end of the boy's apprenticeship he had produced a good mechanic. Almost with the beginning of this century rapid changes developed in the method of conducting business. With the rapid growth of the country, business expanded, his business demanded more of the employer's time and he in turn demanded more production from the mechanic in his employ. Machinery was introduced, more persons ventured into the business and competition became quite keen. As a consequence the apprentice was neglected and the long-established custom of educating the boy in the fundamentals of his trade passed out of existence. No substitute plan for his education was provided.

The local unions of our international association were the first to realize the changed conditions. The problem before our local unions about twenty-five years ago of finding some new method of teaching the apprentice the trade now seems quite simple. As our trade requires considerable technical training, the first attention given to the education of the apprentice was in pattern drafting and development, plan and blueprint reading and architectural and mechanical drawing. A competent instructor was selected from the members and night classes were arranged, usually at the instructor's home, the apprentices in the various shops were invited and this commenced a new system of apprentice training. Later developments demanded a school for instruction in the use of tools and shop equipment. Apprentices were plentiful and swarmed the shops with but little opportunity given them to learn the trade. They were placed at work on some produce that would return the most profit to their employer, real mechanics were not developed and the trade commenced to lose caste. A trade that could not survive specialism was

being given over to specialists, a condition that demanded a remedy if the trade was to live. Plans were devised to enlarge the apprentice schools to include practical instruction in the various branches of the trade. Usually some employer could be found who was in sympathy with the idea and tendered the use of his shop for evening instruction. If a shop could not be secured, a vacant store or space in a building was rented and benches, tools and shop equipment were set up providing the apprentice with practical as well as technical training, a very essential and necessary part of his education. The employers, who by that time had formed their own associations, commenced to display an interest in this new system of teaching apprentices the trade, encouraged it and eventually offered their active co-operation in the work. The training and development of apprentices have made marked progress ever since.

Joint committees from the sheet metal contractors' associations and the local unions have been created with rules and regulations to govern apprentice training. The apprentice is required to attend school, is given examinations at regular intervals and promoted according to his advancement. In many cities the joint boards have secured the co-operation of the board of education. If classes of ten or more can be enrolled with a guarantee of steady attendance, the Board of Education provides the shop, the tools, shop equipment, the material and pays the instructors' salaries. In New York City alone we have some half a dozen evening schools throughout the city with classes several nights each week during the months of September to June. In Chicago, Ill., apprentice training has been developed to a high degree. The apprentice boy in Chicago is released from the shop where he is employed one day in each week to permit his attendance at the trade school. His time is paid for by the employer and his hours at school are the same as his hours in the shop, 8 a.m. to 5 p.m. His education during his whole apprenticeship is thorough and he is turned out a finished mechanic. The School at Pittsburgh, Pa., is located at the Carnegie Institute of Technology, where a modern, up-to-date shop is maintained and every opportunity given the apprentice to learn the trade. Similar schools are operated in Boston, Mass., Buffalo, N.Y., Washington, D.C., St. Louis, Mo., and practically all the larger cities.

The schools are under the direct supervision of the joint apprentice board in each city. One of the strict rules of these joint boards is "no school, no job," consequently, regular attendance is assured. At the end of each year graduation exercises are held, diplomas distributed, medals and honourable-mention certificates given those most proficient. The courses of instruction vary but slightly in the different cities. The apprentice is taught mathematics, drawing, science, principles of geometry as applied to working drawings, free-hand drafting and sketching, blue-print readings, pattern drafting, arithmetical processes, triangulation, composition and actions of solders and fluxes, and the practical use of tools and machines, together with the regular shop work.

Coming Shortage of Skilled Workmen

A warning that a shortage of skilled workmen will continue to exist unless a more concerted effort is made by employers to train apprentices is sounded in a pamphlet on "Apprenticeship" just issued by the Department of Manufacture of the Chamber of Commerce of the United States. The pamphlet is based on a nation-wide investigation of the subject and contains much useful information concerning methods of training now used in certain industries and vocational schools. Various aspects of the subject are covered in the bulletin under such headings as:—"What is an Apprentice?" "Apprenticeship vs. Shop Training," "Apprenticeship in Large Industries," "How Can Small Companies Deal Effectively with Apprenticeship?", "Vocational Education's Part in Apprenticeship," "Co-operating Agencies for Effective Apprenticeship," "The Laying Out of the Course," "The Supervision of the Apprentice," "The Wisconsin Plan of Apprenticeship," and "Selling Apprenticeship."

The purpose of the pamphlet is to awaken employers to the need of training skilled workmen to meet the growing demands of industry. "Restricted immigration," it states, "has reduced the former supply of trained man-power. Also, the tendency has been for boys to drift toward clerical and office jobs. This tendency is many times not justified by the opportunities to advance, but shows a neglect on the part of industry to sell the opportunities afforded the trained man in the shop. Thus a shortage of trained man-power will continue to confront industry unless something is done about it. There is ample evidence that little has been done to interest the sons of employees—the coming generation. The business which employs the father may and most frequently does offer a worthwhile opportunity for the sons.

"As in everything else since the earlier days apprenticeship has changed to meet changing conditions and demands. Notwithstanding the great growth of labor saving and automatic machinery there is yet ample room for brains and skill in industry. American business men can do nothing more important than the educating and training of the young men whose greatest prospects of success lie along industrial lines. Not only does apprentice training provide a valuable source of supply from which foremen may be drawn, and later on executives, but it creates a supply of trained men—dependable, efficient and capable workmen. It offers opportunity to promote men from within the organization who are familiar with the policies and the ideals of the company. It reduces labour turnover through loyalty. It supplies skilled artisans and workmen to meet the effect of restricted immigration.

"In many lines of industry, such as building, printing, metal trades, plumbing and heating, foundry, tile, granite, brick masons, wallpaper, etc., outstanding and successful activities in apprenticeship are at the present time being conducted. Some are being carried on in co-operation with public and private schools, through local community co-operation, and individual companies. Until recently it was considered that only the larger companies could profitably and successfully conduct apprentice schools. A number of actual working cases prove that this belief is not justified by fact. Many small concerns as well as large ones are training apprentices."

NOTES ON INDUSTRIAL SAFETY AND HEALTH

First Aid and Accident Prevention on Canadian National Railways

Mr. W. A. Booth, director of Safety and First Aid on the Canadian National Railways, delivered an address to the safety section of the convention of the American Railway Association on April 27-29, his subject being "The Relationship of First Aid to Accident Prevention." In the course of his address the speaker described the safety work now being carried on in the Canadian National System:

"Our railway system," he said, "is comprised of regions. On each of those regions we have a regional first aid organizer, whose duties are to organize classes amongst the employees and when these are enrolled he appoints instructors to take charge of the teaching of the classes. We have a very excellent text-book which is furnished by the company, free of charge, to each student. This book was written by the late Dr. James Cantile and is known as "First Aid to the Injured." The instructors are selected from our own ranks and to qualify for an instructor's certificate it is necessary that they pass a three years' course in first aid. They are examined by a reputable physician and recommended by two doctors as being qualified to teach. A few years ago we used to have our classes instructed by doctors but found that they had a tendency to speak in terms beyond the comprehension of the common laity.

"A class of about twenty is given a course of instruction for one hour per week for fourteen to sixteen weeks on company's time, after which the students are examined by a physician, and, if successful in passing their individual oral examinations, are granted what is known as the first year certificate in first aid. In addition to this the student is given the opportunity to continue his studies during subsequent years, when further advanced awards are given upon successfully passing the rigid tests of the medical fraternity. So that in three years a student is indeed a very competent first aider and can administer medical aid in a most efficient manner.

"However, we always make it very clear and in a most emphatic manner that the first aider, irrespective of his qualifications, must on no account take upon himself the duties of a doctor. He simply bridges the interval until the arrival of the doctor. The first aider ceases his duties when the physician begins. But in accidents we have found that immediate treatment is essential to the injured, and we have on our files a large number of cases where our first aiders have been the means of saving lives and many incidents where skilled treatment has been the means of minimizing the extent and result of injuries sustained. This alone is a valuable asset in the program of accident prevention.

"Since the inception of the first aid department on the Canadian National Railways something like 30,000 employees have received their certificates, a very large portion of that number having received advanced awards. Yet we have a long way to go in order to realize the President's aim, for we have approximately 100,000 employees with a mileage of 22,663; but we are making steady

progress and each year shows a material increase in the number of employees instructed.

"In addition to class work we have stimulated interest of our first aiders by the adoption of a system of competitions. Teams of five men or women are formed over the entire system, from Halifax on the Atlantic to Vancouver on the Pacific. They are given test cases which consist of a supposed disability, through accident or sudden illness. The examining surgeon prepares these test cases and generally makes them coincide with those most likely to occur on a railroad. They are marked as to their individual as well as team work. Our tests are the basis of the individual examinations, stretcher work and handling of patients being the basis for the team work test. A great deal of enthusiasm prevails over the whole railway system in connection with these competitions and the valuable silver trophies presented to the winners produce that fraternal competitive spirit which promotes beneficial returns to both employee and employer.

"Our department of first aid is connected with the 'safety first' and both come under the jurisdiction of the vice-president, the organization being as follows:—President; vice-president; director, safety and first aid; assistant director, safety and first aid; regional first aid organizers. Regions include Central, Atlantic, Western, Grand Trunk western lines, telegraph department and auxiliary companies, such as electric lines, etc.

"Even from a financial point of view the first aid department is a paying investment for any industrial concern. During 1925, on one region alone, our company saved $32,522 in claims and compensation, as compared with the previous year of 1924. The Pacific Telephone and Telegraph Company, in the United States during the past two years, reduced their accidents 60 per cent through the instruction of first aid to their 9,000 employees. The *American Red Cross Courier* states that 'in certain parts of the United States the number of hours lost per 160 men has been reduced from 115 to 15.4.' Our own Ontario Compensation Board in Canada claims that in 1925 the accident average expense was reduced from $104 to $93 as compared with 1924, and all through the establishment of first aid in many plants.

"I think these facts alone are sufficient to convince the most narrow minded critic that first aid is an important ally of safety first and worthy of your most serious patronage. Furthermore, first aid amongst employees not only assists in accident prevention, but builds up the morale of the clientele as well as develops an *esprit de corps* amongst the employees."

Silicosis Among Miners

The last issue of the LABOUR GAZETTE, in an account of the labour legislation enacted in Ontario at the recent session, noted that "silicosis" had been added to the list of diseases which are compensable under the Workmen's Compensation Act of the Province. A description of this disease, its causes and cure is given in a recent bulletin published by the United States Bureau of Mines under the title "Silicosis among Miners." The leading facts concerning the disease are summarized as follows:—

Silicosis or miners' phthisis has been known to occur among miners in certain districts for centuries. It is found among metal miners in New Zealand, Australia, South Africa, Great Britain, and in many of the States of the United States.

Silicosis is due to breathing very fine rock dust. Rock dust high in free silica is found to be most injurious. Silica dust is somewhat soluble in water and in weakly alkaline liquids similar to body fluids. Some physicians have thought that silica dust by its sharp-edged and needlelike particles injures the lung tissue mechanically. Another belief is that the silica, being soluble in water and weakly alkaline liquids, injures lung tissue by its poisonous action.

The rate of development of silicosis depends upon the character of the dust, the amount breathed, length of exposure, past illness (especially tuberculosis), and physical fitness of the men. Among gold miners in South Africa the average length of exposure to silica dust before silicosis develops is 7½ years, the shortest period of exposure for like results is 2½ years.

Silicosis is usually divided into three stages: The first shows symptoms and physical signs of damage to lung tissue caused by exposure to dust, but capacity for work is not impaired. The second stage shows definite signs of silicosis and capacity for work is impaired, although not seriously or permanently. The third stage shows that specific signs of silicosis are or have been present and the capacity for work has been seriously and permanently impaired by the disease.

The cardinal symptom of silicosis is shortness of breath, especially on exertion. The cardinal sign is diminished expansion of the chest. Both are slight in the early stages and increase gradually with development of the disease. Other symptoms and signs, as coughing, frequent colds, pains in the chest, and X-ray findings, are very important in making

a diagnosis. Men having silicosis are more susceptible to tuberculosis than normal men. Men with silicosis can improve in suitable surroundings to recovery in the first stage, can improve materially in the second stage, and somewhat in the third stage.

Many methods for determining the amount of dust in the air are available. The sugar tube method, the konimeter, and the impinger are chiefly used in the mining industry in the United States.

The elimination of silicosis among miners depends on preventing the formation of dust by wet mining methods—wet drilling and wetting sides, roof and bottom, muck, and rock piles; the use of sprays and water blasts to lay the dust after blasting; good mechanical ventilation to replace dusty air with clean air; and physical examination of all miners before employment and periodically thereafter. All of these means of prevention must be practised to insure success.

Industrial Health in First Quarter of 1926

The *Statistical Bulletin* of the Metropolitan Life Insurance Company states that the health record of the industrial populations of the United States and Canada was by no means so favourable during the first-quarter of 1926 as for the corresponding period of either 1925 or 1924. This is indicated by the mortality record among more than 17,000,000 people who are policyholders in the Industrial Department of the Company. The death rate for this important cross-section of the population of the two countries, was 10.6 per 1,000, as compared with 10.1 during the same months of 1925. This rate of 10.6 is not a high figure for the winter season, and it is better than the average of several years back.

The March health record of the industrial populations of the United States and Canada was unsatisfactory in many respects. In the first place, the deathrate, 12.1 per 1,000, is not only higher than for either of the two preceding months of 1926, but for any month since March, 1923. As compared with February, the rate increased 23.5 per cent; and it was 15.2 per cent higher than for March a year ago. The high death rate for March was due, almost entirely, to the prevalence of influenza and pneumonia.

Occupation and Health

Another series of brochures of "Occupation and Health," the encyclopaedia of hygiene, pathology and social welfare now being issued by the International Labour Office has just been received. The brochures deal with the following subjects which are studied from the point of view of labour industry and trade, namely: artificial silk, sulphur dioxide, breweries, acetanilide, acetic acid, acetic aldehyde, acetone, chlorine, foot and mouth disease.

Some Results of Safety Efforts in the United States

As the result of a three years' campaign in the twenty-three works of a big concern in the United States comprising lime and plaster manufactories, gypsum quarries, etc., there was a total reduction in the severity rate of accidents, as compared with 1922, of 27.8 per cent in 1923, 50.4 per cent in 1924, and 64.9 per cent at the beginning of 1925. The usual methods of prevention were employed. The *National Safety News* describes these methods and gives a list of the records established by the plants which particularly distinguished themselves. They worked for periods ranging from 130 to 175 days without any lost-time accidents.

Owing to the determined efforts of the management to promote safety, the staff of a low-head hydro-electric power plant (with 95 generators producing 40,000 horse-power at 4,400 volts) have not had one lost-time accicent during the last ten years, and no such accident has occurred as a result of electric shock since the establishment of the concern in 1903. The average staff employed is about fifty. The few accidents during the last five years which resulted in lost time (only six cases and a total loss of 41½ days) all occurred in connection with work for the upkeep or construction of buildings, installations, lines, etc., during the summer, when extra help was employed. The report from which these notes are taken (*National Safety News*, November, 1925) describes the methods employed and emphasises the part played by the foremen. Attendance at the annual Safety Congresses has proved a powerful factor in converting certain foremen, who had previously been somewhat sceptical, to the cause of accident prevention.

A punch press department, with 65 presses, recently celebrated its twenty-sixth month without a single lost-time accident. The result is mainly attributable to the education of all the staff directly or remotely connected with the working of the presses. The management, after having introduced every possible safety improvement in the actual construction of the tools, has found it possible, owing to the confidence it has in its employees, to do away with all additional forms of protection.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Eighth Session of the International Labour Conference

THE Eighth Session of the International Labour Conference opened in Geneva on May 26th, thirty-seven countries being represented by delegations which, in all but six cases, were complete in that they consisted of representatives of organized employers and workers as well as of Governments. The Presidency of the Session was unanimously conferred on Monsignor Nolens, Minister of State of the Netherlands, who took an active part in the movement for international labour legislation before the International Labour Organization was established, and has been directly and continuously associated with the Conference of the Organization from its first meeting in Washington in 1919. Reference was made in the last issue of the LABOUR GAZETTE to the Canadian delegation in attendance at this Conference. It is expected that an article will appear in the July issue dealing with the subject matters which have received attention at the Eighth Session as well as at the Ninth Session, which opened on June 7th.

Meeting of Governing Body

The Governing Body of the International Labour Office held its thirty-first session in Geneva from April 21-23, 1926. This session was the first to be held in public, in accordance with a decision taken at the previous session. Among others in attendance at the meeting was Dr. W. A. Riddell, Canadian Advisory Officer in Geneva. The Governing Body considered the results of the recent conference in London at which the Ministers of Labour of Belgium, France, Germany, Great Britain and Italy examined means of arriving at a simultaneous ratification of the Washington Convention concerning the eight-hour day and the forty-eight hour week in industrial undertakings. The members of the Governing Body were agreed in the opinion that the memorandum embodying the conclusions of the London Conference was a special understanding between the five governments named, those governments being desirous of removing the main difficulties which stood in the way of ratification by them, and that the agreement involved no infringement of the text of the Washington Convention, on which text the Permanent Court of International Justice alone was competent to give a binding interpretation. The invitation which the British Government addressed to the Director of the International Labour Office to take part in the conference was in itself a guarantee that the states signatory to the agreement had no intention of substituting a fresh text for that adopted in 1919 by the International Labour Conference in Washington, which to-day remains unimpaired. Mr. Arthur Fontaine, representing the French Government, emphasized the intention of France to pass speedily into law the bill for the ratification of the Washington Convention, which had already been adopted by the Chamber of Deputies and was at present before the Senate. Mr. Albert Thomas, Director of the International Labour Office, summing up the debate, called the attention of the Governing Body to the step forward which the London conference represented with regard to the ratification of the Hours Convention. He pointed out that during the last few years there had been manifest in the chief European countries a continuous movement in favour of ratification. The agreement which had been reached encouraged the hope that they would shortly attain positive results of such a kind as to realize the principles laid down in Part XIII of the Peace Treaty.

At a later sitting, the Governing Body approved the 1927 budget estimates submitted to it, those estimates being drawn up with a view not only to the requirements of the Office but to the rigid policy of economy practised and demanded by the States Members as a whole, and with a view to a more complete representation of the different nationalities on the staff of the office.

Great Britain and Draft Conventions

Eight-hour Day.—On April 30, 1926, in the British House of Commons, Mr. Mackinder, member of the Labour Party, moved the second reading of the Hours of Industrial Employment Bill. This is a private member's bill, for which the government is not responsible. With the addition of a clause dealing with hours of work in railways, it is identical with the bill introduced by the labour government in 1924 and with the bill introduced by Mr. Buchanan, also as a private member's Bill, in 1925. Mr. Mackinder pointed out that the bill covered only industrial workers, because the Washington Hours Convention dealt only with them. Various British governments he said had promised to introduce legislation to give effect to the Convention, but had not done so, and the failure of Great Britain to ratify had un-

doubtedly held back other countries from ratification. Since the 48-hour week had been worked, the reduction of hours had, according to the chief inspector of factories, in his 1921 report, resulted in undiminished output and in improvement of the workers' health. He concluded by asking the government to adopt the bill.

Mr. Short (Labour), who seconded the motion, also urged the ratification of the Washington Convention. The provisions of the bill were very elastic. It enabled the minister of labour to issue regulations governing overtime, but it was not intended to interfere with agreements which were more favourable than the provisions of the bill. In case of disputes, questions of fact would be referred to an umpire and questions of law to a High Court judge. The bill could not handicap industry, because the 48-hour week was already being worked.

Major Kindersley (Conservative) moved an amendment, the effect of which would be to reject the bill. He referred to the conference of Labour Ministers held in London in March. The conclusions of the conference were to be reported to the governments concerned, and he did not think sufficient time had been allowed. Since the 48-hour week already existed, there was no urgent necessity for the bill, and in any case he considered that simultaneous ratification of the Convention by the great industrial Powers was essential.

Mr. Lloyd (Conservative), in seconding the amendment, said that he regarded the bill as a bar to the enlightened development of industrial relations between masters and men, since a legal maximum of hours of work must tend to become the normal figure. The bill, moreover, transferred to the minister of labour the whole responsibility of adjusting hours of work, and such government interference would mean the absence of all enterprise and progress.

Lord Henry Cavendish-Bentinck (Conservative) considered the moment extremely opportune for legislation, since the minister of labour had just secured a unanimous interpretation of the Convention. Although 90 per cent of the workers in the country already had a 48-hour week, there remained 10 per cent who needed the legislative protection which the bill would give.

Sir H. Croft (Conservative) said it would be premature to ratify the Convention before the eight-hour day was in force in competing countries. It was more important to protect wages by imposing tariffs than to safeguard hours of work.

Dr. Drummond Shiels (Labour) quoted figures showing that reduced hours of work resulted in higher output and a lower sickness rate.

Captain Loder (Conservative) said that international competition in hours of labour was just as disastrous as international competition in armaments. The results of the London Conference, he said, were most encouraging.

Mr. Barr (Labour) referred to the improved output in countries where the eight-hour day had been introduced, and quoted a statement made by the Swedish minister of social affairs, recommending that the provisional Eight-hour Day Act should be made permanent.

Dr. Vernon Davies (Conservative) said that it would pay employers to see that the hours worked were economically the best. If that were done, in time to come they would be talking, not of a 48-hours Bill, but of a bill laying down even shorter hours.

Lieut.-Commander Kenworthy (Liberal) regretted that the bill did not cover seafarers, though he realized that it must be kept within the four corners of the Convention. It was due to the national honour that the Convention should be ratified.

Mr. H. Williams (Conservative) said that somewhere between one hour and 16 hours a day there was a length of day which would lead to maximum efficiency. He suggested that scientific experiments should be carried out before any changes were made by Act of Parliament.

Mr Hardie (Labour) urged that, from the point of view of unemployment alone, a reduction of hours of work was necessary, since every mechanical improvement had increased production.

Mr. Betterton (Parliamentary Secretary to the Ministry of Labour) explained why the government was unable to accept the bill. When an identical bill was introduced in 1925, the minister of labour had referred to the possibility of divergencies in the interpretation of the Convention. To deal with the problem the minister had invited the labour ministers of Belgium, France, Germany and Italy to a conference in London. "These countries," he continued "have reached a provisional agreement on certain points. The results of the Conference and the agreement have now to be submitted by the representatives of each country to their governments, in order that those governments may be in a position to proceed with their consideration of the question of the ratification of the Washington Convention. Now the government have be-

fore them these conclusions. Undoubtedly the difficulties are great, and the complications are of a far-reaching nature. They deserve, and they must receive, very careful consideration." Proceeding, Mr. Betterton referred to the continued pre-occupation of the Prime Minister and Minister of Labour with the coal situation, which had prevented them from devoting their attention to the matter, and added that since the Convention without the London Agreement remains as unacceptable as ever it was, one of the points to be considered is whether the London Agreement can be rendered an effective instrument equally with the Washington Convention. That is necessarily a matter of considerable difficulty, and one which may require consultation with other interested states, and, for the reasons given, it had not been possible for the government to reach a decision on this subject.

Mr. T. Shaw (Labour) expressed his disappointment at the continued postponement of ratification of the Convention. Great Britain was more responsible than any other country for the Convention, for which the employers' as well as the Government and workers' representatives had voted. There was no country in Europe which had not a law on the subject or the promise of a law, while in labour legislation Great Britain was behind the average of many European countries. The country had nothing to lose by ratification; on the contrary, it would gain, for in all probability for every industrial nation would follow suit. The criticism that the Convention was too rigid was mistaken; it excepted various classes and forms of employment and could scarcely be more elastic. The attitude of the Government towards the Convention was a grave breach of a pledge. He concluded by asking for a division on the bill.

Sir R. Sanders (Conservative) moved the adjournment of the debate, and on a division the adjournment was carried by 186 votes to 119.

Workmen's Compensation.—Announcement has been made in the British Parliament that it is proposed by His Majesty's Government to proceed with the ratification of two Draft Conventions which were adopted at the Seventh Session of the International Labour Conference in 1925, namely:

1. Draft Convention concerning workmen's compensation for occupational diseases;
2. Draft Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents.

and to accept the two following Recommendations:

1. Recommendation concerning workmen's compensation for occupational diseases;
2. Recommendation concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents.

It is also proposed to notify the Secretary-General of the League of Nations of the unacceptability of the two remaining Draft Conventions of the Seventh Conference and of the two remaining Recommendations, namely:

1. Draft Convention concerning workmen's compensation for accidents;
2. Draft Convention concerning night work in bakeries;
3. Recommendation concerning minimum scale for workmen's compensation;
4. Recommendation concerning jurisdiction in disputes on workmen's compensation.

Refugee Problem in Bulgaria

The International Labour Office, having been appealed to by the Superior Labour and Social Insurance Council of Bulgaria for assistance in solving its refugee problem, recently made a study of this question and its effect on labour conditions in Bulgaria, and has now published a report entitled "Refugees and Labour Conditions in Bulgaria." This report will be of great value, as it emphasises the social aspects of the refugee problem and is in harmony with the constant endeavours of the Office to safeguard, in all circumstances, the application and development of labour legislation.

The refugees at present living in Bulgaria consist mainly of Russians, Armenians and Bulgarians from Thrace, Macedonia, the Dobrudja and the districts of Tzaribrod Bossilegrad, Trn and Kula. It is estimated that the total number of Bulgarian refugees who have entered Bulgaria since it became an independent state exceeds 700,000, or some 14 per cent. of the present population, estimated at 5 millions. The number of Bulgarian immigrants from 1913 to 1925 amounted to approximately 221,000 persons. These refugees include a mass of workers varying from 90,000 to 100,000 persons, of whom more than three-quarters are small peasant proprietors, agricultural day labourers, or rural artisans in their country of origin. The report deals with the influence of the refugees on unemployment,

wages, hours of work, and the system of social insurance which was established in Bulgaria in 1918 for the protection of all workers employed in industrial, commercial and agricultural undertakings, covering accident, sickness, invalidity, old age, death and maternity risks. The contributions to this system of social insurance are paid in three equal parts by the workers, employers and the state. The present economic condition of the country renders the absorption of the refugees in industry and commerce impossibile, so that the enquiry went to show that the newcomers who remain in Bulgaria must either be settled on the land or enabled to set up as artisans. It is recommended that protection should be guaranteed by the League of Nations to Bulgarian minorities abroad and that every effort should be made to secure the emigration of Russian and Armenian refugees, and the payment to Bulgarian refugees from Thrace and Greek Macedonia of compensation for properties which had been taken from them. In the event of it being impossible to obtain the funds in Bulgaria which are necessary for settling 30,000 refugee families of agricultural origin on the land, the report indicates that recourse may have to be had to an international load.

International Coal Crisis

The May issue of the *International Labour Review* contains a brief survey of coal-crisis literature by Mack Eastman, Ph.D., Chief of General Enquiries Section of the Research Division of the International Labour Office, who, prior to being appointed to his present position about a year ago, was on the staff of the University of British Columbia. The object of Professor Eastman's article is to give the general reader a bird's-eye view of the mass of discussion, whether ephemeral or durable, which has appeared in print up to April 1.

Of all industries, coal mining is, for its size, the greatest consumer of labour, and the number of miners and their dependents in several countries is very considerable. Their importance as purchasers cannot be overlooked, and widespread unemployment among them, depresses other trades. In Britain, one-twelfth of the population derives its living directly from the mines, and the fortunes of this group determine the well-being or the hardship of many others. Accordingly, a prolonged economic depression in the fuel industries is a matter of vital importance not only to the miners but to the labour world as a whole.

The writer points out that the world's coal production in the record "peak year" of 1913 was 1,342,000,000 metric tons. In 1924 it was 8 millions more. The world-market was glutted with coal, coke and lignite and its surplus was from 60 to 70 million tons. At the end of June 1925, British stocks amounted nearly to 12 millions, American to 10, German to 10, and Belgian to 2. In February, Russia had made a startling re-entry with 2,030,000 tons on hand. The world's coal industry had been built to meet an anticipated demand of 1½ billion tons by 1924, and it now found itself able to utilize only 4-5 of its equipment. Various reasons for this "under-consumption" are given in the article and mention made of the factors making for "over-production." The problem is one of distribution, of prices. That means competition; a "coal war." The writer states that the existing grave national crises in certain countries recognized as central pillars of world economy, by provoking a "coal war," have become international in their consequences and hence, that whatever efficacy a purely national remedy might have for a purely national crisis, it can avail but little against a crisis which, though still in its earlier stages, is incontrovertibly international. The article terminates with a succinct statement of opinions on the many forms of solutions proposed.

Organizations of Fishermen

The Restigouche Salmon Net Fishermen's Association, Limited, of New Brunswick has been incorporated with an authorized capital stock of $5,000, for the purpose of promoting and safeguarding the rights, privileges and interests of the net salmon fishermen and salmon fishing industry. The head office of the association is located at River Charlo. Commercial fishermen in the vicinity of Kenora, Ontario, are planning on forming a protective association. A local firm of barristers and solicitors has been engaged to draw up a constitution and by-laws. The drysalt herring packing companies of British Columbia have formed an Association, co-ordinating in this branch of the fisheries industry efforts toward the standardization of fisheries operations in all its departments, and to deal with all maters pertaining to the fishing, treatment and marketing of herring.

LEAGUE OF NATIONS CHILD WELFARE COMMITTEE

THE Child Welfare Committee of the League of Nations Advisory Commission for the Protection and Welfare of Children and Young People held its second annual meeting at Geneva from March 25 to April 1, 1926. Delegates representing the governments of Belgium, the British Empire, Denmark, France, Italy, Japan, Poland, Rumania and Spain took part, as well as assessors from the following organisations: International Association for the Protection of Children; League of Red Cross Societies; International Organization of Boy Scouts and Girl Guides; "Save the Children" Fund (International Union); Women's International Organizations; National Conference on Social Work; Social Service Council of Canada and Canadian Council on Child Welfare; and the International Federation of Trade Unions. The International Labour Office and the Health Section of the League of Nations also sent representatives.

Miss Charlotte Whitton, Executive Secretary of the Canadian Council on Child Welfare, Ottawa, attended the meeting.

A number of resolutions were adopted by the Committee touching on various questions concerning child welfare and family allowances.

In relation to child labour the Committee considered a report prepared by the International Labour Office on the ratification of Draft Conventions relating to the protection of children and young persons, and on child labour laws in all countries which were members of the organization. The connection existing between the age for entering industry and the age for leaving school was discussed and emphasis was laid upon the danger likely to result when, as sometimes happened, an interval of one or two years separated these two. Attention was called to child labour in agricultural districts and to the effects of school work undertaken out of school hours by children of school-attendance age. A resolution was passed by the Committee expressing the hope that the International Labour Office will continue to make representations to the governments with a view to the ratification of international conventions on the admission of children to labour by every country, also drawing attention to the fact brought out by the investigation of the International Labour Office with regard to the relation between the laws on school attendance and labour legislation, and emphasizing the importance of extending the age of compulsory school attendance until the age fixed by international conventions as being the earliest at which children may be allowed to work. Another resolution was proposed by the representative of the National Conference on Social Work which was designed to authorize an inquiry into the special field of education for adolescents, the methods employed therein, and their relation to the normal family and social life of the adult. The resolution further proposed that, in all the Committee's deliberations, special attention should be paid to the relation between the life of children in agricultural districts and the education they receive for normal adult life.

With regard to family allowances, the Committee, recognizing that the well-being of children under normal circumstances must depend largely on the means of their parents, and that the value of the family allowance system, whether organized by the State or by private enterprise, depends on the extent to which it places in the hands of parents resources which, expanding with the size of the family, make it possible for the parents adequately to discharge their responsibilities towards their families, therefore passed a resolution asking the International Labour Office to continue, in collaboration with the Secretariat of the League of Nations and the voluntary associations, its study of the subject, especially with a view to obtaining exactly comparable data, and to report progress to the next meeting of the Committee.

An international bureau for industrial organization is under consideration in some of the industrial countries of Europe. Mr. E. A. Filene, of Boston, one of the founders of the International Chamber of Commerce, recently addressed a meeting of business men in London in support of the scheme. He stated that he had just received a telegram informing him that the German Government had declared it would join and support this scheme if England and France would also join. What was wanted, he said, were organizations in Europe to co-operate with associations already formed in the United States for raising the efficiency of management. The Americans believed that by a mutual exchange of experience among all countries they as well as others would benefit. American business men were ready to co-operate with an international bureau for industrial organization to the full extent of their power.

COAL MINERS' DISPUTE IN GREAT BRITAIN AND THE GENERAL STRIKE

REFERENCE was made in the May issue of the LABOUR GAZETTE to the negotiations during April for the settlement of the dispute between the coal miners and the operators of the mines in Great Britain, followed by a cessation of coal mining on May 1, a general strike in sympathy with the miners being called by the General Council of the Trades Union Congress to take effect from midnight on May 3 and called off on May 12. The classes of workers called out by the General Council were miners, railway employees, other transport workers including dock labourers, street railway employees, teamsters and truck drivers, employees in the manufacture of iron and steel, metals and heavy chemicals, the building trades and the printing trades. The membership of the unions covering these trades was reported as totalling 4,350,982 in 1925, divided as follows:

Mining and Quarrying	840,543
Railways	454,924
Transport	397,126
Iron and Steel Trades	153,932
Building and Furnishing	349,658
Printing and Paper	167,665

At the beginning of the second week, that is on May 10, there were reports that other classes of workers were called out, but while this does not appear to have been done, at that time employees in certain establishments producing flour, etc., in Manchester and Liverpool joined in the strike. It was estimated that the total number involved including the coal miners, was about 5,000,000. Many lines of industry, such as textile and other factories, were compelled to shut down or operate partially owing to the shortage of coal.

As mentioned in the previous issue of the LABOUR GAZETTE, the Government had made arrangements under the Emergency Powers Act, 1920, to carry on the essential services, such as the distribution of food, and volunteers were enrolled to unload ships, to operate motor trucks, buses, etc. Railway trains were moved to some extent from the first day and from day to day the number of trains operated increased and railway employees returned to work in increasing numbers. The Government had taken over the coal stocks and rationed supplies to steamships, factories and other consumers.

Early in the strike a union expecting to be involved placed before the courts the question as to the legality of the powers of the General Council of the Trades Union Congress to call such a strike, and on Tuesday, May 11, a decision was given that there was no provision in the law for such a strike and that persons inciting others to participate in it were not protected by the Trade Disputes Act; that members of a trade union would not lose benefits by refusing to participate in a strike illegally ordered; and that trade union funds could not be legally used for or depleted by the payment of strike benefits to strikers observing illegal orders. The question as to the legal status of the general strike was also discussed in Parliament.

The coal miners' union had toward the end of April placed negotiations for a settlement of the dispute in the hands of the General Council of the Trades Union Congress, which negotiated with the Government as to means of securing a settlement up to May 2, when the Government took the position that the calling of a general strike constituted a challenge to constitutional rights and refused to negotiate further until the general strike should be unconditionally and officially called off. On May 10 and 11 there were discussions of the situation between Sir Herbert Samuel, the chairman of the Royal Coal Commission (the report of which was described in the LABOUR GAZETTE for April, 1926), and the mine operators and representatives of the labour organizations. On May 12 the officers of the Congress informed the Prime Minister that the general strike was called off in order that negotiations might be resumed. Sir Herbert Samuel then issued a memorandum containing the basis of a settlement of the coal dispute dealing with some of the measures proposed in the Coal Commission's report. The officers of the Congress stated that they had understood that the Government was prepared to accept this basis and there appears to have been a misunderstanding. The miners' representatives, however, refused to accept this memorandum as a basis. Shortly afterwards the Prime Minister issued a memorandum setting forth a basis for settlement which, however, did not prove to be satisfactory to the parties concerned, and while negotiations continued from time to time, no settlement was reached by the end of the month.

The seamen's union took a ballot as to joining the strike, but it had not been completed when the general strike was called off.

The workmen participating in the general strike began to return to work on May 12 and the following days, but in some cases the

employers took the ground that they had by striking violated their agreements and could return to work only under new contracts to be entered into, proposing in some cases reductions of wages and changes in working conditions. This was regarded by some as a more or less concerted attempt to break up or weaken the unions, that in some cases such action constituted lockouts and that in other cases the employees thus became engaged in new strikes for the old conditions. The Prime Minister issued a statement urging that such adjustments should be amicably settled, indicating that the Government would not permit the employers to take undue advantage of the situation. The unions in some instances, notably that of the railway employees, were required in the new agreements to agree to clauses admitting the illegality of the strike in sympathy with the miners and providing against such action being taken in future.

SURVEY OF INDUSTRIAL RELATIONS IN GREAT BRITAIN

Report of Committee on Industry and Trade

THE Department lately received a copy of the report of the Committee appointed by the Labour Government of Great Britain in 1924 to inquire into and report upon the conditions and prospects of British Industry and Commerce. The report is a survey of industrial relations, based mainly on material derived from official sources with regard to industrial wages, conditions and relationships in Great Britain and certain other countries. The Committee had already published a report on overseas trade, and they are now engaged in a third report, which will describe various British industries. The Committee is composed of eighteen members, including leading industrialists, detached economists and well-known representatives of labour. The London *Times*, in a review of the report, says that perhaps its most remarkable feature is the unanimity of the members, who represent what are commonly regarded as conflicting interests. "From that point of view this volume cannot fail to have a very considerable influence on current controversy, because it reveals facts which lead to the unavoidable conclusion that not by strife or by partisanship, but only by united effort, can the nation find a solution to the pressing problems of industrial life."

The report is divided in five sections, dealing respectively with population, wages, conditions of labour, unemployment, and machinery for industrial negotiation, concluding with a series of statistical tables. The report is prefaced by an introduction summarizing the facts presented in the volume.

Population

The first section deals with the distribution of the population by age, sex, and occupation, and the changes due to the late war and the declining birth rate. The proportion of the population following definite occupations has remained fairly constant during the past 40 years, but a decrease is noted between 1881 and 1921 in the numbers and percentage employed in agriculture from 1,500,000 (12 per cent) to 1,300,000 (7 per cent). There were great increases in coal mining, from 500,000 (4 per cent) to 1,300,000 (7 per cent), and in the metal and engineering group of trades, from 900,000 (7 per cent) to nearly 2,500,000 (13 per cent).

The increase in the population between 1913 and 1926 took place in the older age group, that is, those above 45 years. In this connection the report points out that "the relative decline in the number of men of the most efficient ages has an evident bearing on questions of productive cost and unemployment." This decline is attributed to the war and the lower birthrate. "Broadly speaking, it may be said that since 1901 the total proportion of the occupied population directly engaged in production has remained practically constant at about one half. It is therefore apparent that the total proportion engaged in all other occupations including transport, commerce, finance, public services and non-industrial occupations generally, must also have remained practically constant at about one half."

Wages

On the subject of wages the committee state that the Board of Trade index number of wages shows a rise of about 13 or 14 per cent in the 20 years preceding the war; and comparing the rates of money wages in 1924 and 1925 with 1914 it is stated that the rise may be taken to average between 70 and 75 per cent over industry as a whole. The proportionate rise has been greater for the less skilled than for the more highly skilled workpeople, the average increase being from 80 to 90 per cent for the former and from 60 to 70 per cent for the latter. The proportionate rise has also been unequal as between different industries,

the dominant difference being between industries largely exposed to foreign competition and those which for various reasons are less exposed. The Committee's calculation yield the conclusion that the prevailing rates of increase of weekly rates of money wages in the most exposed trades range from 45 to 75 per cent, with an average of about 60, while for the trades sometimes described as "sheltered" the increases range from 80 to 120 per cent, with an average of about 100. This discrepancy is not confined to percentage increases, but applies also to the actual level of rates of money wages.

On the subject of the movement of wages in relation to the cost of production, it is stated that if the existing conditions of effort, efficiency, and other factors were equivalent to those prevailing before the war the figures indicate on the average a small increase in the wages element in the "real" cost of production (the rise being considerably above the average in the more sheltered trades) though in the case of some classes of skilled men in the exposed trades there had probably been a fall.

As to the relation between the rise of money wages and the cost of living, it is pointed out that in both 1924 and 1925 the mean of the official cost-of-living index figure and the estimated average rise of weekly time rates of wages were approximately the same, the average "real" rates of wages thus being roughly unchanged.

It is pointed out that in any trades in which piece-work has become materially more prevalent since 1914, the true average rise in weekly earnings is somewhat greater than the recorded rise in time rates. There are indications, too, that payment by results has been gaining somewhat on payment by time.

Hours

Attention is drawn to the general decrease in hours of labour which has taken place since 1914. It is estimated that at that time the average weekly hours of industry were between 53 and 54 and that they have been reduced now to an average of about 48 or, roughly, an average decrease of 10 per cent, on the pre-war hours. The survey notes that the trade depression of 1921 and the following years, which resulted in a reduction of wages amounting to something like three-fifths of the increase between 1914 and 1920 had practically no influence on prevailing hours; and that, in pre-war years, while wage movements were subject to periodic fluctuations, there was a continuous tendency towards the shortening of the working day. Dealing with overtime, the Committee point out that there has been little general change since 1914 in the ratio between overtime and ordinary rates of pay, or in the overtime conditions generally prevailing.

It is explained that the movement towards reduced hours of labour in Great Britain has been only part of a movement in the same direction throughout a great part of the world; and the legislation enacted in a large number of countries for the establishment of maximum hours of labour, usually in principle eight a day, or 48 a week, is described. Mention is made, however, of the tendency to be observed in the majority of the countries concerned to modify the legal restrictions by expedients, such as permission to employer and workpeople to lengthen hours by agreement, the grant of permits and elastic interpretations, and the liberal recognition of overtime.

Welfare

Dealing with the industrial welfare work, the committee refer to the improvements in the amenities of workshop life and in industrial relations, and the increased continuity of personnel and productive efficiency which had already taken place and may be expected to result in increasing measure from the development of welfare work through the voluntary action of employers and the encouragement of joint industrial councils and the Industrial Welfare Society. Attention is drawn to the increasing welfare activity in the other principal industrial countries. There is said to be a tendency, especially in America, to regard provision for welfare as an essential part of good business organization rather than as merely philanthropic activity.

Unemployment

As to unemployment, which was the most important cause of lost time, it is estimated that during the years 1921-24 an average of 74,000,000 man weeks of potential work were lost owing to unemployment alone, the figure in the worst year, 1921, being as high as 93,000,000.

After comparing the material available for measuring unemployment before the war with the much fuller particulars now available, the Committee draw the inferences that before the war the country seldom, if ever, had to carry a load of 1,000,000 unemployed persons, and that in pre-war time spells of severe unemployment did not continue for periods comparable in length to the present depression. It is found that unemployment has been higher in the group of exporting trades

than in industry in general. Thus from mid-1924 to mid-1925 the average for all insured trades was 10.7 per cent, whereas in the exporting group it was 12.7 per cent. The main groups of industries which have lately been most severely depressed, the committee point out, are those connected with or dependent upon shipping or iron and steel, and in those industries the highest percentages of unemployment are found.

While it is common knowledge that unemployment has been very severe during the last four years, the committee draw the inference from available figures that the total number of persons in employment in Great Britain is fully as great as immediately before the war, the increased margin of unemployed being at least balanced by the increase of the employed population.

Industrial Negotiation

The chapter describing the machinery of industrial negotiations has a section on Whitley councils. It shows that since 1918 87 joint industrial councils have been formed, but that 25 of them have now ceased to work. This survey, prepared by the Ministry of Labour, gives an explanation of the decline:—

"Various causes have operated to produce this result, the most important of which have been ineffective organization, the difficulties of wages adjustments and the divergence of sectional and district interests. With regard to the latter, the adoption of a scheme based on a triple organization of a national council, district councils, and works committees necessarily involved problems as to the relationship between the national, district, and local organizations. In some industries, in which organization was comparatively new and unstable, the adjustment of the various interests proved to be impracticable." The Ministry adds:—"It may be said that insuperable difficulties have arisen only in circumstances other than those envisaged by the Whitley Committee as suited to the establishment of joint councils."

In regard to the machinery for negotiation the report says: "Throughout British practice the voluntary principle is deeply rooted. Suspended during the war, it was promptly restored. Under the Industrial Courts Act, reference to arbitration can only take place by consent of the parties, nor can the Minister of Labour refer a matter to arbitration unless existing joint machinery has failed. Even then there is no statutory obligation to observe the awards. It is assumed, that is to say, that all that should be done is to provide machinery, as elastic and adaptable as possible, to facilitate discussion between the parties, reinforced by arrangements for their reconciliation by impartial outsiders, and, in the last resort, for the review of the question in dispute by a semi-judicial tribunal. It is assumed that there will be enough good sense and fair dealing in the parties concerned to take advantage of this machinery, and enough honour in them to maintain and support agreements or decisions thus reached.

"In the main this system works well. There can be little doubt that the apparatus described above, inasmuch as it has secured a ventilation of grievances at an early stage, a fuller consultation, a freer expression of points of view, and, above all, a clearer grasp of facts by both parties, has reduced the area of dispute, and nipped many a quarrel in the bud."

The report points out that while the voluntary principle is thus the essence of British practice it is not so in every country. It divides the various countries into two groups: Those which have mainly followed voluntary practice, and those which follow some measure of compulsory arbitration or conciliation of disputes. Thus, the Dominions, Germany, the United States, and some of the smaller European countries have enacted various kinds of legislation making arbitration or conciliation compulsory. In Norway, an experiment in general compulsory arbitration has been allowed to lapse, but disputes regarding collective agreements must still be referred to arbitration, and compulsory conciliation applies to other disputes. Belgium, France, Italy, the Netherlands, and Spain, while adopting voluntary methods in industry generally, have experimented in anti-strike legislation so far as certain classes of workpeople (e.g., State or public utility employees) are concerned; and Austria, Denmark and Sweden rely, as does Great Britain, on voluntary methods of conciliation and arbitration.

The most instructive experience, the report states, is that of Australia, New Zealand, and Canada.

The Commonwealth of Australia has an Industrial Conciliation and Arbitration Court, whose President has the duty of attempting to settle disputes extending beyond the limits of any one State, and the Court can be invoked by either of the parties, by State authorities. The awards are compulsory; there is no appeal; and lockouts or strikes against them are forbidden under monetary penalties. The Industrial Peace Act of 1920, though not nominally superseding this court,

has been widely held to do so in fact. It sets up a Conciliation Council, equally representative of both sides, District Councils, and Special Tribunals. In each case the awards are legally enforceable. The Court, further, may consider matters "leading or likely to lead" to disputes. In New South Wales, compulsory arbitration was introduced in 1901; the Act of 1912 established a special Court of Industrial Arbitration which, in its turn, sets up boards to fix wage rates and issue binding industrial awards. Public servants, and employees in industries covered by an award or agreement, are forbidden to strike under monetary penalties. In Queensland, the Industrial Arbitration Act (amended in 1923) established a Court and Boards which regulate conditions by awards and fix minimum rates. The industrial code of South Australia (1920) contains provisions for Wages Boards, the compulsory extension of agreements, the prohibition of strikes and lockouts in wages board trades (whose conditions are strictly regulated), and an Industrial Court whose awards are binding. In Western Australia a system of compulsory arbitration obtains: strikes and lockouts are forbidden under penalties. In Victoria and Tasmania, on the other hand, the system is one of conciliation, and the Wages Boards are more like the Trade Boards in this country.

In New Zealand, compulsion has been a standing feature of industrial legislation. The Court of Arbitration exercises a virtually continuous power of legislation in everything that belongs to the relations of employer and employed. Its awards and so-called conciliation settlements are enforceable by penalties; and strikes and lockouts in breach of awards or agreements are prohibited, again under severe penalties.

"In Canada," the report continues, "the most important piece of legislation for our purpose is the Industrial Disputes Investigation Act (usually known as the "Lemieux" Act) passed in 1907 and subsequently amended. * * * "The Canadian law is much less ambitious than the Australian, and does not go beyond the compulsory submission of disputes of certain classes or in certain circumstances to conciliation or investigation, with a provision for deferring a stoppage in the meantime. In the limited number of cases in which the Canadian Act has been invoked, it has generally operated successfully, but it is to be noted that its main success has been in conciliation. It has not prevented the occurrence of strikes and lockouts."

OVERSEA SETTLEMENT UNDER THE EMPIRE SETTLEMENT ACT IN 1925

ACCORDING to the Report of the Oversea Settlement Committee of Great Britain for 1925, the total number of British settlers who were assisted, under the Empire Settlement Act, to go overseas in 1925 was 43,057 (14,029 men, 11,821 women, and 17,207 children), as against 41,565 in 1924. Of these 43,057 settlers, 23,427 went to Australia, 8,051 to New Zealand, 11,442 to Canada, and 115 to South Africa. There has thus been a slight increase in the number of assisted passages; while unassisted migration fell in 1925. The report states that there are indications of an increased outflow of settlers in the current year, partly as a result of improving trade and partly as a result of the agreements which have been made with the Governments of Canada, Australia, and New Zealand.

The report refers to the new assisted rates to Canada which have come into force as a result of an agreement made between the British and Dominion Governments, and the transatlantic shipping companies in December, 1925. Settlers going to Canada with assisted passages under the Empire Settlement Act can now travel to the eastern ports (Halifax, St. John or Quebec) for only £3, and to Vancouver for £9, with corresponding reduction to the intermediate points. During last year, 480 families were settled in Canada under a scheme arranged in 1924 for the settlement of 3,000 families on the land; only a very small proportion of these families have abandoned their holdings.

A new agreement between the British and Australian Governments was signed in April, 1925, under which the Commonwealth Government undertakes to raise loans, not exceeding £34,000,000 for issue to the Governments of the several Australian States at a low rate of interest. The scheme aims at the settlement in Australia within the next five years of 450,000 assisted migrants from the United Kingdom, including 34,000 families.

The Committee have always taken the view that any prolonged training for settlement on the land in the Dominions should be undertaken overseas; but they consider that a brief

course of training or testing in this country, both for men and for women, would have many advantages. They refer to the training given at Catterick, in England, to soldiers during their last year of service who wish to settle in the Dominions, and to the British Ministry of Labour training centres at Claydon and at Weeting Park. Training centres would, they suggest, be valuable as a means (1) to encourage applications from those who would otherwise regard themselves as not qualified, (2) to increase the number of acceptable applicants, (3) to eliminate those who prove unsuitable, and (4) to facilitate the actual process of settlement overseas.

ANNUAL CENSUS OF INDUSTRY OF CANADA

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census, covering statistics of fisheries, mines, forestry and general manufactures in Canada. The annual census is in addition to the Bureau's decennial census and the statistics of population, finance, education, etc. Preliminary reports on various industries have been reviewed in previous issues of the LABOUR GAZETTE. These preliminary reports are consolidated from time to time in general reports issued by the Bureau.

The Biscuit and Confectionery Industry, 1924

The report on the biscuit and confectionery industry in Canada in 1924 shows the number of plants reporting as 321, a decrease of 40 from the preceding year. There had been 27 establishments excluded or transferred, 40 firms retired, and 27 new firms reported for the first time. Over one-half of the firms reporting were in Ontario. There were 17 firms making biscuits only, 24 making biscuits and confectionery, and 280 making confectionery (including chewing gum).

A table is given showing statistics of the industry for the years 1923 and 1924. Increases appear in capital invested amounting to $1,730,000 or 4.7 per cent, and in payments for salaries and wages of $1,001,540 or 9 per cent. Decreases are shown in the number of persons employed of 838 or 6.6 per cent; in the cost of materials of $576,252 or 2.4 per cent and in the gross value of products of $3,270,546 or 6.8 per cent.

The total selling value of production in 1924 was $45,123,629. Of this $15,977,345 represented the value of chocolate confectionery; $13,216,605 of biscuits, plain and fancy; $8,793,892, sugar confectionery; $2,662,095; ice cream, and the remainder bread, buns, pies, cakes, etc., puddings, cocoa, popcorn and other products.

There were 11,886 employees in 1924 receiving in salaries and wages $12,126,701, the great majority of these being in Ontario. The months of highest employment were September, October and November, and the average number on the pay-rolls was 10,034, of which 4,355 were males and 5,679 were females.

The average operating time per plant whether on whole or part time was 268.23 days in 1924 as compared with 260.90 days in 1923. The average hours of labour per day were 8.88 in 1924 and 8.26 in 1923.

The total value of imports in 1924 was $1,305,408, an increase of $33,226 during the year. The value of Canadian goods exported during the year 1924 was $559,446 as against $567,365 in 1923, a decrease of $7,919. Of the total value of goods imported, 56.4 per cent came from Britain and the colonies and the percentage of Canadian produce exported to the same was approximately 80 per cent.

The Bread and Bakery Products Industry, 1924

The report on the baking industry is distinct from the biscuit and confectionery industry, but similar items of production appear in both reports. The number of establishments reporting was 2,073, an increase of 93 over the previous year. Capital investment increased by 14.27 per cent; the number of persons employed by 9.27 per cent; salaries and wages paid by 10.19 per cent; cost of materials by 15.75 per cent, and value of products by 11.35 per cent. The statistics of production above refer only to the baking industry. The production of bread increased 6.68 per cent; buns and puddings decreased, and pies, cakes, etc., increased. Biscuits made in baking establishments increased from 141 tons worth $43,908 to 318 tons worth $136,054. Confectionery made in baking establishments also showed a large increase. Ice cream production increased 6 per cent.

The total production for the baking, biscuit and confectionery industries was 713,727,690 pounds of bread valued at $43,769,590; 36,533 tons of biscuits valued at $13,352,659; 92,073.330 pounds of confectionery valued at $25,032,554; and 1,969,096 gallons of ice

cream at $2,781,945. With other items the total reached $99,526,707.

The *per capita* consumption of bakers' bread, based on estimated population of 9,226,400 in 1924, was 77.3 pounds as compared with 73.1 in 1923.

The number of employees in 1924 was 11,917, of which 10,376 were male. The salaries and wages amounted to $13,498,091. The leading province was Ontario, with Quebec second.

Employment was fairly constant throughout the year, with a maximum of 11,101 in August and a minimum of 9,397 in January. The average working time of plants on full time was 298.14 days; 4.18 days on part time; and 10.68 days idle. The daily hours of labour averaged 8.92 and the weekly hours 53.80.

The Silk Industry, 1924

The report on the silk industry in Canada in 1924 showed 10 establishments reporting in 1924, an increase of 3 for the year. The total value of products declined from $5,044,968 in 1923 to $4,381,234 in 1924. The province of Quebec accounted for 72.2 per cent and Ontario for 27.8 per cent of the total production.

The number of employees on salaries and wages declined from 1,457 earning $1,224,036 in 1923 to 1,210 earning $978,686 in 1924. The average number of days each establishment was in operation during the calendar year 1924 was 246.4, with 14.6 days on part time and 43 days idle. The average number of hours worked per day or shift by wage earners was 9.9, and per week 50.1. The months of greatest employment were September, and October, and the month of lowest employment was January.

During 1924 the value of imports of real silk and silk goods from the United Kingdom was $2,425,011; from the United States, $5,444,716; and from other countries, $12,275,313. The value of imports of artificial silk and silk goods were $2,330,272 from the United Kingdom, $436,287 from the United States, and $692,791 from other countries. The value of exports of silk and silk goods to the United Kingdom was $223,632; to the United States, $11,026; and to other countries, $178,875.

The Tobacco Manufacturing Industry, 1924

The report of the tobacco manufacturing industry in Canada, 1924, divides the industry into two parts including 96 establishments whose principal product is cigars and cigarettes and 34 whose output is chiefly smoking or chewing tobacco and snuff. The total, 130 establishments, shows a decrease of 15 in the first group and 3 in the second. The gross value of production in 1924 was $59,953,502 of which $26,455,986 represented the value of cigarettes. The total number of employees on salaries and wages was 8,379 earning $7,338,058. The average number of days cigar and cigarette factories were in operation during 1924 was 246.7, with 27.3 days on part time and 30.0 days idle. The average number of wage earners per establishment working 8 hours per day or less was 20.0; working 9 hours, 39.0; working 10 hours, 2.8; working over 10 hours, 0.4. The average number of hours per week was 46.3. In smoking and chewing tobacco factories, the average number of days in operation was 263.1, with 11.6 days on part time and 29.3 days idle. The average number of wage earners per each establishment working 8 hours per day or less was 1.6; working 9 hours per day, 65.6; working 10 hours per day, 3.3. The average number of hours per week was 52.2. In cigar and cigarette factories the months of greatest employment were November and December and the average number of employees for the year, by months, 4,969. In smoking and chewing tobacco factories the months of highest employment were January and December. The average number of employees was 2,049. The imports of tobacco in 1924 were 18,510,834 pounds valued at $8,958,444. Of this amount $7,835,489 was the value of unmanufactured tobacco, $6,153,898 being the value of such imported from the United States, $27,773 from the United Kingdom, and $1,653,818 from other countries. Tobacco exports amounted to $772,484, of which the value of unmanufactured tobacco amounted to $626,911.

The Cocoa and Chocolate Industry, 1924

The report on the cocoa and chocolate industry in Canada in 1924 shows that reports received from 5 plants, of which 2 were in Ontario, 2 in Quebec and one in Nova Scotia. The number of employees on salaries and wages was 640 in 1923, earning $621,308 and 670 in 1924, earning $654,235. The net value of products was $1,510,938 in 1924, a decrease of nearly 4 per cent. The total selling value at the factory of products in 1924 was $3,839,963, a decrease of 5 per cent from the value in 1923.

The statistics of employment by months show that the month of highest employment was January, when the number on the payrolls was 590, of whom 312 were males and 278 females; the month of lowest employment was July with a total enrolment of 479, of

whom 259 were males and 220 females. The average number of days in operation on full time was 237.0, with 17.6 days on part time and 49.4 days idle. The average number of hours worked per day or shift was 9.0, and per week, 49.6. The total imports of cocoa and chocolate were valued at $2,194,358.

The Coffee and Spice Industry, 1924

The report on the coffee and spice industry in Canada, 1924, shows 52 firms reporting, with 17 in Ontario, 11 in Quebec, 8 in British Columbia, 6 in Manitoba, 5 in New Brunswick, 3 in Alberta, and 2 in Nova Scotia. There was an increase of one plant over the number for 1923. In 1923 there were 1,116 employees receiving in salaries and wages $1,423,383, and in 1924, 1,090 employees receiving $1,440,959.

The selling value of products in 1924 was $15,285,645, an increase of $1,108,577, due to the increase in production of coffee, roasted or ground.

The number on the pay-rolls was highest in May with 367 male and 345 female employees, and lowest in December with 676 employees of which 356 were male and 322 female. Compared with 1923 the average full time operations increased by 5.93 days to 278.63, part time operations by .94 days to 15.94 and the number of days idle decreased by 6.87 days to 9.42. The average number of hours per day increased from 8.4 hours in 1923 to 8.52 in 1924. Average weekly hours decreased from 47.50 in 1923 to 47.37 in 1924.

The total value of imports of coffee, chicory, spices, etc., was $5,887,560, the exports of coffee and imitations of the same amounted to 41,630 pounds valued at $13,542, of which 18,814 pounds valued at $6,738 went to the United States.

Paid Holidays in France

The French Ministry of Labour has just published the results of an inquiry conducted among industrial and commercial establishments which grant paid holidays to all or some of their workers. The information collected covers 628 concerns belonging to all branches of industry, and of which, it should be noted, 259 are situated in Alsace-Lorraine. From the report it appears that altogether 38,466 workers are granted paid holidays, while the branch of industry the most favoured in this connection is the food and drink trade. Of the establishments where a system of paid holidays is organized, 61 employ over 100 workers, 9 over 500 workers, and 8 over 1,000. In 414 establishments paid holidays were instituted by agreement between employers and workers. Forty-eight concerns grant holidays to all their staff, irrespective of their length of service, while 555 allow them only to workers with a certain period of service to their credit, which period varies from 3 months to 15 years.

The number of working days granted as paid holidays varies with the establishments. In 107 cocerns holidays of equal duration are granted to all the workers employed, while in others, the length of the holidays varies according to the length of service. Sometimes workers attaining the minimum length of service entitling them to paid holidays have the right to an extra day's holiday per annum for every additional year of service. More frequently, however, the duration of holidays increases, not from year to year, but after periods of from 2 to 6 years, according to the establishments. Many systems of calculating the duration of holidays have been introduced. In some cases the whole staff take their holidays at once and enterprises close down for a week or a fortnight; but it should be noted that in such cases that part of the staff which is not entitled to paid holidays for the whole periods of the closing takes a part of the holidays unpaid. The duration of paid holidays granted to workers employed by the hour or on piece rates is generally calculated on the average wage earned during a certain period, which varies, being sometime one year, sometimes the last three months worked, and sometimes the last fortnight preceding or the first fortnight following the holidays. On going on holidays some enterprises give their workers a special bonus in addition to paying their wages during their absence.

The number of accidents reported to the Ontario Workmen's Compensation Board during the month of May showed an increase over the prior month, the figures being 4,979 during May, as against 4,449 in April. Although the number of accidents was greater, the benefits awarded were lower, the total for May being $432,408.18, as compared with $475,199.70 during April. The present year to date shows an increase over the prior year, both as to accidents and benefits. The benefiets awarded during the first five months of 1926 amounted to $2,287,913.83, as compared with $2,243,861.42, during the corresponding period of 1925, and the accidents reported have increased from 21,620 in 1925 to 23,750 in 1926.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF MAY, 1926, AS REPORTED BY EMPLOYERS TO THE DOMINION BUREAU OF STATISTICS

ALTHOUGH activity in some lines was retarded by the unseasonable weather prevailing generally at the beginning of May, employment on the whole showed a considerable increase, 23,148 persons being added to the staffs of the 5,866 firms reporting, who employed 773,471 workers. The index stood at 94.3, as compared with 91.4 on April, 1926, and with 90.8, 91.8, 91.4, 83.3 and 84.1 on May 1, 1925, 1924, 1923, 1922 and 1921, respectively. The situation was thus more favourable than on the corresponding date in any of the last five years. The seasonal improvement was rather less than on May 1, 1925, when the spring was further advanced, but the gain exceeded that of May 1, 1924. Continued expansion may be looked for in the next report.

Construction, manufacturing, transportation, communication, trade, mining (other than coal) and services reported marked increases, while the only pronounced losses were those of a seasonal character in logging camps.

Employment by Provinces

The trend of employment was upward in all except the Maritime Provinces; firms in Quebec and Ontario reported the greatest numerical increases in staff.

Maritime Provinces.—Improvement was registered in manufacturing, (notably in fish canneries and lumber mills), coal mining and highway construction, but larger losses in railway construction, logging, shipping and stevedoring reduced the general level of employment. The declines were mainly seasonal in character. An upward movement was noted on May 1, 1925, when the index was higher; the late spring this year delayed operations to some extent. Statements were received from 526 employers having 61,927 workers, as compared with 62,420 in the preceding month.

Quebec.—Further gains were shown in Quebec, where 6,976 persons were added to the staffs of the 1,264 co-operating firms, whose payrolls totalled 217,039 at the beginning of May. Manufacturing recorded heightened activity, mainly in the iron and steel, tobacco, lumber, building material, pulp and paper and mineral product divisions; logging (on account of river drives) transportation and construction also afforded more employment. Conditions were considerably better than on May 1 last year, although the increases then were somewhat more pronounced, partly owing to the more favourable weather that prevailed.

Ontario.—Practically all industries in Ontario recorded a better situation, except logging, in which there were heavy seasonal losses. Within the manufacturing division, the greatest increases were in iron and steel and lumber factories; mining, communication, transportation, construction, services and trade all registered improvement, that in construction being most pronounced. An aggregate working force of 321,007 was reported by the 2,674 employers making returns, who had 312,491 employees on April 1. Increases on a larger scale were noted at the beginning of May, 1925, when the index was lower.

Prairie Provinces.—Employment in the Prairie Provinces showed expansion exceeding that recorded on the corresponding date of last year, when the index was 4.5 points lower. Lumber, iron and steel and building material works, communication, trade and construction indicated heightened activity; the greatest improvement took place in highway and railway construction, while coal mining and logging reported the only recessions of any size. The 744 reporting firms had 97,774 employees as against 93,264 on April 1.

British Columbia.—Further increases in employment were shown in British Columbia, the gains being more extensive than on May 1 last year. The index number then stood at 105.1, as compared with 113.5 on the date under review. According to the statistics tabulated, 658 employers enlarged their staffs from 72,085 persons at the beginning of April to 75,724 on May 1. The most pronounced increases were in construction and manufacturing, notably in lumber and fish-preserving establishments, but logging, transportation and trade also afforded more employment. Coal mining, on the other hand, was decidedly slacker.

Table I gives index numbers of employment by economic areas.

Employment by Cities

Firms in the eight cities for which separate tabulations are made increased their staffs, Montreal, Toronto and Hamilton showing the greatest absolute gains.

Montreal.—Employment in Montreal again increased; manufacturing, particularly of iron and steel products, transportation and con-

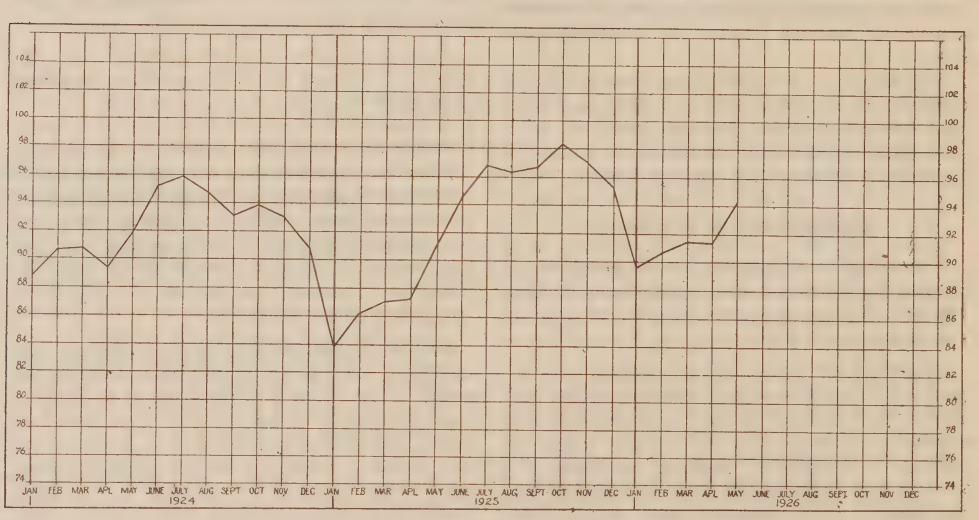
struction were decidedly more active. Statements were compiled from 686 firms employing 109,057 persons, or 3,252 more than on April 1. Considerable improvement had also been indicated on May 1, 1925, but the index then was over four points lower.

Quebec.—Shipping and stevedoring and building afforded increased employment in Quebec. The 86 co-operating employers reported 8,481 workers on payroll, as against 8,025 in the preceding month. The situation was better than on the corresponding date last year, when important reductions were registered.

Toronto.—Statistics were received from 767 firms employing 96,315 persons, an increase of 1,985 over their April 1 staffs. Manufacturing generally, construction, trade and communication registered the greatest expansion. Employment in Toronto was on a higher level than on May 1 a year ago, although slightly larger gains were then reported.

Ottawa.—Pulp and paper and other branches of manufacturing and construction were busier, the general increase exceeding that shown on the same date in 1925. Data were received from 125 employers with 9,636 workers as compared with 9,103 in their last report.

Hamilton.—Further and greater improvement was recorded in Hamilton, where 1,263 persons were added to the staffs of the 194 reporting firms, who had 28,518 employees. Manufacturing, especially iron and steel, and construction registered the bulk of the gain, which was more pronounced than that noted on May 1, 1925, when the index stood between 11 and 12 points lower.



Windsor and Other Border Cities.—Continued increases were reported in the Border Cities, chiefly in automobile plants, while construction, services and other groups were also busier. The number of persons employed in 81 establishments was 11,887, as against 11,240 at the beginning of April.

Winnipeg.—General expansion in manufacturing, construction and trade caused a gain of 522 persons in the working forces of 278 firms who employed 25,671 workers on May 1. This increase was nearly double that shown on the same date a year ago; employment then was much less active.

Vancouver.—Additions to staffs that greatly exceeded those registered on May 1, 1925, were indicated in Vancouver, where the payrolls of the 226 co-operating employers rose from 24,447 on April 1 to 25,374 persons at the beginning of May. Conditions were very much more favourable than on the corresponding date last year. Construction, manufacturing, transportation and trade shared in the upward movement indicated this May.

Index numbers of employment by cities are given in Table II.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

The Manufacturing Industries

Further advances were made in employment in manufacturing; the lumber, iron and steel and fish preserving industries showed the most marked improvement, but large gains were also indicated in pulp and paper, tobacco, building material and mineral product factories. On the other hand, rubber, textile, leather and edible plant product works were slacker. Declines are usually registered in the last three groups during the spring. A combined working force of 448,478 persons was employed by the 3,801 manufacturers making returns, who had 438,778 operatives at the beginning of April. Employment was considerably brisker than on May 1, 1925, although greater gains were then reported.

Animal Products, Edible.—All branches of this division showed general increases of a seasonal nature, those in dairies and fish-preserving establishments being most noteworthy. British Columbia and the Maritime Provinces recorded a large proportion of the gain, but the movement was upward in all provinces. Statements were received from 202 firms having 14,536 employees, as compared with 13,079 at the beginning of April. The ndex number was higher than on May 1, 1925, although the improvement then was slightly more pronounced.

Leather and Products.—Seasonal declines were indicated in boot and shoe factories, the losses being, however, very much less extensive than those noted on May 1 a year ago, when the index number was six points lower. The working forces of the 192 manufacturers reporting declined from 17,063 persons on April 1 to 16,623 at the beginning of May. These decreases were mainly confined to Quebec.

Lumber and Products.—Although operations were retarded to some extent by the unseasonable weather prevailing on May 1, there was an increase of 3,581 persons in the payrolls of the 712 lumber firms furnishing statistics, who had 46,476 employees. Rough and dressed lumber mills registered the bulk of the gain, but heightened activity was also shown in furniture, vehicle, match and other divisions of the group. Additions to staffs were reported in all provinces, those in Ontario and British Columbia being most marked. Substantially greater improvement was noted on May 1, 1925, when the index was three points higher; the season then was more favourable for work in the outlying mills.

Plant Products, Edible.—As was the case on the corresponding date last year, employment in vegetable food factories showed a falling off. A combined working force of 24,813 persons was reported by the 304 co-operating employers, as compared with 25,070 on April 1. Flour and other cereal mills and sugar and syrup works registered most of the loss, which took place chiefly in Ontario.

Pulp and Paper Products.—Further and more extensive increases were shown in this group, the gain rather exceeding that recorded on May 1, 1925; the index number then stood at 99.6, as compared with 105.3 on the date under review. Practically all the improvement was in pulp and paper mills in Ontario and Quebec. The 450 manufacturers whose statistics were tabulated had 53,631 employees, or 852 more than in their last report.

Rubber Products.—Continued curtailment of operations was noted in rubber factories, in which the level of employment was slightly lower than at the beginning of May last year, when comparatively small additions to staffs were indicated. Ontario registered the largest declines, but there were also reductions in Quebec. Statements were compiled from 31 establishments whose payrolls included 11,783 workers, as compared with 12,384 on April 1.

Textile Products.—Seasonal losses were reported in this group, chiefly in garment and personal furnishing factories in Ontario and Quebec. The working force of the 515 concerns making returns fell off 72,526 on April 1 to 71,956 at the beginning of May. Employment was in greater volume than on the corresponding date in 1925.

Tobacco, Distilled and Malt Liquors.—Improvement was again shown in tobacco works, 101 firms increasing their staffs by 744 persons to 11,918 on May 1. Activity was greater than on the same date last year, when seasonal gains were also indicated.

Clay, Glass and Stone Products.—The trend of employment in building material plants continued to be upward, according to 116 manufactures having 9,698 employees, as against 8,988 in the preceding month. All branches of the industry shared in the gains, which were reported chiefly in Quebec, Ontario, and the Prairie Provinces. The number of persons employed in the production of building materials was very much larger in May this year than in 1925, although important additions to staffs were then made.

Electric Current.—Employment in electric current plants increased, 139 extra persons being taken on by the 86 co-operating producers, who had 11,290 workers. This gain was smaller than that indicated at the beginning of May, 1925; the index number then was higher.

Iron and Steel Products.—Further important increases were noted in iron and steel products; rolling and forging mills, agricultural implement, railway car, automobile, heating appliance, and other factories coming under this heading enlarged their payrolls considerably. The expansion was much more pronounced than on the corresponding date of a year ago, when the index number, standing at 75.0, was eight points lower than on the date under review. Statistics were received from 635 establishments having 127,909 employees, as compared with 124,687 in the preceding month.

Non-ferrous Metal Products.—The movement in these industries continued to be favourable, according to 103 firms employing 13,948 workers, or 145 more than in their last report. Rather smaller gains were registered on May 1, 1925, and the index number then was a good deal lower.

Mineral Products.—Seasonal improvement was shown in the mineral products division, chiefly in Quebec and Ontario. The staffs of the 76 reporting employers were increased from 9,260 persons on April 1 to 9,821 at the beginning of May, a gain that caused the curve of employment in the group to continue in its favourable position as compared with the corresponding date last year, when expansion was also indicated.

Logging

Continued but much less extensive reductions were recorded in logging in Ontario and in the Maritime and Prairie Provinces, while river driving operations caused a temporary gain in Quebec and there was also improvement in British Columbia. The payrolls of 218 firms whose statistics were received totalled 15,928 persons, compared with 17,264 in the preceding month. Smaller losses were noted at the beginning of May last year, but employment then was in greater volume.

Mining

Coal.—In spite of a considerable revival of activity in the Nova Scotia coal fields, there was a net decline in employment in this division, due to heavy losses in the Prairie Provinces and British Columbia. The result was a reduction of 382 persons in the forces of the 88 operators reporting, who had 23,197 employees. This contraction was smaller than that which took place on May, 1, 1925, but the index number then was a few points higher.

Metallic Ores.—Additions to staffs were registered in metallic mines in British Columbia and Ontario. Returns were tabulated from 48 firms with 10,991 employees, as against 10,750 on April 1. This gain exceeded that indicated on the same date last year, when employment was above the level reported in May of this year.

Non-Metallic Minerals, other than Coal.—Continued expansion was shown in this group, largely in Quebec and Ontario; 68 employers had 6,000 workers on May 1, or 430 more than in the preceding month. The situation was considerably better than at the beginning of May, 1925.

Communication

The trend of employment in the communication industries was decidedly upward, 1,041 persons being added to the staffs of 182 companies and branches reporting; they had 24,117 employees. Telegraphs and telephones both showed heightened activity. Employment was considerably better than on the corresponding date a year ago, the increase recorded then having been much smaller.

Transportation

Street Railways and Cartage.—Further moderate gains took place in local transportation, in which 182 additional persons were employed by the 113 co-operating firms, who had 18,700 workers. More extensive improvement was reported at the beginning of may, 1925, but the index number then was the same as on the date under review.

Steam Railways.—Data received from 101 divisional superintendents and companies showed that they had 73,127 persons on payroll as compared with 72,558 on April 1. Although there were gains in all provinces, those in Ontario were most marked. Contractions were registered on May 1, 1925, and the index number then was three points lower.

Shipping and Stevedoring.—The opening of the St. Lawrence ports and of navigation in Ontario caused a substantial increase, which was, however, partly offset by shrinkage in employment at the winter ports. There was a net increase of 858 persons, according to 51 employers, reporting 12,221 workers. Activity was slightly greater than on the same date of a year ago.

Construction and Maintenance

Building.—Further extension of operations was reported by 322 contractors, whose working forces rose from 24,829 on April 1 to 27,687 at the beginning of May. All except the Maritime Provinces shared in the gain, which was especially noteworthy in Ontario and Quebec. Rather smaller additions to staffs were

NOTE.—The number employed by the reporting firms in Jan. 1920, is taken as 100 in every case. The "relative weight" in Tables I, II and III shows the proportion of employees in the indicated district or industry to the total number of employees reported in all districts and industries on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing
1921							
May 1	84·1	87·5	80·8	83·6	86·6	90·1	80·2
1922							
May 1	83·3	83·0	81·2	82·4	85·4	91·3	79·0
1923

indicated on May 1, 1925, when the index number stood at 122.7 as compared with 144.8 on the date under review.

Highway.—Continued and much greater expansion was recorded on highway construction, particularly in the Western Provinces. One hundred and one employers in this group reported 7,057 workers, or 3,848 more than at the beginning of April. This improvement was greater than that registered on May 1 last year.

Railway.—Employment in railway construction showed a gain which, though extensive, was not as pronounced as that recorded on May 1, 1925, when the index was higher. The working forces of the 34 employers making returns aggregated 34,335 persons, as compared with 30,277 in the preceding month. There

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industries	Relative weight	May 1, 1926	April 1, 1926	May 1, 1925	May 1, 1924	May 1, 1923	May 1, 1922

NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

were heavy losses in the Maritime Provinces, but pronounced gains in Ontario and the Prairie Provinces and somewhat smaller increases in Quebec and British Columbia.

Services

Another advance was shown in this group, especially in hotels and restaurants; 278 persons were added to the payrolls of the 173 firms reporting in the service group, who employed 14,230 persons on May 1. Conditions were better than on the same date in 1925, when improvement was also registered.

Trade

In spite of the inclement weather that adversely affected business this spring, the forces of the 566 trading establishments making returns were increased by 803 persons to 57,413 on May 1. Gains were noted in both retail and wholesale trade. Expansion on practically the same scale was indicated on May 1 last year, but employment then was in less volume.

Table III gives index numbers of employment by industries as at April 1 and May 1, 1926, and as at May 1 of the last four years. The column headed "relative weight" shows the proportion that the number of employees reported in the indicated industry is of the total number of employees reported in Canada by the firms making returns on May 1, 1926.

EMPLOYMENT OFFICE REPORTS FOR APRIL 1926

THE volume of business transacted in the offices of the Employment Service of Canada during the month of April 1926 showed a substantial increase over that recorded during the preceding month, while a comparison made with the corresponding period of last year showed an increase in the number of vacancies listed and only a nominal decline in the number of applicants registered and placements effected.

The accompanying chart shows the trend of employment since January 1924 as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications rose steadily throughout the month, the former attaining a level of ten points higher than that reached at the close of April 1925, while the latter also reached a higher peak than has been recorded for the past two years. The ratio of vacancies to each 100 applications was 79.8 and 91.6 during the first and second half of April, in contrast to the ratio of 83.6 and 81.2 during the same period in 1925. The ratio of placements to each 100 applications during the period under review was 71.8 and 79.0 as compared with 75.0 and 74.1 during the corresponding month a year ago.

The summary of the reports from the offices showed that the average of applications reported during the first half of April 1926 was 1,799 as compared with 1,488 during the preceding period and 1,931 daily during the corresponding period of 1925. Applications for work during the latter half of the month registered 1,711 daily, in contrast with 1,688 during the latter half of April a year ago. Employers notified the Service of a daily average of 1,437 vacancies during the first half and 1,567 during the latter half of the month under review, as compared with a daily average of 1,613 and 1,371 vacancies during the month of April, 1925. Vacancies offered to the Service during the latter half of March, 1926, averaged 1,156 daily. The Service effected an average of 1,292 placements during the first half of April, of which 931 were in regular employment and 361 in work of one week's duration or less, as compared with a total average placement during the preceding period of 995 daily, and with 1,449 daily during the first half of April a year ago. During the latter half of the month under review placements averaged 1,351 daily (934 regular and 417 casual) as compared with an average of 1,251 daily during the corresponding period of 1925.

During the month of April 1926 the offices of the Service referred 33,090 persons to vacancies and effected a total of 31,772 placements. Of these the placements in regular employment were 22,385 of which 18,711 were of men and 3,674 of women, while the placements in casual work totalled 9,387. The number of vacancies reported by employers numbered 25,366 for men and 10,800 for women, a total of 36,166, while applications for work totalled 42,029, of which 31,169 were from men and 10,860 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

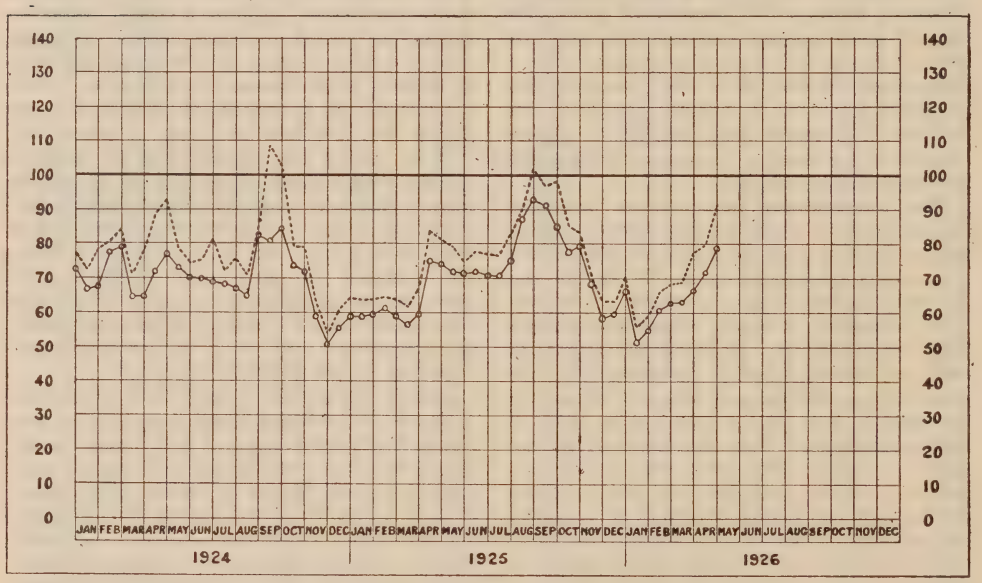
Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926 (4 months)	62,820	30,639	93,459

NOVA SCOTIA

There was an increase of nearly 24 per cent in the number of orders received by Nova Scotia offices during April when compared with the preceding month, and a gain of nearly 29 per cent over the corresponding month of last year. Placements were over four per cent higher than in March, and about 9 per cent above April last year. The increase in vacancies under both comparisons was almost entirely due to orders for coal miners as, with this exception, there were minor changes only in the demand for and supply of workers in other industries. Industrial groups in which most of the placements were effected during the month included manufacturing industries, 100; construction and maintenance, 52; services, 308; and trade 83. Regular employment was secured for 161 men and 89 women during the month.

NEW BRUNSWICK

Orders listed at employment offices in New Brunswick during the month under review were slightly under 1 per cent lower than in March, but nearly 5 per cent higher than during April of last year. There was a nominal increase in placements over March, but nearly 7 per cent gain over April, 1925. The improvement over April of last year was almost entirely due to increased demand for workers in the services' group, in which 567 placements were effected. Placements in regular employment numbered 125 of men and 96 of women.



QUEBEC

Employment offices in Quebec were notified of nearly 6 per cent more vacancies during April than in the preceding month, and over 40 per cent more than during the corresponding month last year. The number of placements effected during April was over 7 per cent higher than in March, and nearly 28 per cent in excess of April, 1925. All industrial divisions participated in the increased placements over April last year, except logging, services and trade. In the logging, the decrease was small, and in services a decline of about 20 per cent was recorded, attributable to a shortage of household workers. Industrial groups in which most of the placements were effected during the month included manufacturing industries, 147; logging, 149; construction and maintenance 654; and services 474. During the month under review, 1,127 men and 374 women were placed in regular employment.

ONTARIO

Opportunities for employment as indicated by orders listed at employment offices in Ontario during April were over 10 per cent better than in March, but nearly 13 per cent less favourable than in April last year. Placements increased over 11 per cent in comparison with the preceding month, but de-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

clined over 12 per cent when compared with April, 1925. The most noteworthy declines from the corresponding month last year occurred in logging, farming, transportation and construction and maintenance, offset in part by increases in the manufacturing industries and trade. Total placements for the month numbered 10,172, and were distributed as follows: manufacturing industries, 1,580, of which 542 were in iron and steel products; logging, 464; farming, 1,020; mining, 74; communication, 45; transportation, 290; construction and maintenance, 2,524, of which 1,388 were railway workers; services, 3,818, including 2,361 household workers; trade, 317; and finance, 40. Regular employment was provided for 5,284 men and 1,258 women during the month.

Manitoba

There was a gain of over 33 per cent in the number of orders received at Manitoba offices during April when compared with the preceding month, but a decrease of over 5 per cent when compared with the corresponding month last year. The number of placements effected was over 28 per cent higher than in March, but nearly 5 per cent lower than during April, 1925. Very little change from a year ago was shown in the different industrial divisions, minor gains in some being offset by small losses in others. Placements by industrial groups included manufacturing industries, 118; logging, 118; farming, 1,622; construction and maintenance, 121; services, 2,031, of which 1,477 were household workers; and trade, 173. During the month 1,840 men and 634 women were placed in regular employment.

Saskatchewan

During April employment offices in Saskatchewan received orders for nearly 67 per cent more workers than in March, and nearly 10 per cent more than in April last year. Placements were more than 68 per cent higher than in March, but declined less than 1 per cent when compared with April, 1925. Orders for farm workers were higher than a year ago, but placements were slightly lower. Industrial groups in which most of the placements were effected during the month were manufacturing industries, 71; farming, 3,406; construction and maintenance, 559; and services, 945. Placements in regular employment during the month numbered 3,947 of men and 460 of women.

Alberta

Opportunities for employment during April as indicated by orders received at offices in Alberta were over 73 per cent higher than in the preceding month but the same as during the corresponding month last year. There was an increase of nearly 68 per cent over March in placements, but a decline of nearly 5 per cent when compared with April, 1925. Gains over last year were recorded in the manufacturing industries and logging, offset by reductions in farming and construction and maintenance. Industrial groups in which most of the placements were effected during the month included manufacturing industries, 224; logging, 104; farming, 3,129; construction and maintenance, 523; services, 947; and trade, 74. There were 3,855 men and 454 women placed in regular employment during the month.

British Columbia

There was an increase of nearly 27 per cent in the number of orders received by British Columbia offices during April when compared with the preceding month, and of nearly 40 per cent in comparison with the corresponding month last year. Placements also increased more than 31 per cent over March, and nearly 33 per cent over April, 1925. The increases over last year were general in all industrial divisions, the most noteworthy gains being recorded in the manufacturing industries, logging, transportation and construction and maintenance. Placements by industrial groups included manufacturing industries, 739; logging, 557; farming, 522; mining, 99; transportation, 239; construction and maintenance, 1,058; and services, 1,045. During the month 2,372 men and 309 women were placed in regular employment.

Movement of Labour

During April, 1926, the offices of the Employment Service of Canada made 22,385 placements in regular employment, of which 14,997 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 2,042 were granted the Employment Service reduced transportation rate, 1,339 going to points within the same province as the despatching office, and 703 to other provinces. The reduced transportation rate, which is 2.7 cents per mile, with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The Moncton, N.B., office issued certificates to 2 farm hands travelling to employment in the Winnipeg zone. The certificates granted in Quebec numbered 47, all provincial. Of these Montreal issued 40 and

Quebec 7 to bushmen going to points within their respective zones. Ontario offices issued 222 certificates, 170 provincial and 52 interprovincial. Of the former, Fort William granted 101 certificates to persons travelling to points within its own zone, which included 1 barber, 1 cook, 38 construction labourers, 26 bushmen, 19 carpenters, 4 station men, 11 pipefitters, and 1 machinist. Port Arthur transferred 10 construction labourers, 24 farm hands, 1 logger and 3 mine workers to employment within its own zone; Sudbury sent 2 axemen to Niagara Falls, 1 blacksmith to Kingston, 6 rockmen to Toronto, and 1 labourer and 1 mill man to employment within its own zone; Timmins despatched 1 machinist to Kingston, Ottawa 1 mill man to Sudbury, North Bay 2 sawmill workers to Cobalt, and 1 bicycle repair man to St. Catharines; Pembroke sent 1 carpenter to Guelph and 1 construction labourer to Timmins, and Toronto 4 bushmen to North Bay, 1 blacksmith, 1 coremaker and 1 machinist to Kingston, and 1 assistant manager, 1 cook, 1 millwright, 1 carpenter, 1 rigger and 1 wood patternmaker to Port Arthur. Of those going to other provinces, 22 were hands travelling from Fort William, Pembroke, Sudbury and Toronto to points in the vicinity of Winnipeg, 1 a farm hand sent from Port Arthur to the Moose Jaw zone, and from Cobalt and Sudbury, 7 surface men and 1 station man sent respectively to Hull. In Manitoba the transportation certificates numbered 627, of which 425 were for points within the province, and 202 for other provinces. Of the latter, 149 farm hands and 9 farm domestics were transferred to Saskatchewan, 24 farm hands and 1 farm domestic to Alberta, and 3 farm hands to Ontario, and of the remainder, Estevan received 1 kitchen maid, Moose Jaw 7 teamsters, Port Arthur 2 teamsters, 2 waitresses, 1 bushman and 1 cook, Yorkton 1 hotel clerk, and Regina 1 cook all from Winnipeg. Provincially 357 farm hands and 40 farm domestics were granted reduced transportation, and from Dauphin, 6 sawmill labourers, 2 carpenters and 1 kitchen helper travelled to points within its own zone, while Winnipeg despatched 2 cooks, 3 kitchen maids and 2 waitresses to Brandon, 1 store clerk, 1 fireman, 1 setter and 8 riveters to Dauphin, and 1 carpenter within its own zone. The transportation certificates issued in Saskatchewan numbered 247, all to points within the province. Those who benefited by the reduced rates included 198 farm hands and 18 hotel and household workers travelling to various points in the province. Prince Albert sent 13 river drivers, 1 bush teamster and 3 sawmill labourers to points within its own zone and in addition received 4 sawmill labourers from Regina and Saskatoon. Two railway construction labourers travelled from Swift Current to Weyburn, 1 railway construction labourer from Saskatoon to Moose Jaw and 6 railroad construction teamsters and 1 blacksmith from Saskatoon to points within its own zone. Offices in Alberta issued 480 certificates, 352 of which were for points within the province and 128 to outside points. Provincially, the movement was for the most part toward the farming areas of the province, and included 295 farm hands and 7 farm domestics, the Edmonton office effecting the majority of the transfers. In addition Calgary transferred 1 bushman within its own zone. Edmonton sent to points within its zone 2 engineers, 1 harness maker, 1 chopper, 2 watchmen, 2 carpenters, 1 forest ranger, 2 housekeepers, 3 miners, 2 clerks, 4 cooks, 2 firemen, 1 flunkey, 1 pit boss, 1 kitchen maid, 8 mill hands, 8 labourers, 1 cookee, 1 blacksmith, 1 bricklayer and 5 tie makers. Of the interprovincial transfers 4 were carpenters going from Calgary to Cranbrook and the remaining 124 were made up of farm labourers and farm domestics for various points in Saskatchewan. In British Columbia 417 special rate certificates were granted, 98 provincial and 319 interprovincial. Of those transferred within the province Nelson sent 1 scaler to Kamloops, Penticton 1 farm hand and Prince George 1 engineer, 2 flunkeys, 1 teamster and 4 rockmen to points within their respective zones, Prince George 1 logger to Prince Rupert and 6 bridgemen to Kamloops, Victoria 1 assistant chemist to Nelson and 1 farm domestic to Kamloops, Prince Rupert 1 mine labourer within its own zone, and Vancouver 2 setters and 1 sawyer to Cranbrook, 3 farm hands, 8 bolt cutters and 2 miners to Kamloops, 1 engineer, 2 bricklayers and 1 lumber grader to Nelson, 1 engineer, 1 housekeeper, 1 mill labourer, 1 lumber piler and 1 flunkey to Penticton, 5 engineers and 1 lumber piler to Prince George, 22 station men, 1 cook, 2 sawmill labourers, 1 logger and 6 miners to Revelstoke, and 14 miners and 1 hoistman within the Vancouver zone. The interprovincial transfers were all for farm and domestic workers, Alberta receiving 159 farm hands and 8 farm domestics, Saskatchewan 133 farm hands and 12 farm domestics, and Manitoba 5 farm hands and 1 housekeeper.

Of the 2,042 workers who were granted the Employment Service reduced rate, 634 were carried by the Canadian National Railways, 1,384 by the Canadian Pacific Railway, 13 by the Pacific Great Eastern Railway, 10 by the Temiskaming and Northern Ontario Railway, and 1 by the Kettle Valley Railway.

BUILDING PERMITS ISSUED IN CANADA DURING APRIL, 1926

ACCORDING to returns from 60 cities, the value of the building permits issued during April showed the considerable increase of $8,450,332, or 80.2 per cent over March, 1926, while there was also a gain of $3,545,900 or 23.0 per cent in the more significant comparison with the corresponding month last year. The building authorized in April was estimated to cost $18,988,755, as compared with $10,538,423 in the preceding month and $15,442,855 in April, 1925. The total for the month was also higher than in April of any year since 1920, with the exception of April, 1923, when it was slightly higher. The index number of wholesale prices of building materials was then, however, 16 points higher than in April, 1926, when at 150.4, it was lower than in any month since 1919, the first year for which records are available on a monthly basis.

Some 50 cities reported that they had issued permits for nearly 1,700 dwellings valued at over $7,000,000, and for more than 2,900 other buildings, also estimated at approximately $7,000,000. In March, authorizations included some 1,200 dwellings and 1,900 other buildings valued at about $5,300,000 and $4,800,000, respectively.

As compared with March, 1926, there were increases in all provinces except New Brunswick and Alberta, where there were declines of 12.1 and 30.2 per cent, respectively. The largest gains were indicated in Manitoba, Ontario, Quebec and Saskatchewan.

Manitoba, Saskatchewan and British Columbia registered much higher totals of building permits issued than in April, 1925, but in the remaining provinces there were decreases, of which that of $762,000 or 10.1 per cent in Ontario was the greatest absolute loss. The reduction in Nova Scotia of 86.9 per cent was, however, the largest proportional decline, Manitoba showed the most pronounced gain of $4,465,368.

Toronto, Winnipeg and Vancouver reported increases in the value of building authorized as compared with both March, 1926, and April, 1925, while in Montreal there was a falling off in both comparisons, Moncton, Quebec, Sherbrooke, Westmount, Belleville, Hamilton, Port Arthur, St. Thomas, Welland, Windsor, Ford, Riverside, Sandwich, Walkerville, Regina, Saskatoon, Medicine Hat and New Westminster recorded greater totals of building permits issued in April than in either the preceding month or the corresponding month last year.

Cumulative Record for First Four Months, 1926.—The table following shows the value of the building authorized in April and in the first four months of each year since 1920. The January-April average index numbers of wholesale prices of building materials during the first

1921	13,460,339	26,886,566	204·6
1920	15,631,850	34,498,201	213·4

The aggregate value of building authorized during April was thus higher than in the same month in any of the last six years except 1923, while the total for the first four months of this year was the greatest since this record was begun in 1920, being 5.9 per cent larger than in 1923, the previous high level, and 53.4 per cent higher than in 1921, when building in the cities reached its lowest point in recent years.

The accompanying table gives the value of the building permits issued by cities in March and April, 1926, and April, 1925. The 35 cities for which records are available since 1910 are marked with asterisks.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest:—

Manufacturing: Iron, Steel and Products

TORONTO, ONTARIO.—SHEET METAL CONTRACTORS AND SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL NO. 30.

Agreement to be in effect from May 1, 1926, until April 30, 1927, and for 12 months thereafter unless 30 days' notice of change is given.

Hours, eight per day. Overtime, time and one-half until 10 p.m.; thereafter and Saturday afternoons, Sundays and legal holidays, double time. No work on Labour Day.

Wages per hour, sheet metal workers, 85 cents; junior mechanics, 60 cents.

Apprentices to serve three years, when they must pass an examination on sheet metal work before being admitted as junior mechanics. No apprentice shall be permitted on outside work unless under the jurisdiction of a journeyman. Shops employing from one to three journeymen, one apprentice; shops employing three or more journeymen the year round, one apprentice for every two journeymen thereafter. All apprentices must be registered with the union.

Workmen sent to out-of-town jobs are to be paid their railway fare and travelling expenses, and for travelling between 6 a.m. and 8 p.m., regular pay per hour; travelling between 8 p.m. and 7 a.m. railway fare and pullman berth but no travelling time. Board and lodging to be paid.

Car rates are to be paid for work outside city limits within 30 minutes ride, and time to be paid for travelling between city limits and job.

Employer is to notify the business agent when needing sheet metal workers. If such are not supplied within 24 hours non-union men may be employed until union men equal in efficiency are supplied.

Any dispute will be settled by the grievance committee of three members of each party, settlement being binding. No strike or stoppage of work shall be permitted while the committee is sitting. If either side fails to attend the meeting the case shall go by default.

Manufacturing: Printing and Publishing

TORONTO, ONTARIO.—EMPLOYING PHOTO ENGRAVERS AND THE INTERNATIONAL PHOTO ENGRAVERS' UNION OF NORTH AMERICA, LOCAL NO. 35.

Agreement to be in effect from May 1, 1926, to April 30, 1929, and thereafter from year to year, with 60 days' written notice of change.

Only members in good standing are to be employed.

No work from employers concerned in a strike or lockout.

In event of the union failing to furnish workmen within seven days of requirements the employer may secure them from other sources, paying not less than the minimum wage, men making immediate application to join the union.

An employee shall serve one week's notice before leaving position and employer shall serve the same before discharging an employee.

All foremen shall be union members.

Minimum wage per week, journeymen, first year, $50; second year, $52; third year, $55. Foremen, not less than $5 per week over journeymen's rate.

Overtime, first four hours, time and one-half; thereafter and Sundays and holidays, double time.

Hours per week, forty-four.

An employee who has been absent from work (except through sickness) shall make up time lost during the week before discharging overtime.

Permanent employees are not to be paid off temporarily owing to slackness of work. This is not to apply to those engaged as extra help.

Apprentices are to serve not less than 5 years beginning at the age of 16 years or over, and shall have a

medical examination and be indentured. There may be one apprentice to each 5 journeymen.

Minimum wage for apprentices, per week, first year, $8; second year, $10 and $12; third year, $14 and $16; fourth year, $18 and $25; fifth year, $30 and $35. Holidays are to be paid for in first three years.

In exceptional cases union recognizes night work. Hours for night work forty per week. Minimum wage, $5 per week above day scale.

Disputes shall be submitted to an arbitration committee of three from each party, and if they fail to agree, after seven days they shall choose a disinterested person whose decision shall be binding. During time of arbitration, no strikes or lockouts shall be engaged in.

No contracts conflicting with this agreement shall be entered into, and all contracts must be in accordance with by-laws and constitution of the union.

Construction: Buildings and Structures

GRANITEVILLE, QUEBEC.—QUARRY MASTERS, AND INTERNATIONAL PAVING CUTTERS' UNION, No. 60.

Agreement to be in effect from January 1 until December 31, 1926, with three months' notice of change.

Blocks 3½ to 4½ inches by 4½ to 5 inches by 7 to 10 inches, $30 per thousand. (Toronto size).

Blocks 4 inches cube, $17 per thousand.

Any other size must be equivalent to yardage price of "Toronto" size.

Day work, $1 per hour. Hours, eight per day, four on Saturdays.

If the average paving cutter cannot make a standard rate of pay, prices will be adjusted while such conditions prevail.

Air and certain tools are to be supplied by quarry masters.

Only union men are to be employed. Additional men are to be obtained from the union.

GANANOQUE, ONTARIO.—TWO LOCAL FIRMS AND PAVING CUTTERS' UNION OF THE UNITED STATES AND CANADA, LOCAL BRANCH 65.

Agreement to be effective from April 1, 1926, to December 31, 1926.

Blocks 3½ to 4½ inches by 4½ to 5 inches by 7 to 10 inches, $35 per thousand. For drilling stone by hand, there shall be added 10 per cent.

Where dimension or monumental stone is quarried extensively price shall be adjusted.

Certain tools shall be supplied. Drinking water free of charge.

Day work, $1 per hour; eight hours per day, provided same is paid by other quarries.

Any other stone or kind of block shall have price adjusted on basis of above size blocks, 34 to square yard as standard.

If paving cutter cannot make standard rate of pay through rough stone or other cause he shall be paid time rate.

Only union men shall be employed. The union shall supply extra men.

In case of dispute over fitness of stone, grievance committee shall decide.

HAMILTON, ONTARIO.—MASTER PAINTERS AND BROTHERHOOD OF PAINTERS, PAPERHANGERS AND DECORATORS OF AMERICA, LOCAL NO. 205.

Agreement to be in effect from May 1, 1926, to April 30, 1927.

This agreement is the same as that for the previous year, summarized in the LABOUR GAZETTE for June, 1925.

WINDSOR, ONTARIO.—MASTER PLUMBERS' ASSOCIATION OF THE BORDER CITIES AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 552.

Agreement to be in effect from May 1, 1926, until April 30, 1927, and for another year unless 30 days' notice of change is given.

Hours, 8 per day and 4 on Saturdays.

Overtime from 5 p.m. to 6 p.m. and on Saturdays from noon to 10 p.m., single time in case of necessity. Other overtime and Sundays and holidays, double time.

Travelling time up to 10 p.m., single time. If travelling at night, sleeper to be provided.

Any man superintending three or more men shall receive 10 cents extra per hour.

Men working out of town shall receive transportation and board.

Plumbers shall not do steamfitting when steamfitters are available.

Wages per hour for plumbers and steamfitters, $1.25.

WINDSOR, ONTARIO.—THE GENERAL CONTRACTORS' ASSOCIATION AND THE GENERAL CONTRACTORS' SECTION OF THE ESSEX COUNTY BUILDERS AND CONTRACTORS' ASSOCIATION, AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, No. 494.

Agreement to be in effect from May 12, 1926, to May 1, 1927, and from year to year unless three months' notice of termination is given.

Minimum wage, per hour—carpenters, $1; carpenter foreman, $1.10.

Hours, eight per day, four on Saturdays.

Overtime, first hour, time and a half; thereafter, double time.

If there is a third shift it shall be paid at rate of eight hours' pay for seven hours' work.

Proper shelter to be provided.

Apprentices shall be indentured and be paid as follows: during 1st year, 40 per cent of journeymen's rate; 2nd year, 55 per cent; 3rd year, 70 per cent; 4th year, 85 per cent; thereafter regular rate.

Union members are to be employed if available.

Holiday rate, double time. No work on Labour Day.

A committee of the secretary of the Association and the business agent of the Union shall deal with disputes. There shall be no strikes or lockouts without first referring matter to this committee.

WINNIPEG, MANITOBA.—THE ELECTRICAL CONTRACTORS' ASSOCIATION AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 435.

Agreement to be in effect from June 1, 1926, until April 30, 1927.

A permanent joint conference board shall be established to carry out the agreement, consisting of three contractors and three journeymen, who shall meet each month.

Firms who are parties to the agreement are to be protected in case of a strike in shops where same has not been signed.

In case of disputes, no stoppage of work shall take place before matter has been brought before the board and a settlement reached. Decision shall be binding.

The agreement shall not apply to electrical work within jurisdiction of a local union having a higher rate of wages than those herein specified.

Only union members are to be employed, and no member shall be allowed to take any contracts.

Hours, eight per day and four on Saturday.

Overtime, time and one-half until midnight; thereafter, and Saturday afternoons, Sundays and holidays, double time. No work on Labour Day.

In shift work, eight hours shall constitute a day's work, forty-eight hours per week.

Extra car-fare to be paid when work is outside the limit of regular city fare. Time travelling beyond city limit shall be paid for.

Men sent out of town shall have transportation paid. Travelling time shall be paid at regular rate, eight hours only per day. A sleeper shall be provided after midnight.

A man hired and finding no work shall receive four hours' pay.

Certain tools shall be supplied by the contractor, and certain others by the men or by helpers.

Minimum wages, per hour: job foreman, $1.10; wiremen, $1; helpers, 1st year, 25 to 40 cents; 2nd year, 40 to 50 cents; 3rd year, 50 to 60 cents; 4th year, 70 cents.

Parties are to meet during January to formulate a new agreement.

WINNIPEG, MANITOBA.—THE TYNDALL STONE PRODUCERS' ASSOCIATION OF WESTERN CANADA, MEMBERS OF THE WINNIPEG BUILDERS' EXCHANGE, CUT STONE SECTION, AND THE JOURNEYMEN STONECUTTERS' ASSOCIATION OF NORTH AMERICA, WINNIPEG BRANCH.

Agreement to be in effect from May 1, 1926, until December 31, 1926.

Hours per day, eight; Saturdays, four.

Wages per hour, journeymen stonecutters, $1.10; carvers, $1 extra per day.

Legal holidays: New Year's Day, Dominion Day, Labour Day, Christmas Day.

Extra car fare to be paid when work is outside the regular city fare. Time spent travelling beyond limits of city to be paid for.

Men sent to outside points to have transportation, room and board paid. Travelling time to be paid up to eight hours per day.

Suitable shelter is to be provided.

CALGARY, ALBERTA.—CALGARY CONTRACTORS AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL NO. 1779.

Agreement to be in effect from May 1, 1926, until April 30. 1928, notice of desired change to be given during January, 1928, when new agreement will be negotiated.

Wages per hour, to July 31, 1926, 90 cents; August 1 to April 30, 1927, 95 cents; May 1, 1927, to April 30, 1928, $1.

Hours per day, eight; four on Saturday.

Overtime until midnight and until 5 p.m. Saturday, time and one-half; thereafter, double time.

Hours, eight per day; seven per night.

Sunday and holiday work, double time; no work on Labour Day except to save life or property.

One hour's notice shall be given of dismissal or leaving work.

No members of the union shall work for persons who have not signed the agreement for less than the above stated wage.

In case of dispute arising a committee shall be appointed of three members of each party, settlement to be binding.

Transportation and Public Utilities: Electric Railways

MONTREAL, QUEBEC.—MONTREAL TRAMWAYS COMPANY AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISION 790.

The agreement of June 30, 1924, as summarized in the LABOUR GAZETTE for December, 1924, has been extended to be effective until July 1, 1930.

SASKATOON, SASKATCHEWAN.—CIVIC BY-LAW TO REGULATE RATES OF WAGES, WORKING HOURS, AND OTHER MATTERS RESPECTING THE MUNICIPAL STREET RAILWAY OF THE CITY OF SASKATOON.

To be effective as from January 1, 1926, until January 1, 1927.

This by-law is unchanged from that of previous years.

Transportation and Public Utilities: Water Transportation

MONTREAL, QUEBEC.—CERTAIN STEAMSHIP LINES AND THE SHIPLINERS' ASSOCIATION OF THE PORT OF MONTREAL, LOCAL NO. 2098.

Agreement to be effective from May 17, 1926, until December 31, 1926.

This agreement, summarized in the LABOUR GAZETTE for November, 1925, has been changed as follows:—

In the clause relating to double time for holidays, Victoria Day has been replaced by St. Jean Baptiste Day.

The following clauses have been added:—

That on all ships having carried bulk sulphur, and where dust has not been taken off old woodwork, 77 cents per hour (day) and 87 cents per hour (night) be paid. Work on new wood to be paid for at the ordinary rate of 62 cents day and 72 cents night.

This contract covers all fitting of the vessels lying in the harbour for grain and cattle, and all woodwork in connection with the stevedoring gear, except where permanent gear men are employed, then this part of the clause referring to gear does not apply.

Services: Personal

HAMILTON, ONTARIO.—SCHEDULE OF HOURS, WORKING CONDITIONS, PRICES AND WAGES FOR JOURNEYMEN BARBERS' INTERNATIONAL UNION OF AMERICA, NO. 131.

To be effective from May 1, 1926, until April 30, 1927.

Wages, weekly guarantee of $20 and half over $28; 70 per cent for broken weeks.

One half day off every week, from 12 noon till 8 a.m. following day. A holiday shall be considered the weekly day off. Full pay for time off.

Hours, 8 a.m. to 7.30 p.m., one hour for dinner and three-quarters of an hour for supper. Saturdays and nights before holidays shops may remain open till 10 p.m. Shops shall be closed on legal holidays.

Schedule of prices is also given.

OTTAWA, ONTARIO.—CERTAIN EMPLOYERS AND JOURNEYMEN BARBERS' UNION No. 704.

Agreement to be in effect from June 1, 1926, until April 30, 1927.

The employer displaying a shop card shall employ union men if available. If a non-union man is employed, local union secretary must be notified, and employee must join union.

Closing hours shall comply with civic by-law. No shop shall open before 8 a.m. Meal hours allowed to journeymen.

Members shall not work on stated holidays, except where employer is not a barber, when he may ask one journeyman to work from 8 a.m. until noon. Journeymen shall be paid for holiday if they work the other five days of the week.

Minimum wages—$23 per week and 50 per cent of takings over $34.

When a man is off for one-half day wages shall be no less than $21 and 50 per cent of takings over $32.

When a man is off for one day wages shall be no less than $19 and 50 per cent of takings over $28.

When a man loses more than one day's work in a week he shall be paid no less than 65 per cent of all takings.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING May the Department received information regarding the three following contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed thereunder.

DEPARTMENT OF PUBLIC WORKS

Supply and installation of interior fittings (in oak) in the public building at Stellarton, N.S. Name of contractor, The Office Specialty Manufacturing Company, Limited, New Market, Ontario. Date of contract, April 13, 1926. Amount of contract, $1,110.

Supply and installation of interior fittings (in oak) in the Public Building at Gravenhurst, Ontario. Name of contractor, The Interior Hardwood Company, Limited, Kitchener, Ontario. Date of contract, April 21, 1926. Amount of contract, $1,785.

Supply and installation of interior fittings (oak) in the Public Building at Stouffville, Ontario. Name of contractor, The Canadian Office and School Furniture Company, Limited, Preston, Ontario. Date of contract, April 28, 1926. Amount of contract, $1,220.

POST OFFICE DEPARTMENT

The following is a statement of payments made in May, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
	$
Making metal dating stamps and type, also other hand stamps and brass crown seals	699 48
Making and repairing rubber stamps, daters, etc.	231 14
Making up and supplying letter carriers' uniforms, etc.	328 29
Stamping pads, ink, etc.	142 38
Mail bag fittings	24,070 06
Scales	294 75

Cleaning of Machinery and Working Hours

Since 1923 it has been a debated point between workers and employers in Czechoslovakia whether the cleaning of machinery should or should not be counted as a part of the normal working day. The workers contended that the cleaning of machinery should be performed during the working day of eight hours, but the employers insisted that this work ought to be considered as preparatory or complementary, and, as such, should not require the sanction of the public authorities. They maintained that this point of view was endorsed in Sections 6 and 7 of the Act of December 19, 1918, on the Eight-hour Day. As these conflicting views had given rise to labour disputes, the Minister of Social Welfare decided that the regular cleaning of textile machinery, performed outside the statutory forty-eight weekly hours of work, should not be considered as complementary or as preparatory work within the meaning of the Eight-hour Act. The employers appealed to the Supreme Administrative Court against this decision, but on March 17, 1926, the Court issued an award confirming the point of view of the Minister.

PRICES, RETAIL AND WHOLESALE IN CANADA, MAY, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was downward. Both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was $11.29 at the beginning of May, as compared with $11.36 for April; $10.48 for May, 1925; $9.89 for May, 1924; $10.36 for May, 1923; $10.22 for May, 1922; $12.25 for May, 1921; $16.65 for May, 1920; $16.92 for June, 1920 (the peak); $12.66 for May, 1918, and $7.43 for May, 1914. Prices of butter and eggs showed a substantial seasonal decline, while less important declines occurred in the prices of milk, cheese and lard. The most important advance was in the price of potatoes, which showed an increase of 20.8c. for the two pecks included in the budget. Less important advances occurred in the prices of beef, mutton, pork, bacon and evaporated apples. Including the cost of fuel and rent with that of foods, the total budget averaged $21.54 at the beginning of May, as compared with $21.64 for April; $20.72 for May, 1925; $20.24 for May, 1924; $20.90 for May, 1923; $20.57 for May, 1922; $22.84 for May, 1921; $26.44 for May, 1920; $26.92 for July, 1920 (the peak); $20.09 for May, 1918, and $14.21 for May, 1914. Fuel was again somewhat lower, due to the continued decline in the prices of anthracite coal. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities declined to 157.0 for May, as compared with 160.6 for April; 158.8 for May, 1925; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); 201.4 for May, 1919, and 194.6 for May, 1918. Fifty-seven prices quotations were lower, thirty-five were higher and one hundred and forty-four were unchanged.

In the grouping according to chief component material seven of the eight main groups declined, while one remained stationary. The Vegetables and their Products group and the Animals and their Products group both declined substantially, the former due to lower levels for grains, potatoes and rubber, which more than offset the advances in flour and other milled products; the latter because of seasonal declines in the prices of milk, butter and cheese, which more than offset the higher prices for live stock, beef and mess pork. The other groups which declined were: Fibres, Textiles, and Textile Products, mainly because of declines in cotton, wool, jute, hessian and manilla rope; Iron and its Products, due to lower prices for steel billets and pig iron; Wood, Wood Products and Paper, because of declines in some lines of lumber; Non-Ferrous Metals and their products, because of declines in the prices of copper, tin, spelter, lead and solder; and Non-Metallic Minerals and their Products, due to declines in the prices of bituminous coal and cement, which more than offset the advances in the prices of gasoline and coal oil. The Chemicals and Allied Products group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower. In the former group higher prices for flour and other milled products, meats, spices, gasoline and coal oil were more than offset by declines in the prices of fruit, milk, butter, cheese and vegetables. In the latter group building and construction materials were lower, due to declines in the prices of some lines of lumber, cement, sash cord and rope. Manufacturers' materials were also lower, increases in materials for the leather, the meat packing, the chemical industries and in miscellaneous producers' materials being more than offset by declines in materials for the milling, the metal working, and the textile and clothing industries.

In the grouping according to origin raw or partly manufactured goods were lower, due mainly to declines in the prices of grains, milk, butter, vegetables, textiles, pig iron, lumber, and non-ferrous metals. Fully or chiefly manufactured goods also fell, advances in flour, sugar and meat being more than offset by decreases in the prices of milk products, non-ferrous metal products, turpentine, cotton bags and rope. Domestic farm products, articles of forest origin and articles of mineral origin were lower, while articles of marine origin were substantially higher.

Professor Mitchell's index number of forty articles, with prices during 1900 to 1909 as 100, declined in May, being 176.7, as compared with 177.8 for April; 172.5 for May, 1925; 270.2 for May, 1920, and 115.1 for May, 1914. The index of twenty foods was slightly lower at 200.0 for May, as compared with

200.9 for April. The index of twenty manufacturers' goods also declined, being 153.5 for May, as compared with 154.7 for April.

The Canadian Bank of Commerce index of wholesale prices of imports fell from 157.58 for April, to 154.55 for May. That for exports declined from 164.81 for April to 162.17 for May.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on 'Prices and Price Indexes 1913-1924," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6.

* LABOUR GAZETTE, December, 1923, page 1442.

Retail Prices

Beef prices advanced slightly, sirloin steak averaging 29.4c. per pound in May, as compared with 28.8c. in April; round steak averaging 23.9c. per pound in May and 23.4c. in April; rib roast 22.1c. per pound in May and 21.8c. in April; and shoulder roast 16c. in May and 15.7c. in April. Prices in most localities averaged slightly higher. Mutton rose from an average of 29.4c. per pound to 30.4c. Increases occurred in most localities. Both fresh and salt pork averaged somewhat

(Continued from page 607)

higher, the former at 29.7c. per pound, and the latter at 27.7c. Bacon advanced from an average of 41.8c. per pound in April to 42c. in May. In fresh fish cod steak, halibut, and white fish advanced. Salt herrings were slightly lower. Lard declined slightly, averaging 24.6c. per pound in May and 24.7c. in April.

Eggs showed a substantial seasonal decline, fresh averaging 34.9c. per dozen in May, 39.8c. in April and 46.4c. in March; and cooking averaging 31c. per dozen in May, 34.8c. in April and 38.7c. in March. The decline was much more pronounced in Ontario, Quebec and the Maritime Provinces than in the Western Provinces. Lower prices for milk were reported from Sherbrooke, Sorel, St. Johns, Thetford Mines, Montreal, Hull, Ottawa, Oshawa, Toronto, Kitchener, Woodstock, Windsor, Cobalt, Regina, Medicine Hat and Victoria. The average price for milk declined from 12.1c. per quart in April to 11.8c. in May. Butter showed a general seasonal decline, dairy averaging 40c. per pound in May, as compared with 46.3c. in April, and creamery averaging 43.6c. per pound in May, as compared with 51.5c. in April. Cheese declined in most localities, averaging 32.1c. per pound, as compared with 32.6c. in April.

Bread was unchanged in the average at 7.6c. per pound. Onions advanced from 4.9c. per pound in April to 5.5c. in May. Potatoes showed a substantial advance, averaging $3.57 per bag in May, as compared with $2.95 in April. Prices in most localities in Ontario, Quebec and the Maritime Provinces were much higher, while in the Western Provinces the increase was less pronounced. Evaporated apples rose from an average of 19.9c. per pound in April to 20.1c. in May. Raisins were slightly higher, averaging 18.3c. per pound. Canned peaches showed a downward movement, averaging 28.9c. per two-pound tin, as compared with 29.2c. in April. Orange marmalade fell from an average of 70.4c. per four-pound tin for April, to 68.6c. in May. Corn syrup was down from 45.5c. per five-pound tin, to 45.1c. in May. Sugar was unchanged, granulated averaging 7.9c. per pound, and yellow averaging 7.5c. Coffee and tea showed little change. Pepper advanced in the average from 54.3c. per pound in April to 55.8c. in May. Anthracite coal declined from an average of $17.76 per ton in April, to $17.38 in May. Lower prices were reported from Quebec, Three Rivers, Sherbrooke, St. Hyacinthe, Ottawa, Belleville, Orillia, Niagara Falls, Brantford, Galt, Kitchener, Stratford, London, St. Thomas, Windsor, Owen Sound, Sudbury and Timmins. Bituminous coal was slightly lower, averaging $10.23 per ton in May, as compared with $10.31 in April. Coke was down from an average price of $14.10 per ton in April to $13.76 in May. Little change occurred in the prices of wood. A slight decline in rent was reported from Peterborough.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to slightly lower levels in May. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged $1.53¾ per bushel, as compared with $1.56⅞ in April. The high price for the month was $1.58 per bushel, reached at the beginning, and the low $1.49⅜, reached at the end. The North American crop conditions were said to be an important factor in the prices fluctuations. The movement in coarse grains was similar to that of wheat. Western oats declined from 53c. per bushel to 49⅞c.; Western barley from 63½c. per bushel to 61½c.; flax seed from $1.96 per bushel to $1.93; American corn from 83¼c. per bushel to 83¼c.; and Ontario barley from 61½c. to 61c. The decline in wheat which was more pronounced towards the end of the month was not reflected in the prices of flour, which advanced at Toronto from $8.81 per barrel in April to $9 in May. Shorts at Toronto also rose, being $33.25 per ton, as compared with $32.85 in April. Lemons declined from $4-$4.50 per case to $3.50. Granulated sugar was up from $5.79½ per hundred to $5.89. Coffee rose from 24½c. per pound to 25c. Pepper at Toronto advanced from 35c. per pound to 38c. The downward movement in rubber continued, Ceylon declining from 51c. per pound to 47⅞c., and Para from 46c. per pound to 41c. Potatoes were substantially lower, the price at Montreal declining from $3.94 per bag to $2.91; at Toronto from $4-$4.25 per bag to $3.50-$4; at Winnipeg from $1.72 per bushel to $1.30; and at St. John, N.B., from $8.10 per barrel to $5.75. Turpentine fell from $1.53 per gallon to $1.37. Western cattle at Winnipeg advanced from $6.78 per hundred pounds to $7, and choice steers at Toronto from $7.25 per hundred pounds to $7.34. Hogs at Toronto rose from $13.90 per hundred pounds to $14.22, and sheep at Toronto from $8.20 per hundred pounds to $8.81. Meats followed the trend in prices of live stock, fresh beef carcass at Toronto advancing from 16c. per pound to 17c., and mess pork from $38.50 per barrel to $39.50. Beef hides advanced from 9½-10c. per pound to 10c.-10½c., and calf skins from 14c.-15c. per pound to 14½c.-15½c. Seasonal

declines occurred in the prices of milk at Toronto, the price to producers declining from $2.22 per eight-gallon can to $1.70, and the wholesale price from 37c. per gallon to 32c. At Montreal the producers' price fell from 25c. per gallon to 21c. Creamery butter at Montreal declined from 38c. per pound to 35c. At Toronto creamery prints were down from 46c. per pound to 38c., and dairy prints from 35¼c. per pound to 32½c. The price of cheese at Toronto fell from 21c. per pound to 20c. Eggs showed little change. Raw cotton at New York was down from 19.2c. per pound to 18.9c. Cotton bags fell from $169.45 per thousand to $163.90. Sash cord fell from 54c. per pound to 50c. Wool continued to decline, the decrease being 1c. to 3c. per pound. Raw silk was slightly lower. Pine, good siding, fell from $140 per M feet to $135. Foundry pig iron at Montreal fell from $29.25 per ton to $28.70. Steel billets were down from $33-$43 per ton to $28-$43. American copper fell from $15.80 per hundred in April to $15.75 in May. Lead declined from $7.75 per hundred to $7.55; zinc from $8.67½ per hundred to $8.35; and tin from 65¼c. per pound to 65c. Silver advanced from 64⅛c. per ounce to 65¼c. The price of gasoline, owing to increased demand and following the advances in the United States, rose from 24½c. per gallon in April to 25½c. in May. Coal oil rose from 21½c. per gallon in April to 23c. in May. Cement at Montreal declined from $1.62 per barrel to $1.37. Nova Scotia coal declined from $6.25 per ton to $6.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The trend of wholesale prices and of the cost of living continued slightly downward with the exception of France, where prices continued to rise, and of Germany, where a slight upward turn was noticed.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 143.6 in April, a decline of 0.6 per cent from the level in March. Foods rose 0.8 per cent to 151.7, and non-foods fell 1.3 per cent to 139.0. Meat and fish showed a slight decline and cereals and other foods rose. In materials, all groups showed declines.

The *Statist* index number (in continuation of Sauerbeck's figures), base period 1867-77=100, was 125.5 at the end of April. There was a slight recession for the fifth month in succession, the index being 0.5 per cent below that for the end of March. During the first 12 months of the restored gold standard, commodity prices have fallen by 8.7 per cent. During the month under review foodstuffs rose 2.6 per cent, all groups rising, while materials declined 2.3 per cent, all groups falling.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 167 on May 1, a decline of one point from the level on April 1. Foods showed a slight reduction, the index being 158. Rents rose slightly to 149, and other groups showed no change, clothing being 220=225, fuel and light, 185, and sundries 180.

Austria

WHOLESALE PRICES.—The official index number of the Federal Statistical Office, on the base first half of 1914=1, was 17,088 in March, 17,086 in April and 17,056 in May, showing a slight downward tendency. Food prices rose about one per cent and materials declined 3.7 per cent.

Finland

COST OF LIVING.—The index number of the Ministry of Labour, July, 1914=100, showed little change in April, being 1141.2, slightly below the May level of 1152.9. Foods fell 1.9 per cent, clothing rose slightly and other groups showed no change.

France

WHOLESALE PRICES.—The index number of *Statistique Générale,* on the base July, 1914=100, was 664 in April, about 3 per cent higher than in March. Foods rose 4.4 per cent, owing to advances in price of vegetable foods and sugar, coffee and cocoa. Industrial materials rose 1.7 per cent, all groups showing advances.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 122.7 for April as against 118.3 for March, a rise of 3.7 per cent. The rise in farm products noticed last month ceased at the end of April and was followed by a

slight decline. Prices of industrial materials which had been declining for about six months rose slightly at the end of April, owing to firmness in prices of metals. During April goods produced and goods imported both rose.

Cost of Living.—The index number rose 0.9 per cent during April to 139.6. Food rose slightly and heat and light, sundries and clothing fell slightly. The principal change was an increase in the index for rents of 6.6 per cent, or from 91.4 to 97.4, bringing rents almost to the pre-war level. This increase took place in various parts of the country, especially in Prussia.

Italy

Wholesale Prices.—The index number of of the Chamber of Commerce, Milan, on the base 1913=100, was 636.41 in April, a decline of 0.7 per cent from the March level. Foods rose 1.8 per cent, both vegetable and animal foods having advanced; industrial materials declined 1.5 per cent, all groups declining.

India

Wholesale Prices.—The index number of the Bombay Labour Office, on the base July, 1914 = 100, was 150 in March as compared with 152 in February. There was an advance of one point in foods, due to a rise in cereals, sugar having fallen slightly while pulses showed no change and "other foods" declined. Non-foods declined 5 points or 3.2 per cent, oil seeds, raw cotton, miscellaneous textiles, hides and skins and metals showing declines while cotton manufactures and miscellaneous articles showed no change.

Cost of Living.—The index number of the Bombay Labour Office, on the base July, 1914 = 100, was 153 in April, a decline of 2 points for the month. Foods declined one point to 150, cereals showing no change, while pulses and other foods declined. Fuel and lighting showed no change at 165 and house rent at 172. Clothing rose one point to 175

New Zealand

Wholesale Prices.—The index number of the Census and Statistics Office, on the base 1909-13=1000, was 1811 for January, 1804 for February and 1792 for March. During March the chief changes were declines in agricultural produce and chemicals and manures, and advances in the group "wool, hides, tallow, butter and cheese," and in coal.

Retail Prices.—The official index number of retail prices of foods in 25 towns, on the base 1909-13 = 1000, was 1623 for March, a decline of nearly 0.7 per cent for the month. Groceries and meat declined while dairy produce advanced.

United States

Wholesale Prices.—There was practically no change in the level of wholesale prices from March to April, as shown by the Bureau of Labour Statistics index number, which stood at 151.1 as compared with 151.5 in March, a decrease of 0.25 per cent. Farm products and foods averaged slightly higher than in March, owing to increases in grains, hay, hogs, sheep and lambs, eggs and potatoes. In all other groups prices were lower, ranging from one per cent in the case of fuels, metals, chemicals and drugs, and house furnishing goods to 2 per cent in the case of clothing materials.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was $12.7594 on June 1, slightly below the level of a month earlier. There were declines in breadstuffs, metals, naval stores, building materials and miscellaneous goods, and less noticeable declines in livestock, textiles, and oils. There were advances in provisions, fruits, and chemicals and drugs, and no change was shown by the hides and leather, and coal and coke groups.

Dun's index number (showing the cost *per capita* of a year's supply of commodities) was $188.072 on June 1, a decrease of 0.6 per cent from the previous month's level. The changes in all the groups were very slight, there being declines in breadstuffs, "other foods," clothing and metals, and advances in meat, dairy and garden produce and the miscellaneous group.

Cost of Living.—The index number of the Special Commission on the Necessaries of Life, of the cost of living in Massachusetts, on the base 1913 = 100, was 164.5 in April, showing slight increase. The food section showed an increase of 1.8 per cent over the preceding month, due to an increase of about 26 per cent in the retail price of potatoes. The clothing index dropped about 1.7 per cent due to lower prices of suits, shoes, hats, gloves, shirts, underwear and women's hosiery. The fuel and light index declined slightly with the establishment of spring prices for anthracite in communities outside of Boston, which was partially offset by an increase of more than 10 per cent in the price of kerosene.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Picketing Used to Persuade Employees Held Unlawful

The Supreme Court of Canada rendered judgment on June 14 in the case of *Reners versus Rex,* the question at issue being the interpretation of the "watching and besetting" provision of the Criminal Code, section 501 (f), and its application in a case of picketing which was alleged to be without violence. The circumstances in the case were outlined in the April issue of this GAZETTE, on page 418, which noted the judgment of the Supreme Court of Alberta confirming the conviction of Reners by a lower court. Appeal from that judgment having been taken by Reners, the Supreme Court of Canada dismissed the appeal. The judgment of the Court (Chief Justice Anglin, and Justices Duff, Migneault, Newcombe, and Rinfret) was delivered by Mr. Justice Newcombe. Mr. Justice Idington concurred in dismissing the appeal, but on different grounds.

Text of Judgment

The appellant, with five others, was charged in two counts, under s. 501 (f) of the Criminal Code, with the offence of wrongfully and without lawful authority besetting and watching the mine of the Alberta Block Coal Company, Limited, where the company carried on its business, with a view to compel the company to abstain from engaging or employing, or continuing in its employ, miners or employees other than those belonging to a Trade Union, known as the Red Deer Valley Miners Union, to which the accused belonged. It will be convenient to set out the material part of the section, which is as follows:

> S. 501. Every one is guilty of an offence punishable, at the option of the accused, on indictment or on summary conviction before two justices, and liable on conviction to a fine not exceeding one hundred dollars, or to three months imprisonment with or without hard labour, who, wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful right to do, or to do anything from which he has a lawful right to abstain,—
>
> (*f*) besets or watches the house or other place where such other person resides or works, or carries on business or happens to be.

The case has been tried twice. At the first trial there was a jury, and all of the accused were convicted, but upon appeal the conviction was set aside upon purely legal grounds, as we are informed, and, at the new trial, the accused, other than the appellant, pleaded guilty, and the latter, electing to be tried without a jury, was tried before McCarthy J., and again convicted. From this conviction he appealed to the Appellate Division of the Supreme Court of Alberta, where the appeal was heard and the conviction upheld by the judgment of the Court, pronounced by the Chief Justice. Clark, J., however dissented, the court considering it convenient that his judgment should be pronounced separately, and it is the question of law involved in his dissent that is now presented upon the appeal to this Court.

The Alberta Block Coal Company of Drumheller, in the province of Alberta, belonged to an association of coal operators which negotiated an agreement with the executive of the United Mine Workers of America regulating working conditions, including the rates of wages to be paid to the miners. This agreement went into operation, but was subsequently amended by the parties in a manner to effect a reduction of 15 per cent in the rates stipulated. The reduced rates were not acceptable to the majority of the Company's employees, and became the cause or occasion for a strike. The striking miners belonged to the union of the United Mine Workers of America; they were dissatisfied with the reduction of the rates to which the executive of their union had agreed, and in consequence they decided to withdraw from it, and to set up a new union, which is known in the case as the Red Deer Valley Miners Union. Some of the company's employees however did not join in the agitation, but continued to work for the company as formerly, and the strikers established what they call pickets at the mine with a view, as they say, peacefully to persuade the miners who adhered to the company's service to cease work.

The locality of the mine is not as clearly described by the transcript of the evidence produced as might be desired, but there is a plan in proof of a limited area, and some of the witnesses give descriptions from which it would appear that the mine is situated in a narrow valley or coulee bordered by hills of considerable height, about 100 ft. to 150 ft. above the level. The shaft is sunk on the property of the company, and in the neighbourhood is a power house, machine shop, wash house, offices, some dwelling houses and outbuildings, and, a few hundred feet distant, a store house and powder house. These buildings are all upon the property of the company, which is approached from the north by a wagon road, and by a railway spur or siding from the line of the Canadian National Railways. The disturbances began on June 23, 1925, and the offence is charged to have been

committed between the 22nd and 27th days of June. The evidence is however directed particularly to the occurrences on the night of the 25th and the early morning of the 26th. On the 23rd a large delegation of the strikers went to the mine and there was some discussion. McDonald, who was one of them, says that they found men there wearing their working clothes and carrying their lunch buckets and he talked with several of these men about quitting work, but that they were not prepared to quit and went down to the mine. The following information is elicited from him:—

A. I spoke to about ten or eleven, they were in line. Thompson and Fernet, I think I remember them all right. I don't remember the others.

Q. These men apparently were not on the 23rd prepared to quit work and join your union, is that right?—A. On the 23rd, they went down to the mine on the 23rd.

Q. They listened to your representations and then they decided to work, is not that the situation, or rather continue work?—A. Oh, yes, they did, because, naturally enough, their boss, Jesse Gouge, who was standing there over them, and he tried to drive me away and I insisted I wanted to speak to the men and talk to them.

Q. You had the opportunity to speak to them?—A. Yes, I spoke to them.

The pickets were divided into groups and took their positions at places convenient for their purpose about the mine, from whence they continued to watch and beset the premises for several days. At night they occupied the hills surrounding the mine and overlooking the avenues of approach. Here they lighted wood fires which were kept burning throughout the night, and about which the men gathered, and where they were relieved at intervals. Inspector Nicholson of the Provincial Police, who was stationed at Drumheller, says:

Q. You have told us that these men had a smudge or fire there?—A. Yes.

Q. And that there were other smudges or fires on neighbouring hills around?—A. Yes.

Q. Were these hills around the A.B.C. Mine?—A. They practically surrounded it, yes.

He says moreover, that:—

A. These men were on the different hills in bunches of individuals and each bunch or crowd on each hill had a fire, a little bonfire or smudge. One of these hills was immediately behind the buildings at the A.B.C. premises, that would be immediately north. On account of a complaint received earlier on the 25th and on account of noises which I had heard in the vicinity of a powder house belonging to the A.B.C. Mine on the night of the 25th, I decided to remove the men on this particular hill that I speak of.

Asked whether there was any means of communication between the various parties on the hills, the witness answers that "they continued to shout to one another from one hill to another. One party would shout to one hill and it would be answered, and the call would go practically round all of the crowd." Inspector Nicholson sent three of his constables at about, or shortly after, midnight of the 25th, to occupy separate positions along the roadway at the foot of the hill immediately to the north. When these constables, or two of them, were perceived by the men on the top, they were greeted with insult, curses and threats. They made no response, but remained in their respective positions, and immediately afterwards five of those on the top were taken into custody by Inspector Nicholson and other constables who had approached under cover of the darkness from the rear. The appellant however ran down the hill where he stoned one of the constables stationed below, who pursued him calling upon him to stand, and was arrested after he had been wounded by a shot from the constable. During the night previous to the coming of the police, there had been ten or fifteen men upon this particular hill, but apparently the six men charged were the only ones there at the time of the arrest.

The trial judge, in convicting the appellant, delivered a somewhat lengthy judgment. He referred to the cases of Regina vs. Hibbert, 13 Cox's Criminal Cases, 82, and Rex vs. Bould, 13 Cox's Criminal Cases, 282. He said that in his view the conduct of the accused and the men with whom he was associated went far beyond the conduct of the men concerned in these cases, and that "I cannot look on his conduct as peaceful picketing, having regard to all the surrounding circumstances and certainly the conduct was such as to operate in the mind of the men who were going to work and to operate on the mind of the operators as to whether or not to carry on the work in the mine."

The learned Chief Justice, pronouncing the judgment of the Appellate Division, relied upon Lyons vs. Wilkins, 1896, 1 Ch.D., 811, and the same case, as reported upon appeal after the trial, 1899, 1 Ch.D., 255, and he considered the case of Ward Lock and Co. vs. The Operative Printers' Assistants' Society 1906, 22 T.L.R., 327, which it had been argued was not in complete accord with the Lyons case. In conclusion, however, he said that "a picketing effected in the way this was—to constitute a menace and practical compulsion by moral force, even if no physical force were contemplated, as to which one might have doubts, would not be such a picketing as would be warranted and, therefore, would be wrongful." He quoted the finding of the learned trial judge and he said "with this finding, which in my opinion, is quite justified, the case does not seem to fall within

the qualifications suggested in the Ward Lock case."

Clarke J., the dissenting judge, agreed "that the defendant should be held responsible as one of the watching and besetting party, engaged in what is commonly called picketing, and that he, with the others charged, did, with a view to compel another person to abstain from doing something from which he had a lawful right to do, or to do something from which he had a lawful right to abstain, beset or watch the place where such other person works or carries on business within the meaning of sec. 501 (f)." But he found difficulty in saying that such picketing was wrongful or without lawful authority; or, as he puts it, "in other words that peaceful picketing is wrongful." He reviewed the evidence, as to which he appears to take a view more favourable to the appellant than that which seems to be held by the majority of the Court. He said that the Ward Lock case, as applied in the later case of Fowler vs. Kibble, 1922, 1 Ch.D., 487, seems to cast considerable doubt upon the correctness of the decision in the Lyons case, and therefore he concluded, adopting what he takes to be the result of the Ward Lock case, that the element of wrongfulness is lacking in the present case and he would therefore allow the appeal.

In view of the nature of the dissent and seeing that the jurisdiction of this Court in criminal appeals is limited to questions of law which are the subject of difference below, the point which this Court has now to determine is in reality whether there was evidence at the trial that the watching and besetting in which the appellant was engaged was wrongful and without lawful authority. Upon this point I entertain no doubt.

In the Lyons case the Court of Appeal upon both occasions considered the interpretation of s. 7, subs. 4 of the Conspiracy and Protection Act, c. 86 of 1875, which corresponds, with unimportant variations, with s. 501 (f) of the Criminal Code, upon which the present charge is laid. It is explained by the concluding clause of s. 7 of the Conspiracy and Protection of Property Act that

> "Attending at or near the house or place where a person resides, or works, or carries on business, or happens to be, or the approach to such house or place, in order merely to obtain or communicate information, shall not be deemed a watching or besetting within the meaning of this section."

But this clause is not embodied in the Criminal Code, and for that reason, as well as because of the facts in proof, it has no application to the case now under review.

The Master of the Rolls (Lindley) considered that to watch and beset in order to compel caused a nuisance, and he found upon the evidence that there was a nuisance. But in the Ward Lock case Moulton L.J. was of the opinion that there might be a sort of compulsion which would not be wrongful or illegal and therefore that the conclusion of the Master of the Rolls was too broad; he did not however deny its application to the particular case which the Master of the Rolls had in hand, and these great judges were in perfect agreement that it was necessary to establish in one way or another that the watching and besetting was done wrongfully and without legal authority.

In the Ward Lock case the defendant had stationed pickets to watch the plaintiff's printing works for the purpose of inducing the workmen employed by the plaintiffs to join the union, and then to determine their employment by proper notices, the object being thereby to compel the plaintiffs to become employers of union men, and to abstain from employing non-union men; the report states that this was carried out without causing, by violence, obstruction or otherwise, a common law nuisance. Moulton, L.J., said, as reported, "In my view that which decides the question is that there is no evidence of any improper or illegal acts, or, indeed, of any acts whatever, by any of the pickets sent by the defendants. . . . . I wish to add that, in my opinion, there is throughout a complete absence of evidence of anything in the nature of picketing or besetting which could constitute a nuisance. It appears that the discharged workmen loitered about for a day or two after leaving work, a thing which is not unlikely to happen, and that they were at times joined by others, but there is no suggestion even by the plaintiffs' witnesses that any annoyance or molestation took place, and the evidence to the contrary is overwhelming". He referred to the fact that, at the request of the plaintiffs, the police had placed special patrols outside their premises during the period of the dispute, but that none of the police had been called as witnesses by the plaintiffs, and that the inspector and a sergeant, called by the defendants, had shown that there was nothing which could give any ground for complaint. This decision is referred to and followed as an important one in Fowler vs. Kibble, 1922, 1 Ch. D. 487; but, for the purposes of the present case it decides no more than I think was decided by the Master of the Rolls in the Lyons case. The judgments concur in the view that watching or besetting, if carried on in a manner to create a nuisance, is at common law wrongful and without legal authority. In the Lyons case the Court of Appeal found the essential facts to constitute a common law nuisance. In the Ward Lock case they found that the

sort of picketing there in proof afforded no evidence of a nuisance, and these cases do not really exist in the determination of the present question, which depends upon its own facts, except in so far as they affirm, what is evident by the statute itself that if picketing be carried on in a manner to create a nuisance or otherwise unlawfully it constitutes an offence within the meaning of the statute.

Coming now again to the facts in the present case, the acts with which the appellant is charged were wrongful and unlawful if the watching and besetting in which he, in common with his comrades or associates, was engaged amounted to a nuisance, or to a trespass, or if the men who were watching and besetting constituted an unlawful assembly, and there is evidence as to each of these particulars which ought not to be overlooked.

There was a large number of men engaged; a crowd was assembled at the Atlas crossing to the north of the company's works; pickets in considerable numbers were stationed at every avenue of approach; they remained in position with reliefs uninterruptedly by night as well as by day; they lighted fires on hilltops surrounding the mine, shouting back and forth from one group to another. On one occasion at the very entrance to the mine one of these men, according to his own testimony, insisted upon his endeavour to persuade workmen, who were there in their working clothes and with their lunch baskets, from going into the mine, notwithstanding that their foreman was present, and tried to drive him away.

To the southeast of the shaft and the power house at a distance of about 800 feet is the powder house, situated in a narrow spur or offshoot of the coulee to the southward of the railway. This building is at the base of one of the surrounding hills, and if, as Inspector Nicholson testifies, the hills on which the fires were lighted practically surrounded the mine, some of them must have been very near to the powder house. He tells us that crowds of men continued on these hills throughout the whole of the 25th from seven o'clock in the morning, and that it was because of a complaint and noises which he heard in the vicinity of the powder house that he decided to remove the men from the hilltops. He says he intended to remove "all these different crowds of men", but to begin at the particular hill where he found the appellant. It will, of course, be realized that as these hills were at considerable distances the shouting from one hill to another must have been vociferous, and moreover, the danger of open wood fires in the neighbourhood of the powder house and other buildings of the company was in itself a cause for apprehension.

Now while apparently the hill which was occupied by the party to which the appellant belonged was somewhat to the northward of the northern limit of the company's property, the hills surrounding the mine in other directions belonged to the company and the groups stationed there were trespassers, and, since the picketing was so carried on in pursuance of a common design or project to which all the strikers including the appellant were parties, he must be held responsible for the trespasses equally with those who actually occupied the company's property.

Moreover, while it is explained, with remarkable agreement on the part of the striking miners, that the purpose of their assembly at and about the mine was peacefully to endeavour to persuade the miners who continued to work to quit the service of the company and to join the new union, in order, as it is said, to maintain the standard of living, the character and purpose of this assembly is, I think, better evidenced by its acts and course of conduct than by the statements of its members as to what their intention was; and the numbers of men who assembled, their distribution about the premises, including the company's property, their attendance there by day and by night, the fires, the shouting, their reception of the police, their threats and conduct when the police approached, afford cogent evidence, not only of a nuisance, but also of an unlawful assembly, Hawkins' Pleas of the Crown, 8th Ed. Bk. 1, c. 28, ss. 4, 5 and 9; Reg. v. Vincent, 9 C. & P. 91, 109; Reg. vs. Neale, 9 C. & P. 431, 435.

It is not for this court to judge the evidence, except to determine whether there be any. The appellant's case fails if evidence be found which the trial judge was bound to consider tending to show that the watching and besetting, which is conclusively found to have taken place, was wrongful and without lawful authority, and I think there is such evidence in each of the aspects to which I have referred.

It was suggested also that the pickets were endeavouring to induce the company's workmen to break their contracts of service, but the evidence does not, in my opinion, go far enough to justify a finding that there were such contracts.

I would dismiss the appeal.

Judge Idington's Judgment

This is an appeal from the judgment of the Appellate Division of the Supreme Court of Alberta maintaining the conviction of the appellant who was tried before Mr. Justice McCarthy without a jury and found guilty of the following charges laid against him and

five others, that is to say that they did at Newcastle in the Judicial District of Calgary

"between the 22nd and the 27th days of June, 1925, wrongfully and without lawful authority with a view to compelling another person, The Alberta Block Coal Company Limited, a body corporate, to abstain in the carrying out of its business from engaging or employing or continuing in its employment miners and employees other than those belonging to the Red Deer Valley Miners' Union, or to such union as the defendants themselves belonged. The Alberta Block Coal Company Limited then having a lawful right to engage or employ or continue in its employment miners or employees without restriction as to their membership in the union or unions aforesaid, or to compel the said company to engage and employ and continue in its employment only such miners and employees as belonged to said union, which members the said company had a lawful right to abstain from employing, did beset and watch the place where the said company carries on business, to wit:—the mining premises of the said company.

And further stand charged that they at the same time and place wrongfully and without lawful authority with a view to compel Tom Fernet, William Hopkins, Joseph Thompson, Robert Brownell, and others to abstain from doing what they had a lawful right to do, to wit:—to work for the Alberta Block Coal Company Limited, did beset and watch the place where the said Tom Fernet, William Hopkins, Joseph Thompson, Robert Brownell and others worked, to wit:—the premises of The Alberta Block Coal Company Limited's Mine."

The accused parties had been tried before Mr. Justice Boyle with a jury and found guilty but for some reason or other a new trial was directed.

The others then pleaded guilty but the present appellant elected to be tried before Mr. Justice McCarthy without a jury.

The said charges were laid under section 501, s. s. (f) of the Criminal Code.

The said section 501 reads as follows:

[*This section is quoted on page 618*]

The essential parts thereof to be considered herein are the following lines:

"who, wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful right to do, or to do anything from which he has a lawful right to abstain,—

(*f*) besets or watches the house or other place where such other person resides or works, or carries on business or happens to be."

This seems to me a clear and explicit expression in plain English forbidding anyone from besetting another's house or place of business with a view to compel him to abstain from doing anything which he has a lawful right to do.

Each of the preceding sections from (a) to (e) inclusive, implies violence or improper conduct towards another of some kind for which the party so doing might be punishable otherwise in law. But there is no such necessary implication in simply watching a house.

These men were, clearly as noonday, doing what the subsection (f) forbids, unless in the case of one having lawful authority to beset or watch. For example, the Sheriff or his officers often have lawful authority to go very far in discharging their duty—even to the extent of besetting or watching a house. No pretence of authority is shewn here. None existed. Indeed the accused were in fact trespassers, I imagine, on the property of the coal company. And surely the company in question, carrying on business in and on the premises in question, had a perfect right to refuse to employ men belonging to the Red Deer Valley Miners' Union.

And can there be a shadow of doubt that the men taking part in the besetting and watching complained of were doing so with a view to compel said company to abstain from pursuing their business without the aid of workmen belonging to the said Red Deer Union.

Compel is a word of various shades of meaning, for example, the Century Dictionary gives some five different shades, but let us select No. 1, which reads as follows:

"1. To drive or urge with force or irresistibly; constrain; oblige; coerce; by either physical or moral force: as, circumstances *compel* us to practise economy."

Or, let us turn to Murray's New English Dictionary, and we find a different application of it and select No. 2 b, which reads as follows:

"*b.* To constrain (an action); to bring about by force, constraint or moral necessity; to exact by rightful claim; to demand."

Surely either one or other of these expressions can be acted upon herein, and was intended to be acted upon and applied in cases such as herein presented if we leave aside all other features than the proof of besetting and watching.

It does not in either necessarily imply physical violence as the means of compulsion.

Ever since the effect of said section as it appeared in the R.S.C. 1886, was changed by dropping s.s. 2 of s. 12 of C. 173, in which the words were as follows:

"2. Attending at or near or approaching to such house or other place as aforesaid, in order merely to obtain or communicate information shall not be deemed a watching or besetting within the meaning of this section."

the law has been simplified and I respectfully submit made clear.

On the other hand in the English Act from which in its original state our Act was first taken there was a provision very similar to the said section 2, almost identical, which continued part of the English Act and hence renders English cases turning thereon (save and except the Lyons v. Wilkins case, I am

about to refer to) of very little service to any Canadian case since our Criminal Code of 1892 was framed and, as already stated, the above quoted section dropped out.

In 1906 the English Trades Disputes Act was passed and distinctly enacted as follows, in the second section thereof:

"It shall be lawful for one or more persons, acting on their own behalf or on behalf of a trade union or of an individual employer or firm in contemplation or furtherance of a trade dispute, to attend at or near a house or place where a person resides or works or carries on business or happens to be, if they so attend merely for the purpose of peacefully obtaining or communicating information, or of peacefully persuading any person to work or abstain from working."

Other provisions of the same Act tended still more to render it impossible to make any English case such as herein in question of any helpful service.

I must also say that a criminal intent and object might well be suspected in much presented to us in the evidence but as I understand the ground of Mr. Justice Clarke's dissent, which is the ambit of our jurisidction herein, it is quite unnecessary to enter into that feature of this case to which I have just referred.

In the judgment of Mr. Justice Clarke, so far as dissenting, he makes clear what he means as follows:—

"I think the real difficulty in this case consists in the interpretation of the words in Sec. 501 'wrongfully and without lawful authority'.

I agree that the defendant should be held responsible as one of the watching and besetting party engaged in what is commonly called picketing and that he with the others charged did with a view to compel another person to abstain from doing something which he had a lawful right to do or to do something from which he had a lawful right to abstain, beset or watch the place where such other person works or carries on business within the meaning of Sec. 501. (f), but my difficulty is in saying that such picketing is wrongful and without lawful authority, or in other words that peaceful picketing is wrongful.

If it is not wrongful then, in my opinion, the conviction cannot be supported upon the evidence. There is no evidence that during the night when the conduct of the defendant is complained of there was any interference with either the mining company or its workmen, or any violence, intimidation or threats; Lewis McDonald was called as a Crown witness and the trial judge states the situation upon which he apparently bases his judgment as follows: "Lewis McDonald in his evidence tells us that the so-called Canadian Union proposed to picket the A.B.C. Mine to tell the miners it was their duty to try to persuade the mine workers not to go to work so as not to reduce the standard of living. He testifies that during the time the accused and others were picketing the A.B.C. mine he was on the picket during the 23rd and on the morning of the 24th of June, 1925. The purpose of the picket was to interview the men employed in the A.B.C. mine and persuade them not to go to work. He admitted interviewing some of them himself. Cecil Terris, in his evidence, says they were supposed to go down to the mine and if they met anybody going down to work to ask them to join the new union. . . . . So that apparently the accused were there to persuade the miners not to go to work or to prevent the A.B.C. Company from employing men who did not belong to the new union and to prevent them from hiring men who belonged to the United Mine Workers of America".

"If the picketing itself, that is, the watching or besetting, was not unlawful I cannot see that the fact of the picketers being distributed in different places and having bonfires on a dark night can make the watching wrongful.

"In Rex v. Blanchsawl, 21 A.L.R. 580, where the conviction of the appellant on a similar charge was affirmed by this court, Lyons & Son v. Wilkins, L.R. 1899 1 Ch. 255, was strongly relied upon. I understand the court there held that watching and besetting, however peaceable, was a common law nuisance and, therefore, wrongful and that the qualifying words in Sec. 7 as to obtaining and communicating information alone rendered it rightful. If that decision stood unchallenged I would not hesitate to say it was conclusive of the present appeal in favour of the Crown not only by reason of the absence of the qualifying words in our section 501 but because if they were still in the Act they do not extend to persuading which was part of the plan here.

"The later case of Ward, Lock & Company v. The Operative Printers Assistants' Society, February, 1906, 22 T.L.R. 327, applied in Fowler v. Kibble, L.R. 1922, 1 Ch. 487, seems to me to cast considerable doubt upon the correctness of the decision in Lyons v. Wilkins. It was not referred to in the Blacksawl case and it is said that it was not brought to the attention of the court which I think is correct. I gather from that case that peaceable picketing was not considered to be wrongful at common law and was not made illegal by section 7 of the Imperial Act and if that be correct it can scarcely be wrongful under our Sec. 501. But for the fact that owing to the general importance of the question the defendant is desirous of obtaining the opinion of the Supreme Court of Canada, I would say that the question is determined by our former decision but considering it a proper case for an appeal I have decided to dissent from the majority and adopting what I take to be the result of the Ward, Lock case, would hold that the element of wrongfulness is lacking in this case and would therefore allow the appeal and quash the conviction."

The foregoing quotation from his judgment shows that all involved in this appeal, by reason of the dissent of Mr. Justice Clarke, is the doubt he has as to the meaning of the words "wrongfully and without lawful authority" in the part of section 501 which I have quoted above.

He suggests, as had been suggested long ago by others, that "besetting and watching" a house or premises is not in law wrongful, and hence the basis of the said subsection (f) renders it absolutely inoperative.

The answer to such an objection is that we must, if possible, give it some efficacy, and to do that we must ask ourselves, if it is correct that the act of so besetting and watching never was, in law, wrongful.

I answer that such a course of conduct always was at common law, wrongful, and might be the basis of a civil action, and hence clearly wrongful.

Such was the holding of the court in the case of J. Lyons & Sons v. Wilkins, L. R. (1899) 1 Chy. Div. 255, and the judgment of

Mr. Justice Lindley, M. R., at pages 266 and 267, deals with exactly what has troubled Mr. Justice Clarke herein and, I submit, the passage therefrom on page 267, which reads as follows:—

"But it is not necessary to shew the illegality of the overt acts complained of by other evidence than that which proves the acts themselves, if no justification or excuse for them is reasonably consistent with the facts proved. This is the principle always applied in criminal prosecutions in which the words 'feloniously,' 'wrongfully,' or 'maliciously' are introduced into the charge, and have to be proved before the person accused can be properly convicted; see Archbold's Criminal Pleadings and Evidence, 19th ed. pp. 64-7. That this is the correct method of construing and dealing with the words 'wrongfully and without lawful authority' in s. 7 is, in my opinion, perfectly plain if attention is paid to sub-heads 1, 2, 3 and 5, to which those words are as applicable as they are to sub-head 4. If the overt acts mentioned in sub-head 1, for example, i.e., using violence or intimidation, are proved, and it is proved that they were done with a view to compel, etc., and there is no reasonable ground for justifying them, it is unnecessary to give further evidence to prove that they were committed 'wrongfully and without legal authority'; see *Reg.* v. *McKenzie*, 1892, 2 Q.B. 519, 521-3. If this be true of all the sub-heads except 4 (watching and besetting), I can discover no justification for giving the words 'wrongfully and without lawful authority any different meaning or effect when applied to 4—namely, 'watching or besetting.'"

Others in like manner in same case and in a further appeal refer to this and express analogous opinions, and such was taken to be the law until the case of Ward, Lock & Co. v. The Operative Printers Assistants' Society, et al, 22 L.T.R. 327, in 1906, 26th February. Even in that Stirling J. expresses himself as if the court were in accord with what Lord Justice Lindley had said in the Lyons case above mentioned. It was the provision of exception that created the difficulty.

By our Canadian courts, cases were decided in Manitoba and Alberta, adopting the law as settled by the Lyons v. Wilkins case and others.

This I accept as good law yet, and more especially so when the subsequent paragraph above referred to had been eliminated in framing our Criminal Code in 1892.

It became increasingly more difficult to do so in England by reason of the Trades Disputes Act, to which I refer above. Indeed that rendered it almost quite impossible for us to follow the later English decisions. I imagine said Act was a result of the Ward, Lock case.

I need not elaborate further but submit the foregoing considerations remove all doubts such as in question, and therefore am of the opinion that this appeal should be dismissed.

I may add, however, that having read the entire case, I find there is evidence of actual violence, trespass and abusive and vile language, even in the presence of policemen keeping guard, which removes all doubt in law and in fact of the guilt of the appellant, who ran away on hearing someone approach. Why, if innocent, do so?

I have out of respect to the learned judge below, dissenting, tried to confine the expression of my opinion above to the point in which he expresses doubt, but if others think we should go beyond, think it as well to state concisely my conclusions if needed.

(*Supreme Court of Canada—Reners versus The King*).

Picketing to Injure a Man in his Business Held Unlawful

The Supreme Court of British Columbia on May 10 granted an injunction against the Vancouver local union of the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, forbidding them to place pickets outside the Empress Theatre at Vancouver. The picketing took place under the following circumstances:—

The owner of the theatre for a long time had employed only seven stage hands, and when he gave notice that after a certain date he would employ only five, this announcement proved unsatisfactory to the stage hands and to their local union, and a strike followed. The owner then engaged five new employees, and the union thereupon placed men at the entrance to the theatre, who distributed handbills addressed to the "theatre-going public of Greater Vancouver," stating in large type that "the Empress Theatre is unfair to organized labour." The union also caused motor cars and sandwich men, displaying signs and banners bearing the same statement, to parade before the entrance to the theatre, "watching and besetting" the theatre. During the continuance of these acts the volume of business at the theatre was materially reduced.

Mr. Justice Gregory, in giving judgment, said: "I find, as a fact, these acts were all done with the intention of injuring the plaintiff's business and in the hope that to save himself from such injury he would return to the employment of seven stage hands as desired by the Vancouver Theatrical Federation—the body with whom the contract, if any, would have been made. Defendant's intention was to injure plaintiff; their object was to force him to conform to the Vancouver Theatrical Federation's views of the proper number of stage hands to be employed at the Empress Theatre. Apart from this, I find

no evidence of any personal malice against the plaintiff."

During the hearing it was argued by counsel for the defendants that there was no liability for the acts complained of by reason of the provisions of the Provincial Act relating to Trade Unions (Revised Statutes of British Columbia, 1924, chapter 258). This act is as follows:—

Chapter 258.—1. No trade union or any association of workmen or employees in the province, nor the trustees of any such trade-union or association in their representative capacity, shall be liable in damages for any wrongful act of commission or omission in connection with any strike, lock-out, or trade or labour dispute, unless the members of such trade-union, or association, or its council, committee, or other governing body, acting within the authority or jurisdiction given such council, committee, or other governing body by the rules, regulations, or directions of such trade-union or association, or the resolutions or directions of its members resident in the locality or a majority thereof, have authorized or have been a concurring party in such wrongul act.

2. No such trade union or association shall be enjoined, nor shall any officer, member, agent, or servant of such trade-union or association or any other person be enjoined, nor shall it or its funds or any such officer, member, agent, servant, or other person be made liable in damages for communicating to any workman artisan, labourer, employee, or person facts respecting employment or hiring by or with any employer, producer, or consumer or distributer of the products of labour or the purchase of such products, or for persuading or endeavouring to persuade by fair or reasonable argument, without unlawful threats, intimidation, or other unlawful acts, such last-named workman, artisan, labourer, employee, or person, at the expiration of any existing contract, not to renew the same with or to refuse to become the employee or customer of any such employer, producer, consumer, or distributer of the products of labour.

3. No such trade union or association, or its officer, member, agent, or servant, or other person, shall be enjoined or liable in damages, nor shall its funds be liable in damages for publishing information with regard to a strike or lock-out, or proposed or expected strike or lock-out, or other labour grievance or trouble, or for warning workmen, artisans, labourers, employees or other persons against seeking or urging workmen, artisans, labourers, employees or other persons not to seek employment in the locality affected by such strike, lock-out, labour grievance or trouble, or from purchasing, buying, or consuming products produced or distributed by the employer of labour party to such strike, lock-out, labour grievance or trouble, during its continuance.

In regard to section 1, the judgment pointed out that the defendants admitted their responsibility. Section 2 only permits the communication of *facts,* etc., and the persuasion by fair and reasonable argument, without any unlawful act. "The statement that the theatre was unfair to organized labour is not a statement of fact but one of opinion merely—about which people may and do differ—an attribute which does not belong to a statement of fact. The statements on the handbills, banners and sandwich boards were not 'fair or reasonable argument'—they were not argument at all, and in addition they were accompanied by the unlawful act of watching and besetting."

The judgment cited the decision of the Supreme Court of Alberta in the picketing case which was outlined in the LABOUR GAZETTE for November, 1925, pages 1156-8. "This decision," Judge Gregory said, "I have no hesitation in accepting notwithstanding the suggestion that it is bad law. It is quite true, as argued, that the Parliament of Canada cannot by declaring a certain act to be criminal invade the exclusive jurisdiction of provincial legislatures to legislate on property and civil rights, but surely there can be no question that the preservation of the public peace is a subject coming within the jurisdiction of the Dominion Parliament."

"The court held further that section 3 was equally inapplicable to the circumstances of the case. As the plaintiff had a perfect right to carry on his business with five stage hands, if he so wished, and the defendants have combined to prevent him from so doing and have endeavoured to carry out their object by unlawful means and have caused him serious loss and injury, I can see no reason why they should not be made liable for such injury even though their ultimate object was to promote their own lawful interests."

The plaintiff claimed that his losses amounted to $700 a week for a period of five weeks, but judgment was given for $1,750 with costs of action, and an injunction against the union was also granted, as stated above.

—*(British Columbia—Schuberg versus Local International Alliance Theatrical Stage Employees et al).*

Master Must Provide Safe Conditions of Living for Resident Servant.

A farmer in Saskatchewan employed as a farm hand a Norwegian who had recently arrived in Canada, paying him $40 for the first month and $10 per month for the winter months, together with board and lodging. The two men lived together in the farmer's shack, a wooden structure divided into two rooms, a kitchen and a bedroom, both rooms being heated by one cooking stove. At first the hired man attended to the stove, but later the farmer told him he would attend to the fire himself. When the stove began to smoke they cleaned the pipes, but omitted to clean out the roof jack and the smoke grew worse. The hired man brought in a heater from the granary, but the farmer would not allow him to put it up, saying he would get a new stove next day. The next day was too cold to go to town for the new

stove and the old stove continued in use. The hired man became indisposed from the effects of the smoke and on the farmer's suggestion he went to bed in the afternoon. He slept for two days, being, as it was afterwards discovered, overcome with coal-gas from the stove, and when he woke up both his feet were frozen. Going to the kitchen, he found the farmer lying on the floor, dead and frozen. He tried to light a fire, but it would not burn, and he went back to bed, where he was found by a neighbour who came in and removed him to a hospital. The hired man subsequently brought an action for damages against the administrator of the farmer's estate owing to his personal injuries, and for unpaid wages.

The trial judge dismissed the action with costs, but on appeal the court of appeal reversed the decision and allowed the appeal, giving judgment for payment of $5,787.85 and costs. The court held that the farmer was negligently ignorant of the obstruction in the chimney, which would have become known to him on a casual examination of the roof-jack, and that the employee was therefore entitled to damages. "There is no evidence," the judgment stated, "that the plaintiff assumed the risk, in fact he tried to remedy the situation by suggesting the putting up of another heater with 6-inch pipes, but the deceased would not allow him to put them up."

The judgment found that the Masters and Servants Act requires that where, under the terms of his employment a servant lodges with his employer the latter is under a duty to the servant to have his house reasonably safe for living and sleeping in; and where the servant is injured because of a defect in the premises of which the employer should have known, and which he failed to remedy, he is liable in damages to the servant, in the absence of evidence that the latter assumed the risk. The fact that although the servant knew of the danger he remained on the premises does not constitute an assumption of the risk.

—(Saskatchewan—Petersen versus Sigerseth).

Actions Under Masters and Servants Act

A hired man brought action under section 4 of the Masters and Servants Act against his employer, a farmer, for failure to pay certain wages amounting to $45, and obtained judgment for that amount with costs. The farmer then brought another action, charging the hired man with having absented himself from his master's employ, contrary to subsection (*b*) of section 3 of the same act, and the accused was convicted on this charge and ordered to pay the sum of $30 and costs amounting to $8.65, or in default of payment to imprisonment for two weeks. The hired man appealed, and the District Court at Estevan quashed the conviction, declaring that "it is not the intention of the Masters and Servants Act that the questions whether a master has wrongfully failed to pay wages and whether the servant has unlawfully absented himself from his master's employment should be dealt with in separate proceedings under the Act. If the master is dissatisfied with the decision awarding the servant wages against the master's contention that the servant violated his contract, the master's proper course is to appeal therefrom, and not to prosecute the servant for absenting himself."

—(Saskatchewan—Myers versus Hilke).

A Compensable Accident Must Have Arisen Out of Employment

A workman who had been employed as a sectionman by a railway company in Alberta for about eight years was assigned the duty of night watchman at a point on the line where there was danger of a landslide, his hours of work being from 10 p.m. to 6 a.m. His place of work was about two miles from his home, and the company allowed him to use a hand speeder to and from work. On a certain night he was late going to work leaving home and taking out the speeder about midnight. Shortly after 1 o'clock a.m. he was run down by a regular train at a point one mile from the place of work and killed. The widow applied for compensation under the Workmen's Compensation Act, and the Board referred the case to a judge as arbitrator. Section 14 of the Act provides as follows:

14.—(1) The Board may act upon the report of any of its officers and any inquiry which it is deemed necessary to make may be made by a commissioner, or by an officer of the Board or by some other person appointed to make inquiry and the Board may act upon his report as to the result of the inquiry.

(2) The person appointed to make the inquiry shall for the purposes of the inquiry have all the powers conferred upon the Board.

The arbitrator found that the deceased was in an intoxicated condition, and that while intoxicated he was overcome with sleep and was killed, and further, that he was killed "in the course of his employment." He therefore decided in favour of the applicant.

On appeal, the Supreme Court of Alberta held, on the contrary, that even if the accident arose "in the course of" employment, it was not one "arising out of his employment," and was not therefore subject to compensation under the act. "It is not a case

of doing his work negligently or wilfully misconducting himself, but what brought about his death was the act of going to sleep, something outside of and in fact necessarily contrary to the work which he was engaged to do."

The appeal was allowed with costs.

—(Alberta—Martineau versus Grand Trunk Pacific Railway.)

Dominion Lord's Day Act Rules in Absence of Provincial Law

A farmer obtained possession of a binder, under a purported sale by another farmer, pursuant to a contract made between the parties on a Sunday, in the year 1922. The sale was made on credit, the purchaser giving the vendor his note for $50 to cover the purchase price. The purchaser failed to pay this note when it became due, and upon action being brought against him in the District Court he set up the illegality of the contract of sale as a defence, the contract having been entered into on a Sunday. This defence was successful, and the vendor's action on the note was dismissed. In the meantime the purchaser had used the binder to cut 267 acres of grain in 1923 and 1924, and he continued to use it after having obtained judgment in his favour. The vendor then appealed from the dismissal of his action to recover possession of the binder, and for compensation for its use. The Court of Appeal allowed the appeal with costs, the judgment ordering the return of the binder to the plaintiff, together with compensation for its use by the defendant since the date of the former judgment which declared the contract of sale illegal. The Court of Appeal, however, established the fact that the sale of a farm implement by one farmer to another on a Sunday is illegal in Saskatchewan because of section 5 of the Lord's Day Act of Canada which provides as follows:—

5. It shall not be lawful for any person on the Lord's Day, except as provided herein, or in any provincial Act or law now or hereafter in force, to sell or offer for sale or purchase any goods, chattels, or other personal property, or any real estate, or to carry on or transact any business of his ordinary calling, or in connection with such calling, or for gain to do, or employ any other person to do, on that day, any work, business or labour.

In 1898 an ordinance was enacted for the North West Territories "to Prevent the Profanation of the Lord's Day," invalidating all contracts made on Sunday. This Ordinance as applying to Saskatchewan was repealed in 1920 by the Legislature of the Province. The judgment of the Appeal Court stated that "there can be no doubt that the repeal of the Ordinance in 1920 left the law of the province in such a state that, at least, a contract of the kind under consideration here, involving the sale of a farm implement by one farmer to another, could not be said to be invalid or illegal by virtue of any law. The common law was silent on the subject; therefore all persons had originally the same right to make a contract on Sunday as on Monday, or any other day of the week. The Ordinance of the North West Territories took away this right, but when that Ordinance was repealed it left Sunday where it had found it, i.e., in the same position as all other days, and therefore a contract of this kind made on Sunday in 1922 being no longer subject to any invalidating legislation, was just as valid as a contract made on Monday."

"In 1922," the judgment continued, "the law of Saskatchewan did not invalidate a contract made between two farmers for the sale of a binder on Sunday, and this was the case merely because the common law was silent and there was an absence of statute law on the subject. * * * * I think it is the clear intention of Parliament that the provincial rule which is to supersede the federal Act must be something positive, something *provided in* an enactment, and not the mere existence in the province of a system of law which has nothing whatever to say on the subject, and therefore does not invalidate the Act.

"I am therefore of opinion that when the Legislature of Saskatchewan repealed the territorial Ordinance in 1920, and enacted nothing in its stead, the field became vacant, and the prohibitory provisions of the Dominion Act stepped in and rendered unlawful all sales of property made on Sunday."

—(Saskatchewan—Demchenko versus Fricke)

Employer not a Builder Held Not Liable for Compensation in Building Industry

A journalist in the province of Quebec, wishing to erect a building on his own property, entrusted the work to a contractor. When the building was nearly completed the contractor became bankrupt. The owner then decided to complete the building himself, and engaged the former contractor as a foreman. Shortly afterwards a minor, who was engaged as a mason's helper, sustained an injury to one of his eyes, reducing his earning capacity 30 per cent. The guardian of the young man took action under common law, alleging that the method used in hoisting material was dangerous, and at the same time he took action also under the Workmen's Compensation Act. The

Superior Court for the District of Quebec dismissed the action, and this judgment was affirmed by the Court of King's Bench, on appeal. The Court held that the Act does not apply to a proprietor who, never having been engaged in the industry of building, assumes the completion of a building for his own use, because of his contractor's bankruptcy. The theory of professional or occupational risk, it was pointed out, had been fully discussed for many years, and the purpose of the Workmen's Compensation Act was to place upon industry the risk of injury, which under common law was carried by the workman himself, unless he were able to prove some fault or negligence of which the employer or his servants had been guilty. Therefore, to come within the provisions of the act an employer must be one who is engaged in one of the industries enumerated in the act. In the present case the contractor had not even assumed the responsibility of constructing the building from its inception and was only drawn into supervising it under special circumstances.

—(*Quebec—Gagnon versus Carrell*)

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] JULY, 1926 [NUMBER 7

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

T the beginning of June there was a further substantial increase in employment as reported to the Dominion Bureau of Statistics. Regular reports on employment are received from firms with a minimum of fifteen employees in industries other than agriculture and fishing. The gain was more pronounced than is usual at that time of year, the situation being more favourable than in any month since 1920. Data were tabulated from 5,907 employers having 828,483 workers, or 54,262 more than on May 1, 1926. The employment index number (the base 100 representing the number of employees of the same firms in January, 1920) stood at 101.0, as compared with 94.3 in the preceding month, and with 94.5, 95.2, 97.3, 89.2 and 86.6 on June 1, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada showed a slight increase in the volume of business transacted in May as compared with the preceding month, but substantial gains are shown when the records are compared with those in May 1925. At the beginning of June the percentage of unemployment among members of local trade unions was 4.9, as compared with percentages of 7.3 at the beginning of May, 1926, and 7.0 at the beginning of June, 1925. The percentages for the month under review are based on returns received by the Department of Labour from 1,558 local trade unions with an aggregate membership of 150,765 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.06 at the beginning of June, as compared with $11.29 for May; $10.44 for June, 1925; $9.86 for June, 1924; $10.23 for June, 1923; $10.18 for June, 1922; $11.16 for June, 1921; $16.92 for June, 1920 (the peak); $12.79 for June, 1918; and $7.49 for June, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 continued to decline being 155.7 for June, as compared with 157.0 for May; 158.8 for June, 1925; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; 256.7 for May, 1920 (the peak); and 196.0 for June, 1918.

The time loss caused by industrial disputes in June was less than in the previous month, and less than in June last year. Thirteen disputes were in progress at some time during the month, involving 2,237 employees, and resulting in the loss of 45,348 working days. Corresponding figures for May were as follows: 16 disputes, 4,016 workpeople, and 59,936 working days; and for June, 1925, 23 disputes, 14,761 workpeople and 320,594 working days, due chiefly to a dispute in the coal mining industry in Nova Scotia.

Industrial Disputes Investigation Act, 1907

During June the Department received the report of a Board of Conciliation and Investigation established in the previous month to deal with a dispute between the Canadian National Railways (Montreal and Southern Counties Railway) and certain of its employees, being conductors, trainmen and motormen, members of the Brotherhood of Railroad Trainmen. A minority report was presented by one of the Board members.

Two other Boards were completed during the month. A full report of the month's proceedings under the Act is given on page 643.

The Honourable George B. Jones, New Minister of Labour

The Honourable George B. Jones, of King's County, New Brunswick, has been appointed Minister of Labour in succession to the Honourable J. C. Elliott, who retired on the resignation of the Right Honourable W. L. Mackenzie King and the other members of the Government towards the end of the late session of the Dominion Parliament. The Right Honourable Arthur Meighen, the new Prime Minister, announced the names of the new ministers on July 13.

Dominion-Provincial conference on labour conditions

The Dominion Parliament at the late session adopted the report of the Select Standing Committee on Industrial and International Relations, including a recommendation that a conference of provincial and Dominion representatives immediately in touch with labour conditions throughout Canada be held in the near future to consult as to the best means to be employed of giving effect to the labour provisions of the Treaties of Peace (The text of the report of the Committee is given on page 654 of this issue). The principal subject considered by the Committee was stated in the resolution referred to it by the House on March 17, to the effect that "a wage sufficient to provide for a reasonable standard of living should constitute a legal minimum wage." The payment of an "adequate wage" to workpeople is one of the labour principles embodied in the Treaty. However, as the legislative authority necessary to give effect to the various principles laid down in the Treaty is in Canada divided between the Dominion Parliament and the Provincial legislatures, it was necessary that a joint discussion should be held before these principles could be formally adopted in Canada.

Minimum wages and hours of female employees in Saskatchewan

The Saskatchewan *Public Service Monthly* for June announces that a higher minimum wage for women and girls employed in shops and stores and in millinery, dressmaking, tailoring, fur sewing and florists' establishments has been set by the Saskatchewan Minimum Wage Board. A cut of an hour in the weekly total of hours permissible for female employees is also made by the board. The board has also decided that seating accommodation must be provided for the female employees in shops and stores. Representations urging that some provision for this should be included in the orders of the board were made at the public meetings recently held by the board in Moose Jaw and Regina. These changes will come into effect thirty days after the first official publication of the new orders by the board. This will not take place until the question of the inclusion of beauty parlours under the orders of the board has been decided. At present the board is seeking expert advice on this matter.

In shops and stores the regulations to be issued by the board will call for a minimum for learners of $10 a week for the first six months; of not less than $12 a week for the second six months; $13.50 a week for the third six months and not less than $15 a week for experienced workers (those having over 24 months' experience). This is a raise of $2.50 in the minimum for learners; $2 a week for the next group; $1.50 for the next and $1 for the experienced workers. The board also reduced the hours for female employees in shops and stores from 51 hours a week to 50 hours. Statutory holidays are to be regarded as time worked and paid for as such, while overtime is to be limited to six hours a week for individual female employees, excepting during the period between December 15 and 31 when nine hours overtime may be worked by individual employees. In millinery, tailoring, fur sewing and florists' establishments the board raised the minimum for experienced workers from $14 to $15 a week. In laundries and factories the minimum for experienced women and girls was increased from $13 to $14 a week. An all round raise of $1 a week was granted for women and girls employed in mail order houses. The new minima are: For learners not less than $9 a week for the first six months; not less than $11 a week for the second six months; not less than $14 a week for experienced workers (those having 12 months or more experience).

Superannuation in British Columbia

The Civil Service Commissioner of British Columbia recently published reports of the work done in the Province during the past two fiscal years in connection with the Superannuation Act of 1921. The provisions of this Act have been noted in previous issues of the LABOUR GAZETTE, (February, 1924, page 131; May, 1924, page 391; December, 1921, page 1444, etc.). The Act is in five parts, of which Part I deals with the superannuation fund and allowances; Part II contains provisions in reference to the superannuation of provincial civil servants; Part III relates to municipal employees; Part IV relates to School Board employees, and Part V relates to employees in the province who are not in any of these categories.

The Superannuation Act established a general system of superannuation which is compulsory for employees of the provincial government and optional for other public employees and employees in private industry by agreement with their employers. Allowances are payable to employees at the age of 65 years, or by the employees' own request at the age of 60 years in the case of males, and of 55 in the case of females. The

Superannuation Fund is made up of equal contributions by the employees and the employers, the latter term including the Crown. The employee's contribution is made by a deduction from his salary of four per cent, this amount being retained by the Minister of Finance. A larger deduction may be made, at the employee's request, up to eight per cent, if he is over fifty years of age, up to seven per cent if he is over forty-five, up to six per cent if he is over forty and up to five per cent if he is under forty.

The Commissioner, after an experience of five years' administration, reports that the Act has achieved a remarkable success in its application to provincial civil servants. So far the Act has not been widely adopted by employees in private industry, but the Commissioner points out that "it would be difficult to place a limit on its usefulness in the future if full advantage were to be taken of its provisions." The civil servants show their appreciation of the Act by investing their savings in the Fund, making voluntary contributions in excess of the 4 per cent contribution which is required by the Act.

The province itself has derived substantial benefits from the Act. The old system of pensioning retired employees made no provision for the payment of a contribution during the period of service, and the provincial liability for superannuation tended to accumulate at a rapid rate. As the Commissioner points out, the time would eventually have come when the burden would have become too great and the Government would have been forced to either reduce allowances already granted or to refuse to continue to grant to civil servants reaching retirement age superannuation allowances on the same scale as previously followed. From such a dilemma the "Superannuation Act" provided an escape. It is calculated that the net gain to the Government under the Act has been $730,683 in five years. This is largely due to two reasons, first, the contributions of the civil servants, and second, the fact that where groups of civil servants are employed for the benefit of special interests and paid by those interests through special funds, such as the Scaling Fund and Fire Marshal Fund, these Funds are required to contribute the employer's share to the Superannuation Fund. Under the old system these interests would have escaped all liability and the Government would have been saddled with the responsibility for providing superannuation allowances when the individuals in these groups reached retirement age.

The Commissioner considers that in view of the gains secured by the province through the contributions of the employees, the Act should be interpreted in the most generous spirit.

Handicap men under B.C. Male Minimum Wage orders

The first order under the Male Minimum Wage Act of British Columbia, applicable to the lumbering industry, makes special provision to secure that the order shall not operate against the interests of handicapped men. Each employer in the lumber industry is permitted to choose 10 per cent of his entire staff from the "handicap section." Ten per cent is the limit of handicapped men that may be employed at less than the minimum wage set, and the wages to be paid to this class is a matter for the handicap man to determine, but no man whatever his handicap may be will be permitted to work for less than 40 cents per hour unless he has permission from the Board to accept a lesser amount. Employers are not permitted to designate who is or who is not handicapped. This is a matter to be determined entirely by the Board, and it is not the intention of the Board to place any man on the handicap list unless application is made by himself or on his behalf and over his signature. The Board will not set any definite wage for such men, but permit them to get all they can, and any man who is handicapped and fails to make application to work for a lesser amount comes under the minimum wage law of 40 cents per hour. This arrangement applies to all handicap men, both ex-service and civilians. The text of the order will be given in the next issue of the GAZETTE.

Employment of British workmen in Canada

The Ontario Office Superintendents of the Employment Service of Canada, at their recent annual convention, discussed suggestions for dealing with an alleged prejudice on the part of some employers of labour in Canada against British workmen. It was stated that the Employment Offices were often asked by railway managers, contractors lumber and steel companies and other employers to supply non-English speaking workmen to the exclusion of British and Canadian workmen. As proof of the injustice of such a prejudice it was pointed out that British workers were able in their own country to carry on heavy work such as is required in Canada, without the assistance of foreigners. Moreover in Canada British workmen commonly engage in city labour at wages similar to those paid in the occupations in which preference is now given to foreigners. In former years, it was stated, railway track labour was all done by

English, Irish and Scotch workmen. The opinion was further expressed that competent British workmen are still available if provision should be made for wages, sanitary sleeping quarters, foremen of British stock, and fair living conditions. The married British workman, it is found, usually prefers to remain at home, but it was thought that there were sufficient unmarried men for the "long distance jobs" to be filled. In order to remedy these conditions it was recommended (1) that the Provincial Government should be asked to provide the same sanitary standards in connection with bunk cars and construction camps as are now followed in lumber camps; (2) that the manager of railways and other industries be invited to give English speaking workers equal opportunities of employment; (3) that the Employment Officers should use their best judgment in sending out men who are reasonably certain to prove successful; (4) that the Dominion Government should only admit immigrants of a good type, and return unfit immigrants to the country of their origin.

It was further stated at the meeting that the problem of the assimilation of new arrivals, particularly of those unable to speak English, was not confined to Ontario. In Saskatchewan, for instance, the newcomers tend to settle in isolated racial groups, and passively resist efforts to establish them as Canadians.

Question of legality of general strike

The text of an important judgment given on May 11 by Mr. Justice Astbury in the Chancery Division of the High Court of Justice of England appears in this issue among the "Recent Legal Decisions Affecting Labour." The case arose out of the recent action of the General Council of the Trades Union Congress in calling upon all its affiliated unions to take part in a general strike in support of the miners in their dispute with the coal operators. The National Sailors' and Firemen's Union was one of the affiliated unions called out by the order of the General Council. The Lower Hill branch of this union, however, declared a strike without awaiting orders from the executive council of the Union, as required by its constitution. The Union claimed an injunction against the local officials to restrain them from taking further action in regard to the general strike, and the Court granted the injunction. The case involved the question of the legality of the general strike in trades where no dispute exists. Judge Astbury held that persons taking part in such a strike, or inciting others to do so, are not protected by the Trades Dispute Act of 1906.

Pneumoconiosis an "industrial disease" in Ontario

The Ontario Workmen's Compensation Board published in June an amendment to Regulation 94, adding pneumoconiosis to the list of diseases that are compensable under the act when they have been contracted during, and in consequence of, employment. It may be noted that under Section 2 of the Act, which came into effect on January 1, 1915, the Board has power to add to the list of "industrial diseases" that is contained in Schedule III of the Act, and to declare by a regulation that any other disease falls within this category. The diseases mentioned in Schedule III are as follows: anthrax, lead poisoning or its sequelae; mercury poisoning or its sequelae; miners' phthisis (this disease added by amendment in 1917); phosphorus poisoning or its sequelae; ankylostomiasis (a disease of miners); and silicosis (added by an amendment in 1926.)

Regulation 94 now provides for the inclusion under the act of pneumoconiosis, stone workers' or grinders' phthisis due to employment in quarrying or in cutting, crushing, grinding, or polishing of stone, or in grinding or polishing of metal, and benzol poisoning due to employment in any process involving the use of benzol.

The original regulation was published in January, 1925 (LABOUR GAZETTE, February, 1925, page 145). The following qualification has now been added: "Provided this regulation shall not apply to mining, and no workman nor his dependants shall be entitled to claim hereunder unless such workman has been actually exposed to stone or metal dust in his employment in Ontario for periods in all amounting to at least three years preceding his disablement."

Some account of this disease was given in the May and June issues of the GAZETTE.

Improved methods increase production rates in coal mines

The *Canadian Mining Journal* contains in its issue of June 18 an article by Mr. Walter Herd, on the "Output of Coal per man in Nova Scotia." The average output per shift for all employees of the Dominion Coal Company, he says, increased from 2.06 in 1919 to 2.53 tons last year, or 20 per cent. In the other constituent companies of the British Empire Steel Corporation the increase in production per man per shift was slightly more pronounced. Based on the number of underground producers the rate of production was 6.85 tons

per shift in 1925, an increase of 14 per cent as compared with 1919, and 9 per cent above 1922. "It may be interesting to note," the writer continues, "that in 1914, prior to the war, the output per shift per underground producer was 6.4 tons. To-day this output is increased by 7 per cent in spite of the fact that an 8-hour shift is now worked as compared to a 10-hour shift in 1914. In other words, the miner has been given such increased facilities that he can now produce more in an 8-hour shift than he previously could in a 10-hour shift."

Mr. Herd attributes the increased rate of production to the consolidation of the various coal properties in Nova Scotia in 1920 under the British Empire Steel Corporation, and to the improved mining methods that were adopted subsequently. "Since that date," he states, "year by year the physical condition of the mines has been gradually improving. Air-ways have been enlarged, resulting in increased ventilation, main roadways of a permanent nature have been constructed, underground mechanical haulage has been extended, reducing the number of horses necessary (in some mines horse haulage has been eliminated), miners have been provided with electric lamps, and the machinery and equipment generally has been brought to a higher state of efficiency."

It will be recalled that the Alberta Coal Commission, in their report which was outlined in the LABOUR GAZETTE for May, pointed out that in the latter province there is great scope for further improvement in the industry by increased efficiency in management and by the increased use of labour saving devices. The Commission found the various operators alive to the advantages to be derived from such devices, and that they would be "only too willing to employ them if they had the means, or if in their opinion they had the conditions that would make their application successful."

Mr. Herd agrees with the Alberta Coal Commission that the higher rate of production per man in the mines in the United States is to be accounted for mainly by the greater physical difficulties encountered in Canadian mines. "Many prominent American mining engineers," he says, "have visited Nova Scotia coalfields and several have made extended reports on the operations. Without exception they recognize that difference in the physical conditions precluded the wholesale adoption of the methods employed in West Virginia or the bituminous mines of Pennsylvania—realizing that the inclined seams being worked at considerable depth and the submarine conditions in Nova Scotia barred the possibility of the same output per employee as could be obtained from the thick, flat seams lying at little depth in the United States. Generally they found the conditions under which coal is mined in Nova Scotia somewhat comparable to the anthracite mining conditions in Pennsylvania where the output per employee is just slightly under that of Nova Scotia."

The Canada Year Book 1925

The Dominion Bureau of Statistics announces the publication of the Canada Year Book, 1925, which is now ready for distribution. This volume is the official statistical annual of the physiography, history, institutions, population, production, trade, transportation, finance, administration and general social and economic conditions and life of the Dominion, and constitutes a synthesis not only of the data collected by various branches of the Bureau, but of information relative to Canada drawn from the whole field of governmental activities. In addition it brings Canadian statistics, as a whole, into relation with British Empire and world statistics.

The present edition of the Year Book extends to over 1,000 pages and is divided into fourteen sections, as follows:—

(1) Physical characteristics of Canada, a description of the geography, geology, climate and natural resources of the Dominion;

(2) History and Chronology, including a chronological history of Canada from 1497 to 1925;

(3) Constitution and Government of Canada, including a treatment of parliamentary representation in Canada;

(4) Population, including detailed figures from the census of 1921, vital statistics and statistics of immigration;

(5) Production, including a general survey of Canadian production and sections dealing with agriculture, forestry, furs, fisheries, mines and minerals, water-powers, manufactures and construction;

(6) Trade and Commerce, dealing with Canadian foreign and internal trade;

(7) Transportation and Communications, with subsections on government control over transportation agencies, steam and electric railways, express companies, roads and highways, motor vehicles, air navigation, canals, shipping and navigation, telegraphs, telephones and the post office;

(8) Labour, Wages and Prices. Under this section an account is given of the constitution and functions of the Dominion

Department of Labour, with an account of the work carried on by the Department in connection with the Industrial Disputes Investigation Act, Fair Wages, The LABOUR GAZETTE, and the publication of "Labour Legislation." The various duties of the provincial Labour Departments and bureaus is also described. Canada's relations to the International Labour Organization are outlined, and a summary is given of the Department's annual publication "Labour Organization in Canada." Other features of the section include statistics of fatal industrial accidents during the year, and an outline of the work carried on in the provinces under the various Workmen's Compensation Acts; statistics of industrial disputes, employment and unemployment; the co-operative movement in Canada. Statistics of wage rates are given for the several industries and occupations, and the movement of prices, wholesale and retail, is described;

(9) Finance, with detailed treatment of Dominion, provincial and municipal finance, national wealth and income, currency and banking, and insurance;

(10) Education, chiefly dealing with general education, and technical and higher education;

(11) Public Health and Benevolence;

(12) Administration, including the administration of public lands, public defence, public works, Indian affairs, soldiers' civil re-establishment and miscellaneous administration;

(13) Sources of statistical and other information relative to Canada, including bibliographies of Dominion and provincial government publications;

(14) The Annual Register, 1925, with a sketch of recent Dominion and provincial legislation, principal events of the year and important extracts from the *Canada Gazette*.

Numerous maps and diagrams are used to illustrate various topics and to supplement the statistical tables of historical and current data.

New features to which special attention may be directed include the following:—a sketch of the history of the Canadian lumber trade; new trade statistics showing the trade of Canada with twenty-seven leading countries; an outline of the organization of Provincial Departments and Bureaus of Labour; a special article on the co-operative movement in Canada; an explanation of the Bureau's new index number of security prices; the Bureau's latest co-ordinated statistics of provincial and municipal finance; permanent rates of war pensions; new statistics relative to the Dominion civil service. Throughout the volume the latest available information is included in each section, tables generally including figures for the fiscal year 1924-25 or later and the letter-press supplying supplementary figures, extending in many cases to the end of the calendar year 1925.

This addition of the Year Book has been edited by Mr. S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc., Chief, General Statistics Branch.

A charge of $2 is made for the Year Book which may be obtained from the Department of Public Printing and Stationery, Ottawa.

Proposed family endowment by state

The Women's Co-operative Guild of Great Britain, at their forty-third annual convention, which was held at Newcastle-on-Tyne in June, passed the following resolution in favour of a State system of family allowances:

"That this Congress is of opinion that family allowances would be of great benefit to working-class mothers, and desires the Central Committee of the Women's Co-operative Guild to approach the standing joint committee of industrial women's organizations with a view to the preparation of a non-contributory scheme for such allowances on a State basis, rather than on an employers' pool."

The Guild has a membership of 57,000 women of whom 326 are directors of co-operative societies, 700 are engaged in educational work, 50 are magistrates, and 670 are associated with the work of local councils and municipalities. The May issue of this GAZETTE contained a note on various proposals that have been made in regard to family endowment.

Progress of co-partnership in industry

The Labour Co-partnership Association of Great Britain held its third triennial congress in London in June, when the principles of industrial co-partnership were discussed, and reports were received showing the progress of the movement in the United Kingdom and in other countries. The British *Ministry of Labour Gazette*, in its issue for June, presents the results of a study of existing schemes of profit sharing and labour co-partnership. The figures relate only to definite schemes under which employees participate in profits on some pre-arranged basis, and do not include schemes providing for bonuses depending on output, sales, etc.

The total number of profit-sharing schemes known to have been in operation in Great Britain and Northern Ireland at the end of 1925 was 377. About 421,000 workpeople

were employed in the businesses concerned, of whom approximately 213,000 participated, or were entitled to participate, in the benefits of the schemes. These figures include schemes in co-operative societies as well as schemes in ordinary businesses. Apart from schemes in co-operative societies, 240 firms were practising profit-sharing or co-partnership at the end of 1925; six of these firms had each two separate schemes. In addition there were six schemes as to which no recent returns have been received but which are still in operation, so far as is known to the Department, making totals of 246 firms and 252 schemes at the end of 1925. The number of workpeople employed by the 246 firms in 1925 was about 398,000, of whom about 191,000 were eligible to participate in the benefits conferred by the schemes. In the previous year the number participating in the schemes then in existence was 177,000. In the case of a considerable number of schemes, such participation is available only to those who are able and willing to deposit savings with the firm, or to purchase shares in the undertaking. In most schemes, also, employees have to fulfil certain conditions, such as serving for a minimum period, in order to qualify for benefit.

The industries or businesses having schemes in operation in 1925 were as follows: Gas, water or electricity supply, with 38,500 employees participating; insurance, banking or other financial businesses, with 37,000 employees; chemical oil, soap, paint, glass, etc., with 28,100 employees; food and drink (manufacture), with 24,300 employees; engineering, shipbuilding or other metal, with 18,300, employees; textile, with 16,700 employees; merchants, warehousemen or retail traders, with 9,700 employees; paper manufacture; printing, bookbinding, publishing, etc., with 5,000 employees; agriculture, with 400 employees; other businesses, with 12,700 employees (in all).

In the simplest, and most numerous, type of profit-sharing schemes the employees' bonus consists of a specified proportion of the net profits or is a sum which automatically rises or falls with the rate of dividend paid on capital. A type of scheme which has become prominent in recent years admits employees to a share in the profits by the issue of employees' shares, either free, or on specially favourable terms as to price or dividend; 46 such schemes are at present known to be in operation. Twenty-two further schemes are based on arrangements for the payment of interest, at a rate varying with the profits, on money deposited with the firm by its employees. In the gas companies' schemes, the bonus usually varies inversely with the price charged for gas, which itself varies with the rate of dividend paid; in some cases the bonus is a percentage on wages varying directly with the rate of dividend, or is a fixed percentage of the amount paid in dividends.

For a period of about two years immediately following the war, a period of great industrial activity, there was a marked advance in the profit-sharing movement. In these two years 106 schemes are known to have been started; and, after allowing for schemes discontinued, there was a net addition of 82 schemes in this period. During the succeeding period of industrial depression this advance has been checked; and during the years 1921-5, although 55 new schemes appear to have been started, 41 schemes were terminated, the net addition being thus only 14.

Besides these schemes 125 co-operative societies had co-partnership schemes in operation in 1925. The number of workpeople employed by these societies in 1925 was about 23,000, practically the whole of whom were entitled to participate in the schemes. Of the 125 societies, 26, employing a little over 7,000 workpeople, were industrial productive societies; 52 employing nearly 15,000 workpeople were industrial distributive societies; and 47, employing about 600 workpeople, were agricultural societies.

Numerous references have been made in recent issues of the LABOUR GAZETTE to co-partnership schemes, particularly those on this continent. Some opinions on the significance of the movement were given in the issue for July, 1925, page 644; April, 1925, page 368, etc.

South African Economic and Wage Commission

The appointment of an Economic and Wage Commission in the Union of South Africa was noted in the LABOUR GAZETTE for November, 1925 (page 1060). The report of this Commission is outlined in the *Social and Industrial Review*, issued by the Department of Labour of the Union. Among the subjects of the inquiry were current rates of wages; the differentiation of wage rates; the procedure in fixing wage rates; the relation of money to real wages and the cost of living; industrial conditions affecting wages; the effect of wage standards on the distribution of labour between various occupations; public wage regulations; and industrial training and apprenticeship.

In regard to existing wage rates the majority report of the Commission states that the level of urban skilled rates is high in South Africa—far higher than in any

European country, higher than in Australia, about as high as in Canada, and exceeded only in the United States of America. When real wages are compared the advantage of South Africa is reduced, but still remains considerable. Taken in connection with the capacity of industry to pay wages in different countries, the South African rates are relatively far higher than in any other country. The explanation is obvious. The rates selected (that is, the only rates which were available) are the rates of a small minority of workers, i.e. white workers. In other words, the explanation is found in the fact that the characteristic feature of South African wages is the wide spread between the highest and the lowest rates of wages—a spread several times as great as in any other country.

In regard to the procedure for settling wages the Commission urges that a co-ordinating authority is required for wage determinations. Without such co-ordination, unrest and unsettlement are bound to occur. The only possible authority existing under present machinery is the Wage Board, or, for certain purposes, the Chairman of the Wage Board. In this respect the commission makes certain specific recommendations. If these recommendations are carried out, it is suggested that the functions of the Wage Board will tend to an important extent to become those of a co-ordinating and advisory body.

On the subject of the public regulation of wages it is pointed out that if wage regulation is directed to raising the rates of the lowest paid workers it is possible that the increased pay may be counter-balanced by an increase in efficiency, so that the improvement is not at the expense of any one else. This possibility is in South Africa a probability, for reasons which are examined. The primary object of wage policy, it is stated, should be to aim at increasing the volume of production, and this being the case, the wage authority will concentrate on a study of the conditions of industries where wages are lowest and where any increase in wages is most likely to lead to an increase of efficiency. Better-paid classes can, and should, the Commission considers, be left to action under the Industrial Conciliation Act.

In a discussion of the principles of wage regulation the Commission discusses the legitimate sphere of functioning of the Wage Board which was inaugurated in February this year (LABOUR GAZETTE, April 1926, page 309), and reaches the following conclusions:—

(1) Every industry should be dealt with by itself.

(2) The lowest paid classes of workers should have priority of attention.

(3) The first step in an ill-organized industry is to level up the poorly paid in any class of occupation to the average in that class.

(4) Where a general advance in wages is impracticable, an improvement in conditions may be made.

(5) While each industry is considered separately, it should be considered in relation to all industry as an interdependent system.

(6) There must be an implicit recognition of the necessity to fit the wage to the capacity of the industry to pay.

The Commission concludes that the higher classes of wage rates should be maintained and that the operations of the Wage Board should not be allowed to reduce them, but that the wide gap between the high and low rates must be bridged. Efficient organization and increased efficiency of the worker, it is thought, may make this result possible.

Workmen's compensation in Ontario and Manitoba

The benefits awarded under the Workmen's Compensation Act of Ontario during the half year ending June 30, amounted to $2,723,321.98, as compared with $2,728,916.96 during the corresponding half of the year 1925. The compensation for the half year amounted to $2,225,889.89 and the medical aid to $497,432.09.

The number of accidents reported for the past half year was 29,631, of which 147 were fatal, as against 27,266 for the corresponding half of 1925, of which 152 were fatal.

The average daily benefits awarded for the half year were $17,457, and the average number of cheques issued daily was 680.

During the month of June, 5,881 accidents were reported, 29 of which were fatal, this being the highest number this year and higher than for any month during 1925. The benefits for June amounted to $435,408.15.

During the month of June 1,046 industrial accidents, including seven fatalities, were reported to the Workmen's Compensation Board of Manitoba. The fatal accidents were as follows:—A telephone line worker was fatally crushed while unloading poles; a carpenter was crushed by falling scaffolding; a deck-hand on lake boat fell overboard and was drowned; a brakeman was killed as the result of a collision; a railway yardman was crushed to death (particulars not yet available); a locomotive engineer was killed in a collision; and a wood-worker operating a rip saw was struck by a piece of lumber thrown by the saw.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of June was as follows:

The agricultural industry in the Province of Nova Scotia was reported as active. The fishing industry reported good catches. There was considerable activity throughout the province in the cutting of pulp wood. Miscellaneous manufacturing plants seemed busy, while the iron and steel industry, although not exceptionally busy, appeared to be maintaining its activity. The volume of construction work being carried on was not very great, and from Halifax it was reported that some contracts projected earlier in the year had not yet been proceeded with. Coal mining was very active, with numbers employed, working time and production showing cumulative gains each week. Trade was rather good.

As in Nova Scotia, farming in the Province of New Brunswick was active and crop prospects were fair. Fair catches of fish were reported along the coast. Manufacturing was brisk, with pulp and paper and lumbering reported as very active. Construction was being carried on in fair volume. General conditions seemed fair, although St. John reported that at that point they were none too good, due in a large measure to the decrease in this year's construction programme.

The improvement in the general industrial situation which was reported from the Province of Quebec earlier in the year continued during June. The demands for farm help were rather heavy and fairly general throughout the province. Logging activities were normal for the season. Manufacturing industries both in Montreal and outside of the metropolis continued busy, and showed activity at a fair level; the only important exception to this situation seemed to be the boot and shoe industry in the City of Quebec, where production had been halted by an industrial dispute. Placements of workers in the building and construction industry were heavy, and were reported from several points in the Province. Railroad construction and municipal work, the latter more particularly in Montreal, continued to employ increasing numbers. Trade was fair, having shown a betterment in recent weeks. The demand for women domestics, as is usual at this season, was in excess of the supply. Speaking generally, conditions throughout Quebec were stated to be good.

In Ontario the demands for farm workers were heavy and general. Most building tradesmen seemed to be employed. Highway construction and railroad construction, the latter particularly, absorbed a considerable number of unskilled labourers, and this, added to the fact that the railroad construction job at Rouyn, Que., and the power plant construction at Chelsea, Quebec, took men from contiguous Ontario points, eased the situation in so far as unskilled labourers were concerned. From all points in Ontario manufacturing was reported as showing steady activity, with a tendency toward increases, and while no phenomenal activity was reported in any one line, conditions were reported as being such that all lines are working at about a normal pace. The metal mines were reported as busy, although no staff increases were reported. Pulpwood cutters and peelers were in demand, but not many men seemed anxious to take this work. Orders for female domestic workers continued numerous.

The between seasons demand for farm hands in Manitoba was reported as somewhat heavier than usual, but there was no difficulty in filling orders. Building construction activity was fair, but railroad construction seemed dull. Demands for mine and bush workers received at Winnipeg were very few. Casual orders for general labour were scarce. The demand for domestic workers was fair, with some local shortages reported.

From Saskatchewan farm demands were reported as normal with sufficient applicants. Building and construction industries were fairly busy with demands for workers rather numerous in the different branches of this industry. The demands in casual employment were increasing. Women domestics were in demand with fair numbers applying.

As in Saskatchewan the demand for farm workers in Alberta had kept up well with an adequate supply. Extra gang work on the railroads was absorbing men. Building construction was active and mechanics for the most part seemed busy. The coal mining industry was dull. As in practically all other provinces, the demand for female domestic workers was reported as rather heavy, with a fair supply. Throughout Alberta conditions generally seemed favourable.

In the Province of British Columbia fruit picking had already required the services of some workers. The logging and lumbering industry showed quite a perceptible improvement and prospects seemed fair for the season, although no large increases in staff were

yet reported. While building and construction were not very active, mechanics seemed to be fairly well employed. The metal mining industry was active, although very few workers were being taken on. Every office reported a sufficient number of applicants for the vacancies expected in the ordinary course of business, but conditions generally throughout the Coast province were reported as being in a rather healthy state.

EMPLOYERS' REPORTS

Employment returns were furnished the Dominion Bureau of Statistics by 5,907 employers, whose payrolls totalled 828,483 on June 1, as compared with 774,221 at the beginning of May. This increase, which is the largest shown in any month of the record, caused the index number to rise to 101.0, a point higher than has been indicated in any month since 1920.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending June 26, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

Increased activity was reported generally throughout the country. In the Maritime Provinces, all industries except transportation registered heightened employment on the whole. In Quebec, continued improvement was noted; manufacturing as a whole, logging, transportation and construction recorded large gains. In Ontario, manufacturing showed a further advance, especially in sawmills and iron and steel works. Seasonal improvement was reported in logging (on account of river drives) and in transportation and construction. In the Prairie Provinces, manufacturing again increased, and railway construction and maintenance showed especially pronounced expansion. In British Columbia, construction and transportation were decidedly busier, but manufacturing was practically unchanged.

Of the eight cities for which separate tabulations are made, only two—Quebec and Vancouver—recorded reduced activity, while in Montreal, Toronto, Ottawa, Hamilton, Windsor and the Other Border Cities and Winnipeg, additions to staffs were recorded by the co-operating firms. In Montreal, manufacturing increased steadily, the greatest gains being in iron and steel, wood-using and electric current plants. In Quebec, there were large reductions in boot and shoe factories. In Toronto, manufacturing recorded the most pronounced improvement, the gains in edible animal product, wood, printing, and iron and steel works being especially important. On the other hand, rubber and textile factories were slacker. In Ottawa, seasonal expansion was indicated in sawmills, and construction also showed improvement. In Hamilton, manufacturing and construction continued to report heightened activity; within the former group, iron and steel plants showed the greatest increase, but in textiles there was a seasonal loss. In Windsor and the Other Border Cities, automobile factories and construction were more active. In Winnipeg, there were slight increases in manufacturing and quarrying, and major gains in construction. In Vancouver, reduction in staffs in sawmills and non-ferrous metal works caused a net decline in employment in manufacturing; construction also recorded small losses in payroll.

The construction, manufacturing, transportation, logging, and mining industries reported especially extensive increases in employment at the beginning of June. The gains were mainly of a seasonal character, but in many cases they exceeded those registered on June 1 of preceding years since 1920. Within the manufacturing division, the most marked expansion was in lumber, food, iron and steel, building material, pulp and paper, electric current, and rubber works, while seasonal losses were noted in leather, textile and tobacco factories. There were also reductions in non-ferrous metal works.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of June, 1926.

TRADE UNION REPORT

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Substantial improvement in the trade union situation was noted at the close of May, as indicated by the returns received from 1,558 local trade unions with an aggregate membership of 150,765 persons. These returns showed that 7,442 members, or a percentage of 4.9 were unemployed, as compared with percentages of 7.3 in April and 7.0 in May, 1925. In Alberta conditions were not so favourable as in April owing to lessened activity in coal mining, and in New Brunswick also there was a slight adverse change. Of the expansion in the remaining provinces the most noteworthy percentage gain was registered in Nova Scotia where more employment was afforded coal miners. In comparison with the returns for May of last year unions in all provinces with the exception of Nova Scotia, were more active. The situation in the manufacturing industries at the end of May as reported by 420 unions having a combined membership of 40,955 persons changed very slightly in comparison with the previous month the increase in employment being only .2 per cent. Textile workers were better employed and wood workers and cigar makers also registered improvement. Leather, glass and hat and cap workers, on the other hand, were slacker and employment for metal polishers and garment workers declined. The printing trades showed practically no change as did also the pulp and paper industry. A better situation than in May last year was reported in the manufacturing industries, the gains being rather generally distributed throughout the various trades. In coal mining Nova Scotia made a considerable advance in employment when compared with April; in British Columbia no idleness was reported but in Alberta unem-

ployment appeared in somewhat greater volume. The situation in the building trades was brighter than in April, as was shown by reports tabulated from 170 unions with 12,339 members, 7.4 per cent of whom were unemployed in May as compared with 12.5 per cent in the previous month. Conditions were, however, less favourable than in May last year when 7.0 per cent of the members were idle. The most outstanding gain in comparison with April was registered by bridge and structural iron workers, and the improvement among steam shovel and dredgemen was also pronounced. Bricklayers, masons and plasterers, granite and stone cutters, and painters and decorators and paperhangers were more active, and lesser gains were reported by carpenters and joiners, electrical workers and plumbers and steam fitters, tile layers, lathers and roofers and hod carriers and building labourers, however, were slacker. In comparison with May last year steam shovel and dredgemen, bridge and structural iron workers, bricklayers, masons and plasterers, electrical workers and hod carriers and building labourers were all more active, but among the other tradesmen unemployment was in greater volume. Reports were tabulated from 618 unions of transportation workers with 56,346 members, 2.1 per cent of whom were unemployed at the end of May, as compared with 3.5 per cent in April and with 3.9 per cent in May last year. Steam railway employees were busier than in April, as were also navigation workers and street and electric railway employees. In comparison with May last year employment among navigation workers declined; steam railway employees were afforded more work, and the situation for street and electric railway employees remained unchanged. Retail shop clerks were slightly less active than in April. Hotel and restaurant employees, theatre and stage employees, barbers and stationary engineers and firemen were all more fully engaged. A much higher level of employment than in April was maintained by lumber workers and loggers and fishermen also were busier.

EMPLOYMENT OFFICE REPORTS.

During the month of May, 1926, the offices of the Employment Service of Canada made 35,115 references to employment and effected a total of 33,655 placements. Of these, the placements in regular employment were 21,877, of which 18,473 were of men and 3,404 of women. The placements in casual work numbered 11,778. Employers notified the Service of 36,966 opportunities of employment, of which 25,994 were for men and 10,972 were for women. The number of applicants for work was 43,209, of whom 31,957 were men and 11,252 women. Nominal changes only were recorded in the volume of business transacted during May when compared with that of the preceding month, while substantial gains were shown when the records are compared with those of the corresponding period last year, the records for April, 1926, showing 36,166 vacancies offered, 42,029 applications made, and 31,772 placements effected, while in May, 1925, there were recorded 30,650 vacancies, 39,841 applicants for work, and 28,533 placements in regular and casual employment. A report in detail of the work of the offices for the month of May will be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES.

Some figures indicating the recent movements of trade and industry are given in the table on page 638.

The Dominion Bureau of Statistics reported that production of pig-iron in Canada in May amounted to 72,762 long tons, a gain of 8 per cent over the 67,607 long tons produced in April. Production of basic iron at 56,423 tons showed an increase of 44 per cent over the output of the previous month; of this total only 2,853 tons were produced for sale and 53,570 tons were made for the further use of the producers. Foundry iron at 16,339 tons was 34 per cent below the 24,654 tons of the previous month. No malleable iron was produced in May. For the five months ending May the cumulative production of pig-iron in Canada totalled 300,010 long tons, an increase of 22 per cent over the output of 245,009 tons made during the same period last year. This year's output was composed of 204,845 tons basic iron, 83,236 tons of foundry iron and 11,929 tons of malleable iron. In the first five months of 1925, production included 213,791 tons basic iron, 18,621 tons foundry iron and 12,597 tons of malleable iron.

Blast furnace charges in May consisted of 126,981 long tons of imported ore, 80,678 short tons of coke and 38,515 short tons of limestone. For each long ton of pig iron made, the furnace charges in April were: 3,909 pounds of ore, 2,218 pounds of coke, and 1,059 pounds of limestone.

There was no change in the number of active furnaces, the same six being in blast on April 30th, as at the end of March. The active furnaces had a capacity of 2,375 long tons per day which represented about 47 per cent of the total capacity of all blast furnaces in the Dominion. Two working furnaces were located at each of the following points: Sault Ste. Marie, Ont., Hamilton, Ont., and Sydney, N.S.

Production of ferro-alloys at 3,396 tons showed a gain from the 2,487 tons of April and was 50 per cent higher than the 2,293 tons reported for May of a year ago. The cumulative production amounted to 13,913 tons, an increase of 40 per cent over the 9,988 tons produced in the same five months last year.

Reflecting the higher output of pig-iron, the production in Canada of steel ingots and castings advanced to 89,513 long tons, an increase of 12 per cent over the 79,936 tons of April, which in turn was 36 per cent in excess of the March output of 58,765 tons. Production of steel ingots totalled 85,604 tons, as compared to 76,046 tons made in April. The output of direct steel castings remained firm, the actual tonnage being 3,909 in May and 3,890 tons in April.

Cumulative production for the year to date totalled 349,907 tons, which was 3 per cent below the 360,557 tons reported for the same five months of a year ago. Taking the output by grades steel ingots at 332,919 tons showed a drop from 352,421 tons, while the output of steel castings showed an increase to 16,988 tons from 8,136 tons for the same period of last year.

Pig-iron prices moved to lower levels during May. No. 1 foundry at Montreal was quoted at $28.70 and No. 2 foundry at $28.20 per ton as compared with $29.25 in April. At Toronto No. 1 foundry was $25.80 and No. 2 was $25.30 per ton. The Bureau's index number for iron and its products, based on prices at the middle of the month (1913 prices = 100), declined from 145.0 to 144.1 due mainly to the lower levels for pig-iron and steel billets.

Full statistics of coal production during May are not yet available. The output of coal from Canadian mines during April was 10 per cent less than the production for the preceding month, and 8 per cent greater than the average for April in the past five years. The figures were 965,095 tons in April as against 1,066,900 tons in March and an average of 894,663 tons for the month during the five preceding years.

None of the coal-producing provinces showed a gain in production over the preceding month, but the outputs of Saskatchewan and Alberta were greater than the averages for the month in the five preceding years.

Men employed in the coal mines of Canada during April numbered 24,206, of whom 18,417 worked underground and 5,789 on surface, as compared with a total of 24,065 in March of whom 18,207 worked underground and 5,858 on surface. Production per man was 39.8 tons in April as against 44.3 tons per man in March. During April, the production per man-day was 2.3 tons, as against 2.4 tons in March. The tonnage lost was largely due to "lack of orders."

EXTERNAL TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in May, 1926, the merchandise entered for consumption amounted to $86,052,253, as compared with $75,894,532 in May, 1925. The domestic merchandise exported amounted to $91,353,423 in May, 1926, as compared with $60,166,868 in April, 1926, and $96,356,747 in May, 1925. Foreign merchandise exported amounted to $1,741,447 in May, 1926, and $1,117,864 in May. 1925.

The chief imports in May, 1926, were: Iron and its products, $23,015,476, and fibres, textiles and textile products, $13,955,872.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $38,512,054, and wood, wood products and paper, $21,387,014. In the two months ending May, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $56,399,239, and wood, wood products and paper at $38,976,039.

BUILDING PERMITS

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty cities in Canada during the month of May, 1926, amounted to $18,513,422, as compared with $18,988,755 in the preceding month and $15,500,165 in May, 1925. This was a slight decrease of $475,333, or 2.5 per cent, from last month's total, but an increase of $3,013,257, or 15.9 per cent over the month of May, last year.

The *MacLean Building Review* estimates the total value of the contracts awarded in Canada in June, 1926, at $54,186,400 as compared with $57,139,700 in May. Of the contemplated new construction in Canada during June, 1926, $12,894,200 was for residential building; $33,747,400 for business building; $16,249,800 for industrial building, and $17,767,500 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering). By classification the construction contracts awarded during June, 1926, were divided as follows: Industrial building, $20,589,100; residential building, $14,323,800; business building, $13,209,600, and engineering, $6,063,900. The apportionment by provinces was: Quebec, $30,641,600; Ontario, $13,295,300; British Columbia, $5,044,800; Prairie Provinces, $4,392,400, and the Maritime Provinces, $812,300.

Strikes and lockouts

The time loss due to industrial disputes in June was less than during either May, 1926, or June, 1925. There were in existence during the month 13 disputes, involving 2,237 employees, and resulting in a time loss of 45,348 working days, as compared with 16 disputes in May, involving 4,016 workpeople and resulting in a time loss of 59,936 working days. In June, 1925, there were recorded 23 disputes, involving 14,761 employees, and resulting in a time loss of 320,594 working days. Two of the strikes and lockouts commencing prior to June, and five of the strikes and lockouts commencing during June, terminated during the month. At the end of the month, therefore, there were six strikes and lockouts affecting 1,725 workpeople, not including these strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices were again somewhat lower. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.06 at the beginning of June, as compared with $11.29 for May; $10.44 for June, 1925; $9.86 for June, 1924; $10.23 for June, 1923; $10.18 for June, 1922; $11.16 for June, 1921; $16.92 for June, 1920 (the peak); $12.79 for June, 1918; and $7.49 for June, 1914. Potatoes and butter were substantially lower, while less important declines occurred in the prices of milk, cheese, lard, rolled oats, rice and beans. The prices of beef, veal, mutton, fresh and salt pork, bacon and eggs were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged $21.31 at the beginning of June, as compared with $21.54 for May; $20.67 for June, 1925; $20.22 for June, 1924; $20.72 for June, 1923; $20.58 for June, 1922; $21.74 for June, 1921; $26.92 for July, 1920 (the peak); $20.36 for June, 1918; and $14.27 for June, 1914.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics again declined, being 155.7 for June, as compared with 157.0 for May; 158.8 for June, 1925; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; 256.7 for May, 1920 (the peak); and 196.0 for June, 1918. In the grouping according to chief component materials four of the eight main groups advanced, three declined, while one was practically unchanged. The groups which advanced were: Animals and their Products, due to higher prices for live stock, meats, butter, cheese, lard and eggs; Non-Ferrous Metals and their Products, due to higher prices for copper, lead, silver and spelter, which more than offset lower prices for tin and antimony; Non-Metallic Minerals and their Products, because of higher prices for gasoline and coal oil; and Chemicals and Allied Products. The Vegetables and their Products group was substantially lower, because of declines in the prices of grains, flour and potatoes. The Fibres, Textiles and Textiles Products group, and the Iron and its Products group also declined, the former because of lower prices for cotton, silk, jute and hessian, and the latter mainly because of a decline in the price of pig iron. The Wood and Wood Products group was practically unchanged.

Inquiry into Production in Germany

A German Act was passed on April 15 providing for the setting up within a month of a Committee of Inquiry into conditions affecting production and marketing in German industry. This Committee is to consist of eleven members nominated by the Reichstag, nine nominated by the Provisional Federal Economic Council, and nine members appointed by the Government. A further six members may be appointed by the Government on the proposal of the Committee either to serve during the whole term or for limited periods or in connection with specific questions which may arise. Sub-committees may be formed from among the members of the Committee to investigate special questions and the Act specifically prescribes that such a sub-committee must be appointed to inquire into the effect on output of "the duration of working time" and of methods of remuneration on the basis of experience acquired during recent years. The Committee and its sub-committees are empowered to summon witnesses, to inspect undertakings and to require the production of accounts, etc. The findings are to be reported to the Government which will communicate them to the Provisional Federal Economic Council, Federal Council and the Reichstag.

The Co-operative Union of Canada will hold their regular congress on August 2-3 at the Parliament Buildings, Edmonton, Alberta, the provincial government having granted the use of the Buildings for the occasion. In addition to co-operative organizations, invitations have been sent to trade unions.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JUNE, 1926

DURING the month of June the Department received the report of a Board of Conciliation and Investigation established to deal with a dispute between the Canadian National Railways (Montreal and Southern Counties Railway) and certain of its employees being conductors, trainmen and motormen, members of the Brotherhood of Railroad Trainmen. The membership of the Board was as follows: Mr. Bernard Rose, K.C., Montreal, P.Q., Chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, namely, Messrs. Arthur Gaboury, Outremont, P.Q., nominee of the company, and Albert McGovern, Toronto, Ontario, nominee of the employees. The report was signed by the chairman and Mr. McGovern, and contained recommendations as to the settlement of the dispute. A minority report was presented by Mr. Gaboury. The text of the Board's findings and of the minority report is given below.

Other Proceedings Under the Act

A Board was completed in June in the case of a dispute between the Winnipeg Electric Company and certain of its employees being motormen and conductors, members of the Street Railway Employees' Unit, One Big Union. The Honourable Mr. Justice J. H. Lamont, Regina, Sask., was appointed chairman by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Mr. J. B. Coyne, K.C., Winnipeg, Man., appointed by the Minister in the absence of a recommendation from the company, and Mr. Fred. J. Dixon, Fort Garry, Man., employees' nominee.

In the case of a dispute between the Canadian National Express Company and certain of its employees being members of the Canadian Brotherhood of Railroad Employees, a Board was completed by the appointment of Mr. E. McG. Quirk, Montreal, P. Q., chairman, on the joint recommendation of the other members of the Board, Messrs. U. E. Gillen, Toronto, Ont., and David Campbell, K.C., Winnipeg, Man., nominees of the employer and men, respectively.

Report of Board in dispute between the Canadian National Railways (Montreal and Southern Counties Railway) and certain of its employees being conductors, trainmen and motormen, members of the Brotherhood of Railroad Trainmen.

IN RE Dispute between Montreal and Southern Counties Railway, Canadian National Railways, and Certain of its Employees being Conductors, Trainmen and Motormen, Members of the Brotherhood of Railroad Trainmen.

Award of the Board

The Board was appointed by the Honourable the Minister of Labour, on the 18th day of May, 1926, the members thereof being Mr. Bernard Rose, K.C., of Montreal, Chairman and third member, Mr. Albert McGovern of the city of Toronto, representing the employees, and Mr. Arthur Gaboury of the city of Outremont, in the province of Quebec, representing the company.

The Board met and sat on the following dates: June 9, June 18, June 21, June 22, June 23, June 24, June 25, June 26, and June 28. Owing to unavoidable circumstances, Mr. Gaboury was unable to attend sessions of the Board on the 18th and 26th. The majority met with his consent and knowledge in connection with the matter in dispute.

The representatives before the Board of the parties were the following: For the employees Mr. W. J. Babe; for the company Mr. W. B. Powell, Mr. A. E. Crilly, Mr. W. O. Lever. Mr. D. E. Galloway, Vice-President of the Canadian National Railways in charge of Electric Lines, was also present.

The application for a Board was made by the employees on the ground of their inability to adjust differences with the company in the matter of a basic day, scale of wages and working conditions. During the course of the hearing it was intimated to the Board that in the matter of working conditions the parties had practically reached an agreement, the two principal issues, therefore, being the basic day, with effective date, and scale of wages.

The representative of the men submitted a very carefully prepared memorandum in which they endeavoured to justify their contention that they were entitled to a basic day, as well as an increase in the rate of compensation. From the very outset the Board endeavoured to bring about a settlement of matters in dispute by conferences between the parties. Not-

withstanding the good offices of the Board in this respect, the parties advised the Board that they were unable to adjust the matters in dispute and that the Board would have to make an award.

The company submitted a memorandum, and, during the course of the several sessions which its representatives attended, strenuously objected to a basic day. They argued that the nature of the service which they rendered their patrons was such that to adopt a basic day would mean a very substantial increase in the cost of operation. They likewise pointed out in their statement that the company was presently operating at a deficit, which they put for the year 1925 at over $19,000. The undersigned recognize the difficulties confronting the company in the operation of the road, and appreciate that the officials are doing their utmost to reduce the deficit, at the same time maintaining a service demanded by those who either travel as passengers on its line or have freight conveyed by it.

They wish to take this opportunity of stating that the officials, on account of the conditions that prevail, are somewhat handicapped and are entitled to the support of those who are interested in the welfare of this line, either as passengers or shippers of freight. There is no doubt that, as the population of the district covered by this road increases, the deficit will be very materially reduced, and if efficient management and direction continues there is every reason to believe that the road will be operated at a profit.

The undersigned likewise wish to place on record their appreciation of the courtesies extended to them by the officials of the company, and particularly Mr. D. E. Galloway, Vice-President, who gave the Board every facility to inspect the road and acquire at first hand information as to the conditions affecting, not only the operating of the road, but the employment of the men.

After making all allowance for conditions and the allegations contained in the statement furnished by the company, the undersigned are of the opinion that the employees are entitled to consideration. Although they are very strongly in favour of the establishing of a basic day, deeming the same desirable in the interests of the employees, from both the efficiency and health standpoint, in view of the representations made by the company, and their very strenuous objection to the adoption of a basic day at present, they are not incorporating in this award the demand of the men for a basic day, but believe that in the interests of both the company and its employees that some effort should be made within the very near future looking towards the fixing of a basic day, since, in the opinion of the undersigned, the number of hours worked by a good many employees is altogether excessive.

They are of the opinion that the men are entitled to an increase of pay, and do respectfully recommend that the rates of pay should be the following:—

Conductors and motormen, first year 45 cents; second year, 49 cents; third year, 50 cents; fourth year, 52 cents.

The rate of pay for employees in freight work and snow-plow service shall be: Conductors and motormen, first year, 50 cents; second year, 52 cents; third year, 54 cents; fourth year, 55 cents. First brakeman, first year, 46 cents; second year, 47 cents; third year, 50 cents; fourth year, 51 cents. Second brakeman or trolleyman, first, second, third and fourth year, 45 cents per hour. These rates to be effective from June 15.

The undersigned believe that these rates of pay, in view of the nature and responsibility of the services rendered, are not incompatible; the Company contends that they are merely operating a tramway service, the undersigned believe that the Company can be more closely assimilated to a railroad than a tramway company. The undersigned regret that their colleague did not see fit to agree with their conclusions, and has decided to make a minority report.

They wish to likewise refer to the excellent relations between the Company and its employees, and trust that these will continue. They also believe that, in view of the efforts made by the officials of the Company to give a good service, they are entitled to the co-operation and support of citizens living along the line, and the businessmen in the different centres through which the road passes.

The whole respectfully submitted.

(Signed) BERNARD ROSE,
Chairman.

(Signed) A. McGOVERN,
Member of the Board.

Montreal, June 28, 1926.

Minority Report

MONTREAL, P.Q., June 29, 1926.

H. H. WARD, Esq.,
Deputy Minister of Labour,
Ottawa, Ontario.

DEAR MR. WARD,—I was appointed on May 22 a member of a Board of Conciliation to inquire into an industrial dispute existing between the Montreal & Southern Counties Railway Company and its conductors, motormen and trainmen.

The Board sat for the first time on June 9 and has had several sessions since, the last one being on Monday, June 28.

At the sitting of June 18 another effort was made by the Board to get the two parties together, it being pointed out very ably by Mr. Bernard Rose, the Chairman, that the Board had been appointed to conciliate whatever dispute there might exist and that another effort should be made to endeavour to reach an agreement which the Board would only be too pleased to sanction, and a meeting was therefore adjourned until the following Monday.

At the opening of the meeting of Monday, June 21, declaration having been made that the parties had not ben able to arrive at an agreement on all matters but that the questions before the Board had been reduced to three, viz:—

(*a*) Rates of pay,
(*b*) Basic day,
(*c*) Effective date,

the Board, therefore, decided to proceed in the hearing of the parties.

The employees were represented by Messrs. H. Day, L. Sanguinet, and William Love, all conductors and motormen in the employ of the Company; and the Company was represented by Messrs. A. E. Crilly, W. B. Powell, and W. O. Lever, all officials of the Montreal and Southern Counties Railway Company. Mr. D. E. Galloway, Vice-President of the Company, and Mr. W. J. Babe, Vice-President of the Brotherhood of Railroad Trainmen, also followed the proceedings, representing their respective interests.

The employees and the Company brought out arguments in support of their contention, and, having listened attentively to evidence offered by both sides and having taken cognizance of statements furnished, I am sorry indeed to say that I cannot consistently concur in the findings of the majority of the Board and wish to cast my dissenting vote and beg to offer reason for such a decision.

Evidence was brought forward that the Montreal and Southern Counties Railway Company should be considered similar to a steam railroad. My opinion is that this Company is no more than one of the many small other electric railway companies operating outside of their territory in an effort to reach enough returns to meet its financial obligations. It is, therefore, for comparison's sake, an electric suburban and inter-urban company, pure and simple.

In the matter of wages, the Company has proven to my satisfaction that its employees were remunerated for their service, not only as well as all other employees doing the same kind of work, but, it was clearly shown, that the rates of weekly wages were higher than are being paid on other electric railways operating in the Province of Quebec.

Official statements filed by the Company represented that the salaries had not only been increased since 1914 to a much greater extent than any increase in the cost of living, but a graphic prepared showed quite a margin for improved living conditions.

It was further demonstrated that in addition the employees had the privilege of free transportation for themselves and families over the entire system of the Canadian National Railways, a privilege not generally granted to employees of other electric railway companies.

The Company also furnished proof that this Railway had since 1914 been operated at a loss. It was also shown that the employees are receiving rate of wages superior to the wages received by other semi-skilled employees in industrial plants in the same territory served by the Company.

This is evidenced by the statements filed of wages paid to conductors, motormen and trainmen, during the months of July and October, 1925, and January, February and March, 1926.

Referring to the basic day, beg to state that from my experience of some thirty years in electric railway work on electric railways in Canada I can say without hesitation that on a suburban and inter-urban company, such as the one involved in this case, and the character of service they are called upon to perform, with peak load traffic movements morning and evening in one only direction, requiring a number of extra short runs, it is impracticable from an economic point of view to operate a service of this kind under the stringent limitations of a set basic day.

The copy of schedules filed with the Board clearly shows that the Company is endeavouring to offer to its employees a day's work of about 10 hours when it is practical, but, as it is necessitated by conditions to run a number of extra cars to fill in the requirements of the traffic, this is not always possible.

For all the above reasons, I beg to respectfully submit that in my opinion the evidence submitted by both parties in this case does not indicate that there is justification for granting an increase of wages at this time; considering the wages actually paid and the financial position of the Company, there is no reason to recommend the establishment of a basic day.

Therefore, and as much as I would wish and see the desirability for an unanimous report, I am compelled to present this separate report based solely upon the conditions as revealed.

Respectfully submitted,

(Signed) A. GABOURY,
Member, Board of Conciliation.

CANADIAN NATIONAL RAILWAY EMPLOYEES' BOARD OF ADJUSTMENT No. 2

REPORTS have been received of seven cases recently settled by the Canadian National Railway Employees' Board of Adjustment No. 2.

This Board was established towards the end of 1925 for the purpose of adjusting disputes arising between the management of the Railways and the clerks and certain other office and station employees The classes of employees coming under the Board are those given in the schedule of rules governing these classes which is contained in the existing agreement between the Railways and the Canadian Brotherhood of Railway employees.

Board of Adjustment No. 2 is composed of the following members:—

Representing the railway—Messrs. H. Morton, Moncton, N.B., J. F. Aitchison, Toronto, Ont.; George Turvey, Toronto, Ont.; W. A. Kirkpatrick, Saskatoon, Sask.

Representing the employees—Messrs. A. R. Mosher, Ottawa, Ont.; M. M. McLean, Ottawa, Ont.; N. L. Preston, Winnipeg, Man.; and C. H. Minchin, Calgary, Alta.

An outline of earlier cases dealt with by the Board was given in the March issue of this GAZETTE.

Case No. 12—Operating Department, Western Region.

A clerk on the timekeeping staff was laid off, with other employees, on a reduction in working forces. As junior employees had been retained, he claimed he should have been given preference of employment in accordance with the Rule (k) of Article 3 which provides that when a reduction in forces takes place the senior employees with sufficient ability to perform the work shall be retained. The Board found that the claimant in this case had been dismissed for cause and denied the claim.

Case No. 13—Accounting Department, Atlantic Region.

This case arose out of Case No. 8, reported in the LABOUR GAZETTE, December, 1925, page 1178. The ruling in that case was that the position of Material Distribution Clerk must be bulletined when a vacancy occurs, and the position awarded to the senior qualified applicant. As the result of this ruling certain changes were effected in the Auditor of Disbursements Office at Moncton. Among other changes, a timekeeper was demoted to the position of Register Clerk, his salary being reduced from $135 to $123, which is the rate for this position in the schedule covering the Stores and Mechanical Accounts Office. The employees contended that the salary of the new position should be $135, at which it was rated in the list submitted by the general comptroller of the staff of the Auditor of Disbursements Office in 1923. The railway replied that the latter list contained only proposed rates, which if accepted would involve decreases in the rates now being paid for some positions.

The Board denied the claim of the employees.

Case No. 14—Accounting Department, Atlantic Region.

A "referencing clerk" in the Auditor of Disbursements Office at Moncton, claimed that he had seniority rights which had been ignored in connection with an application he had made for the position of Assistant Store Order Clerk. The question at issue was whether or not the applicant should appear in the seniority list of the staff. The applicant contended that his name had appeared on this staff since 1923. On behalf of the railway it was stated that special arrangements had been made for this man, but it was admitted that by an oversight his name appeared on the seniority list.

The Board sustained the employees' claim.

Case No. 15—Accounting Department, Central Region.

This case concerned the question of seniority in connection with an appointment to the position of Shippers Claims Investigator at Montreal. Three men applied for this position, the first two having higher seniority in point of time, and the third being in a higher grade than the other two. The third applicant obtained the appointment. The railway contended that the promotion was made in accordance with a special agreement of 1924, dealing with a previous grievance. The Board decided that the senior qualified applicant should be awarded the position.

Case No. 16—Accounting Department, Central Region.

A position scheduled as "In Charge of Sections, Station Outstandings" rated at $160 per month, in the Auditor of Agencies Office, became vacant on November 4, 1925. The position was not bulletined, but was abolished insofar as supervisory feature was concerned. A rearrangement of the work was made and a position as clerk at a rate of $136 per month previously abolished was revived. An employee in the same office claimed to be next in line for this promotion, alleging that the position should have been bulletined in

accordance with Article 3 of the schedule which required that all vacancies be bulletined for five days; and further that the abolition of the position had violated Article II, Rule (d), which provides:

"Established positions shall not be discontinued and new ones created under a different title covering relatively the same class of work for the purpose of reducing the rate of pay."

On behalf of the Railway it was stated that conditions in the office were in an unsatisfactory condition and a consolidation was carried out, some of the employees being relieved of their supervisory duties. In regard to Article II it was explained that the position held by the claimant was different from that held by him before the rearrangement, and that the schedule does not require the continuance of positions where there is not sufficient work to maintain them.

The Board denied the contention of the employees.

Case No. 17—Accounting Department, Central Region.

This case was in regard to an appointment to a clerical position scheduled as "In Transit Investigator," in which the employees claimed seniority should have ruled. The position was bulletined for 5 days as required. The claimant filled the position of "Car Demurrage Checker" at a schedule rate of $96. Prior to the consolidation of the various accounting staffs (referred to in the preceding case) this position was rated at $106. In order to avoid hardship on the employees through this reduction, the management agreed to pay the employees the former rates until the positions should become vacant, when the new schedule rates would apply, the difference being granted as a "temporary allowance." The claimant was never informed that his schedule rate had been reduced, and was therefore ignorant of the effects it would have on his seniority and promotion. The successful applicant held a position scheduled at $106 per month, and was therefore considered as the senior applicant.

The management contended that they had considered only the permanent rate in determining the seniority of the applicants, and the employees contended that the claimant had been unjustly dealt with as regards promotion.

The Board sustained the employees' claim.

Case No. 18—Parlour, Sleeping and Dining Car Department.

The steward, waiter and chef on a café-parlour car in the Montreal-Rivière à Pierre Service, were alleged by constables of the Investigation Department of the railway to have misappropriated revenue of the railway on two occasions, the amount being $1.55 and $1.30. The constables alleged that the crew collected money from them for two meals but that the meal check covered only one meal. Following an investigation the three members of the crew were dismissed.

The Board held that the evidence submitted as to the misappropriation of the railway's revenue did not appear to be sufficiently conclusive to warrant dismissal of all three employees involved, and that the employees had not been given one day's notice of the investigation as required by article II of the schedule.

The decision of the Board was that the three employees be reinstated and that, if desired, the Railway then hold another investigation in accordance with the schedule

Training of Prospective Emigrants from Great Britain

The British Ministry of Labour made arrangements last year to establish four training centres, two non-residential centres in large towns, and two residential centres in country districts. The training consisted of a six months course for the benefit of unemployed young men without opportunity of learning a skilled trade. The men in non-residential centres are trained with a view to employment in Great Britain. About half the men in residential centres are trained with a view to employment overseas. The four training centres are at Birmingham, Wallsend-on-Tyne, Claydon (Essex), and Brandon (Suffolk). The British *Ministry of Labour Gazette* states that of the men who were trained at Claydon Centre in agricultural and other work for employment overseas, 43 are now employed on farms in Western Ontario and 51 embarked for Australia during May. The places at the Centre thus vacated have been filled with intending settlers for Australia. Pending the completion of hutments, the accommodation at the Brandon Centre is limited to about 80 places. None of the ment at this Centre have as yet completed the full 6 months' course, but about 60 of them have already been passed by the immigration authorities for employment in Canada. These men were expected to embark about the end of June.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1926

THE number of strikes and lockouts in existence during June was 13 as compared with 16 during May. The time loss for the month was less than during June, 1925, being 45,348 working days, as compared with 320,594 working days in the same month last year. The considerable time loss and number of employees involved in June, 1925, were chiefly due to the cessation of work involving coal miners in Nova Scotia, from March to August.

Date	Number of disputes	Number of employees involved	Time loss in working days
June, 1926	13	2,237	45,348
May, 1926	16	4,016	59,936
June, 1925	23	14,761	320,594

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Seven disputes, involving 1,858 work people, were carried over from May, and six disputes commenced during June. Two of the strikes and lockouts commencing prior to June, and five of the strikes and lockouts commencing during June, terminated during the month. At the end of the month, therefore, there were on record six strikes and lockouts, as follows: boot factory employees at Toronto; boot factory employees at Quebec; hat and cap makers, Montreal; bookbinders at Montreal; moulders at New Westminster and Vancouver, and coal miners (pit boys) at New Waterford, N.S.

The record does not include minor disputes as described in the third paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet declared them terminated. Information is available as to nine such disputes, namely: cigarmakers at Montreal, commencing March 24, 1925; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Owen Sound, January 19, 1925; upholsterers at Montreal, June 27, 1925; stage hands at Vancouver, January 9, 1926; musicians at Vancouver, January 11, 1926; men's clothing factory workers, Montreal, March 19, 1926, and firemen and engineers at New Westminster, May 17, 1926.

Of the strikes and lockouts commencing during June, five were for increased wages and the sixth one was against the discharge of employees. Of the strikes and lockouts which terminated during the month, two were in favour of the employers; in two other cases the employees were partially successful, and in three other cases compromises were effected.

The following notes give particulars in regard to certain disputes in addition to information given in the tabular statement.

BOOT AND SHOE FACTORY WORKERS, QUEBEC, QUE.—In regard to the dispute of boot factory employees which occurred at Quebec on May, 3, involving some 1,500 employees in a strike not authorized by the union following an arbitration award, it was reported early in June that the boot and shoe manufacturers' association had issued a statement that they had no intention of renewing negotiations with the union involved, and would operate their factories under open shop conditions. Conflicts between pickets and workmen occurred during the month, and in some cases arrests were made and terms of from one to two months' imprisonment were imposed. Relief was given the strikers' families from funds secured from various organizations and individuals. This dispute remained unterminated at the end of the month.

MEN'S CLOTHING FACTORY EMPLOYEES, MONTREAL, QUE.—In regard to the cessation of work on March 19, of 100 clothing workers at Montreal in protest against an alleged violation of the agreement, the employer opening a new factory in which non-union help was to be employed, it was reported that from time to time the workers secured employment elsewhere until at the end of June none were out on strike, but the union had not called off the strike.

FIREMEN AND ENGINEERS, NEW WESTMINSTER, B.C.—In connection with the strike of six firemen and engineers ceasing work on May 17, when their demand for increased wages was refused, at the end of June employment conditions appear to have been no longer affected (as the strikers reported they had secured work elsewhere), but the strike had not been called off.

STRIKES AND LOCKOUTS DURING JUNE, 1926

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to June, 1926.			
MANUFACTURING—			
Boots and shoes (other than rubber and felt):			
Boot factory employees, Toronto, Ont.	40	1,000	Commenced January 13, against changes in working conditions alleged to be in violation of agreement. Unterminated.
Boot factory employees, Quebec, Que.	1,500	37,500	Commenced May 3, against reduction in wages awarded by arbitrators. Unterminated.
Clothing (including knitted goods):			
Hat and cap makers, Montreal, Que.	10	250	Commenced March 4, against alleged violation of agreement. Unterminated.
Men's clothing workers, Montreal, Que.	9	.....	Commenced March 19, against alleged violation of agreement. Information received indicates employment conditions no longer affected but union still claims strike in existence.
Saw and planing mills:			
Firemen and engineers, New Westminster, B.C.	6	.....	Commenced May 17, for increased wages. Information received indicates employment conditions no longer affected, but union still claims strike in existence.
Printing and publishing:			
Bookbinders, Montreal, Que..	5	125	Alleged lockout commenced March 9, of members of certain unions. Unterminated.
Iron, steel and products:			
Moulders, Vancouver and New Westminster, B.C.	100	2,500	Commenced April 1, for increased wages. Unterminated.
CONSTRUCTION—			
Buildings and structures:			
Sheet metal workers, Ottawa, Ont.	103	927	Commenced May 1, for increased wages. Settled by negotiations and work resumed June 14; compromise.
TRANSPORTATION AND PUBLIC UTILITIES—			
Water transportation:			
Dock labourers, Port Alfred, Que.	100	100	Commenced May 26, for increased wages. Settled by negotiations and work resumed June 2. In favour of employers.
(b) Strikes and lockouts commencing during June, 1926.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners (landing tenders), Glace Bay, N.S.	50	75	Commenced June 18, for increased wages. Settled by negotiations and work resumed June 19; compromise.
Coal miners (pit boys), New Waterford, N.S.	70	560	Commenced June 21, against discharge of employees; work resumed June 22; discharged employees reinstated.
CONSTRUCTION—			
Buildings and structures:			
Carpenters, Victoria, B.C.....	80	1,760	Commenced June 1, for increased wages. Settled by negotiations and mediation of Deputy Minister of Labour for British Columbia. Work resumed June 22; compromise.
Labourers (building), Halifax, N.S.	44	176	Commenced June 11, for increased wages. Work resumed about June 15; in favour of employers.
TRANSPORTATION AND PUBLIC UTILITIES—			
Water transportation:			
Dock labourers, Port Alfred, Que.	125	375	Commenced June 10, for increased wages. Settled by negotiations and work resumed June 14; employees partially successful.
SERVICE—			
Personal and domestic:			
Barbers, Ottawa, Ont.....	10	10	Commenced June 3, for increased wages. Settled by negotiations and work resumed June 4; employees partially successful.

SHEET METAL WORKERS, OTTAWA, ONT.—A settlement of the dispute involving 100 sheet metal workers who ceased work at Ottawa on May 1 for an increase in wages from 80 cents per hour to 90 cents per hour, was effected on June 11, after several meetings had been held. An agreement was reached whereby work was resumed on June 14 at 83 cents per hour until May 1, 1927, and 85 cents per hour for the ensuing twelve months.

DOCK LABOURERS, PORT ALFRED, QUE., MAY 26.—Regarding the strike on May 26 of 100 dock labourers when their demand for an increase in wages was refused, on June 1, the strikers returned to work, apparently without any change in conditions.

DOCK LABOURERS, PORT ALFRED, QUE., JUNE 10.—Following the dispute of dock labourers at Port Alfred in May, causing a cessation of work from May 26 to June 1, another dispute arose owing to a demand for increased wages causing another cessation of work from June 10 to June 14. Pickets were placed about the docks to prevent others from either going to work or signing up with the employer, and when further trouble arose police were brought in from Chicoutimi. It has been reported that some concessions in wages were made and work was resumed June 14.

COAL MINERS, (LANDING TENDERS), GLACE BAY, N.S.—On June 18, 50 landing tenders in a colliery at Glace Bay ceased work when a demand for a change in wages was refused, some 500 employees out of 1,200 being involved directly during that shift or the next. A local contract with piece rates, expected to yield higher earnings, was arranged.

COAL MINERS (PIT BOYS), NEW WATERFORD, N.S.—A cessation of work occurred at New Waterford on June 22, when 70 pit boys ceased work on account of the dismissal or suspension of two boys who had left off work before the regular hour. This caused the mine to be shut down and after the return to work the disciplined employees were reinstated at the request of the union, the executive of which found that they had been justifiably laid off.

CARPENTERS, VICTORIA, B.C.—A strike of 80 carpenters occurred at Victoria on June 1, for an increase in wages from $6 to $7 per day. Several conferences were held and the Deputy Minister of Labour for British Columbia met both sides to the dispute. Finally a settlement was arrived at whereby an agreement was reached providing for $6.50 a day from June 26 to September 1, and $7 per day thereafter. Work was resumed June 26.

LABOURERS, (BUILDING), HALIFAX, N.S.—Forty-four labourers at Halifax ceased work on June 11, when their demand for an increase in wages from 30 cents to 35 cents per hour was refused. After four days 17 returned to work, and the remainder sought work elsewhere.

BARBERS, OTTAWA, ONT.—A cessation of work involving about 10 barbers in three shops occurred at Ottawa on June 3, an increase in wages being refused. The union attempted to secured new agreements with a number of master barbers providing for an increase in wages from a minimum of $20 per week plus 50 per cent of receipts over $31, to a minimum of $25 per week plus 50 per cent of receipts over $35, previous agreements having expired April 30. Most of the master barbers signed an agreement providing for a minimum of $25 per week plus 50 per cent of receipts over $34. It was reported that some of the shops involved agreed to these terms after one day's cessation of work.

The Ottawa Allied Trades and Labour Association at a meeting on June 20, issued a call to all units of organized labour in Canada to take action in view of the recent decision of the Supreme Court of Canada in regard to picketing. It was suggested that legislation should be sought establishing the lawfulness of picketing without violence, and that definite action be taken in this direction through the Trades and Labour Congress of Canada.

The Department of Health of Ontario is undertaking an investigation for the purpose of securing by means of future legislation the protection of workmen employed in compressed air. This action is being taken in consequence of the recent death at Toronto of a man who was working under this condition.

During the summer of 1925 a farm hand agreed with a farmer in the Moose Jaw district of Saskatchewan to work for the season until "freeze-up," at a monthly wage of $35. After working for three months he left the employment, and the farmer refused to pay wages for the time he had worked. The case was brought before the provincial police court at Moose Jaw in June, the hired man claiming $100 alleged to be due from the farmer as wages. The justice of the peace held that he had broken his contract of employment, and was therefore not entitled to any pay for his work. The action was dismissed without costs.

LABOUR SUBJECTS AT RECENT SESSION OF DOMINION PARLIAMENT

THE First Session of the Fifteenth Parliament of the Dominion of Canada opened on January 8, and continued until July 2, when Parliament was dissolved.

No new labour legislation was completed during the session, but various subjects of interest to labour were discussed and action in regard to some of these was taken. Reference has been made in recent issues of the LABOUR GAZETTE to some of the proceedings in the Senate and House of Commons.

Old Age Pension Bill

The last issue contained a note on the Senate's rejection by 45 votes to 21 of the proposed Old Age Pension Act which had been passed by the House of Commons. The Bill followed the lines of the resolution adopted by the House in March, which was reprinted in the LABOUR GAZETTE for March. Briefly, it was proposed to establish a system of old age pensions in Canada, under which the Dominion Government would contribute to the various provinces one-half the net amount paid out by them in pensions, the payment of pensions being contingent upon the passing of legislation in the individual provinces to take advantage of the federal act, making it effective in their respective areas. Old age pensions were to be granted to British subjects of the age of 70 years or over resident in Canada for 20 years, and resident for five years in the province in which application is made. The maximum pension was to be $240 a year, subject to reduction by the amount of the pensioner's income, if any, in excess of $125 a year.

Proposed Immigration Act Amendment

A bill to amend the Immigration Act was passed by the House of Commons on June 7 but was rejected by the Senate. This bill which was the subject of considerable discussion in both Houses, proposed to repeal section 41, which was enacted in 1919. Its purpose was stated in an explanatory note as follows:—

(a) To make deportation for certain causes dependent upon a conviction in Canada, under Part II of the Criminal Code, relating to offences against public order, rather than upon a hearing before a Board of Inquiry, concerning certain offences under section 41 of the Immigration Act;

(b) To remove the discrimination against the British born as it stands in the existing section, by recognizing his Canadian citizenship as in the case of the alien born who has been naturalized in Canada.

Section 40 of the Immigration Act provides that any person other than a Canadian citizen or person having Canadian domicile, and belonging to certain undesirable classes, may be reported by the municipal authorities to the Minister of Immigration.

Section 41, which it was proposed to repeal, reads as follows:—

41. Every person who by word or act in Canada seeks to overthrow by force or violence the government of or constituted law and authority in the United Kingdom of Great Britain and Ireland or Canada, or any of the provinces of Canada, or the government of any other of His Majesty's dominions, colonies, possessions or dependencies, or advocates the assassination of any official of any of the said governments or of any foreign government, or who in Canada defends or suggests the unlawful destruction of property or by word or act creates or attempts to create any riot or public disorder in Canada, or who without lawful authority assumes any powers of government in Canada or in any part thereof, or who by common repute belongs to or is suspected of belonging to any secret society or organization which extorts money from or in any way attempts to control any resident of Canada, by force or by threat of bodily harm, or by blackmail, or who is a member of or affiliated with any organization entertaining or teaching disbelief in or opposition to organized government shall, for the purpose of this Act, be deemed to belong to the prohibited or undesirable classes, and shall be liable to deportation in the manner provided by this Act, and it shall be the duty of any officer becoming cognizant thereof and of the clerk, secretary or other official of any municipality in Canada wherein any such person may be, forthwith to send a written complaint to the Minister, giving full particulars: Provided, that this section shall not apply to any person who is a British subject, either by reason of birth in Canada, or by reason of naturalization in Canada.

2. Proof that any person belonged to or was within the description of any of the prohibited or undesirable classes within the meaning of this section at any time since the fourth day of May, one thousand nine hundred and ten, shall for all the purposes of this Act be deemed to establish prima facie that he still belongs to such prohibited or undesirable class or classes.

The purposes of the proposed legislation were summed up by the Honourable Senator Dandurand, government leader in the Senate. Referring to the proviso contained in the concluding lines of the section he said: "This proviso does not include the Britisher who has acquired Canadian domicile. 'Any person who is a British subject by reason of birth in Canada' means any Canadian born here, as most of us have been. Any person who is a British subject by reason of naturalization in Canada means any alien, not a Britisher, who has come to Canada and become a naturalized subject. The British-born coming from other parts of the British Empire are thus excluded. They can gain Canadian domicile by five years' residence, under clause 40, but they shall not be excepted from

the operation of clause 41. An alien coming from any part of the globe who obtains his letters of naturalization in Canada cannot be deported without a trial. He cannot be deported at all under this clause, for the simple reason that the acquisition of his Canadian nationality has deprived him of any country to which he might be deported. But the Britisher who comes from the British Isles, who is not a British subject by reason of birth in Canada or naturalization in Canada, can be deported even if he has been here thirty or thirty-five years." The section, it was thought, "puts altogether too much power into the hands of the Board of Inquiry, which, according to section 22 of the Immigration Act, may be composed of but one officer, who in the very nature of things may be a man largely if not wholly without legal training.... It is in the public interest" he continued, "and more in accord with British methods of justice that determination of undesirability as defined by section 41 of the Immigration Act shall be left to our regular courts of justice rather than to the decision of an Immigration Board. Canada is amply protected when provision is made for deportation of a person convicted of a criminal offence in Canada. I have read clause 40, which is to remain in the Act, and which declares that anyone may be deported who has been convicted of a criminal offence in Canada. The deportation of such person is provided for in section 40 of the Immigration Act. The undesirable classes of section 41, to be repealed, are included in Part II of the Criminal Code, and therefore the repeal of section 41 does not remove the power of deportation. It merely makes it dependent upon a court conviction rather than on the order of an Immigration Board. Labour also considers it is a discrimination against the British-born to make him liable to deportation regardless of his length of residence in Canada, when aliens naturalized in Canada are placed beyond the power of deportation the moment they become naturalized. No person has yet been deported under the authority of section 41 of the Act of 1919; there is therefore no ground for believing that the repeal of section 41 will remove any power or authority now exercised for the protection of Canada."

The Honourable Mr. Dandurand further stated that labour people say that Parliament is giving immigration agents a power which should belong to the courts.

The Honourable W. B. Ross, leader of the Opposition, in opposing the bill, said: "Some nine years ago this Parliament passed the law which it is now proposed to repeal. At that time the consensus of opinion in Parliament was that the measure was necessary. It has been on the Statute Book ever since, and I understand there has never been any injustice or wrong done to anyone under it, though the administration of it has been in the hands of the immigration authorities all the time. This is the fourth, or at least the third, time it has been proposed to repeal section 41. Under the law as it stands now a man may be dealt with by a Board if there is a strong suspicion of his being an undesirable citizen. Having been dealt with by the Board, if he is ordered to be deported, he has an appeal to the Minister. Now, I am not ready to-day to go back upon the position that this House has taken from the time it gave its sanction to section 41 of the Immigration Act until the present time. There are, I suppose, differences of opinion in the House, but I see no necessity for this amendment being made now. The time may come when this House may prepare a Bill dealing with both the Immigration Act and the criminal law of this country. But the thing is very much mixed up, and when the time comes to deal with it—which I think has not yet arrived—it will have to be dealt with with a great deal of care and at a juncture when the House has abundance of time to study every word and every clause in the Bills which are presented. The position I take is that this Bill is entirely premature. This matter can very well stand over for the future, because there is not the slightest chance of any honest, law-abiding man who comes into this country being in any way molested under this provision."

The motion for the second reading of the bill was negatived on a division by 35 votes to 16.

Proposed Criminal Code Amendment

The House of Commons on June 4 passed a bill for the amendment of the Criminal Code. This bill, like the proposed amendment to the Immigration Act, was identical in its aims with bills introduced at three previous sessions of Parliament and met with a similar fate. Among other changes it was proposed to repeal the two sections 97A and 97B which were enacted in 1919, some time after the labour disturbances in Western Canada and to re-enact section 133, which was repealed in the same year. The two sections which it was desired to repeal gave the right to police officers on the warrant of a justice of the peace to search the papers of a citizen who is supposed to be a member of an association "whose professed purpose or one of whose purposes is to bring about any governmental, industrial or economic change within Canada by use of force, violence, or physical injury to person or property, or by threats of such

injury, or which teaches, advocates, advises or defends the use of force, violence, terrorism, or physical injury to person or property, or threats of such injury, in order to accomplish such change, or for any other purpose, or which shall by any means prosecute or pursue such purpose or professed purpose, or shall so teach, advocate, advise or defend." Any one attending meetings of such an association would be guilty of the crime of sedition, and liable to a penalty of twenty years' imprisonment. A similar penalty is fixed for printing, circulating or importing seditious literature, that is, advocating the use of force as above defined. The former section 133, exempts from the definition of sedition the intention to point out errors or defects in the existing system of government.

The Honourable Ernest Lapointe, Minister of Justice, made the following statement in explanation of the amending bill:

"These two sections which we intend to repeal were added to the Criminal Code in 1919. I do not say that they were placed in the act on account of events in Winnipeg, although it was done after those events. But it was explained at the time that owing to the period of unrest through which the world was passing it would be important to place those sections in the act which, if not enlarging the powers already given under the clauses relating to sedition, would at least make them more definite in certain ways. It was further explained that they were intended to replace to a large extent, certain provisions which had been made during the war under the War Measures Act by way of orders in council. Since that time labour in general, but especially organized labour, has continually and strongly complained about these two sections. Every year since I have been a member of the government representatives of the Trades and Labour Congress, when they came annually to present their suggestions to the government, have asked that these two sections might be repealed, leaving the situation as it was prior to 1919. They have always feared that the sections in question would be directed against the activities of labour unions, although those who are responsible for the insertion of the sections in the code always claimed that such was not the intention. At all events we have already in the code sufficient protection as to everything against which we should be protected in the matter of sedition. We have those precautions in section 87 and also provisions concerning unlawful assemblies. We find provisions in section 130 regarding sedition, oaths or engagements in societies; in section 132 against seditious works, seditious libel and seditious conspiracy, in section 135 against any libel on a foreign sovereign, and in section 136 against publishing false news. Sedition under the British law, of course, is an old offence, but there has never been a strict definition of sedition. I think it was in 1880 that the British commissioners who were entrusted with the work of drafting the English code inserted a clause defining seditious intention. That clause read as follows:

> An intention to bring into hatred or contempt or to excite disaffection against the person of Her Majesty, or the government and constitution of the United Kingdom or of any part of it as by law established, or either House of Parliament, or the administration of justice; or
>
> to excite Her Majesty's subjects to attempt to procure, otherwise than by lawful means, the alteration of any matter in church or state by law established; or
>
> to raise discontent or disaffection amongst Her Majesty's subjects; or to promote feelings of illwill and hostility between different classes of such subjects.

"This was not made part of the British code; parliament rather preferred to let the tribunals decide as to sedition under the common law as the practice had always been in the past. The same thing happened in Canada. When our Criminal Code was introduced in parliament there was a clause similar to the one which had been drafted by the commissioners of the English code. Here also, after a good deal of discussion and criticism, both in committee and in the House, the clause was not accepted, and we were left with the old British law concerning sedition and governed by the common law of England. This has always worked well in Canada, as well as in Great Britain, and I am firmly convinced that the sections which were added in 1919, on account, as was said at the time, of the unrest which prevailed in the world, are not at all necessary. I asked the officers of the Department of Justice to ascertain whether any prosecutions had ever been made under these sections, and I was told that they could find no record of any. I do not think there is any reason why we should not accede to the requests of the Labour unions, in which they are supported by the railway brotherhood. Their representatives have come here every year, and especially this year, and insisted very strongly upon their requests. They have a feeling that these provisions are directed against organized labour. I do not think that such was the intention, but owing to the fact that we are amply protected by the sections of the Criminal Code as they are and as they were, we are asking the repeal of those two sections."

The bill was passed by the House of Commons after a prolonged debate but without a division. The Senate, however, negatived it in so far as concerned the sections already mentioned.

Resolution on Minimum Wage

The House of Commons on March 15 considered a resolution moved by Mr. J. S. Woodsworth, Winnipeg North Centre, "that in the opinion of this House a wage sufficient to provide for a reasonable standard of living should constitute a legal minimum wage." The subject matter of the resolution was, on the motion of the Prime Minister, referred for further consideration to the committee on Industrial and International Relations.

The final report of the committee was presented to the House of Commons, on June 16, and adopted without opposition on June 30, as follows:—

Wednesday, June 16, 1926.

The select standing committee on Industrial and International Relations beg leave to present the following as their second and final report.

In the House of Commons on March 17th, the resolution, "That in the opinion of this House a wage sufficient to provide for a reasonable standard of living should constitute a legal minimum wage" was referred to the select standing committee on Industrial and International Relations for examination and report.

Your committee has held several meetings and made a careful examination of the said resolution, having regard to the labour provisions of the Treaties of Peace and the jurisdiction of the Dominion parliament, and the provincial legislatures. Six witnesses in all were examined. The witnesses who appeared before your committee and the subjects respectively dealt with were:—Assistant Deputy Minister of Labour, Gerald H. Brown, who traced the history of minimum wage legislation in Canada and the contribution the federal Department of Labour was trying to make to the effective solution of the many problems arising in the realm of labour in the Dominion; W. Stuart Edwards, Deputy Minister of Justice, who gave a legal opinion on the question of jurisdiction involved in the resolution under examination; C. W. Bolton, statistician, Labour department, who took up the question of family budgets considered from the point of view of living wages; Margaret S. Gould, Research department of the Canadian Brotherhood of Railway Employees, who further continued the discussion in a specific and detailed manner on family budgets; Albert Hewiston, departmental superintendent, Canadian Colored Cottons Limited, Cornwall, Ontario, who made a statement of the wages and conditions existing in a typical Ontario factory town; and Dr. J. W. MacMillan, Chairman of the Minimum Wage board, who explained minimum wage administration.

The labour principles embodied in the Treaty of Versailles and the other Treaties of Peace recognized the well-being physically, morally and intellectually of industrial wage earners. They are nine in number, the third of which is "The payment of the employees of a wage adequate to maintain a reasonable standard of living as this is understood in their time and country." The latter clause of the Peace Treaty was explained by Gerald H. Brown, Assistant Deputy Minister of Labour, when he gave evidence to the effect that "The labour part of the Peace Treaties opens with the declaration that if we are going to have peace in the world it must be based on social justice, and there must be a world-wide acceptance of reasonable living and working conditions, and that the principle which is enunciated in the Peace Treaties, and the principle which has already been endorsed by Canada through its acceptance of the Peace Treaties and its approval by parliament and ratification by proper diplomatic authorities on our behalf constitute acceptance of the idea of minimum wages."

The evidence presented by Dr. MacMillan showed that the principle of the minimum wage as applied to women was working out most satisfactorily. His words, "The very convincing appeal which the Minimum Wage principle makes to the world, is of this nature; it is an assertion of the preciousness, or if you prefer sacredness; the supreme sacredness of human life—the right of the worker to live from his work." Dr. MacMillan further states that if the principle has been applied to women workers and found satisfactory there is no reason why its scope should not be extended to men. He says, "There seems to be no reason why if this principle is good for women's wages, it should not be applied at least to some classes of men's wages, as a provision that the proper type of law should first be passed and then that the proper type of administration of this law should be applied. It is to be noted in this connection that the British Columbia Legislature at its last session passed a minimum wage act for men applicable to most phases of industrial activities, and that the board appointed to carry out the act is now engaged obtaining data and evidence to enable it to fix the minimum wage for the lumbering industry, the first industry to be dealt with.

The evidence of family budgets given by Mr. Bolton and Miss Gould showed the items of family expenditures and the cost in Canada of such budgets. The evidence also showed that some workers in Canada are receiving less than will enable them to adequately maintain this standard. Such an injustice is manifestly unfair and unbusinesslike inasmuch as it costs the country much, involving, as it does, an excess of unrest, ill-health and crime.

It was stated by the Deputy Minister of Justice that according to the British North America Act legislative jurisdiction in regard to minimum wages is vested primarily in the provincial legislatures. He also quoted section 132 as follows: "The parliament of Canada shall have all powers necessary or proper for performing the obligation of Canada or any provinces thereof as part of the British Empire, towards foreign countries, arising out of any treaty between the empire and such foreign countries." Commenting on this he said "There can be no doubt that where Canada has entered into an obligation by treaty—and in that connection I mean an association with the empire of course—within the meaning of section 132, which I have just read—I do not think there is any doubt but that parliament has power to legislate for the purpose of carrying into effect the provision of the treaty." This opinion goes to show that the British North America Act by no means contemplates industrial problems of the kind and scope to which Canadians to-day must adjust themselves.

Your committee accordingly recommend (a) That a conference of provincial and Dominion representatives intimately in touch with labour conditions throughout Canada be held in the near future to consult as to the best means to be employed of giving effect to the labour provisions of the Treaties of Peace; (b) That 10,000 copies of the present report and the evidence

upon which it is based be printed, these to be distributed by the Department of Labour, and that Rule 74 be suspended in connection therewith.

All of which is respectfully submitted,

CAMERON R. MCINTOSH,
Chairman.

Government Policy on Unemployment Relief

The Government's policy in regard to unemployment relief was communicated to Parliament early in the session and was set forth in an Order in Council in March (P.C. 315. The text of this Order was given in the LABOUR GAZETTE for that month (page 237). It was stated in the Order in Council that the problem of unemployment relief is regarded as being primarily one of municipal and provincial responsibility. The Federal Government expressed itself in the Order in Council as willing, however, where distress exists as the result of unemployment to such an extent that the local authorities are unable to cope with it, to co-operate with the municipal and provincial governments in bearing a share of the cost of relief measures during the period January 1—March 31, 1926. It was also provided that requests for such co-operation and assistance must come from the municipal authority concerned through the provincial authority in each case.

Productive Labour for Prisoners

The House of Commons, on March 31, without opposition, adopted a resolution moved by Miss Macphail, member for South-East Grey, "that, in the opinion of this House, the administration of penitentiaries be amended to provide: first, sufficient productive work to keep the inmates employed; and, second, that a share of the proceeds go to dependents, and in case of no dependents such share to be held in trust until release."

This resolution is in conformity with a recent proposal of the Trades and Labour Congress of Canada that steps should be taken to give effect to the report of the Prison Reform Commission of 1921. This commission emphatically recommended statutory provision to provide productive labour for all convicts. The report said "such provision need not extend to any work except for what is known as state use and can, in Canada, not extend any compulsion beyond the federal service, but the evidence taken by the Commission has satisfied it that manufactures within this limitation will afford much more than ample scope for all the industry and activity which the penitentiaries can put forth."

Workers Right of Contract for Wages

The House of Commons, on March 18, adopted the following resolution on the motion of Mr. A. W. Neill (Comox-Alberni) seconded by Mr. A. A. Heaps (Winnipeg North):

"That, in the opinion of this House, every effort should be made to affirm and establish the full industrial freedom of the citizens of Canada to bargain for their services on all industrial contracts and works; that the exploitation of labour should be prevented and condemned; that no person should be induced or compelled by undue influence, threats of dismissal, loss of wages or position or by any other unfair and improper means, to work for wages less than the standard or to engage in work which he has not agreed to do; that in all cases such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out should be enforced and paid; and that this House will, so far as it is within the jurisdiction of parliament, endorse every reasonable and legitimate proposal to preserve such industrial freedom of contract and action, and will co-operate with the several provinces in these objects to provide for uniform legislation throughout Canada."

This resolution was suggested by a discussion in the House of the question of the payment of emergency labour such as that required for fighting forest fires.

The various provincial laws on this subject show a wide diversity in regard to the requisitioning of such labour (LABOUR GAZETTE, April, 1926, page 305), and the Prime Minister made this discussion the occasion of a plea for uniformity of legislation throughout Canada with respect to industrial standards in general.

Utilization of Workers' Spare Time

The Acting Minister of Labour on February 22 laid on the table of the House of Commons the Recommendation adopted by the International Labour Conference at its sixth session in 1924 concerning the development of facilities for the utilization of workers' spare time, together with the text of an order in council dealing with the extent to which the subject matters of the Recommendation fall within the legislative authority of the Dominion Parliament, or of the provincial legislatures. These documents were reprinted in the March issue of this Gazette (page 243).

Revaluation of Soldiers' Lands

A bill was passed by both Houses amending the Soldiers Settlement Act, 1919, enabling the Soldiers' Settlement Board to make provision for the revaluation of lands held by returned soldiers under the act, where the holder has not repaid his indebtedness to the Board, and where there has been a depreciation in the market value of the land, not being the result of neglect or mismanagement on the part of the settler.

This bill however had not received the Royal assent when Parliament was dissolved and consequently lapsed.

BRITISH LAW ON INTIMIDATION AND MOLESTATION IN CONNECTION WITH PICKETING IN INDUSTRIAL DISPUTES

THE following circular, explaining the provisions of the law relating to intimidation and molestation in Great Britain, was sent out by the Home Office December 30, 1925, to the chief constables of England and Wales. The circular was signed by the Right Honourable Sir John Anderson, permanent Under-Secretary of State, Home Office.

HOME OFFICE WHITEHALL,
December 30, 1925.

SIR,—I am directed by the Secretary of State to say that he desires to remind the Chief Officers of Police of the provisions of the law relating to intimidation and molestation, contained more particularly in the Conspiracy and Protection of Property Act, 1875, and the Trade Disputes Act, 1906.

Section 7 of the Act of 1875 is as follows:—

"7. Every person who, with a view to compel any other person to abstain from doing or to do any act which such other person has a legal right to do or abstain from doing, wrongfully and without legal authority—

"1. Uses violence to or intimidates such other person or his wife or children or injures his property; or

"2. Persistently follows such other person about from place to place; or

"3. Hides any tools, clothes, or other property owned or used by such other person, or deprives him of, or hinders him in the use thereof; or

"4. Watches or besets the house or other place where such other person resides, or works, or carries on business, or happens to be, or the approach to such house or place; or,

"5. Follows such person with two or more other persons in a disorderly manner in or through any street or road,

shall, on conviction thereof by a court of summary jurisdiction, or on indictment as hereinafter mentioned, be liable either to pay a penalty not exceeding £20, or to be imprisoned for a term not exceeding three months, with or without hard labour."

Section 2 of the Act of 1906 enacts as follows:—

"It shall be lawful for one or more persons, acting on their own behalf or on behalf of a trade union or of an individual employer or firm in contemplation or furtherance of a trade dispute, to attend at or near a house or place where a person resides or works or carries on business or happens to be, if they so attend merely for the purpose of peacefully obtaining or communicating information, or of peacefully persuading any person to work or abstain from working."

The Secretary of State desires to emphasize the point that all that is made lawful by the later enactment is picketing *for the purpose of peacefully obtaining or communicating information, or of peacefully persuading any person to work or abstain from working;* the offences described in section 7 of the Act of 1875, as quoted above, remain criminal offences.

The only effect of section 2 of the Act of 1906 is that "attending at or near a house or place" is not criminal if it is done merely for the purpose of peacefully obtaining or communicating information, or of peacefully persuading any person to work or abstain from working; but it remains a criminal offence under the Act of 1875 if it goes beyond these peaceful purposes and is carried on for purposes of compulsion. The Act of 1906 gives no protection to a person who attends at or near a house or place with a view to compulsion or who intimidates or uses threats of violence, actual or implied, and the duty of the police in dealing with these offences is not in any way affected by that Act.

The chief difficulties, however, which confront the police in dealing with trade disputes arise, no doubt, in the enforcement of the law rather than in the interpretation of it, especially where acts which are complained of were not observed by the Police and witnesses are reluctant to come forward to give evidence in Court. Occasionally there may also be doubt whether picketing which is being carried on is merely for the purpose of peacefully persuading a person to cease from work or to abstain from working or amounts to intimidation. In endeavouring to deal with this question, the numbers composing the picket is often a material point. The Act has not laid down any limit to the number of a picket, but it is clear that where a crowd watching or besetting any works is so disproportionate in size to what is needed for lawful purposes as to exclude the idea of peaceful persuasion, the Act of 1906 may cease to apply, and the persons taking part in the demonstration would then become liable to be charged with watching or besetting under the Act of 1875.

In this connection the Secretary of State would also point out that the Trade Disputes Act confers no right to hold meetings upon or otherwise to obstruct the highway, and occasions may arise where the police should take action on this account and disperse a crowd which has assembled in connection with a trades dispute, even though there is at the time no actual evidence of intimidation.

I am also to point out that nothing in the Trade Disputes Act gives pickets the right of entry into any works. If they enter private premises contrary to the wishes or directions

of the owner they are trespassers and can be expelled by the owner or his agents. The police are not called upon to expel them unless they use violence in resisting removal, or otherwise; but if they do, it becomes the duty of the police to take all steps necessary for the maintenance of the peace.

Neither does the Trade Disputes Act authorize pickets to interview a workman in private (that is, apart from his comrades or from the escort which may have to accompany him in cases where violence is feared), unless the workman himself desires it. The Act does not interfere in any way with the liberty of the workman, who may stop to speak to the picket or not as he pleases, and may speak to the picket alone or in the company of his comrades or escort as he pleases. The pickets are given the right peacefully to persuade any workman who is willing to listen to them, but they are not entitled to compel the workman to listen to them by stopping him or obstructing his passage, or by any other means.

The police must, of course, carry out their duties with strict impartiality as between employers and workmen, and as between strikers and non-strikers. On the one hand, workmen have the fullest right, after due notice, to refuse to work; and they have the right peacefully to persuade other workmen to do the same—a right which is secured by the Trade Disputes Act, and must be respected and maintained. Even if they break their contracts by stopping work without notice, it is, except in the cases provided for in sections 4 and 5 of the Conspiracy and Protection of Property Act, 1875, and section 31 of the Electricity (Supply) Act, 1919, a matter of civil justice, and does not concern the police. On the other hand, the police are bound to maintain order, to prevent riot and damage to property, and to protect from violence and molestation workmen who voluntarily continue to work or are willing to work. It is essential, therefore, that in dealing with pickets they should observe the distinction between proceedings which are lawful and those which are unlawful, and that in any future dispute in which the country may become involved, they should take all possible steps, so far as their resources will permit, to repress any proceedings, on the part even of properly constituted pickets, which pass beyond peaceful persuasion and assume any form of compulsion.

I am, sir, your obedient servant,

JOHN ANDERSON.

LABOUR CONDITIONS IN ALBERTA IN 1925

THE Commissioner of Labour of Alberta in his annual report 1925, recently published, outlines the activities of the Bureau of Labour during the calendar year. This Bureau was created under an act of 1922 (chapter 80). It is in charge of a Commissioner of Labour appointed by Order in Council, the duties of this official being to "superintendent the performance of such work relating to the collection, assortment, systemization and publication of information and statistics affecting labour as may be directed by the minister;" to administer such acts as may be assigned to the Bureau by Orders in Council; and to discharge such other duties as may be delegated to him by the minister. The Bureau now administers the provincial Employment Bureau and the Minimum Wage Act, the Boilers Act, the Factories Act and the Theatres Act.

The co-ordination of the various provincial inspection services under the Bureau has continued to increase the efficiency of these services, better attention being now given to places situated at outlying points in the province. The practice of the Bureau during the past two years has been to make use of all its inspectors for the enforcement of the Factories Act and the Minimum Wage Act. During the year boiler inspectors at the time of their regular inspection visit to outlying points inspected 115 factories, which, prior to the adoption of the present policy, did not receive attention.

Under the provisions of the Factories Act a total of 3,055 inspections were made of 2,882 factories, shops, offices and office buildings in which 21,131 employees were engaged. This is an increase in the number of inspections, places visited and employees. Included in the places visited are 12 new factories in which 322 persons are employed. All places within the scope of the Act received one inspection visit during the year, subsequent visits being for the purpose of checking up on recommendations, on complaint, or where there is a varying element of risk.

During the year 325 recommendations relative to safety, health, hours and wages and the employment of children were made, all of which were fully carried out by employers. Additional to this 372 inspections were made of

370 elevators, situated in places within the scope of the Act, and 171 recommendations relative to safety in operation were made.

Inspections were also made of 54 elevators, of which 38 were passenger and 16 freight, situated in places not within the scope of the Act, under the provisions of regulations made under the Workmen's Compensation Act.

Statistics of Trade and Industries

The returns for 1925 indicated an improvement in business conditions over 1924. Returns received from 1,271 firms covered 19,804 male employees over eighteen, 512 males under eighteen 2,861 females over eighteen, 214 females under eighteen and 318 apprentices. The total payroll for wages and salaries was $31,596,105, of which sum $27,389,023 was paid to wage earners. The returns show no marked difference between the number of males employed by months when all industries are considered, there being 17,664 in April, the month of least employment, and 19,097 in October, the month of greatest employment. The returns by industries, however, showed a greater fluctuation than in the grouped total. The periods of greatest employment in the main groups were as follows: in coal mining, the first two and last four months of the year; in lumbering, the first three months; and in railroad and general construction, from May to November. "It is apparent," the report states, "that for the unskilled work in these industries men interchange from one to the other, by which a better balance is maintained."

The returns of monthly employment of females show a steady increase in the number employed throughout the year. February, the month of least employment, showed 2,731 females employed, and following that there was a small increase each month, with December the month of greatest employment, 3,183 being females employed.

A table is given showing the classified weekly wage rates for the week of employment of the greatest number of employees, as follows:—

CLASSIFIED WEEKLY WAGE RATES (WAGE-EARNERS ONLY)

For week of employment of greatest number	Males		Females		Apprentices
	18 years and over	Under 18 years	18 years and over	Under 18 years	
Under $6.00	28	24	10	7	8
$6.00 to $6.99	12	23	10	9	14
7.00 to 7.99	9	39	23	15	3
8.00 to 8.99	21	43	13	7	25
9.00 to 9.99	27	72	66	51	33
10.00 to 10.99	88	56	124	25	34
11.00 to 11.99	95	51	90	16	17
12.00 to 12.99	179	67	465	36	36
13.00 to 13.99	104	15	130	13	28
14.00 to 14.99	645	25	239	17	16
15.00 to 15.99	589	39	294	6	21
16.00 to 16.99	189	5	202	7	12
17.00 to 17.99	754	5	164	1	10
18.00 to 18.99	1,108	12	192	3	2

50.00 and over	1,237	.....	.....	.....	.....
Totals	19,804	512	2,861	214	318

The majority of employees in the province worked 48 hours a week, but a considerable number worked longer hours. The number employed, for example, for 40 hours in the week was 1,474; for 44 hours, 3,451; for 48 hours, 12,645; for 50 hours, 1,462; for 54 hours, 1,530; for 60 hours 1,381; for 84 hours, 112.

The loss of working time, expressed in "man-days," was 35,938, about half this loss being in the mining area in Edmonton and district, and a large proportion of the remainder in the mines at Drumheller and Wayne.

Minimum Wages During 1925

Industry in the province was divided into six classifications and an order made for each division. These orders which were reprinted in the LABOUR GAZETTE for August, 1925, made no change in the wage rates or in the maximum weekly hours, but they made provision for a minimum wage rate that must be paid for all overtime, and fixed a maximum number of working hours per day. The nature of the Board's work may be seen from the following account of the work during the year:—

Nine requests were received from individual firms for permission to work their female employees overtime to permit of seasonal rush trade being taken care of. Six of these requests were granted and three refused. Additional to this requests were received from merchants of Calgary, Edmonton and Medicine Hat for permission to work their employees additional hours during Christmas rush. Permission was granted to all merchants who applied. In each case employers were required to observe the provisions of the various Orders of the Board relative to payment for overtime.

Twelve requests were received for permission to employ a greater number of apprentices than is permitted by the Regulations on account of there being a shortage of experienced help. Ten of these requests were granted for a limited period and two refused.

Requests were received for handicapped rates to be fixed in the case of twelve employees. All cases were investigated by inspectors of the Bureau of Labour and acting on the information contained in their reports special rates were fixed for each of the twelve employees.

Under the provisions of the Minimum Wage Act a total of 2,332 inspections was made of 2,146 businesses, 227 orders were made for adjustments of wages, 61 orders for adjustment of hours and 13 orders made for adjustment of staff so that not more than twenty-five per cent would be in receipt of apprentice wages. These inspections were made at the same time as the regular factory inspection in the four cities. Special visits were made to the other eight localities within the scope of the Act.

There was a slight increase in the total number of females employed under Orders 1 (manufactures), 2 (laundries), 4 (personal service) and 6 (shops and stores), and a slight decrease under Orders 3 (hotels and restaurants) and 5 (offices).

The number of recommendations made for adjustments increased over the previous years. This is accounted for largely by the situation found early in the year, due to the publicity given to the decision of the Appellate Court rendered in December, 1924, that the Orders of the Board were *ultra vires* (LABOUR GAZETTE, December, 1924, page 1109). Employers in a number of instances assumed the position that as a result of this decision they could pay whatever wages they could persuade a female employee to accept, neglecting to acquaint themselves with the provisions of the Orders of the Board published December 31, 1924. In most instances, however, when the position was explained, ready compliance was obtained.

Seven prosecutions were instituted for violations of the provisions of the Orders during the year; five convictions were obtained and two were dismissed by the magistrate.

Steam Boilers.

A more general inspection of pressure vessels governed by the Boilers Act was completed throughout the province during the year than had been possible for a number of years past. The report points out that "explosions of the steam boilers that are commonly used with threshing machine outfits, sawmills and other portable equipment are, we believe, the most serious accidents associated with agricultural operations. The conditions under which boilers in this service are used are often such as to cause rapid deterioration. In many cases, the boilers are sadly neglected. As a rule there is no attempt made to provide such boilers with suitable feed water, reasonably free from scale-producing substances or alkali. When used for heavy duty, such as ploughing or sawing, they are not always safely operated with regard to the water level above the fire line, as provided for in the Boilers Act. It is for these reasons particularly that traction and portable boilers are considered poor insurance risks, and insurance companies do not like to cover them. In the absence of insurance the loss would fall on the owner if a boiler explodes. He is, therefore, largely dependent upon Government inspection and the services of a competent and reliable engineer who will safeguard the owner from a loss of this kind, by frequently opening up the boiler to remove all scale, mud and other deposits, overhaul all gauges, safety valves and other equipment so as to provide against such loss. In pointing out some of the advantages of inspection service, the seriousness of defects found have often been emphasized. There are several instances of defects in both

boilers and engines, also in their accessories, which were located by members of the inspection staff, which are of particular interest. Most of them undoubtedly would have been passed over by men not specially trained and experienced in boiler and engine inspection service."

Alberta Government Employment Offices

The work of these offices has been described in the regular articles in the LABOUR GAZETTE. The general employment situation, throughout the province during 1925 was much better than in 1924. The number of vacancies filled increased from 46,153 in 1924 to 60,806 in 1925. While the increase was greatest in farm placements there was a fair increase in placements for building construction, clerical, domestic and personal, general labourers, manufacturers, mining, miscellaneous and casual. There was, however, a material reduction in the vacancies offered in lumbering, railroad construction and railroad operation

THE CREATION OF EMPLOYMENT DURING THE WINTER MONTHS

Address at the recent fourth annual conference of Ontario Office Superintendents, Employment Service of Canada, by Mr. C. S. Ford, superintendent of the Provincial Office at Ottawa.

OUR country is somewhat peculiarly situated as regards distribution of employment during the summer and winter (for purposes of this paper I am including late Spring and early Fall in Summer) as, during the Summer probably five times as many men can be employed as in the Winter on seasonal work, the chief being Agriculture. The result is that even in times of national prosperity during Winter months there is a large amount of unemployment in the cities and towns, as the unemployed farmhand, railway and other construction worker naturally makes for the city in search of work. I do not propose to go into the causes of unemployment, as that is not the purpose of this paper, further than to say that the chief causes are cyclical depression, seasonal fluctuation, ineffective distribution of labour and various international causes.

In the creating of employment due regard should be paid to the economic value of the proposed work. The carrying of stone from one pile to another and then returning it, is work, but it is non-productive and useless. The intention is that the *morale* of the men should not be impaired by receiving something for nothing. It is advisable that, in conjunction with other schemes, our natural resources should be developed, having due regard to their conservation for the future and not ruthlessly destroying that which would eventually prove of much greater value.

In agriculture the farmer generally engages men from March or April to November rather than for twelve months with the result that during the winter months large numbers, of workers, unskilled along other lines, are thrown on the labour market and their presence adds to the difficulty of placing at work other groups of unskilled or semi-unskilled workers. It would seem reasonable that the farmer who in part receives the benefit of these men's labour should in part be responsible for their welfare during the other four months of the year; therefore, if the farmer would hire his help for twelve months even at considerably lower wages during the winter months, he could surely find work for them to do, he would relieve the labour market to a great extent, farm work would become more attractive and good experienced farm workers would stick to the farms rather than migrate to the cities. We have known many cases where good farm hands have stated that they would have been willing to stay with the farmer for the winter months for their board and carry on with him in the Spring, but were told it could not be considered.

The lumber woods require a large number of men every year though latterly the number asked for has been decreasing. One of the difficulties in connection with this industry is that the demand for men for the lumber camps begins before other seasonal work, especially after the western harvest ceases. If it were possible to commence lumber operations somewhat later these men already in the country would be available. Work which is not done which could be done with advantage is the cutting out of ground or underbrush, growths of poplars, birches etc., which are now retarding the growth of the larger trees. Work of this kind is not as heavy as lumbering in the camps and gangs of men could be employed on this work up to January or until there was deep snow. The reward for this work is not immediate and for this reason, although it has as beneficial

results as weeding a garden, it has not been undertaken except in maple bushes where the increased yield of syrup has more than justified it. It would also be worth considering the question of clearing up the slash in our forests, as slash is the most prevalent cause of forest fires and it would seem that some, at least, of the large amount spent annually on prevention, both by governments and lumber companies could be better expended on a more certain way of removing the cause. Henry Ford has adopted this method of cleaning up his forest reserves with the result that they have been practically immune from fire, thereby saving millions of dollars.

In mining circles, the possibility of utilizing low grade ores by means of electrical processes, for which our water-power supplies excellent facilities, would be an important extension and would react very favourably on the unemployment problem. Owing to the initial cost of this project I believe governments have been asked to interest themselves in the matter.

The further development of our water power can be initiated during the winter months, as in the case of the International Paper Company work on the Gatineau River near Ottawa. From seven hundred to two thousand men have been employed this winter, clearing sites, constructing huts, building coffer dams, etc., in preparation for the concrete work in the spring.

In other countries having a similar climate to our own there is not the migration to the urban centres that there is here, as in the rural districts the farms are much smaller and usually worked by the owner who, during the winter months, turns his attention to such work as he can do at home. Some of these winter products have become known all over the world; Switzerland—lace and toys, North Germany—toys, Norway—skis, and it might be possible to make something in the homes of Canada which would become well known and have a ready market. It has long been advocated that federal, provincial and municipal authorities plan all public works far enough ahead so that, having due regard to the possibility of doing work, it may be done during the winter months or during periods of depression. Stone for highways may be crushed, repairs to canals and bridges and all underground work. The municipalities should particularly commence their sewer and drainage work in the fall, as the cost would be rather less than in the summer, the expense of shoring being reduced.

In industry the only real gain could be in building and construction. There still remains the private employer and the householder who may have odd jobs that require doing, which brings us to the vexed financial question, what is there to induce the householder to have painting, carpentry or other work done in the winter when it would inconvenience him to a greater degree than in the spring? It is undoubted that the work would be done less hurriedly and with more care, but this argument does not seem to appeal to those concerned, but the fact that the work would be done considerably cheaper would appeal to them. The same applies to the motor garage industry which is very slack in the winter and extremely busy in the spring, working in many cases twenty-four hours a day. One has to offer a very strong inducement to the general public to get them to have work done before it is absolutely needed and this would appear to be that they can save money. The ways and means by which they could save money would be an arrangement between the employer and employee, and quite possibly the manufacturer.

The creation of work as relief work pure and simple has been undertaken in the past, but has in the main been necessary public and municipal works which were being postponed owing to cost and only undertaken when it was realized what serious proportions unemployment has assumed. In 1925, the Ontario Legislature passed the Unemployment Special Rate Act enabling the Council of any municipality during the year 1925 to levy, in addition to all other rates, a special rate not exceeding one mill in the dollar on the whole rateable property in the municipality, for the purpose of meeting the cost of any work or service undertaken for the express purpose of providing work for those out of employment; this only applied to the year 1925, but, had it been applicable to all years where serious unemployment was likely to exist, it would encourage municipalities to do as is advocated and indulge in long range planning of their work. Therefore, after a fairly careful study of the subject, one realizes that the variety and complexity of conditions bearing upon winter employment are such that one is diffident about offering a solution for this old problem, so, with due timidity, I would summarize my foregoing remarks into the following:—

The employment of farm help by the year rather than for seven or eight months each year.

The development of natural resources and care of existing timber areas.

Federal, provincial and municipal authorities to plan public works ahead with a view to allotting such work as is suitable to the

winter months including letting of contracts and supplies.

In conclusion I must mention that the only authentic source for ascertaining the amount of unemployment is the Employment Service; and the workers themselves, by not registering, handicap us in rendering them service, as the figures we give to the authorities rarely, if ever, show the full amount of unemployment. I would also mention, although it does not come under Creating Employment, an agreement called Unemployment Insurance, which has many good points and might prove of great value to the community as a whole.

CANADIAN MANUFACTURERS' ASSOCIATION

Proceedings at Annual General Meeting, June, 1926

THE Canadian Manufacturers' Association held their annual general meeting at Toronto on June 8-10, the president, Mr. J. H. Fortier, in the chair.

Industrial Conditions in 1925

The president, in the course of his address, reviewed industrial conditions during the past year. "During the autumn months and December and January," he said, "improvement in a number of departments of national activity was evident, but in February and March a reaction set in, many factories went on short time, and the present outlook for industry and business, while retaining some encouraging features, is not nearly as satisfactory as anticipated.

"Part of our present industrial production is not remunerative. Too many factories are operating without profit, after allowing for operating charges, heavy taxes, and depreciation. Too much business is being done merely to maintain staffs and to keep in the race. Present prices of many commodities do not yield sufficient profit to maintain the industries in a healthy condition and to lay aside necessary reserves for new machinery, buildings and equipment. Many buyers in Canada think only of cheapness and not of quality. They are so preoccupied with prices that they forget standards and values. This does not encourage craftsmanship nor the best business methods.

"During the past year railway earnings show an encouraging increase; building permits reached a higher aggregate; bank clearings rose until January and declined afterward; iron and steel production decreased steadily from last summer until April; bank deposits have been growing monthly, but current loans have been decreasing, indicating that money is piling up in the banks and is being loaned in less amounts to business.

"Conditions have improved in agriculture, due largely to successive good crops. The value of the field crops in 1925 was $1,153,000,000, as against $995,000,000 in 1924, and $900,000,000 in 1923. The improved prices for farm products have enabled farmers to pay their debts and to buy more manufactured goods.

"During the past year, as in several preceding years, there was a continued revival of international trade, following the slow but steady recovery of most countries from the war. As a result, the demand from other countries for Canadian products, including primary, partly manufactured and fully manufactured, has been increasing, a fact reflected in the statistics of our export trade."

Relations with Employees

Referring to the relations of workmen and employers Mr. Fortier said:

"The relations of employers and employees in Canada on the whole are excellent. They have been constantly improving for some years. Much has been accomplished by co-operation. Wage earners are being told the true conditions in their industries and are realizing more and more that the interests of employees and employers are the same, that loss and discontent are the results of fighting, and that better conditions can only come through the prosperity of the industries in which they are engaged. The collapse of the general strike in Great Britain was inevitable, because, if it had been pushed to its logical conclusion, it would have deprived the people of food, clothing, shelter, water, heat and light, and the families of the strikers would have suffered with the rest.

"As manufacturers, we should do everything possible to increase the confidence of our wage earning associates, and to secure a larger measure of their interest in our enterprises. As a matter of fact, we are nearly all wage earners ourselves, because we are employed by the individuals or shareholders who own our companies, and consequently, our interests are the same as those of other wage earners, namely, the success of the business in which we are employed. We sincerely hope that the present good relations exist-

ing among those engaged in industrial enterprises in Canada will continue and improve. This hope extends to those in other occupations. We are conferring with farmers in our many common problems, with the railways in transportation and with the wholesale and retail trades in distribution and we welcome further proposals to exchange views and to achieve further co-operation."

Resolutions adopted

Numerous resolutions were adopted by the association relating to the customs tariff and tariff preferences; tariff preference to the United Kingdom; asking the Dominion Government to establish a system under which each shipment of imported goods over $100 should be accompanied by an "import invoice" marked by an officer of the Dominion in the country of export; thanking the Dominion, provincial and municipal governments for the support accorded to the "made in Canada" movement; recommending the fullest use of Canadian seaports; condemning the sales tax; recommending the further development of industrial and scientific research; recommending drastic measures to eliminate smuggling; and asking relief from the heavy weight of taxation, which is sometimes duplicated by the taxing authorities.

Canadian Conference Committee

The following resolution was adopted:—

Whereas, it is desirable that there should be co-operation among Canadians of all occupations in considering national questions, and, whereas, manufacturers, in addition to studying production, selling and other matters connected with industry, should give as much attention as possible to the problems of agriculture, labour, transportation, distribution, finance and other great occupational activities.

Therefore be it resolved that the Canadian Manufacturers' Association, in annual meeting assembled in Toronto, on June 10, 1926, request the executive committee to appoint a special committee of nine, from the membership at large, to be called "The Conference Committee," which will consult with representatives of agriculture, labour, transportation, distribution, finance and others, for the purpose of improving relations among Canadians of various occupations and promoting measures for the general development of the country, and which will report from time to time to the executive committee.

Industrial Relations

The report of the Industrial Relations Committee outlined the report of the employers' representative at the Seventh Session of the International Labour Conference at Geneva, 1925. In comparison with previous sessions, it was stated, the Seventh Conference was much less European and much more representative of other parts of the world.

In regard to the draft convention guaranteeing adequate compensation for injured workmen, the report stated that—

So far as Canada is concerned the minimum set by the convention is considerably below that which prevails in the various provinces, so that the convention represents a levelling-up of conditions in countries less advanced than our own.

In regard to the draft convention provisionally adopted by the Conference in 1924 to prohibit night work in bakeries, the employers decided, in view of the far-reaching nature of the question, to demand that the High Court of International Justice should be asked to decide whether it was within the powers of the International Labour Conference to pass a convention applying to proprietors or the heads of undertakings as well as to employees.

The 8-hour Day

The Industrial Relations Committee expressed the opinion that it is impossible for the employers of Canada to modify in any way the attitude they have always adopted of opposition to compulsory eight-hour-day legislation, if for no other reason than that the United States shows no sign of adopting such a principle.

"The situation in Canada with regard to hours of work," the report continued, "is that no province except British Columbia has seen fit to pass such legislation; and in British Columbia it has been found necessary to allow so many exceptions that the law is largely inoperative.

"At the past session of the Alberta legislature an eight-hour day clause was inserted in a new consolidated Factories Act. Our Alberta members having decided to oppose this to the utmost, and having asked the association for assistance, your committee sent its secretary to Alberta to give all possible assistance. A strong delegation waited on the Government, the heads of the United Farmers of Alberta and members of the Legislature were thoroughly canvassed, a radio address was given, the co-operation of other business organizations was enlisted; and in the result the eight-hour-day clause was struck out of the bill and instead, a commission was set up to study the whole question of eight-hour-day legislation as it would effect Alberta.

"Your committee feels that there could hardly be a better example than Alberta of a community that should, and indeed must avoid arbitrary restriction of working hours. At present predominantly agricultural, it aspires to become industrial; and in the view of your committee it cannot be the one or become the other if hours of work are to be arbitrarily restricted by eight-hour-day legislation. If it is retorted that the law would not apply to agriculture, the answer is that

the result would be: (1) to draw men from the country to the towns and (2) to increase the cost of goods to the farmer; and industrial employment in the towns would fail to thrive for want of the capital that was frightened away by the handicap of arbitrarily-restricted hours of work."

Accident Prevention

After a review of the legislative changes during the year in connection with workmen's compensation, the committee made the following statement of the employers' views on accident prevention:

"With five compulsory state insurance systems of workmen's compensation in force in Canada it becomes increasingly clear that too much attention cannot be paid to the prevention of accidents. Under the present Canadian legislation, as is well known, the employer must pay compensation for practically every accident regardless of whether he is in any way responsible or not. This obviously means a heavy financial burden; and therefore, in addition to the humanitarian, there is a direct financial, reason for doing everything possible to reduce accidents. The charge is sometimes made by the private insurance companies that a compulsory state system is bound to fail in accident prevention because there is not the same direct incentive to reduce accidents as when the individual employer's rate is determined entirely by his individual accident record. Without admitting the charge it is well to remember that in a sense accident prevention is the "acid test" of the compulsory state insurance system. In other words, if the compulsory state system were to breed slackness in accident prevention, it might almost be pronounced a failure. The fact, however, is that the employers in the various provinces where compulsory state systems are in force, have developed effective organizations for grappling with this problem, and are sparing no efforts to achieve results."

Industrial Disputes Investigation Act

The Committee reviewed the recent action taken by the Dominion and by various Provinces in regard to the Industrial Disputes Investigation Act in consequence of the Privy Council decision of January, 1925, declaring the act as it formerly stood to be *ultra vires* in so far as purely provincial disputes were concerned. Following the Dominion legislation of 1925, the report points out that "British Columbia, Saskatchewan, Manitoba, New Brunswick and Nova Scotia passed enabling legislation making the Lemieux Act apply to disputes within their respective borders. It is to be noted that in all this no real change was made in the character of the Act itself. Thus the definition of 'employer,' which determines to what classes of employment the Act shall apply, remained unchanged, i.e., it included only railways, mines and public utilities.

"Alberta, instead of following the example of the other five provinces, introduced a new Act modelled on the Lemieux Act, but differing in this one important respect, viz., that the definition of 'employer' was widened to include everyone who employs ten or more people. Your Committee on being consulted by our Alberta members, took the view that, while the principle of compulsory arbitration may be necessary and sound in the case of vital public services, the suspension of which would directly injure a large number of the public, the application of this principle to general industry is unnecessary in the interests of the public, and, therefore, constitutes an unwarranted interference with an employer's management of his own business. It was also pointed out that, as the chief object of the legislation was to deal with the situation in the mining industry (which, of course, the Lemieux Act covers), Alberta should be content to follow the example of the other provinces and simply pass enabling legislation making the Lemieux Act apply to a purely provincial dispute. In spite of the representations made, the Act was passed."

Minimum Wage for Boys in Ontario

In a review of the minimum wage regulation of the year the Committee referred to the appointment of a Board in Quebec, noting favourably that the new Board proposes not to interfere in any industry unless and until some complaint is made, when the parties will be called together, the case investigated and some settlement recommended, such recommendation to be subject to the approval of the Minister of Labour.

Reference was also made to the enactment of the Male Minimum Wage Act of British Columbia, the first act of its kind on this continent.

"In Ontario" the report states, "it was proposed early this year that the scope of the act should be extended to include boys under eighteen. Your Committee opposed this on the grounds: (1) That there was no demand or need for it (the labour turnover in the case of boys being greater than with any other class of workers). (2) That it might easily be harmful (by attracting boys from apprenticeship jobs, to which the minimum would not apply, to "blind-alley" jobs). (3) That no such innovation should be made until the situation had been thoroughly surveyed,—which had not been done. In the result the proposed legislation was withdrawn.

EMPLOYEES' REPRESENTATION PLAN OF DOMINION IRON AND STEEL COMPANY, LIMITED

A JOINT council on the Employees' Representation Plan was established by the Dominion Iron and Steel Company, Limited, in September, 1923, in its various establishments in Nova Scotia. It has thus been in operation for more than two years and a half. During that time it has dealt with a wide range of questions involving the relations between the management and the employees, both individually and collectively. A solution of these administrative difficulties was found in all these cases by means of the co-operative plan. The constitution of the Joint Council, and an outline of the various cases dealt with, showing the scope of its activities, will be found in the following paragraphs:

It is mutually agreed by the employees and management that this plan be established to provide an orderly and expeditious means of communication and adjustment on matters pertaining to conditions under which the employees work and to develop a closer relationship between them and the management.

1. Representations

1. Representation shall be by departments on the basis of one representative for each one hundred employees or major fraction thereof.

2. When applying the unit of representation to the smaller departments, it appears desirable to group some of these. In so doing regard shall be had to logical groupings.

3. Fluctuations in forces of the various units will require adjustment in representation from time to time. These changes shall be made in accordance with the recommendation of the Joint Committee.

2. Voters

1. Any employee who is eighteen years of age, or over, is eligible to vote. Foremen, Assistant Foremen, Chief Clerks, and others in similar or higher positions are excluded.

3. Representatives—Qualifications and Terms

1. (a) Any employee 21 years of age, or over, who has been continuously in the employ of the company for at least six calendar months immediately preceding the nomination and who has had a total of twelve calendar months' service with the company shall be eligible for nomination and election; (b) Foremen, Assistant Foremen, Chief Clerks, and others in similar or higher positions shall be excluded.

2. Representatives shall be elected for a term of six months, and shall be eligible for re-election.

3. A representative shall be deemed to have vacated office upon leaving the company's services or upon being permanently and voluntarily transferred to another department or upon his permanent appointment to any of the positions mentioned in paragraph 1 (b), of Section 3.

4. Vacancies in the office of employee representative shall be filled by special election. However, if four months have expired and it appears satisfactory at the time the General Works Committee may arrange to carry on for the balance of the term with the remaining representatives of the department affected, or by appointing some employee of that department to act for the unexpired portion of the term.

5. A representative may be recalled for cause by a petition being signed by two-thirds of the employees of the department he represents and approved by the Joint Committee.

4. Nominations and Elections

1. Nominations shall be made semi-annually and outlined below.

2. Nominations shall be made by petition. Any employee can circulate a petition for the nomination of any qualified employee or as a candidate.

The signature of at least fifteen employees of the interested division shall be necessary for each nomination.

3. Nominations shall close at 5 p.m. on the second Wednesday of February and August of each year. In the event of either of these days being a holiday, the next full working day shall be substituted.

4. Nomination petitions shall be filed, not later than the time specified above, with the clerk in the office of the department superintendent. These may be left open, or sealed in an envelope which shows that it contains a nomination petition.

Immediately after nominations close all these nomination petitions shall be delivered to the Joint Committee which shall promptly arrange for printing of election ballots and the posting in each department of lists showing nominees.

5. Elections shall be held semi-annually on the third Wednesday of February and August of each year. In event of either of these days being a holiday, the next full working day shall be substituted.

Elections shall be by secret ballot and so conducted as to avoid undue influence, or interference with voters in any manner whatsoever, and to ensure a true count and return of votes cast. The election shall be conducted by the employees themselves, in accordance with rules and regulations prescribed by the General Works Committee, and agreed to by the Joint Committee, with only such assistance from the management as may be required.

The number to be elected in each division of the plant shall be based on the allotment of units of representation. Within this limitation the candidates receiving the highest number of votes in their divisions shall be declared elected.

6. Ballots showing in alphabetical order the names of all candidates, as nominated for each of the divisions of the plant, shall be provided by the Joint Committee which shall also arrange for suitable ballot boxes and other election supplies.

Should any controversy arise concerning any election it shall be referred to and decided by the Joint Committee.

5. Management's Representatives

The General Superintendent shall appoint from his staff the management's representatives which may equal but shall not exceed in number the Central Works Committee, as elected by the General Works Committee. One member shall be appointed as secretary.

6. Arrangement of Plan and Committees

Committees:

1. The Employees' Representatives, as elected, shall constitute the General Works Committee.

2. The General Works' Committee shall meet promptly after each semi-annual election for the purpose of electing from among their own numbers a Chairman, Vice-Chairman, and Secretary, and also to appoint

from among their own members a committee of nine (9) representatives which shall be termed the *Central Works* Committee. The Chairman, Vice-Chairman and Secretary shall be members of this Cenral Works Committee.

3. The Joint Committee shall consist of the Central Works Committee, and the representatives of the management.

7. Committee Meetings

1. The meeting of Committees shall be held on the Company's premises and time, with pay. Any outside work done by representatives in connection with their duties as such, shall be regarded as entirely voluntary and no compensation shall be allowed.

2. A quorum of any committee shall require the attendance of not less than two-thirds of its members.

3. The General Works Committee shall meet during the first and third Tuesday of each month. The meetings to be held at such hours as appear to best fit in with the next succeeding meetings of the Joint Committee. Special meetings to be held when necessary.

4. The Joint Committee shall meet on Thursday following the first and third Tuesdays of each month. Special meetings to be held when necessary.

8. Procedure

1. Any matter which in the opinion of any employee requires adjustment and which the employee affected has been unable to adjust with the foreman of the work on which he is engaged, may be taken up by such employee, either in person or through any representative of his department in the following order:—

First: With the foreman concerned.

Second: With the superintendant concerned.

Third: With the General Works Committee which shall consider the matter fully, and where the merits of the case warrant, it shall be referred to and dealt with by the Joint Committee.

Fourth: If the General Joint Committee fail to effect a settlement the President of the Company shall be notified and with due consideration to the nature of the controversy the President may refer the matter to arbitration.

It is urged that all particulars of such matters be taken briefly in writing by the representatives interested, as this will greatly assist in the efforts towards prompt adjustments.

The General Works Committee and the Joint Committee shall consider any such matter with reasonable promptness, at a regular or special meeting, and may adopt such means as are necessary to ascertain the facts and effect a settlement.

Suggestions as to changes that might result in improvement in quality or quantity of output or in reduction of costs should be taken, in writing, not only to ensure proper credit to the employee making the suggestion, but to permit the idea being correctly transmitted and thoroughly studied.

9. Discrimination

Departmental representatives shall be wholly free in their performance as such, and shall not be discriminated against on account of any action taken in good faith in their representative capacity. Should any representative feel that his independence is being abridged he shall have the right to appeal to the General Works Committee, or directly to the Joint Committee, for the removal of the discrimination.

In adopting this plan, it is also mutually agreed that there shall be no discrimination by the management or by any of the employees on account of membership or non-membership in any lawful society or union.

10. Amendments

The method of procedure under this plan may be amended as changes appear to be mutually desirable to the employees' representatives and the management.

This plan, freely approved and adopted at the meeting of the General Works Committee, held January 15, 1924, was signed on February 21, 1924. At a meeting of the Joint Committee held June 5, 1924, the following changes in the Plant Committees' Scheme were suggested by the Employees' Representatives.—That three sub-committees be formed; one on rates and conditions, one on safety, compensation and benefit, and one on personnel, to consider all matters affecting employment, promotion, discipline and discharge.

The Committees as now constituted are as follows:—General Works, 23 members; Central Works, 8 members; Management, 5 members; Joint, 13 members.

The Sub-Committees are as follows:—Rates and conditions, 9 members; Safety, Compensation and Benefit, 7 members; Personnel, 9 members.

Minimum Wages in Manitoba

The Minimum Wage Board of Manitoba has issued an order, dated July 3, 1926, making Regulation No. 1 applicable to female employees in the Canning Industry in Manitoba.

Regulation No. 1 was given in the LABOUR GAZETTE for December, 1921. It standardized the regulations previously made for female employees in the following industries: Abattoirs; cigars, confectionery and biscuits; creameries; drugs; groceries; macaroni and vermicelli; paper boxes; pickles, soap and yeast. The minimum wage for experienced employees in these industries is fixed at $11 per week. Adult learners receive $9 for the first three months and $10 for the second three months of employment; minor employees begin at $8, increasing by one dollar after each of three periods of four months. The hours of labour are 48 per week, and not more than 9 hours per day.

The Government of Italy, in order to check the further rise in the cost of necessities, has opened a series of special stores for state employees, which will sell at cost price all the articles essential for the maintenance of a family. It is stated that a reduction of fifty per cent in the cost of these articles would result. Nine central stores opened at Rome on July 10. The government has expressed the hope that other large employers of labour would take similar measures on behalf of their employees.

CONVENTION OF GOVERNMENTAL LABOUR OFFICIALS

Synopsis of the Proceedings of the Thirteenth Annual Meeting

THE thirteenth annual convention of the Association of Governmental Labour Officials of the United States and Canada was held in Columbus, Ohio, June 7-10, delegates being present from the Federal Departments of Labour of Canada and the United States, from fourteen State departments and from one provincial department (Ontario). The convention was opened by a banquet at which Mr. H. R. Witter, the president of the Association presided. In the absence of Mr. V. Donahey, Governor of Ohio, who was to have addressed the assembly, Mrs. Donahey welcomed the delegates to the State of Ohio. An address was also delivered by Mr. James Wilson of Cincinnati, seventh vice-president of the American Federation of Labour.

The business sessions commenced on the morning of June 8. The report of the secretary-treasurer, Miss Louise E. Schutz, of St. Paul, Minnesota, showed that 28 States and provinces had paid dues during the fiscal year, the number of dues-paying States having increased by four. The committee to which this report was referred suggested that the association should consider re-classifying some of the State departments of labour which are now paying the minimum fee. The report on the financial statement was adopted, but the question of dues was laid over. The committee paid tribute to the work of the retiring president, Mr. Herman R. Witter, director of the Department of Industrial Relations of Ohio, who subsequently was made an honorary member of the association.

The association re-affirmed its support of the child labour amendment to the United States constitution.

The report of the committee which had been appointed at the 1925 convention to consider uniform methods of collecting and compiling statistics, dealt with (1) accident statistics, (2) employment statistics, (3) wages and hours of labour (pay roll data), and (4) the acceptance of the union scales of wages as the prevailing rates in the localities where the trades are well organized. The committee recommended that the association adopt the principle of uniformity in the collection and compilation of industrial statistics, and that the committee be continued until such time as it can work out a report on terminology to be used. After some discussion, and the adoption of a few minor amendments, the report was approved.

As a substitute for the recommendation of the committee on the employment of migratory children, the convention decided to instruct the committee to extend its study to include non-migratory children employed in industrial forms of agriculture.

The committee on industrial home work recommended that this subject should be undertaken as a nation-wide inquiry by some national research organization. The convention, however, disapproved of this suggestion, and adopted as a substitute a resolution calling for the continuation of the committee with a view to enlarging the scope of its investigation.

The afternoon session of Tuesday, June 9, was devoted to the consideration of women and children in industry. An address on "The Effect of Labour Laws Upon Women in Industry" was delivered by Miss Mary Van Kleeck, director of the Department of Industrial Studies of the Russell Sage Foundation. An address on "Industrial Hygiene" was delivered by Dr. E. R. Hayhurst, consultant of the Department of Industrial Hygiene, Department of Health of the State of Ohio.

The Wednesday morning session was given over to the question of employment, the first paper read being one by Miss Mary Van Kleeck, of the Russell Sage Foundation, the subject of which was "Preventing Unemployment by Statistics." Captain T. S. Wharton, manager and special agent of the Richmond, Virginia, Public Employment Bureau, read a paper on "Securing the Confidence of Employers" (in supplying their labour requirements), and Mr. B. C. Seiple, Cleveland superintendent of the Ohio State Employment Service, dealt with "Public Employment Work in Ohio." An address was delivered by Mr. M. F. Carpenter, assistant industrial manager of the Dennison Manufacturing Company, of Columbus, on the unemployment insurance plan as carried on by that firm.

On Wednesday afternoon the delegates visited the plant of the Jeffroy Manufacturing Co., of Columbus, after which they were taken on a sight-seeing motor trip.

On Thursday morning Mr. W. W. Adams, statistician of the Bureau of Mines, Department of Commerce, Washington, D.C., delivered an address on "Accidents and Accident Prevention in Bituminous Coal Mines," followed by a paper prepared by Mr. Joseph J. Walsh, secretary of Mines of the State of Pennsylvania, and which was read by Mr. R. H. Lansburgh, Secretary of Labour and Industry of the State of Pennsylvania. Fol-

lowing the discussion on this paper, which was led by Mr. J. H. Hall, commissioner of Labour of Virginia, a demonstration of first aid work in mines was given by two teams, one of which represented the American Rolling Mills of Columbus, the other being made up of mine inspectors of the State of Ohio.

The session of Thursday afternoon was devoted to inspection and safety. The first address was by Mrs. Lillian M. Gilbraith, of Montclair, N.H., on the subject of "Industrial Fatigue." Mr. T. P. Kearns, superintendent of the Division of Safety and Hygiene, Industrial Commission of Ohio, read a paper on "Educational Phases of Safety Work," followed by a paper by Mr. C. B. Auel, of the Westinghouse Electric Co., of East Pittsburgh, Pa., on "Co-operation Between the States and the National Safety Council." Mr. Robert Northrop, safety inspector of the Department of Labour of New York State, delivered an address on "Motion Pictures as an Aid in Accident Prevention Study." Following a general discussion on various phases of safety work led by Dr. Andrew McBride, commissioner of the Department of Labour of New Jersey, and Gen. E. Leroy Sweetser, commissioner of the Department of Labour and Industries of Massachusetts, a screening was given by Mr. H. W. Mowrey, of New York, of a film depicting the causes of many accidents both in factories and on the streets.

The election of officers for 1926-27 resulted as follows: President, John S. B. Davie, commissioner, Bureau of Labour, Concord, N.H.; first vice-president, R. H. Lansburgh, secretary of Labour and Industry, Harrisburg, Pa.; second vice-president, R. T. Kennard, Workmen's Compensation Board, Olive Hill, Ky.; third vice-president, Miss Maud Swett, director, Women's Department, Industrial Commission, Milwaukee, Wis.; fourth vice-president, H. C. Hudson, superintendent Ontario employment offices, Toronto, Ont.; fifth vice-president, M. H. Alexander, Deputy Labour Commissioner Bureau of Labour Statistics, Denver, Col.; secretary-treasurer, Miss Louise E. Schutz, superintendent, Division of Women and Children, Industrial Commission, St. Paul, Minn.

New Jersey was selected as the State in which the 1927 convention is to be held.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Workers' Educational Association in Ontario

AT the annual meeting of the Workers' Educational Association of Ontario recently held in Toronto, the secretary reported that 31 classes had been carried on, with an enrolment of 821 adult students. These classes were held in Brantford, Galt, Hamilton, Toronto and Windsor, the subjects of instruction being, English literature and rhetoric, economics, psychology, drama, civics, finance, astronomy, sociology, journalism, and public speaking. A new centre is being arranged in Stratford, where there is a large group of enthusiastic students, and classes are to be established in Ottawa early in October.

During the past year the Trades and Labour Congress of Canada has affiliated and has appointed a representative on the executive council. Gratitude was expressed to the Provincial University for its generous financial support which has made possible the extensive educational work carried on by the association. The delegates were asked to make clear to the members of the various branches that the classes are open to workers of all sorts, hand workers and brain workers, whether organized or unorganized.

Representatives of the various branches gave optimistic reports of the work done during the year in the different Ontario centres and outlined plans for advancement during next season.

Proposed Training Programme for the Pulp and Paper Industry

The following are extracts taken from an article contributed to the *Pulp and Paper Magazine* on May 27, 1926, by Mr. T. Linsey Crossley.

In the paper, textile, and other industries, craftsmanship is yielding to mass production. These industries used to provide for self-perpetuation by systems of apprenticeship, wherein the future craftsman was held in practical bondage for long periods, for the privilege of picking up such fragments of the inner mysteries as were grudgingly thrown to him in the process of using him as the craftsman's drudge.

Industrial liberty and free schools gradually destroyed that system but its hierarchy made no provision for its successor.

Into this situation is being projected an increasing number of men with scientific training, who, finding the professions crowded, have turned their attention to industry, not as engineers, or chemists, but as workmen, with this difference, that they wish to master the industry, not for a job and pay envelope, but for a life work.

Further, our educational systems now are sending into industry boys with a higher degree of preparation and greater expectations than was the case even twenty-five years ago. These two classes of employee find no preparation made to receive them, but instead a

tyrannical system of advancement by seniority and personal connection or "pull".

There are 130,000 employees, more or less, in the pulp and paper industry of the United States and Canada. With endless opportunities for self study or night schools, we believe it is not overstating the case to say that less than 3 per cent of these employees are doing anything for self advancement, or are finding provision made by the industry, for increasing their knowledge or adding to their pay envelope.

There are grounds for hope, however, that ere long some system of general application may be devised and put into operation.

The organization of the technical men some twelve years ago and the superintendents a few years later, provided machinery for the production of text books, and interest sufficient to develop agencies for study of the industry.

We are still faced with the fact that only a notably small proportion of the men and women engaged in the industry are giving it a thought beyond job and pay cheque.

The great hindrance to any development of this nature is covered in the phrase "counsels of perfection." Some system apparently is expected to spring fully armed from the head of Jove, function immediately and occasion no direct expenditure. Manifestly there is no such system. The writer ventures to suggest a plan. There are two requisites to success in this work. Both involve expense.

PLAN FOR MILL

I. The employee seeking opportunity must spend some of his own time and energy, and sacrifice, for the time being, some earnings.

II. The company must be prepared to spend a little money and a lot of thought.

1. Education and training should be a part of the company's policy and come before its intention on the employer's part, either in the matter of undertaking a training, a correspondence, or other course.

2. There should be an agreement covering directors.

3. The plan should be understood and accepted as fair by the other employees.

4. It should be supervised by a committee representing management and operatives.

5. It should be voluntary and open to all who are prepared to submit to the ruling of the committee in charge.

6. It should be administered by a competent person, compensated adequately for the time and thought given. One good man should be engaged on full time basis in larger mills. Smaller mills could be grouped for one man to a group.

7. In addition to agreement to serve in the mill, the employee taking training should be required to follow some definite course of study at the company's expense.

8. If the employee wishes to discontinue, he may do so upon due notice, and reimbursing company for expenditures other than the pay agreed upon.

9. There should be a definite period.

10. Entry should be voluntary and by application to the committee.

With these general provisions agreed upon it does not appear necessary for any organization to endeavour the almost impossible task of evolving details to be practicable in all mills. Each mill committee could decide these.

An arrangement on these lines would involve a minimum of expense and a definite start could be made.

PLAN FOR INDUSTRY

The industry as a whole could undertake some such plan as the following, which if taken up by even fifty per cent of the mills, would probably be self-supporting.

EDUCATION AND TRAINING

General Outline

I. Finance.

(*a*) Industry guarantees $5,000 per annum.

(*b*) School or schools repay to the industry 25 per cent of the amounts received by them from mills or individuals in mills.

(*c*) Amount required about $10,000 per annum.

II. Personnel.

(*a*) One International Field Operative and Educational Secretary with one or two stenographers.

(*b*) Committee of three in each mill to approve candidates and oversee operation of courses or progress of apprentices.

III. Character of Work or Training.

(*a*) Self-study by any individual.

(*b*) Voluntary course of training and study by individuals entering the industry as a life work.

IV. Schools Involved.

(*a*) The Institute of Industrial Arts at Gardenvale, Que., under supervision and control of the industry, for Pulp and Paper Technology.

(*b*) Other approved schools giving courses in Combustion Engineering, Business Administration or Machine-shop Practice.

The school must accept financing arrangement to comply with this plan.

Organization

I. General Secretary.

To visit mills and conduct campaigns to arouse interest and explain courses, advising prospects.

To maintain records of progress of students, endeavouring to secure more constant adherence to courses, to rearrange where necessary, and to maintain file of all employees graduating from schools or completing courses. To prepare statistical data and make reports to supporting associations.

II. Local Committee.

Each mill to have a committee of three, one nominated by the management (preferably the personnel director), one nominated by a majority ballot of the employees, and a third mutually agreed upon by these two. This committee's duties will be;

(*a*) To approve or disapprove applications for courses to be undertaken by employees where assistance or reward is offered by the company.

(*b*) To consider applications of persons wishing to undertake a course of experience with the object of making a life work of the industry.

(*c*) To receive reports of progress from schools and endeavour to keep men interested in their courses.

(*d*) To advise General Secretary of any criticism of schools by students.

Operation

This will affect two classes of employees as in section III of General Outline.

I. Those who wish to study some course.

If the company through its committee approves the course as being one to increase the value of the employee, it will advance on his behalf the cash price of such course, in quarterly payments, collecting from the employee such amounts weekly or monthly as will cover cost of course in one year or more as decided by committee. If the employee completes the course and is still in the employ of the company he will, upon securing diploma or certificate, be repaid the amount he has paid for the course. If this student leaves the mill before he has completed payment for his course, he should pay the company to the amount of the current quarter paid by the company to school. If he wishes to discontinue, he can do so by paying the company in like manner.

II. Those who wish to enter the mill with a view to making it a life-work.

(*a*) These must first be approved by the committee (who should consult with superintendents or executive of department in which applicant is employed if he is not a new man).

(*b*) They must signify their willingness to work for a definite period of years, say three, in such positions as can be made available.

(*c*) They must undertake at the same time to study a definite course in the technology of the industry, to be paid for by the company.

(*d*) They shall agree, if they decide to discontinue training or to leave the employ of the company to repay to the company the amount paid to the school for their courses.

Recognition

Upon satisfactory completion of the period of work and the study course undertaken, some form of recognition, possibly the right to use certain letters, such for instance as F.P.I.A., Fellow, Paper Industry of America, might be conferred, or a special button, only to be used in such cases. The presentation of certificate, or button, to be made by the senior association of the industry either in Canada or the United States, at either of their respective annual meetings, and with due formality, the employer to defray expense on this occasion.

Apprenticeship in Commerce, South Africa

A committee of the Chamber of Commerce, at Port Elizabeth, which recently considered a proposal regarding an apprenticeship system in commerce, has reported that in its opinion such a system is not desirable.

In giving it as their opinion that the proposal would result in increased juvenile unemployment, the committee state that commerce is not an easily defined calling owing to its numerous ramifications, and cannot be confined within limits, such as a trade or profession. Business houses must, at all times, endeavour to give their youths the fullest opportunities of becoming efficient in their respective spheres, and, until a youth has discovered his true avocation, it is necessary to transfer him from department to department. Or, again, it may be necessary to arrange such transfers in order that he may become fully acquainted with the business as a whole. It is also a fact that no two businesses are run on identical lines, and it is, therefore, necessary that houses should train their own staffs, as is now done in order that wastages in the higher positions may be replaced.

Finally, it is the definite opinion of the committee that the enforcement of a system of apprenticeship would cause a serious reduction in the number of youths employed.

The Board, at its last meeting, decided to put the matter before the Retail Section of the Chamber in the hope of meeting with a better result.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Electrical Protection in Alberta

THE Workmen's Compensation Board of Alberta issued in June revised regulations in accordance with the provisions of the Electrical Protection Act, the administration of this act being assigned to the Board. The new regulations are practically the same as the regulations issued under the act in 1920, to which reference was made on page 216 of the March issue of the LABOUR GAZETTE. (It will be recalled that the Ontario Executive of the Trades and Labour Congress of Canada suggested early this year that the Ontario Government should make regulations for the protection of electrical linemen similar to those in force in Alberta (LABOUR GAZETTE, February, 1926, page 122). The regulations contain rules to be observed in connection with overhead lines; jointly used wood pole lines carrying supply circuits and signal circuits; underground lines; and miscellaneous installations; and conclude with general safety rules and special rules for workmen in supply station and switchboard operation.

Among the additions made in the new regulations mention may be made of rules relating to insulating drop wires which are contained in the section on the vertical spacing of wires; rules relating to large transformers in connection with roof fixtures; rules governing line wires on cross-arms used in connection with jointly-used pole-lines; rules governing live wires of high voltage in connection with switches in supply station, etc.

It is required that rubber gloves must be tested at least once every twelve months by a method approved by the Board. No regulations made under the provisions of the Electrical Protection Act are to apply to any underground work in connection with coal mining.

The general rules for workmen, which were also contained in the earlier regulations, are in part as follows:—

(1) Workmen should familiarize themselves with approved methods of first-aid, resuscitation and fire extinguishment, those whose duties do not require them to approach or handle electrical equipment and lines should keep away from such equipment or lines.

(*a*) They should cultivate the habit of being cautious, heeding warning signs and signals, and always warning others when seen in danger near live equipment or lines.

(2) *Inexperienced or Unfit Employees.*—No workman shall do work for which he is not properly qualified on or about live equipment or lines, except under the direct supervision of an experienced and properly qualified person.

(3) *Supervision of Workmen.*—Workmen whose employment incidentally brings them in the neighbourhood of electrical supply equipment or lines with the dangers of which they are not familiar shall proceed with their work only when authorized. They shall then be accompanied by a properly qualified and authorized person, whose instructions shall be strictly obeyed.

(4) *Exercising Care.*—Workmen about live equipment and lines should consider the effect of each act and do nothing which may endanger themselves or others. They should be always careful to place themselves in a safe and secure position and to avoid slipping, stumbling, or moving backward against live parts. The care exercised by others should not be relied upon for protection.

(5) *Treat Everything as Alive.*—Electrical equipment and lines should always be considered as alive, unless they are positively known to be dead. Before starting to work, preliminary inspection or tests should always be made to determine what conditions exist.

Accident Prevention in Ontario Pulp and Paper Mills

Mr. R. A. McInnis, of the Abitibi Power and Paper Company, in his report as president of the Ontario Pulp and Paper Makers' Safety Association for 1925, outlined the activities of the Association as follows:—

(1) A meeting of the safety experts of a large number of mills was held in Toronto during the late summer.

(2) Letters were written every company in the Association asking for their form of Safety Organization, their methods of combating accidents, their system of recording accidents, and any methods they had for studying them. The purpose of that letter was to make a survey of the mills to find out exactly what was being done.

(3) There were correspondence and visits with various companies in order to secure their actual promise to support the work of the Association; and, more particularly, to induce them to see that active work was carried on in their plants.

(4) A group system was inaugurated, dividing all the mills in the Association into four groups, geographically located, for the purpose of enabling the safety men in those mills to get together three or four times a year, and to study the problems common to their locality.

(5) The next step was to distribute monthly data to the various mills in such a way as to show them their standing and status in comparison with other companies. A set of suggestions, in pamphlet form, were compiled and issued by the Association to all mills. Various rules governing the computation and recording of accidents were improved, so as to make them clearer and more equitable.

The results in accident experience for the year 1925 as compared with 1924, are very in-

teresting. There has been a reduction of a substantial nature in frequency, severity, and fatalities. According to the reports, it would appear that a reduction took place in the time lost, by 3,319 days or 553 weeks; which, in turn was equivalent to a saving of $13,-272. This was a saving in time alone, of which two-thirds would have been paid by the manufacturers.

Natural and Artificial Ventilation

The Department has received a report recently published by the Industrial Fatigue Research Board of Great Britain giving the results of a physiological study of the ventilation and heating in certain factories. The atmospheric conditions of a factory have for many years been recognized as exerting an important influence on the health and comfort of the workers employed therein, and in Great Britain statutory provisions regulating ventilation, temperature and humidity were embodied in the Factory Acts as long ago as 1844. Formerly there was a tendency to regard ventilation as being largely independent of temperature and humidity, and to limit its definition to the replacement of vitiated air by fresh. As the result, the legal standards were almost always formulated in terms of chemical purity of the air. Recent physiological research, however, has shown that an important relation exists between the above three factors, and has introduced into the study of ventilation the new conception of air movement. It is, in fact, now generally accepted that neither the chemical purity of the air nor the temperature (whether dry or wet-bulb) is *per se* an accurate index of the physiological effects of the physical environment, but that in addition to these the rate of movement of the air must be taken into account. A temperature, for instance, which will prove insupportable in still air, may be borne without discomfort if the air in contact with the body is kept in a state of motion. The present study shows that natural systems of ventilation are to be preferred to artificial systems, although it is often impossible to avoid artificial ventilation entirely.

Natural systems of ventilation are not only less expensive than artificial systems, but they are more pleasant and more healthy. On an average they yielded more air movement, whilst the air was rather more humid, and created a greater sensation of freshness. The rigid system of ventilation installed in one factory, though it gave eight air changes per hour, was especially liable to induce a stale and oppressive smell in the air.

A Model Factory in England

The Shredded Wheat Company's new factory at Welwyn Garden City, England, is described in the May issue of *Industrial Welfare* (London) as follows:—

"Both outside and inside, the factory is a beautiful structure, looking in the distance as if it had been carved out of white ivory, and with innumerable windows sparkling like diamonds in the sunshine or when lit up from the interior. This effect is produced because the exterior walls are encased in white tiles interspersed with large glass windows. The work stands in the midst of its own grounds which have already been laid out for cricket and tennis and which will later on allocate pitches for football and other team games. Beds of flowers are being cultivated and carefully kept lawns adjoin the playing pitches. Within the factory itself all is harmony and light. No dirt or dust can flourish where there are no dark and inaccessible corners, and the various departments are as spick and span as a ward of a modern hospital. In their airy and pleasant workrooms, the employees are as busy as bees, and attired in spotless white overalls and caps look the picture of happiness and contentment. Each individual is treated as a partner in the enterprise and there are no special privileges retained for any one section more than another. The pleasant dining-room is shared by everyone from the directors down to the youngest and newest employee. Run on the Cafeteria system, there are no special restrictions as to reserved seats and preferential treatment of service or diet. As a matter of fact no charge whatever is made for the three-course dinner which is served in the middle of the day, as the management consider that as many of their employees come from a considerable distance, it is a sound investment for health and efficiency to ensure that everyone has a good mid-day meal. Of course this would probably not be possible in the case of large numbers, but when only a small working force is involved (there are about 100 employees at the Shredded Wheat Works), it is an experiment which is well worth carrying out.

"The dining-room is worthy of special notice, fitted up as it is with small glass-topped tables and comfortable chairs—a place of refreshment for mind as well as body. The kitchen is a model of spotless cleanliness and purity, and in addition to all the latest equipment and apparatus, has its own refrigerating and ice-cream plant. There are two intervals of rest pauses—each of one quarter of an hour—one in the morning and one in the after-

noon, when tea and biscuits are served, and for which the employees pay 2d. a head. The profits derived from these breaks are devoted entirely to the workers, and are spent mainly on social amenities and the like. Already a stage has been erected out of the proceeds and the dramatic society is contemplating producing plays and operas when compiling next winter's social programme.

"Whist drives, concerts and dances are being held periodically and are organized entirely by the employees themselves, with every support and encouragement as required from the management. A piano has been provided and a works orchestra is at present in course of formation.

"The cloak room and sanitary arrangements are particularly good. Each employee has his or her individual steel locker, and these are housed in well warmed and ventilated rooms, where in addition there is an ample supply of wash hand basins of the newest type. Towels are supplied *ad lib.*, a very excellent welfare feature is a food factory, where personal cleanliness is of such vital importance. Better still, there are shower baths which may be used during working hours, and which are much appreciated by the employees.

"Visitors to the factory—and it is worth noting that they are welcome to inspect the works at any time during working hours—have their own delightful reception room fitted up with cane armchairs and palms. But the employees fare no less well, as they too have rooms fitted up in a similar manner, to which they can retire for rest and recreation. In addition, ambulance rooms, in charge of qualified workers, are set aside for those employees requiring attention for illness or accident, or for rest in the case of those who are temporarily indisposed.

The works closes down on Saturday mornings, so that the employees have the advantage of a long week-end, a custom which is becoming fairly common in industries where the nature of the process will admit of it.

Group Life Insurance Association Formed in Canada

Early this year a Group Life Association was formed in Canada, the chartered members being the Metropolitan, Canada Life, Prudential, Sun, Equitable of New York, Travelers, Missouri State Life, Connecticut General and the Aetna Life.

Group insurance was explained by Mr. K. N. Burns McKenzie in a recent address to the Life Underwriters' Association of Canada. He said that this kind of insurance is divided into two parts: (1) where 50 or more lives are involved; and (2) where 10 to 49 lives are to be insured. In both cases it is on the Yearly Renewable Term Plan with the same disability feature. Where 50 or more lives are covered the estimated average premium is $10 per $1,000, while the premium where 10 lives are involved is approximately $12 per $1,000.

Insurance is now provided to cover the "four worries" experienced by workmen, namely, sickness, unemployment (in some cases), old age and death. A master policy is issued to the employer for the benefit of his employees. This is a contract between the insurance company and the employer. Each employee receives a certificate pertaining to the benefits payable to his beneficiary or to himself in event of disability up to age 60, the conversion privilege to which he is entitled if he ceases to be employed, and usually some form of message from the employer giving his reasons for arranging this service.

It has been estimated that approximately 30 per cent of the workers in industry carry no insurance, 30 per cent have not more than $500, while the average insurance in force on the remaining 40 per cent does not exceed $1,000. It is, therefore, not surprising that employers are called upon for burial expenses or sufficient funds to help the widow and children through the period of adjustment. It is estimated that because of physical disability 20 per cent of all employees cannot get insurance of any form or are obliged to pay premiums which have been rated up; because there is no medical examination, various employers have introduced Group insurance in order to do something for employees, which employees cannot do for themselves.

The City Council of Hull, Quebec, resolved in June to petition the provincial government to promote legislation which would provide that all unnecessary work shall cease on Sunday. This action was taken by the council on the representations of the Quebec Sunday Observance Society. The legislation asked for would, if enacted, affect chiefly the paper industry at Hull.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Eighth and Ninth Sessions of the International Labour Conference

THE Eighth and Ninth Sessions of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace were held at Geneva, Switzerland, from May 26 to June 6 and from June 7 to June 24 respectively.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreement.

Seven previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (LABOUR GAZETTE, October, 1920); Geneva, Switzerland, 1921 (LABOUR GAZETTE, January, 1922); Geneva, Switzerland, 1922 (LABOUR GAZETTE, December, 1922); Geneva, Switzerland, 1923 (LABOUR GAZETTE, December, 1923); Geneva, Switzerland, 1924 (LABOUR GAZETTE, August, 1924); Geneva, Switzerland, 1925 (LABOUR GAZETTE, July, 1925).

It will be observed that only one Session of the Conference has been held annually until the present year. In this connection the Treaty of Peace required that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year." It was desired this year to deal with certain questions relating to the employment of seamen and also to consider the adoption of a Convention relative to the simplification of the inspection of emigrants on board ship. The latter question was referred to the Eighth Session and was the principal item on the agenda of this gathering, while the agenda of the Ninth Session was confined to certain questions affecting seamen. The present article deals with the proceedings of both the Eighth and Ninth Sessions.

Under the terms of the Treaties of Peace, each State adhering thereto is entitled to send four delegates to the International Labour Conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

Proceedings of the Eighth Session

The results of the Eighth Session may be summed up as follows:—

By 72 votes to 35, the Conference adopted a Draft Convention concerning the simplification of the inspection of emigrants on board ship.

By 89 votes to 19, the Conference adopted a Recommendation concerning the protection of emigrant women and girls on board ship. This Recommendation provides for the appointment of properly qualified women conductresses to give to women and girl emigrants while at sea any material or moral assistance they may need.

By 75 votes to 19, the Conference adopted a Resolution in favour of the carrying of an interpreter on any emigrant vessel carrying at least 50 emigrants speaking a language not that of the country under whose flag the vessel sails.

By 66 votes to 33, the Conference adopted a Resolution in favour of the appointment of a committee of experts to examine the annual reports from Governments, under

Article 408 of the Peace Treaty, on the application of Conventions ratified by them, with a view to facilitating the scrutiny of the reports by a Committee set up by the ensuing Session of the Conference.

By a unanimous vote, the Conference adopted an amendment to its Standing Orders designed to enable all delegates who so desire to take part in the discussions of Committees of the Conference.

The Conference also adopted unanimously a number of amendments to the Standing Orders intended to substitute a "double discussion" procedure for the scheme of first and second readings which had been applied experimentally to proposed Conventions and Recommendations at the two preceding Sessions.

The Conference, further, adopted resolutions concerning native labour, the scientific organization of industry, unemployment, the Hours Convention, and the establishment of a Correspondence Office in India.

In addition, the Conference afforded an opportunity, during a general discussion on the annual report of the Director, for an exchange of views with regard to the progress of ratifications, especially in relation to the Hours Convention, and with regard to a variety of problems arising in connection with the current work of the Organization.

Countries Represented

Of the fifty-seven countries which are members of the International Labour Organization, thirty-eight countries sent delegations to the Eighth Session. In all but six cases these delegations were "complete" in that they consisted of representatives of organized employers and workers as well as of Governments. A list of the countries represented follows:—

South Africa	India
Germany	Irish Free State
Argentina	Italy
Australia	Japan
Austria	Latvia
Belgium	Norway
Brazil	Netherlands
British Empire	Peru
Bulgaria	Poland
Canada	Portugal
Chile	Roumania
China	Kingdom of the Serbs,
Cuba	Croats and Slovenes
Denmark	Siam
Spain	Sweden
Esthonia	Switzerland
Finland	Czechoslovakia
France	Uruguay
Greece	Venezuela
Hungary	

Canadian Delegation

The Canadian delegation in attendance at the Conference was as follows:—

Government Delegates.—Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland.

Mr. Lucien Pacaud, Secretary, Office of the High Commissioner for Canada, London, England.

Adviser to Government Delegates.—Mr. Thomas Poulin, of the Federation of Catholic Workers of Canada, Quebec, Que.

Employers' Delegate.—Mr. Thomas Robb, Manager and Secretary, Shipping Federation of Canada, Montreal, Que.

Adviser to Employers' Delegate.—Mr. R. W. Gould; Canadian Manufacturers' Association, Montreal, Que.

Workers' Delegate.—Mr. Tom Moore, President, Trades and Labour Congress of Canada, Ottawa, Ont.

Adviser to Workers' Delegate.—Mr. Bertram Merson, President, Toronto Division 113, Amalgamated Association of Street & Electric Railway Employees of America, and Vice-President, Trades & Labour Congress of Canada, Toronto, Ont.

Appointment of Committees

Committees were appointed by the Conference as follows:—

Selection Committee.—12 Government delegates, 6 employers' delegates, and 6 workers' delegates, nominated by the respective groups.

Credentials Committee.—Three members—one from each group.

Second Committee (on measures taken in various countries to give effect to the provisions of Conventions to which they have respectively adhered).—Thirty-six members—12 from each group.

Third Committee (on proposed discussion of subjects of two successive Sessions of the Conference before adoption of Draft Conventions or Recommendations).—Thirty-six members—12 from each group.

Fourth Committee (on proposed amendments to the Standing Orders of the Conference).—Eighteen members—6 from each group.

Committee on Proposed Simplification of the Inspection of Emigrants on Board Ship.—Forty-eight members—16 from each group.

Dr. W. A. Riddell was chosen as one of the members of the government group on the Selection Committee.

Mr. Tom Moore was appointed a member of workers' group on the Committee on Standing Orders.

Canada was represented on all three groups of the committee on the simplification of the inspection of emigrants on board ship. Dr. W. A. Riddell was elected as a member of the government group, Major Thomas Robb as a member of the employers' group and Mr. Bertram Merson as a member of the Workers' group.

Mr. Lucien Pacaud and Mr. R. W. Gould acted as substitutes for Dr. Riddell and Major Robb respectively at some of the meetings of the Committee on the simplification of the inspection of emigrants on board ship.

Mr. Thomas Poulin acted as a substitute for Mr. Pacaud at one of the meetings of the Conference.

Officers of the Conference

The following were elected as officers of the Conference:—

President.—Monsignor Nolens, Minister of State of the Netherlands.

Vice Presidents.—Mr. Aguero y Bethancourt, Government Delegate (Cuba); Mr. Hodac, Employers' Delegate (Czechoslovakia); and Mr. Muller, Workers' Delegate (Germany).

Mr. Albert Thomas, Director of the International Labour Office, acted as Secretary-General of the Conference.

The President's Address

The President, after thanking the delegates for the honour conferred on him and his country, referred to the objects of the International Labour Organization, to the obstacles encountered, and to possible remedies for the situation. The ideal of the organization was the promotion of social justice and peace between employers and employed. It was to be an organization taking decisions involving strict obligations on its members, including the obligation of adapting national legislation to the minimum standards laid down in international conventions. He regretted to have to say that the reality still fell short of the ideal. Monsignor Nolens declared, however, that he spoke in no spirit of uncertainty or doubt as to the future of the International Labour Organization. If he had felt it possible to make criticisms in public on this occasion, it was because the Organization had already acquired a lofty consciousness of its mission and because the populations of the member states were coming to desire more ardently that simultaneous action in reform which should be the very basis of the Organization's constitution.

Director's Annual Report

Three days were devoted to the discussion of the Director's report. A summary of the report of the Director appears on page 690 in the present issue. During this discussion an exchange of views occurred with regard to the progress of ratifications, especially in relation to the Eight Hours Convention, and a variety of problems arising in connection with the current work of the Organization. During the discussion of the Director's report, Mr. Tom Moore, President of the Trades and Labour Congress of Canada, referring to what had been said by an earlier speaker with regard to the development of scientific management, said the workers of Canada and the United States had realized for some considerable time that if prosperity, measured in the workers' terms (i.e., higher living conditions, greater purchasing power and reduced hours of labour) were to prevail, it could only come about by constantly improving the methods of production and distribution. Mr. Moore stated that the greatest obstacle to these ideals was not so much on the workers' side as on the management side. The workers had, therefore, taken the matter into their own hands in many countries, and were determining for themselves how the great waste caused by inefficient management might be eliminated. The Director's report called attention to the developments that had taken place in this field. It was necessary to point out that these new developments had no connection whatever with the so-called "Taylor systems" of the past, which involved the destruction of human initiative. These new developments were along the lines of introducing a kind of democracy into industry, whereby all those interested, whether by the investment of capital, or by the contribution of manual labour, would take their just part in discussing the problems of the industry, and the results achieved would be equally distributed among those who participated in securing increased production. One of the greatest experiments in this direction had been undertaken by the State-owned railways of Canada, some 23,000 miles in length, and employing some 110,000 workers and, after a year's experience, it had been whole-heartedly approved by the workers concerned. As regards vocational education and apprenticeship, legislation had been passed in Canada which was probably as advanced as that of any part of the world. Mr. Moore suggested that the International Labour Office should examine the Canadian systems of vocational education which co-related the work carried on by the apprentice in the workshop with the technical education

in the school. In closing, Mr. Moore said: "I just wish to say one word of warning in that particular regard, namely, that there should be no confusion between vocational training of apprentices and the so-called trade school. It is impossible to take a school and train anyone in the rudiments of industry, even as it is known to-day, merely through a school. It is essential that technical training of that kind shall be vocational: that it shall supplement the work, the manual labour, which the boy or young apprentice is called upon to perform in the industry in which he is training himself, by giving him the necessary technical knowledge. Where vocational training takes place, it should give him knowledge as to the remainder of the industry so that he may know not only the particular operation with which he is concerned, but also the operations before and the result of those operations in the completed article. Therefore, I wish to commend to the Office a study of our Canadian system, along with the systems already referred to, which I am sure are excellent."

Dr. W. A. Riddell, one of the two government delegates from Canada, expressed satisfaction at the recognition in the report that extra-European countries had something constructive to contribute to social welfare and to the work of the Organization. Reference had been made to experience in North America in what was called scientific management. In his judgment it was something infinitely greater than scientific management; it was an industrial philosophy, and as such demanded the fullest investigation. This new industrial philosophy was a recognition among organized workers and employers alike that the class struggle, with its distrust and its suspicion, could not bring about industrial prosperity. It was a deepening conviction that industrial prosperity could come only from mutual confidence and intelligent co-operation, that it depended on better and more economic methods of production and on the just distribution of the profits of this increased production making possible an increased purchasing power for the great mass of the workers in North America. He congratulated the Office on the emphasis it had laid on this question.

Continuing, Dr. Riddell said: "I would like to point out that since we met here last year some progress has been made in the way of ratification—not all the progress we would like to see, but some considerable progress in view of the world in which we live and the difficulties attendant on making progress. I am very pleased to be able to state that my Government has contributed considerably with regard to progress in ratification. When I spoke from this tribune last year, I stated that we had passed legislation covering four Conventions. I am glad to say that we have ratified four Conventions recently. Canada, as you know, is a federal state; the jurisdiction is a divided one. We have gone to almost every length to ascertain where the responsibility lies; whether it lies with the Federal Parliament or with the Provincial Legislatures. We have consulted the highest judicial authority in our land. That authority has stated, in effect, that six of the Conventions which have been adopted here may be considered within the competence of the Dominion Parliament; there are six that are clearly within federal jurisdiction. We have already ratified four of those six. There is another Convention part of which is of federal concern and part of which is provincial. We have passed legislation—both federal and provincial—which largely covers that Convention. Possibly this is the best evidence of the interest which Canada has taken and is taking in the International Labour Organization."

M. Albert Thomas, Director of the International Labour Office, referred to the various points which had arisen in the discussion. In reference to the ratification of Conventions he intimated that the total number of ratifications on June 1 stood at 199. It had been calculated that if all the member states of the Conference had ratified all the Conventions that had been adopted by the Conference since 1919, the total number of ratifications would be 896. This, however, was not a fair calculation. All the Conventions were not of the same value and could not indeed be ratified by every state. What, for instance, would be the value of a ratification of a maritime Convention by countries which had no seaboard. If they made the necessary adjustment of the number, it would be found that a fair total of ratifications which could be expected was 600. Actually, therefore, the ratifications to date represented one-third of the possible, which was at least a fair result. Twenty countries had ratified the Convention on unemployment; 16 countries had ratified the Convention with regard to night work of Women; 16 countries had ratified the Convention with regard to night work of children; 15 countries had ratified the Convention on the admission of children to employment at sea. These figures show that certain results had been obtained and the permanence of those results was guaranteed by the existence of the international Conventions.

Inspection of Emigrants on Board Ship

Following the organization of the Conference a resolution was submitted by members of the employers' group challenging the competence of the Conference to deal with the main item on its agenda, namely, the simplification of the inspection of emigrants on board ship. The resolution submitted by the group not only denied the competence of the Organization to deal with "questions of the regulation of the transport of emigrants", but also invited the Conference to decline to discuss the specific question on the agenda. This resolution was rejected by 77 votes to 23 and, the ground thus being cleared, the Conference settled down to the tasks before it.

The Conference proceeded to consider the report of the Committee on the Inspection of Emigrants on Board Ship. A Draft Convention on this subject was adopted by 72 votes to 35. This Convention, the full text of which appears hereafter, is based on the principle that the official inspection carried out on board an emigrant vessel for the protection of emigrants shall be undertaken by not more than one Government—as a rule, that of the country whose flag the vessel flies—in order that the present duplication and overlapping may be avoided.

A Recommendation concerning the protection of emigrant women and girls on board ship was adopted by 89 votes to 19, providing for the appointment of properly qualified women conductresses to give to women and girl emigrants while at sea any material or moral assistance they may need.

A Resolution was also adopted by 75 votes to 19, in favour of the carrying of an interpreter on any emigrant vessel carrying at least 50 emigrants speaking a language not that of the country under whose flag the vessel sails.

Double Discussion Procedure

The committee which had been appointed to consider the double discussion procedure of subjects appearing on the agenda of the International Labour Conference, proposed a series of amendments to Article 6 of the Standing Orders of the Conference, under which the various stages of the procedure would be as follows:—

(1) The Governing Body places an item on the agenda of a Session of the Conference;

(2) At this Session the Office submits a documentary report setting forth the law and practice followed by a draft questionnaire;

(3) The Conference holds a general discussion on the substance of the question and decides whether the matter may suitably form the subject of a Convention or Recommendation;

(4) If its decision is in the affirmative, it draws up the questionnaire to be sent to the Governments;

(5) The Conference decides by a two-thirds majority to place the item on the agenda of the following Session;

(6) The questionnaire put into form by the Office ("Red Book") is sent to the Governments within one month;

(7) The Governments' replies reach the Office as early as possible, and in any case so that the Office can despatch the final report ("Blue Report") about four months before the Session of the Conference;

(8) At the following Session the Conference has before it the report in question, and deals with it according to the usual procedure.

The committee's report on this subject was adopted unanimously. The Conference also adopted unanimously two resolutions providing that, as transitory measures, the new double discussion procedure should not be applied to the Ninth or Tenth Sessions of the International Labour Conference. The full text of the Draft Convention, Recommendation and Resolutions of the Conference follows:

Text of the Draft Convention Concerning the Simplification of the Inspection of Emigrants on Board Ship

The General Conference of the International Labour Organization of the League of Nations.

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Eighth Session on 26 May, 1926, and

Having decided upon the adoption of certain proposals with regard to the simplification of the inspection of emigrants on board ship, the question on the agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention.

adopts, this fifth day of June of the year one thousand nine hundred and twenty-six, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1.—For the purposes of application of this Convention the terms "emigrant vessel" and "emigrant" shall be defined for each country by the competent authority in that country.

Article 2.—Each Member which ratifies this Convention undertakes to accept the principle that, save as hereinafter provided, the official inspection carried out on board an emigrant vessel for the protection of emigrants shall be undertaken by not more than one Government.

Nothing in this Article shall prevent another Government from occasionally and at their own expense placing a representative on board to accompany their nationals carried as emigrants in the capacity of observer, and on condition that he shall not encroach upon the duties of the official inspector.

Article 3.—If an official inspector of emigrants is placed on board an emigrant vessel he shall be appointed as a general rule by the Government of the country whose flag the vessel flies. Such inspector may, however, be appointed by another Government in virtue of an agreement between the Government of the country whose flag the vessel flies and one or more other Governments whose nationals are carried as emigrants on board the vessel.

Article 4.—The practical experience and the necessary professional and moral qualifications required of an official inspector shall be determined by the Government responsible for his appointment.

An official inspector may not be in any way either directly or indirectly connected with or dependent upon the shipowner or shipping company.

Nothing in this Article shall prevent a Government from appointing the ship's doctor as official inspector by way of exception and in case of absolute necessity.

Article 5.—The official inspector shall ensure the observance of the rights which emigrants possess under the laws of the country whose flag the vessel flies, or such other law as is applicable, or under international agreements, or the terms of their contracts of transportation.

The Government of the country whose flag the vessel flies shall communicate to the official inspector, irrespective of his nationality, the text of any laws or regulations affecting the condition of emigrants which may be in force, and of any relevant agreements or contracts which have been communicated to such Government.

Article 6.—The authority of the master on board the vessel is not limited by this Convention. The official inspector shall in no way encroach upon the master's authority on board, and shall concern himself solely with ensuring the enforcement of the laws, regulations, agreements, or contracts directly concerning the protection and welfare of the emigrants on board.

Article 7.—Within eight days after the arrival of the vessel at its port of destination the official inspector shall make a report to the Government of the country whose flag the vessel flies, which Government shall transmit a copy of the report to the other Governments concerned, where such Governments have previously requested that this shall be done.

A copy of this report shall be transmitted to the master of the vessel by the official inspector.

Article 8.—The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 9.—This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

Article 10.—As soon as the ratification of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 11.—Subject to the provisions of Article 9, each Member which ratifies this Convention agrees to bring the provisions of Articles 1, 2, 3, 4, 5, 6, and 7 into operation not later than 1 January, 1928, and to take such action as may be necessary to make these provisions effective.

Article 12.—Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

Article 13.—A Member which ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Article 14.—At least once in ten years the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

Article 15.—The French and English texts of this Convention shall both be authentic.

Text of the Recommendation concerning the Protection of Emigrant Women and Girls on Board Ship

The General Conference of the International Labour Organization of the League of Nations.

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Eighth Session on 26 May, 1926; and

Having decided upon the adoption of certain proposals with regard to the means to be taken to ensure the protection of emigrant women and girls on board ship, which question is included in the agenda of the Session; and

Having determined that these proposals shall take the form of a Recommendation,

adopts, this fifth day of June, of the year one thousand nine hundred and twenty-six, the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Where fifteen or more women or girls unaccompanied by a responsible person are carried as emigrants on board an emigrant vessel a properly qualified woman who has no other duty to fulfil on board shall be appointed to give such emigrants any material or moral assistance of which they may stand in need without in any way encroaching upon the authority of the master of the vessel.

She shall report to the authority making the appointment and her report shall be available for the use of the Governments which may be concerned.

Resolution adopted in Favour of the Carrying of Interpreters on Emigrant Vessels

Wherever 50 or more emigrants speaking a particular language which is not the official language of the country under whose flag the vessel sails, are carried on board an emigrant vessel, the vessel shall be required to carry a person or persons (who may be the official inspector of emigrants on board, or some member of the ship's complement, or a passenger on the vessel) who is acquainted with the language of the emigrants concerned, and can act as interpreter for them, when required.

Resolution Respecting the Proposed Appointment of a National Correspondent in India

This Conference draws the attention of the Governing Body to the resolution referred to it by the Conference in 1922 regarding the appointment of a National Correspondent in India, and requests the Governing Body to decide on the matter as soon as possible.

Resolution Concerning Unemployment

Whereas unemployment in many countries still presents a grave and persistent problem, the International Labour Conference, while expressing the hope that the forthcoming International Economic Conference will discover effective methods of mitigating this evil,—

(1) Requests the International Labour Office to increase to the utmost its efforts to secure wider adoption of the measures proposed in the Recommendations and Conventions on unemployment adopted at previous Sessions of the Conference, i.e.,

(*a*) communication by Governments of all available information, statistical or otherwise, concerning unemployment and the measures taken or contemplated to combat it;

(*b*) the creation and extension of systems of unemployment insurance, and the admission of foreigners to the benefits of these systems on condition of reciprocity;

(*c*) the creation and extension of public employment exchange systems and international co-ordination of these national systems, particularly for the collective recruiting of workers for employment abroad;

(*d*) the organization of public works so as to counteract the fluctuations of private business;

(2) Requests the Governing Body to place unemployment insurance on the Agenda of an early Session of the Conference;

(3) Notes that the results of the enquiry into seasonal unemployment proposed by the 1922 Session of the Conference will be published in the series *Studies and Reports* during 1927;

(4) Notes the information given in the Director's Report on the work of the Joint Committee on Economic Crises, and requests that this work shall be actively continued, with a view both to the development in the several countries of the series of statistics known as "economic barometers" and to the discovery and application of the best means of counteracting the trade fluctuations which give rise to periodic outbreaks of unemployment; and

(5) In particular, requests the International Labour Office, in accordance with the intention expressed by the Director in his Report, to seek the advice of the Joint Committee on the financial obstacles to the putting into operation by public authorities of the Recommendation referred to above concerning the organization of public works, and on a suggestion which has been made as to the possibility of reducing trade fluctuations by a scientific regulation of railway goods rates.

(6) In connection with the above measures, requests the Office to approach the Governments of the countries concerned, in order to request them to take the necessary steps so that the finding of employment for foreign workers may be undertaken solely by public institutions or by organizations not aiming at making profits, operating under the supervision of the public authorities, and after consultation of the employers' and workers' organizations.

Resolution Concerning Scientific Organization of Industry

The Conference requests the International Labour Office to devote special attention to questions of the scientific organization of industry, in view of the fact that these questions are of increasing social interest, and to carry on its studies actively in this sphere.

Resolution Concerning the Conference of Governments held in London with a view to Ratification of the Eight Hours Convention

The Conference, in approving every effort tending to secure the ratification of the Conventions of the International Labour Conference, takes note of the agreement reached at the Conference of Governments held in London with a view to the ratification of the Eight Hours Convention, which agreement it regards as a progressive step.

The Conference does not intend to express an opinion on the London interpretations of the Washington Convention, but, in view of former declarations of the Governments represented at London, simply wishes to place on record that, as far as they are concerned, no objections against ratification now stand.

In consequence, the Director of the International Labour Office is requested to continue his endeavours to obtain from the countries signatories of the London agreement with the least possible delay the ratification of the Washington Eight Hours Convention.

Resolution Concerning an Enquiry into Conditions of Native Labour

The Conference welcomes the decision reached by the Governing Body to undertake an enquiry into conditions of native labour, and expresses the hope that, as the result of the labours of the Committee of Experts which it is proposed to establish, it may be possible to present a preliminary report on the matter to the Conference of 1927.

Proceedings of the Ninth Session

The Ninth Session of the International Labour Conference opened in Geneva on June 7 and continued until June 24. The agenda comprised the two questions following:—

1. International codification of the rules relating to seamen's articles of agreement; and
2. General principles for the inspection of the conditions of work of seamen.

Countries Represented

Thirty-eight states were represented at the Conference by 126 delegates, 12 substitutes, 121 technical advisers and 2 substitute advisers. Representation in each case included two government delegates, one employers' delegate and one workers' delegate, excepting in the case of eight states, namely: China, Lithuania, Peru, Portugal, Rumania, Siam, Uruguay and Venezuela, which were represented only by government delegates. The complete list of states represented at the Conference is as follows: Argentina, Australia, Austria, Belgium, Brazil, British Empire, Bulgaria, Canada, Chili, Cuba, Czecho-Slovakia, China, Denmark, Esthonia, Finland, France, Germany, Greece, Hungary, India, Irish Free State, Italy, Japan, Latvia, Lithuania, Netherlands, Norway, Peru, Poland, Portugal, Rumania, Serb-Croat-Slovene Kingdom, Siam, South Africa, Spain, Sweden, Uruguay, Venezuela.

Canadian Delegation

Government Delegates: Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland.

Mr. Lucien Pacaud, Secretary of High Commissioner's Office, London, England.

Adviser to Government Delegates: Mr. Thomas Poulin, of the Federation of Catholic Workers of Canada, Quebec, P.Q.

Employers' Delegate: Mr. Thomas Robb, Manager and Secretary, Shipping Federation of Canada, Montreal, P.Q.

Technical Adviser to Employers' Delegate: Mr. R. W. Gould, Canadian Manufacturers' Association, Montreal, P.Q.

Workers' Delegate: Mr. Tom Moore, President, Trades and Labour Congress of Canada, Ottawa.

Technical Adviser to Workers' Delegate: Mr. Eugene Hamelin, Grand President, National Association of Marine Engineers of Canada, Montreal, P.Q.

President and Vice-Presidents

Viscount Burnham, one of the delegates of the British Government, was elected as President of the Conference. He had previously served as President of the Third and Fourth Sessions of the Conference in 1921 and 1922, respectively. Mr. Bandeira de Mello (Government Delegate, Brazil), Mr. de Rousiers (Employers' Delegate, France), and Mr. Mahlman (Workers' Delegate, Belgium) were elected as Vice-Presidents.

President's Address

The president, after thanking the Conference for the unique honour conferred on him of election for the third time to the chair, and referring in graceful terms to others who had occupied that position, said in part:—

"This Conference is to be concerned wholly with the consideration of maritime questions, which present peculiar difficulties and divergent aspects. We work here to complete the work which was begun at the Second Conference at Genoa. If we can bring to our debates a spirit of mutual helpfulness and accommodation we may do a good deal to facilitate and simplify the interpretation of the rules of the sea, and to lessen the extent of the difference which now exists between the maritime nations in our essential services to one another and to mankind. May I express the hope that it may be within the range of our reasonableness and our good-will to effect this purpose, and so to justify the existence of the International Labour Organization as one of the permanent institutions of the civilized world?"

Appointment of Committees

Committees were appointed by the Conference as follows:—

Credentials Committee: one representative of each group.

Selection Committee: twelve government delegates, six employers' delegates, and six workers' delegates, nominated by the respective groups.

Item 1 of the Agenda (International Codification of the Rules relating to Seamen's Articles of Agreement):

First Committee (Articles of agreement): thirty-six members, 12 from each group.

Second Committee (Repatriation): twenty-four members, 8 from each group.

Third Committee (Discipline): twenty-four members, 8 from each group.

Item 2 of the Agenda (General Principles for the Inspection of the Conditions of Work of Seamen):

Fourth Committee: thirty-six members, 12 from each group.

It was also decided that a Sub-committee of six members from each group should be set up to consider the questions which might be common to the three Committees dealing with the question of codification.

Canada was represented on four of the above committees.

Dr. W. A. Riddell was chosen as a member of the government group on the Selection Committee.

Dr. W. A. Riddell was also appointed a member of the government group on the Committee on Seamen's Articles of Agreement, Mr. Thomas Poulin being named as a substitute for him, while Mr. Thomas Robb, with Mr. R. W. Gould as a substitute, was selected as a member of the employers' group.

Mr. Eugene Hamelin was elected a member of the workers' group on the Committee on Discipline of Seamen.

Mr. Thomas Robb was chosen as a member of the employers' group on the Committee on Conditions of Work of Seamen, and Mr. Tom Moore as a member of the workers' group.

Credentials

The Credentials Committee was called on to deal with protests which had been lodged against the admission of the following representatives in attendance at the Conference: Mr. Rossoni, workers' delegate of Italy (whose appointment had also been under challenge at the Eighth Session), Mr. Mahlman, workers' delegate of Belgium; Sir Arthur Froom, employers' delegate of India; and Arthur Pugh, workers' delegate of Great Britain. The Credentials Committee reported in favour of the admission of all of these delegates and the recommendation of the Committee was upheld by the Conference.

Proceedings of the Conference

The Ninth Session resembled somewhat in its initial stages the Eighth Session which immediately preceded it. At the Eighth Session the employers' delegates challenged the competence of the International Labour Organization to deal with the subject matter of the agenda and were defeated by 77 votes to 23. At the opening of the Ninth Session, the employers' group challenged the correctness of the preparatory steps taken by the International Labour Office in respect of the first item on the agenda and were defeated by 78 votes to 27. Stated broadly, the question raised by the shipowners' representatives was whether, in drawing up proposals for three Draft Conventions concerning the international codification of the rules relating to seamen's articles of agreement, the International Labour Office had or had not complied with the intentions of the Second Session of the Conference—the first devoted exclusively to maritime matters—held at Genoa in 1920. As a collateral issue, the question was raised whether the office was wise in dividing the subject into three parts, and suggesting three Conventions—one concerning articles of agreement generally, another concerning repatriation, and another concerning disciplinary and criminal penalties—instead of attempting to cover the whole ground in a single Convention.

The employers' representatives argued, with considerable vigour, that the Genoa Conference, from which the proposal for an international code sprang, intended no more than that an attempt should be made to stereotype existing law and practice in various countries by establishing a uniform code containing only such principles as were already generally recognized, and that any proposal to introduce new or additional provisions into the code was outside the scope of the Genoa decisions. This contention was opposed with equal vigour by the workers' delegates, some of whom roundly declared that the employers were actuated by wrecking motives, and was not accepted by the great majority of the Government delegates.

After a lively and exhaustive discussion, the Conference by a large majority dismissed, as already indicated, the restrictive proposals of the employers' group.

Results of the Conference

The results of the Session may be summed up as follows:—

By 95 votes to 0, the Conference adopted a Draft Convention concerning seamen's articles of agreement.

By 76 votes to 22, the Conference adopted a Draft Convention relating to the rights of repatriation of seamen.

By 75 votes to 22, the Conference adopted a Recommendation in favour of measures for repatriation of masters and apprentices.

By 96 votes to 6, the Conference adopted a Recommendation concerning general principles for the inspection of the conditions of work of seamen.

By 55 votes to 25, the Conference adopted a Resolution in favour of the placing on the agenda for an early Session of the Conference of the question of articles of agreement for the fishing industry and other forms of navigation excluded from the above-mentioned Convention.

By 72 votes to 17, the Conference adopted a Resolution inviting Governments to take steps to ensure the repatriation of fishermen left in foreign ports.

By 54 votes to 32, the Conference adopted a Resolution in favour of further study by the Office of penalties in respect to violations of articles of agreement, particularly by desertion or absence without leave, and the submission of the results to the Joint Maritime Commission with a view to the possible treatment of the question internationally.

By 67 votes to 26, the Conference adopted a Resolution asking the Governing Body to place the question of the regulation of hours of work on board ship on the agenda of a special maritime Session in 1928, and to submit this question to the Joint Maritime Commission at its next regular session.

By a unanimous vote, the Conference adopted a Resolution instructing the Office to continue the study of seamen's welfare ashore, and requesting the Governing Body to consider the possibility of placing this question on the agenda of an early Session of the Conference with a view to the adoption of a Recommendation.

By 38 votes to 27, the Conference adopted a Resolution requesting the Office to collect information on the conditions of work in sponge-fishing, pearlfishing, etc.

Other Resolutions were adopted relating to procedure for the appointment of group secretaries and for the consideration of objections to delegates raised by international organizations.

Election of Joint Maritime Commission

A Joint Maritime Commission composed of five representatives of shipowners, five representatives of seamen, and two additional members chosen by the employers' group and the workers' group, respectively, of the Governing Body, was established at the Second Session of the International Labour Conference in 1920. Its meetings are presided over by the Chairman of the Governing Body. Mr. Thomas Robb, manager and secretary of the Shipping Federation of Canada, served during the past six years as one of the shipowners' group. It was decided to change slightly the composition of the Joint Maritime Commission by providing for the election of two deputy members on behalf of the shipowners' group and two deputy members on behalf of the seamen's group. Provision was made also for the selection of substitute members. The elections were held by the employers' and the workers' groups respectively in attendance at the Ninth Session of the International Labour Conference and resulted as follows:—

Employers' Group:
Mr. Cuthbert Laws (British Empire).
Mr. de Rousiers (France).
Mr. Matsukata (Japan).
Mr. Odfjell (Norway).
Mr. Brunelli (Italy).

Deputy Members:
Mr. Deckers (Belgium).
Mr. Rehmke (Germany).

Substitute Members:
Mr. Thomas Robb (Canada).
Mr. Doudriaan (Netherlands).
Mr. Arteta (Spain).

Workers' Group:
Mr. Henson (British Empire).
Mr. Fimmen (Netherlands).
Mr. Kohler (Germany).
Mr. Ehlers (France).
Mr. Lundgren (Sweden).

When the report of these elections was presented to the Conference, Dr. W. A. Riddell, one of the two Government delegates from Canada, voiced a vigorous protest based on the fact that only two of the ten members comprising the Commission will be drawn from other than European countries. He moved that the report should be referred back for further consideration. A vote was taken on Dr. Riddell's amendment, which was defeated by 39 votes to 36.

Director's Report

The Conference devoted one day's sitting to a consideration of the Annual Report of the Director of the International Labour Office so far as it related to maritime affairs. Attention was drawn in this discussion to the fact that the maritime section of the International Labour Office had been abolished in 1922. The Director in his reply admitted that the maritime section of the Office had been discontinued some years ago on grounds of economy, but added that an effort was being made to build it up again.

Proposed Reference to Permanent Court of International Justice

Mr. Cuthbert Laws, employers' delegate for Great Britain, proposed that a reference should be made to the Permanent Court of International Justice at The Hague in order that an advisory opinion might be given as to whether the International Labour Organization was within its rights in calling special sessions of the International Labour Confer-

ence to consider conditions of employment at sea. This proposal was discussed at some length in the Conference but was not adopted.

Proposed Draft Convention concerning Discipline of Seamen

A proposed Draft Convention was submitted to the Conference concerning guarantees to be provided to seamen in regard to disciplinary and criminal penalties. A report was received in the Conference from one of the committees containing the text of a Draft Convention on this subject. The vote on this Draft Convention stood 62 to 36 in its favour, but as a two-thirds majority is required for the passage of Draft Conventions under the Standing Orders of the Conference, it was not adopted. The subject matter was thereupon referred back to the committee, which introduced instead a Recommendation. The vote on the Recommendation was 38 for and 50 against. This particular item of the Conference agenda accordingly failed of adoption. A Resolution was, however, adopted by the Conference requesting the Governing Body to study the question of penalties inflicted in respect of the violation of seamen's articles of agreement; also to collect information in regard to the law and decisions of courts in various countries on this question and to submit the results of such study to the Joint Maritime Commission, with a view to deciding upon methods of dealing with this subject which might be adopted internationally.

Proposed Resolution concerning Seamen's Welfare

On motion of Mr. Thomas Robb, employers' delegate for Canada, a resolution was adopted unanimously by the Conference that the International Labour Office be instructed to continue the study of seamen's welfare and to submit the report of the Sub-Committee on Seamen's Welfare in Ports to the attention of the Government of the states members of the International Labour Organization; also that the Governing Body be requested to consider the possibility of placing this question on the agenda of an early Session of the Conference with a view to the adoption of a Recommendation.

President's Closing Address

The business of the Session having been concluded, an expression of thanks was voted to the President for his conduct of the proceedings. The President (Viscount Burnham), in acknowledging the vote of thanks described the Session as an important and progressive one. Referring to the resolution on seamen's welfare, he expressed a hope that a world-wide effort would be made to secure decent provision for the health and safety of sailors ashore. He went on to suggest that the Governing Body should consider two subjects which he regarded as being of paramount importance. The first concerned the volume of world production. He suggested that what was called limitation of output, whether by trade custom or by trade union rule, or by industrial agreement, went to the root of the social problems with which the International Labour Organization dealt. The second question was that of methods of avoiding such disastrous trade disputes as that now proceeding in the British coal industry. Compulsory arbitration had been tried in some countries, and had not been altogether successful. There was another matter: compulsory conciliation, and he thought this method was worth the fullest examination.

Text of the Draft Convention Concerning the Repatriation of Seamen

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Ninth Session on June 7, 1926, and

Having decided upon the adoption of certain proposals with regard to the repatriation of seamen, which is included in the first item of the agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts, this 23rd day of June of the year one thousand nine hundred and twenty-six, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1.—This Convention shall apply to all sea-going vessels registered in the country of any Member ratifying this Convention, and to the owners, masters and seamen of such vessels.

It shall not apply to: ships of war, Government vessels not engaged in trade, vessels engaged in the coasting trade, pleasure yachts, Indian country craft, fishing vessels, vessels of less than 100 tons gross registered tonnage or 300 cubic metres, nor to vessels engaged in the home trade below the tonnage limit prescribed by national law, for the special regulation of this trade at the date of the passing of this Convention.

Article 2.—For the purpose of this Convention the following expressions have the meanings hereby assigned to them, viz.:

(*a*) The term "vessel" includes any ship or boat of any nature whatsoever, whether publicly or privately owned, ordinarily engaged in maritime navigation.

(*b*) The term "seaman" includes every person employed or engaged in any capacity on board any vessel and entered on the ship's articles. It excludes masters,

pilots, cadets and pupils on training ships and duly indentured apprentices, naval ratings, and other persons in the permanent service of a Government.

(*c*) The term "master" includes every person having command and charge of a vessel except pilots.

(*d*) The term "home trade vessel" means a vessel engaged in trade between a country and the ports of a neighbouring country within geographical limits determined by the national law.

Article 3.—Any seaman who is landed during the term of his engagement or on its expiration shall be entitled to be taken back to his own country, or to the port at which he was engaged, or to the port at which the voyage commenced, as shall be determined by national law, which shall contain the provisions necessary for dealing with the matter, including provisions to determine who shall bear the charge of repatriation.

A seaman shall be deemed to have been duly repatriated if he has been provided with suitable employment on board a vessel proceeding to one of the destinations prescribed in accordance with the foregoing paragraph.

A seaman shall be deemed to have been repatriated if he is landed in the country to which he belongs, or at the port at which he was engaged, or at a neighbouring port, or at the port at which the voyage commenced.

This Article shall not apply to a seaman engaged in a country other than his own.

Article 4.—The expenses of repatriation shall not be a charge on the seaman if he has been left behind by reason of

(*a*) injury sustained in the service of the vessel, or

(*b*) shipwreck, or

(*c*) illness not due to his own wilful act or default, or

(*d*) discharge for any cause for which he cannot be held responsible.

Article 5.—The expenses of repatriation shall include the transportation charges, the accommodation and the food of the seaman during the journey. They shall also include the maintenance of the seaman up to the time fixed for his departure.

When a seaman is repatriated as member of a crew, he shall be entitled to remuneration for work done during the voyage.

Article 6.—The public authority of the country in which the vessel is registered shall be responsible for supervising the repatriation of any member of the crew in cases where this Convention applies, whatever may be his nationality, and where necessary for giving him his expenses in advance.

Article 7.—The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 8.—This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organisation have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

Article 9.—As soon as the ratification of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 10.—Subject to the provisions of Article 8, each Member which ratifies this Convention agrees to bring the provision of Articles 1, 2, 3, 4, 5 and 6 into operation not later than 1 January 1928, and to take such action as may be necessary to make these provisions effective.

Article 11.—Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

Article 12.—A Member which ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Article 13.—At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

Article 14.—The French and English texts of this Convention shall both be authentic.

Text of the Draft Convention Concerning Seamen's Articles of Agreement

The General Conference of the International Labour Organization of the League of Nations.

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Ninth Session on June 7, 1926, and

Having decided upon the adoption of certain proposals with regard to seamen's articles of agreement, which is included in the first item of the agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention.

adopts, this 24th day of June of the year one thousand nine hundred and twenty-six, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1.—This Convention shall apply to all seagoing vessels registered in the country of any Member ratifying this Convention, and to the owners, masters and seamen of such vessels.

It shall not apply to: ships of war, Government vessels not engaged in trade, vessels engaged in the coasting trade, pleasure yachts, Indian country craft, fishing vessels, vessels of less than 100 tons gross registered tonnage or 300 cubic metres, nor to vessels engaged in the home trade below the tonnage limit prescribed by national law, for the special regulation of this trade at the date of the passing of this Convention.

Article 2.—For the purpose of this Convention the following expressions have the meanings hereby assigned to them, viz.:

(*a*) The term "vessel" includes any ship or boat of any nature whatsoever, whether publicly or privately owned, ordinarily engaged in maritime navigation.

(*b*) The term "seaman" includes every person employed or engaged in any capacity on board any vessel and entered on the ship's articles. It excludes masters, pilots, cadets and pupils on training ships and duly indentured apprentices, naval ratings, and other persons in the permanent service of a Government.

(*c*) The term "master" includes every person having command and charge of a vessel except pilots.

(*d*) The term "home trade vessel" means a vessel engaged in trade between a country and the ports of a neighbouring country within geographical limits determined by the national law.

Article 3.—Articles of agreement shall be signed both by the shipowner or his representative and by the seaman. Reasonable facilities to examine the articles of agreement before they are signed shall be given to the seaman and also to his adviser.

The seaman shall sign the agreement under conditions which shall be prescribed by national law in order to ensure adequate supervision by the competent public authority.

The foregoing provisions shall be deemed to have been fulfilled if the competent authority certifies that the provisions of the agreement have been laid before it in writing and have been confirmed both by the shipowner or his representative and by the seaman.

National law shall make adequate provision to ensure that the seaman has understood the agreement.

The agreement shall not contain anything which is contrary to the provisions of national law or of this Convention.

National law shall prescribe such further formalities and safeguards in respect of the completion of the agreement as may be considered necessary for the protection of the interests of the shipowner and of the seaman.

Article 4.—Adequate measures shall be taken in accordance with national law for ensuring that the agreement shall not contain any stipulation by which the parties purport to contract in advance to depart from the ordinary rules as to jurisdiction over the agreement.

This Article shall not be interpreted as excluding a reference to arbitration.

Article 5.—Every seaman shall be given a document containing a record of his employment on board of the vessel. The forms of the document, the particulars to be recorded and the manner in which such particulars are to be entered in it shall be determined by national law.

The document shall not contain any statement as to the quality of the seaman's work or as to his wages.

Article 6.—The agreement may be made either for a definite period or for a voyage or, if permitted by national law, for an indefinite period.

The agreement shall state clearly the respective rights and obligations of each of the parties.

It shall in all cases contain the following particulars:

(1) The surname and other names of the seaman, the date of his birth or his age, and his birthplace;

(2) The place at which and date on which the agreement was completed;

(3) The name of the vessel or vessels on board which the seaman undertakes to serve;

(4) The number of the crew of the vessel, if required by national law;

(5) The voyage or voyages to be undertaken, if this can be determined at the time of making the agreement;

(6) The capacity in which the seaman is to be employed;

(7) If possible, the place and date at which the seaman is required to report on board for service;

(8) The scale of provisions to be supplied to the seaman, unless some alternative system is provided for by national law;

(9) The amount of his wages;

(10) The termination of the agreement and the conditions thereof, that is to say:

(*a*) if the agreement has been made for a definite period, the date fixed for its expiry;

(*b*) if the agreement has been made for a voyage, the port of destination and the time which has to expire after arrival before the seaman shall be discharged;

(*c*) if the agreement has been made for an indefinite period, the conditions which shall entitle either party to rescind it, as well as the required period of notice for rescission; provided that such period shall not be less for the shipowner than for the seaman;

(11) The annual leave with pay granted to the seaman after one year's service with the same shipping company, if such leave is provided for by national law;

(12) Any other particulars which national law may require.

Article 7.—If national law provides that a list of crew shall be carried on board it shall specify that the agreement shall either be recorded in or annexed to the list of crew.

Article 8.—In order that the seaman may satisfy himself as to the nature and extent of his rights and obligations, national law shall lay down the measures to be taken to enable clear information to be obtained on board as to the conditions of employment, either by posting the conditions of the agreement in a place easily accessible from the crew's quarters, or by some other appropriate means.

Article 9.—An agreement for an indefinite period may be terminated by either party in any port where the vessel loads or unloads, provided that the notice specified in the agreement shall have been given, which shall not be less than 24 hours.

Notice shall be given in writing; national law shall provide such manner of giving notice as is best calculated to preclude any subsequent dispute between the parties on this point.

National law shall determine the exceptional circumstances in which notice even when duly given shall not terminate the agreement.

Article 10.—An agreement entered into for a voyage, for a definite period, or for an indefinite period shall be duly terminated by:

(*a*) mutual consent of the parties;

(*b*) death of the seaman;

(*c*) loss or total unseaworthiness of the vessel;

(*d*) any other cause that may be provided in national law or in this Convention.

Article 11.—National law shall determine the circumstances in which the owner or master may immediately discharge a seaman.

Article 12.—National law shall also determine the circumstances in which the seaman may demand his immediate discharge.

Article 13.—If a seaman shows to the satisfaction of the shipowner or his agents that he can obtain command of a vessel or an appointment as mate or engineer or to any other post of a higher grade than he actually holds, or that any other circumstance has arisen since his engagement which renders it essential to his interests that he should be permitted to take his discharge, he may claim his discharge, provided that without increased expense to the shipowner and to the satisfaction of the shipowner or his agent he furnishes a competent and reliable man in his place.

In such case, the seaman shall be entitled to his wages up to the time of his leaving his employment.

Article 14.—Whatever the reason for the termination or rescission of the agreement, an entry shall be made in the document issued to the seaman in accordance with Article 5 and in the list of crew showing that he has been discharged, and such entry shall, at the request of either party, be endorsed by the competent public authority.

The seaman shall at all times have the right, in addition to the record mentioned in Article 5, to obtain

from the master a separate certificate as to the quality of his work or, failing that, a certificate indicating whether he has fully discharged his obligations under the agreement.

Article 15.—National law shall provide the measures to ensure compliance with the terms of the present Convention.

Article 16.—The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 17.—This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

Article 18.—As soon as the ratification of two Members of the International Labour Organiation have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 19.—Subject to the provisions of Article 17 each Member which ratifies this Convention agrees to bring the provision of Articles 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14 and 15 into operation not later than 1 January 1928, and to take such action as may be necessary to make these provisions effective.

Article 20.—Each member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

Article 21.—A member which ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Article 22.—At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

Article 23.—The French and English texts of this Convention shall both be authentic.

Text of the Recommendation Concerning the Repatriation of Masters and Apprentices

The General Conference of the International Labour Organisation of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Ninth Session on June 7, 1926, and

Having decided upon the adoption of certain proposals with regard to the repatriation of masters and apprentices, which is included in the first item of the agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation,

adopts, this 23rd day of June of the year one thousand nine hundred and twenty-six, the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

The Conference recommends that the national Governments shall take steps to provide for the repatriation of masters and duly indentured apprentices, who are not covered by the terms of the Draft Convention on the repatriation of seamen adopted by the General Conference at its Ninth Session.

Text of the Recommendation Concerning the General Principles for the Inspection of the Conditions of Work of Seamen

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Ninth Session on June 7, 1926, and

Having decided upon the adoption of certain proposals with regard to the general principles for the inspection of the conditions of work of seamen, the question forming the second item on the agenda of the Session, and

Having determined that these proposals should take the form of a recommendation,

adopts, this 19th day of June of the year one thousand nine hundred and twenty-six, the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Whereas among the methods and principles of special and urgent importance for the physical, moral and intellectual welfare of the workers, the Treaty of Versailles and the other Treaties of Peace make it a duty of the International Labour Organization to devote special attention to the inspection of conditions of work in order to ensure the enforcement of the laws and regulations for the protection of the workers;

Whereas the International Labour Conference at its Fifth Session (October 1923) adopted a "Recommendation concerning the general principles for the organization of systems of inspection to secure the enforcement of the laws and regulations for the protection of the workers".

Whereas that Recommendation is based essentially on the experience gained in the inspection of industrial establishments and it would be particularly difficult to apply or even to adapt it to the work of seamen, the nature and conditions of which are essentially different from those of work in a factory;

Whereas the inspection of the conditions under which seamen work will increase in importance in proportion as legislation for the protection of seamen is developed in the different countries and as further conventions concerning the working conditions of seamen are adopted by the Conference;

Whereas for the foregoing reasons it is desirable, in order to place the experience already gained at the disposal of the Members with a view to assisting

them in the institution or re-organization of their systems of inspection of the conditions under which seamen work, to indicate the general principles which practice shows to be best calculated to ensure the enforcement of measures for the protection of seamen;

The General Conference therefore recommends that each Member of the Organization should take the following principles into consideration:

I. Scope of Inspection

1. That the principal duty of the authority or authorities responsible in each country for the inspection of the conditions under which seamen work should be to secure the enforcement of all laws and regulations dealing with such conditions and the protection of seamen in the exercise of their profession.

2. That, in so far as it may be considered desirable and possible, by reason of the experience they gain in carrying out their principal duties, to entrust the inspecting authorities with other secondary duties of a social nature which may vary according to the conceptions, customs, or traditions prevailing in the different countries, such duties may be assigned to them in addition to their principal duties on condition that:

(*a*) they do not in any way interfere with the performance of the inspectors' principal duties;

(*b*) they do not in any way prejudice the authority and impartiality which are necessary to inspectors in their relations with shipowners and seamen.

II. Organization of Inspection

The Conference recommends:

3. That, wherever it is compatible with administrative practice and in order to secure the greatest possible uniformity in the enforcement of the laws and regulations relating to the conditions under which seamen work, the different services or bodies responsible for supervising the enforcement of such laws and regulations should be centralized under a single authority;

4. That if existing administrative practice will not admit of such centralization of supervison, the different services or authorities whose functions are wholly or partly concerned with the protection of seamen should be enabled to benefit by one another's experience and to regulate their methods of work according to such common principles as may be considered the most effective;

5. That for this purpose close liaison and constant collaboration should be established between these different services or authorities, so far as is compatible with administrative practice and by the means considered the most suitable in each country (exchange of reports and information, periodical conferences, etc.); and

6. That the different services or authorities responsible for supervising the conditions under which seaman work should keep in touch with the authorities responsible for factory inspection in matters of mutual concern.

III. Reports of the Inspection Authorities

The Conference recommends:

7. That an annual general report on the supervision of the conditions under which seamen work should be published by the central authority or by the collaboration of the different authorities responsible for carrying out such supervision;

8. That this annual report should contain a list of the national laws and regulations affecting the conditions under which seamen work and their supervision together with any amendments thereto, which have come into operation during the year;

9. That it should also contain statistical tables with the necessary comments on the organization and work of inspection and giving information, as far as may be possible and compatible with national administrative practice, on the following points:

(*a*) the number of vessels in commission subject to the various forms of inspection, these vessels being classified according to type (mechanically propelled vessels and sailing vessels) and each category being subdivided according to the purpose for which these vessels are used;

(*b*) the number of seamen actually engaged on board the vessels of each class;

(*c*) the number of vessels visited by the inspectors, with an indication of the strength of the crews;

(*d*) the number and nature of breaches of the law or regulations ascertained by the inspectors and of the penalties imposed;

(*e*) the number, nature, and causes of accidents occurring to seamen during their work;

(*f*) the means adopted for the enforcement of the provisions of International Labour Conventions which relate to the conditions under which seamen work, and the extent of the compliance with such provisions, either in the form of the annual report transmitted to the International Labour Office under Article 408 of the Treaty of Peace or in some other appropriate form.

IV. Rights, Powers and Duties of Inspectors

(a) Rights of inspection.

The Conference recommends:

10. That the inspection authorities, on proof of their identity, should be empowered by national law;

(*a*) to visit without previous notice any vessel flying the national flag by day or by night, in national or foreign territorial waters, and, in exceptional cases fixed by national law and by authorization of the maritime authority, at sea, provided, however, that the time and manner of such visits should in practice be fixed so as to avoid as far as possible any serious inconvenience to the working of the vessel;

(*b*) to question without witnesses the crew and any other persons whose evidence may be considered desirable, to make any enquiries which may be judged necessary, and to require production of any of the ship's papers or documents which the laws or regulations require to be kept in so far as such papers or documents relate to the matters subject to inspection.

11. That national law should provide that the inspectors should be bound by oath, or by any other method which conforms with the administrative practice or customs in each country, not to disclose commercial secrets which may come to their knowledge in the course of their duties, under pain of criminal penalties or appropriate disciplinary measures.

(b) Compulsory powers.

The Conference recommends:

12. That the inspection authorities should be empowered, in serious cases where the health or safety of the crew is endangered, to prohibit by proper authorization or the maritime authority a vessel from leaving port until the necessary measures have been taken on board to comply with the law, subject to appeal to higher administrative authority or to the court of competent jurisdiction, according to the law in the different countries;

13. That prohibiting a vessel from leaving port should be considered a measure of exceptional gravity, which should only be employed as a last resort when the other legal means at the disposal of the inspection authority to ensure respect for the law have been used without effect;

14. That the inspection authorities should be empowered in special cases to issue orders for securing observance of the laws and regulations governing the conditions under which seamen work, subject to appeal to higher administrative authority or to the court of

competent jurisdiction, according to the law in each country;

15. That the central authority should be empowered in special cases to grant exemption from any specified requirement of any law or regulation governing the conditions under which seamen work, if such authority is satisfied that that requirement has been substantially complied with, or that compliance with the requirement is unnecessary in the circumstances of the case, and that the action taken, or provision made, as regards the subject matter of the requirement is as effective as, or more effective than, actual compliance with the requirement;

(c) Right to call for an inspection.

The Conference recommends:

16. That national law should provide that the master of a vessel should be entitled to call for an inspection in all cases where he considers it necessary;

17. That national law should provide that the members of the crew of a vessel should also be entitled, subject to such conditions as may be prescribed, to call for an inspection on any matters relating to health, the safety of the vessel, or the rules affecting the conditions under which seamen work.

(d) Co-operation of shipowners and seamen with the inspection authorities.

The Conference recommends:

10. That, so far as is compatible with administrative practice in each country, and by such methods as may be considered most appropriate, shipowners and seamen should be called upon to co-operate in the supervision of the enforcement of the laws and regulations relating to the conditions under which seamen work.

In particular, the Conference draws the attention of the different countries to the following methods of co-operation:

(*a*) it is essential that every facility should be afforded to seamen freely to bring to the notice of the inspection authorities either directly or through their duly authorized representatives any infringement of the law on board the vessel on which such seamen are employed, that the inspection authority should as far as possible promptly make an enquiry into the subject matter of any such complaint, that such complaints should be treated by the inspection authority as absolutely confidential;

(*b*) with a view to ensuring complete co-operation by shipowners and seamen and their respective organizations with the inspection authorities, and in order to improve conditions affecting the health and safety of seamen, it is desirable that the inspection authorities should from time to time consult the representatives of shipowners' and seamen's organizations as to the best means of attaining these ends. It is also desirable that joint committees of shipowners and seamen should be set up, and that they should be enabled to co-operate with the different services responsible for supervising the enforcement of the laws and regulations governing the conditions under which seamen work.

(e) Safeguards.

The Conference recommends:

19. That only such persons should be appointed inspectors as command the full confidence both of the shipowners and of the seamen, and that such persons should therefore be required to possess:

(*a*) The qualities necessary to ensure absolute impartiality in the performance of their duties;

(*b*) The technical qualifications necessary for the performance of their duties.

It is desirable that the inspection service should include men who have served at sea whose appointment whether in a permanent or temporary capacity should be at the discretion of the administrative authority.

20. That, when necessary, inspectors should be assisted in their duties by competent experts who command the full confidence of the shipowners and seamen.

21. That inspectors should be public servants whose status renders them independent of changes of Government;

22. That they should be prohibited from having any financial interest whatsoever in the undertakings subject to their inspection.

(f) Other duties.

The Conference recommends:

23. That as, by reason of the nature of their duties inspectors have special opportunities of observing the practical results of the operation of the laws and regulations governing the conditions under which seamen work, they should be called upon, so far as it is compatible with the administrative methods in each country, to assist in improving legislation for the protection of seamen and to give the most effectual help possible in promoting the prevention of accidents;

24. That, so far as is compatible with administrative practice in each country, they should be called upon to take part in enquiries into shipwrecks and accidents on board ship, and that they should be empowered, where necessary, to submit reports on the results of such enquiries;

25. That, so far as is compatible with the administrative methods in each country, they should be called upon to collaborate in supplying information preparatory to the drafting of laws and regulations for the protection of seamen.

Text of Resolution adopted Concerning Hours of Labour at Sea

A Resolution was adopted in the Conference by 67 votes to 26 on a motion of the Workers' Group in the terms following:—

The Conference asks the Governing Body to place the question of the regulation of the hours of work on board ship on the agenda of the special maritime session in 1928 and to submit this question to the Joint Maritime Commission at its next regular session.

Text of a Resolution Adopted Concerning an Enquiry into the Sponge Fishing Industry, etc.

Whereas in present conditions fishing for sponges, pearls of all kinds, coral, and submarine products in general, is carried on beyond the reach of any administrative or other supervision and thus abuses may and do take place, and

Whereas this exceptionally unhealthy and dangerous occupation causes numerous victims among those engaged in it,

The Ninth Session of the International Labour Conference requests the International Labour Office to collect information on the conditions in which this work is carried out, with a view to determining the best means of protecting the workers.

Text of Draft Resolution Adopted Concerning Seamen's Welfare

The Conference, after having examined the conclusions of the report of the Sub-Committee on Seamen's Welfare in Ports, decides

(1) to instruct the International Labour Office to continue the study of seamen's welfare and to submit the above-mentioned report to the attention of the Governments of the States Members of the International Labour Organization;

(2) to request the Governing Body to consider the possibility of placing this question upon the Agenda of an early Session of the Conference, with a view to the adoption of a Recommendation.

Text of Resolution Adopted Concerning penalties Inflicted in Respect of Violation of Seamen's Articles of Agreement

The Conference requests the Governing Body to instruct the International Labour Office to study the question of penalties inflicted in respect of the violations of seamen's articles of agreement, and in particular the manner in which the national laws classify and punish the various acts in which a violation of such articles of agreement may consist (irregular absence, absence from duty, abandonment of the vessel, refusal to obey orders, desertion under ordinary or special circumstances).

The Conference requests the International Labour Office to collect information in regard to the law and the decisions of the Courts in the various countries on this question and in particular to study the most recent laws, in which new methods of dealing with it have been embodied.

The Conference requests the Office to submit the results of such study to the Joint Maritime Commission, with a view to deciding upon methods of dealing with this question which might be adopted internationally.

Text of Resolution Adopted Concerning Articles of Agreement for the Deep Sea Fishing Industry

The International Labour Conference, considering the extreme importance of the international deep sea fishing industry,

considering the fact that the fishing industry has hitherto been excluded from the application of international regulations,

considering that the deep sea fishing industry represents an essential part of the international shipping industry,

requests the Governing Body to place the question of articles of agreement for the deep sea fishing industry, as well as for other forms of navigation, excluded from the Draft Convention on articles of agreement, on the Agenda of an early Session of the International Labour Conference.

Text of Resolution Adopted Concerning the Repatriation of Fishermen

The Committee on Repatriation requests the Conference to adopt a Resolution inviting the Governments of all maritime countries which have not already done so to take the measures required to ensure the repatriation of fishermen left in a foreign port. It is understood that the term "fishermen" includes all persons employed in any capacity on board a fishing boat.

Text of Resolution Adopted Concerning Amendment to the Standing Orders

The Conference requests the Governing Body of the International Labour Office to submit to the next Session an amendment to the Standing Orders, intended to define the procedure to be followed in the appointment of the Secretary of each Group, as well as the composition of the Secretariat of the Groups.

Annual Report of Director

The Annual Report of the Director of the International Labour Office for the calendar year 1925 has been issued in two volumes and was presented to the Eighth and Ninth Sessions of the International Labour Conference which assembled in Geneva on May 26th and June 7th of this year, respectively. The first volume deals with the general principles of the Organization and the second part with the reports submitted to the International Labour Office under Article 408 of the Treaty of Versailles, relative to the legislative measures which have been taken in various countries to give effect to conventions of the International Labour Conference.

The Report draws attention to the fact that the work of the International Labour Office is becoming increasingly systematized. During the early years of its existence the Office was obliged to collect material on a great variety of subjects, in order to have a basis for the supply of information and to prove that it was able to meet such requests as might be addressed to it. Henceforth, however, the enquiries called for by the Conference or by the Governing Body oblige the Office to concentrate on extending its work on certain subjects, while on other subjects the information collected in the past few years suffices for the moment to meet current requests. The character of the publications

is at the same time becoming better defined. In many cases, in order to meet the wishes of the Governing Body, there has been included for particular questions a statement of the law and practice in the various countries, in order to permit international comparisons to be made on the most accurate and critical basis possible. A striking proof of the scientific value which the publications of the Office are recognized to possess is found in the following instance. The National American Bureau for Economic Research, one of the many foundations which have been created in the United States during recent years for the purpose of facilitating in certain spheres extensive and detailed investigations, has decided to study the question of migration. In connection with this study it was necessary to begin by an examination of the available statistics. Professor Walter F. Wilcox, to whom this examination was entrusted, found such full information on the subject in the International Labour Office that he decided that even for the carrying out of a retrospective survey no institution was better equipped at the present moment than the International Labour Office. He thereupon requested its assistance in making the survey and with the concurrence of the Governing Body of the International Labour Office, arrangements were made accordingly. The Office has also collaborated on other occasions with outside institutions and co-operation along these lines will no doubt increase in the future. In this connection the Director makes the following observations:—

"If the Office is able from year to year to acquire undisputed authority through its scientific work, is it fanciful to imagine that it may become the world centre for all scientific research on social affairs, and that the large official and unofficial institutions of all countries, social research bodies, universities, etc., may be grouped about it for the periodical consideration of a general programme of work? Already, from America, a suggestion of this nature has been forthcoming. If the idea further developed, it would surely be at Geneva, in collaboration with the proposed Labour University of which mention has been made in various countries would become a reality. This is perhaps a mere dream, but the fact that the idea can be entertained emphasises the scientific value of the work of the Office; and what is now a mere dream may eventually be realized if the Office is able to win increasing support and inspire increasing confidence in its work.

In his general conclusions at the end of the first volume, the Director attempts to form an estimate of the vitality and effectiveness of the International Labour Organization, to define its proper position in the general system for securing international peace, and to specify points on which its further efforts should be concentrated. In the report last year satisfaction was expressed with the stability which the Organization had gained. During 1925 this impression has been fully borne out. The faith and enthusiasm which in the early days of the Office constituted its strength are now disciplined, and possibly tempered with prudence. The Office has now a staff which is trained and experienced. Its capacity for providing information has become considerable. Its supply of documentary material has grown in reply to the demands made upon it by governments and industrial organizations. Its publications have fulfilled expectations in regard to accuracy and completeness. Moreover, as the social reform movement becomes in all countries more methodical and extensive, so the Office as a clearing house of information becomes more vigorous and capable of development. Whilst the labour movement and the demands of the trade unions, since the economic crisis of recent years, may have lost something of vigour and intensity, and above all of the sensational element of the post-war period, there is a remarkably vigorous and continuous development of ideas and of legislative activity. Striking illustrations of this assertion may be found in social insurance systems, in recent movements in favour of conciliation and arbitration and in experiments with a view to preventing and alleviating unemployment crises.

At the end of 1925, 194 ratifications of Draft Conventions of the International Labour Conference had been registered with the League of Nations by various countries as against 146 the year before. This number has since been increased to 199. Moreover, whether they are ratified or not, the resolutions of the International Labour Conference exercise an increasing influence on legislation and administrative practice in all countries. In the far eastern countries, like India and Japan, the undertakings assumed at the First Conference at Washington (1919) tend more and more to lead to practical results. If it is not always possible, as it was in the case of the assistance given to Russian and Armenian refugees, to calculate arithmetically the number of persons directly benefited by the activities of the International Labour Office, it is at least clear that its efforts result every year in saving human life and that definite progress is being made in the attainment of proper labour standards. In particular, the great reform of the eight-hour working day appears to have accomplished in 1925 a fresh stage in its slow movement towards realization.

In his report for 1924, the Director endeavoured, in reply to certain criticisms, to convince employers in the great industrial countries that the most effective means of protection at their disposal against the dangers of competition lay in the more regular and complete fulfilment of its functions by the International Labour Organization. It appears to him to be fallacious to suppose that even in periods of economic crisis it might still be politically and morally possible to force a working class movement which daily becomes better organized to accept lower conditions of labour, longer working hours and lower wages. The countries where social legislation is advanced had, he urged, in reality nothing to lose by ratifying the Conventions, but on the contrary, everything to gain, since by ratifying they acquired power to insist that other countries which ratified should no less than themselves give effect to the resolutions of the Conference and exercise the moral pressure necessary for securing fresh ratification elsewhere. The ineffectiveness of protection by means of tariffs was contrasted with the efficacy of a simultaneous raising of labour standards. In his present report the Director reiterates his statements.

In this same connection the Director observes that the positive and realistic spirit of Great Britain has again opened the way to industrial progress through a conference of European ministers of labour which was held in London. The fact, however, that on all sides the question of the cost to national industry of insurance systems, family allowances, holidays with pay, etc., is being raised, and that the Office is asked to calculate and compare these costs, seems yet a further indication that it is recognized to be out of the question to put back the hands of the clock and refuse guarantees of justice to wage earners, but that it is desired to ensure that nations undertaking such burdens shall not thereby be placed at a disadvantage.

Thus, the idea of securing a certain international uniformity of labour standards no longer appears as an abstract theory, but is viewed by the more advanced States, whose position may under present conditions be threatened by the competition of neighbouring countries, as an essential means of protection. This in turn signifies that the International Labour Organization is no longer on the fringe of economic reality but is right at its centre.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Inauguration of International Labour Office Building

THE Inauguration of the new building of the International Labour Office in Geneva took place on June 6th in the interval between the Eighth and Ninth Sessions of the International Labour Conference. In the morning a meeting was held in the *Bâtiment électoral* of Geneva, the building in which sessions of the Conference are held Among those present were the President of the Swiss Confederation, members of the Council of the League of Nations, ministers of various states, members of the League and of the Labour Organization, members of the Diplomatic Corps, and representatives of the public authorities of Geneva. Addresses were delivered by the following: Mr. Haeberlin, President of the Swiss Confederation; Mr. H. Wolfe, British Government delegate; Dr. Brauns, German Federal Minister of Labour; Mr. Camille Huysmans, Belgian Minister of Science and Art; Dr. Riddell, Government Delegate of Canada; Mr. Durafour, French Minister of Labour; Sir Atul Chatterjee, High Commissioner for India; His Excellency G. de Michelis, Italian Government delegate; Mr. Mayeda, Japanese Government delegate; Mr. Pinto, Latin-American delegate, representative of the Argentine Republic; the Rt. Hon. G. N. Barnes, *Rapporteur* of the Labour Legislation Committee of the Peace Conference; Mr. H. B. Butler, Deputy-Director of the International Labour Office and General Secretary of the First International Labour Conference; Viscount Burnham, President of the Third and Fourth Sessions of the International Labour Conference; His Excellency Mr. Adatci, Japanese Ambassador in Brussels, President of the Fifth Session of the International Labour Conference; His Excellency Mr. Benes, Czechoslovak Foreign Minister, President of the Seventh Session of the International Labour Conference; Mgr. Nolens, Minister of State, President of the Eighth Session of the International Labour Conference; Mr. Epitaux, architect of the new building; Mr. Arthur Fontaine, Chairman of the Governing Body; Mr. J. Carlier, Vice-Chairman of the Governing Body, representative of the Employers' Group; Mr. Jouhaux, representative of the Workers' Group; Sir Eric Drummond, Secretary-General of the League of Nations; Mr. Albert Thomas, Director of the International Labour Office.

Mr. Epitaux, the architect under whose direction the building has been erected, handed to Mr. Fontaine three keys intended for the representatives, respectively, of the Government, employers' and workers groups on the Governing Body of the Office.

In the afternoon, in the presence of a large and distinguished gathering, the entrance gates of the new premises were opened by Mr. Fontaine, Chairman, and Mr. Carlier and Mr. Oudegeest, Vice-Chairman, of the Governing Body, representing the three groups already mentioned. An official inspection of the building was made, and afterwards a reception was held in the grounds.

Dr. W. A. Riddell, League of Nations Advisory Officer in Geneva, read a message from the Minister of Labour, Hon. J. C. Elliott, in the terms following:—

"Canada is proud to have been associated with other nations in the erection of suitable office premises for the International Labour Office in Geneva.

"Please convey to those assembled at the inauguration ceremony the fullest sympathy of the Government of Canada with the high aims which are expressed in the Labour Part of the Peace Treaty and our hope that through the continued co-operation of employers, workers and Governments, means will be found progressively to improve the working conditions throughout the world."

Great Britain and the Lead Paint (Protection against Poisoning) Bill

On June 4, the Lead Paint (Protection against Poisoning) Bill, 1926, introduced by the Home Secretary, Sir W. Joynson-Hicks, received its second reading in the House of Commons and was then committed to a standing committee. At the Third Session of the International Labour Conference held in Geneva in 1921, the prohibition of the use of white lead in painting was made the subject of a Draft Convention, but the Bill under discussion is merely one for regulation of the use of lead paint so as to minimise its dangers, and not one to embody the Convention as passed at Geneva. During the debate in the House on this question, it was argued by those who opposed the measure that regulations in connection with the stamping out of lead poisoning would be absolutely impracticable and unenforceable, while those opposed to the ratification of the Convention for the prohibition of white lead maintained that such prohibition would lead to considerable unemployment and cut down a very large industry. In his speech to the House, the Home Secretary stated that he was as determined as any of his Labour opponents to reduce the evils of lead poisoning, and that if the Government found that the proposed regulation was not sufficient and that the increase in lead poisoning still went on, it would probably be necessary for him to ask the House to pass a Bill completely prohibiting the use of white lead. This would be a very serious Bill from the point of view of the trade of the country, but one which he hoped would not be necessary, as he felt confident that this horrible disease will be, if not completely stamped out, very largely reduced indeed by the proposals of the Bill before the House.

Labour Legislation in Japan

The International Labour Office has just published a volume entitled "Industrial and Labour Legislation in Japan" by Dr. Iwao F. Ayusawa, which is an informative study, based on the latest available material, and containing an account of present conditions and present legislation in Japan. In no other country, perhaps, have such striking developments taken place in recent years in labour legislation and industrial conditions generally as in Japan. The beginning of this period of development coincided more or less with the creation in 1919 of the International Labour Organization. Japan holds one of the permanent seats on the Council of the League of Nations and, as one of the eight states of chief industrial importance, is permanently represented on the Governing Body of the International Labour Office. Japan was the first country to establish in Geneva a permanent delegation, attached to the Governing Body of the International Labour Office. Many other countries have followed the example set by Japan. The delegation of the Japanese Government was set up as early as 1920, by an Imperial Ordinance, within a few months after the International Labour Office was set up. The staff of the delegation includes experts on industrial and labour problems and the Delegation acts as a *liaison* office between the Tokyo Government and the International Labour Organization. It has a dual function in that, on the one hand, it studies labour legislation in Europe, and keeps the Japanese Government informed; on the other hand, it supplies information on the subject of Japanese labour and industry to the International Labour Office and to any other organizations or individuals who request it. Moreover, every year Japan has sent to each session of the International Labour Conference a large delegation (often among the largest of the delegations) which is thoroughly representative and which indicates the immense interest which Japan takes in the proceedings of the Conference. This is shown

also by the legislative measures adopted in Japan to deal wtih the subject matter of the various conventions and recommendations of the Conference.

Since 1919 there has been marked progress in Japanese social legislation and in the betterment of general conditions of work. Notwithstanding the growing demand in other countries for information on these developments however, very little literature which treats the subject either scientifically or completely has so far been available in any language other than Japanese. As a result of the Seventh Session of the International Labour Conference at Geneva in 1925 requesting the International Labour Office to make an inquiry into working conditions in certain Asiatic countries, including Japan, the questions dealt with in the above-mentioned study have been and are the subject of careful and continuous examination by the Office, which hopes in due course to publish the results of its official inquiry.

Dr. Ayusawa's report contains chapters on Japan's industrial population, the historical development of her labour legislation, hours of work, wages and cost of living; woman and child labour, unemployment, industrial hygiene and safety, social insurance and trade unionism, and also gives as an appendix a conspectus of Japanese labour legislation. The study in question shows that a tremendous change is taking place in Japanese industry, in working conditions and in labour legislation, but the author hazards the statement that progress is by no means confined to industry. He points out that as long ago as 1921, one of the advisers to the Japanese Workers' Delegate at the International Labour Conference declared: "A young Japan entirely different from what it has hitherto been . . . . is coming upon the tide. The labour movement is simply a manifestation of it. The workers have awakened and the power of their organizations is increasing year by year. . . . .A new era is dawning."

STATISTICAL RELATION BETWEEN UNEMPLOYMENT AND PRICE CHANGES

THE *International Labour Review* for June publishes an article by Prof. Irving Fisher, Professor of Economics at Yale University, entitled "A Statistical Relation between Unemployment and Price Changes." The question so much discussed by economists at the present time as to the possible relation between changes in the price level and changes in the volume of employment has already been debated in the pages of the *Review,* but in the present article Professor Fisher, one of the foremost authorities on monetary problems and for years a protagonist of stabilisation, removes the question from the sphere of controversy to that of exact statistical research. The paper under discussion is based on a report made by Professor Fisher in June, 1925, to the American Statistical Association. The writer points out that the correlation for unemployment, while not quite as high as for trade, is sufficiently high to enable us to say that for the period between 1915 and the present, changes in the purchasing power of the dollar may very largely explain changes in employment. The principle underlying this relationship is, of course, familiar. It is that when the dollar is losing value, or in other words when the price level is rising, a business man finds his receipts rising as fast, on the average, as this general rise of prices, but not his expenses, because his expenses consist, to a large extent, of things which are contractually fixed, such as interest on bonds; or rent, which may be fixed for five, ten, or ninety-nine years; or salaries which are often fixed for several years; or wages, which are fixed sometimes, either by contract or custom, for at least a number of months. For this and other reasons, the rise in expenses is slower than the rise in receipts when inflation is in progress and the price level is rising or the dollar falling. The business man, therefore, finds that his profits increase. In fact, during such periods of rapid inflation, when profits increase because prices for receipts rise faster than expenses, we nickname the profit-taker the "profiteer". Employment is then stimulated—for a time at least. The ultimate effects of a long-continued inflation are doubtless bad all round, and even during the period when it does help to provide jobs for the labouring man it raises the cost of living against him. On the other hand, when prices are falling, expenses likewise lag behind and reduce profits, for exactly the same reason reversed. Consequently, during periods of falling prices profits are reduced, bankruptcies are increased, concerns shut down entirely or in part and men are thrown out of employment. Therefore, statistics show exactly what we would expect, namely, that unemployment is correlated with the purchasing power of the dollar. The writer points out that it is not a high price level that makes for full employment, nor a low price level that makes for unemployment. Whether a price level is high or low has, in

the long run, nothing whatever to do with employment. But, if we sink from one level to another, then, during the time of falling, we do produce depression of trade and unemployment. Reversely, if we rise from one level to another, then during the period of rising, we do for a time produce more employment. Charts are presented by Professor Fisher in his article that show a genuine and straightforward causal relationship between inflation and employment or deflation and unemployment; that the ups and downs of employment are the effects, in large measure, of the rises and falls of prices, due in turn to the inflation and deflation of money and credit.

The author is of the opinion in short, that facts and theory both indicate that in the "dance of the dollar" we have the key, or at any rate a very important key to the major fluctuations in employment, and that we have in our power, as a means of substantially preventing unemployment, the stabilisation of the purchasing power of the dollar, pound, franc, lira, mark, crown, and any other monetary units.

THE INDIAN TRADE UNIONS ACT

THE Indian Legislature on February 8, passed the Indian Trade Unions Act, which provides for the registration of trade unions and in certain respects defines the law relating to registered trade unions in British India. The bill extends to the whole of British India, and will come into force on such date as the Governor General in Council may appoint. Under the provisions of the Act a registrar is to be appointed for each province, and if the trade union can satisfy the requirements of the registrar a certificate of registration is issued. An appeal from the decision of a registrar may be taken to a Judge of a principal Civil Court. In the event of the dismissal of an appeal the person or persons aggrieved shall have the right to appeal to the High Court. Every registered Trade Union will be a body corporate by the name under which it is registered, and may sue and be sued. The rights and liabilities of registered trade unions as set forth in the act are in part as follows:—

Objects on which general funds may be spent

The general funds of a registered trade union shall not be spent on any other objects than the following, namely:—

(*a*) the payment of salaries, allowances and expenses to officers of the trade union;

(*b*) the payment of expenses for the administration of the trade union, including audit of the accounts of the general funds of the trade union;

(*c*) the prosecution or defence of any legal proceeding to which the trade union or any member thereof is a party, when such prosecution or defence is undertaken for the purpose of securing or protecting any rights of the trade union as such or any rights arising out of the relations of any member with his employer or with a person whom the member employs;

(*d*) the conduct of trade disputes on behalf of the trade union or any member thereof;

(*e*) the compensation of members for loss arising out of trade disputes;

(*f*) allowances to members or their dependents on account of death, old age, sickness, accidents or unemployment of such members;

(*g*) the issue of, or the undertaking of liability under, policies of assurance on the lives of members, or under policies insuring members against sickness, accident or unemployment;

(*h*) the provision of educational, social or religious benefits for members (including the payment of the expenses of funerals or religious ceremonies for deceased members) or for the dependants of members;

(*i*) the upkeep of a periodical published mainly for the purpose of discussing questions affecting employers or workmen as such;

(*j*) the payment in furtherance of any of the subjects on which the general funds of the trade union may be spent, of contributions to any cause intended to benefit workmen in general, provided that the expenditures in respect of such contributions in any financial year shall not at any time during that year be in excess of one-fourth of the combined total of the gross income which has up to that time accrued to the general funds of the trade union during that year and of the balance at the credit of those funds at the commencement of that year; and

(*k*) subject to any conditions contained in the notification, any other object notified by the Governor General in Council in the Gazette of India.

Constitution of a separate fund for political purpose

(1) A registered trade union may constitute a separate fund from contributions separately levied for or made to that fund, from which payments may be made, for the promotion of the civic and political interests of its members, in furtherance of any of the objects specified in subsection (2).

(2) The subjects referred to in subsection (1) are:—

(*a*) the payment of any expenses incurred, either directly or indirectly by a candidate or prospective candidate for election as a member of any legislative body constituted under the Government of India Act or of any local authority, before, during or after the election in connection with his candidature or election; or

(*b*) the holding of any meeting or the distribution of any literature or documents in support of any such candidate or prospective candidate; or

(*c*) the maintenance of any person who is a member of any legislative body constituted under the Government of India Act or of any local authority; or

(*d*) the registration of electors or the selection of a candidate for any legislative body constituted under the Government of India Act or for any local authority; or

(*e*) the holding of political meetings of any kind, or the distribution of political literature or political documents of any kind.

(3) No member shall be compelled to contribute to the fund constituted under subsection (1); and a member who does not contribute to the said fund shall not be excluded from any benefits of the trade union, or placed in any respect either directly or indirectly under any disability or at any disadvantage as compared with other members of the trade union, (except in relation to the control or management of the said fund) by reason of his not contributing to the

said fund; and contribution to the said fund shall not be made a condition for admission to the trade union.

Criminal conspiracy in trade disputes

No officer or member of a registered trade union shall be liable to punishment under subsection (2) of section 120B of the Indian Penal Code, in respect of any agreement made between the member for the purpose of furthering any such object of the trade union as is specified in section 15, unless the agreement is an agreement to commit an offence.

Immunity from civil suit in certain cases

(1) No suit or other legal proceeding shall be maintainable in any civil court against any registered trade union or any officer or member thereof in respect of any act done in contemplation or furtherance of a trade dispute to which a member of the trade union is a party on the ground only that such act induces some other person to break a contract of employment, or that it is an interference with the trade, business or employment of some other person or with the right of some other person to dispose of his capital or of his labour as he wills.

(2) A registered trade union shall not be liable in any suit or other legal proceeding in any civil court in respect of any tortious act done in contemplation or furtherance of a trade dispute by an agent of the trade union if it is proved that such person acted without the knowledge of, or contrary to express instructions given by the executive of the trade union.

Enforceability of agreements

Notwithstanding anything contained in any other law for the time being in force, an agreement between the members of a registered trade union shall not be void or voidable merely by reason of the fact that any of the objects of the agreement are in restraint of trade.

Provided that nothing in this section shall enable any civil court to entertain any legal proceeding instituted for the express purpose of enforcing or recovering damages for the breach of any agreement concerning the conditions on which any members of a trade union shall or shall not sell their goods, transact business, work, employ or be employed.

Right to inspect books of Trade Union

The account books of a registered trade union and the list of members thereof shall be open to inspection by an officer or member of the trade union at such times as may be provided for in the rules of the trade union

Rights of minors to membership of Trade Unions

Any person who has attained the age of fifteen years may be a member of a registered trade union subject to any rules of the trade union to the contrary, and may, subject as aforesaid, enjoy all the rights of a member and execute all instruments and give all acquittances necessary to be executed or given under the rules.

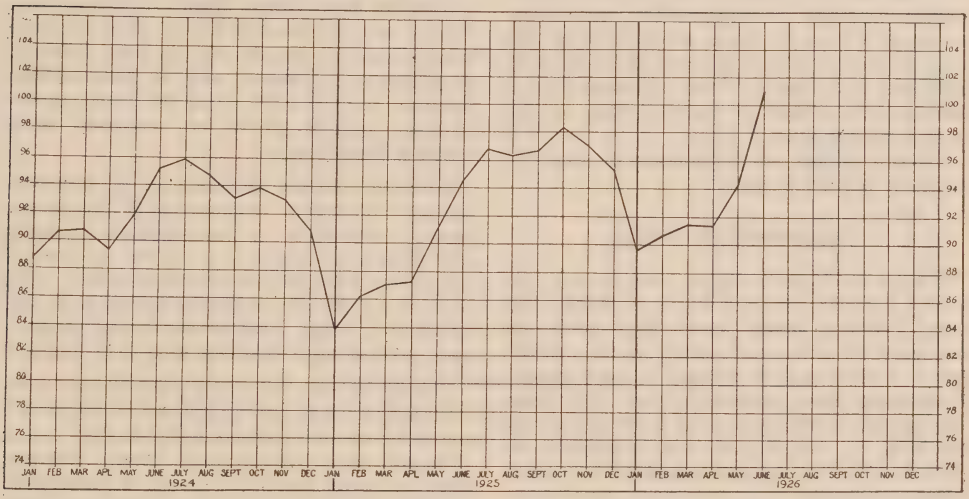
Provided that no person who has not attained the age of eighteen years shall be an officer of any such trade union.

Proportion of officers to be connected with the industry

Not less than one-half of the total number of the officers of every registered trade union shall be persons actually engaged or employed in an industry with which the trade union is connected.

Provided that the local government may, by special or general order, declare that the provisions of this section shall not apply to any trade union or class of trade unions specified in the order.

Picketing Held to be Justified in Certain Cases



A company manufacturing men's clothing at Cleveland, Ohio, employing about 20 or 25 men to cut and trim garments, the sewing being contracted to outside firms, brought an action against the employees' union, a local of the Amalgamated Clothing Workers of America, to enjoin the union from picketing the establishment and from inducing the employees to break their individual contracts of employment. It appeared that the plaintiff had in the past contracted work to firms employing only union labour of the defendant union, but that it had more recently refused to give work out to certain manufacturers who employed union labour. There was testimony that the officers of the company had induced several sub-manufacturers to put their establishments on a non-union basis in consideration of further work from plaintiff, and that work had been refused to companies who had refused to go on a non-union basis.

Denying that the plaintiff was entitled to an injunction, the Court of Appeals of the County of Cuyahoga said:—"In the light of these facts it would be an unconscionable exercise of the powers of a court of equity to grant this company an injunction on the ground that the defendant was attempting to persuade its employees to break their contracts of employment with it. The plaintiff is not here with clean hands. The situation of which it complains is the inevitable result of its own interference in the affairs of the union . . . . The active cause of the alleged strike and the subsequent picketing complained of grew out of the discharge by the plaintiff of one of its employees named Neville. It is claimed that he was discharged because of his affiliation with a labour union. . . . . We do not question the right of the plaintiff company to discharge Neville for the reason that he belonged to a labour union if such was the case. . . . We do, however, question the plaintiff's contention that such discharge in connection with its other acts may not be the basis of a legitimate trade dispute with the defendant organization. It would be difficult to conceive a grievance more vitally affecting the rights of union labour than those appearing from the evidence in this case. If such organization may not protect their members and their contracts by lawful means they have no right to exist and, in fact cannot long exist. There is no evidence of any unlawful acts or violation or intimidation on the part of the defendant or its representatives in this case."

THE EMPLOYMENT SITUATION AT THE BEGINNING OF JUNE, 1926, AS REPORTED BY EMPLOYERS TO THE DOMINION BUREAU OF STATISTICS

REPORTS from 5,907 employers show that at the beginning of June, 54,262 persons had been added since May 1 to their staffs, which totalled 828,483 workers. The index number of employment stood at 101.0, as compared with 94.3 on May 1, 1926, and with 94.5, 95.2, 97.3, 89.2 and 86.55 on June 1, 1925, 1924, 1923, 1922 and 1921 respectively. The situation was thus more favourable than on the corresponding date in any of the last five years; in fact, the index number stands higher now than at any time since 1920.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January 1920, as 100.

All the larger divisions reported increases, the only losses being minor ones in furniture, non-ferrous metal and leather product factories and seasonal ones in textile and cigar establishments. Nominal losses in telephones and personal services were more than compensated for by gains in other subdivisions of the communication and service groups.

Employment by Provinces

Increased activity was noticeable in all parts of the country.

Maritime Provinces.—All activities except transportation registered increases in the number of workers employed. Reductions in iron and steel works were more than compensated for by improvements in other manufactures. The 539 firms reporting had 64,681 employees or 2,842 more than on May 1, 1926. The index number for the Maritimes was, however, higher on June 1, 1925, 1924 and 1923.

Quebec.—Continued improvement was noticed in Quebec. Manufacturing showed a further increase, some 3,500 persons being added to staffs, though there were losses in textile, leather, and cigar factories. Logging again showed an increase, owing to river-driving. All other activities showed gains, of which those in transportation and construction were the most noticeable. Reports were received from 1,271 employers, with a payroll of 238,687 persons, as compared with 217,357 last month. This increase exceeds that registered on June 1, 1925.

Ontario.—Manufacturing continued the steady increase noted of late. Saw-mills and iron and steel works accounted for the greater part of the increase in this province. River-driving brought the logging index up some seven points, while transportation and construction also showed considerable gains. Retail trade was the only activity showing any pronounced loss. Co-operating firms numbered 2,688, with 337,444 persons employed, an increase of 16,695 over last month. The

increase on the same date last year was only about half as large.

Prairie Provinces.—Manufacturing was again active, losses in edible plant product and textile factories being more than counterbalanced by gains in other groups, of which those in clay, glass and stone and iron and steel works were most pronounced. All other activities showed gains, railway construction and maintenance alone showing an increase of nearly 7,500 workers. Employers reporting numbered 756, whose payrolls of 109,599 persons showed an increase of 11,529 workers over May 1, 1926. The increase on June 1, 1925, was very much smaller.

British Columbia.—While manufacturing remained practically steady, the total volume of employment showed an increase, due largely to gains in construction and transportation. Reports were received from 653 firms employing 77,594 persons, an increase of 1,868 over last month. Over a thousand more persons were added to payrolls than on the same date last year.

Table I gives index numbers of employment by economic areas.

Employment by Cities

Montreal.—Manufacturing continued its steady increase, seasonal losses in textile and cigar factories being more than offset by increases in iron and steel works, wood-using industries and electric current plants. Statements were compiled from 691 firms employing 116,903 persons, or 7,820 more than on May 1. Gains were also registered on June 1, 1925, but the index number was much lower.

Quebec.—Large reductions in boot and shoe factories were the outstanding feature of this months report, the index for the city as a whole dropping from 100.4 to 89.3. Other activities showed practically no change. Reports were received from 86 employers, with 7,798 persons on their payroll, as compared with 8,691 on May 1, 1926. On the same date last year employment was in somewhat greater volume.

Toronto.—Increases were registered in all phases of activity except services and trade. Manufacturing was higher, increases in edible animal products, wood-working, printing and iron and steel groups compensating for losses in rubber and textile factories. Co-operating employers, numbering 767, reported 96,677 employees, a gain of 557 over last month's total. The increase was greater on the same date last year.

Ottawa.—The opening up of saw-mills was the most noteworthy incident in this month's report. Pulp mills registered small losses. The usual seasonal increase in construction was evident. The monthly increase was greater than that of last year. Data were received from 128 employers with 10,547 workers as compared with 9,736 on May 1.

Hamilton.—The increase in employment in Hamilton, chiefly in manufacturing and construction, was not so large as that registered on May 1, but was more pronounced than that shown on June 1, 1925. In manufacturing, iron and steel works showed the principal gain, while textiles recorded a seasonal loss. Firms reporting numbered 200, with payrolls of 29,246 as compared with 28,627 last month.

Windsor and Other Border Cities.—Conditions in the Border Cities were slightly better than last month. Gains were reported in antomobile factories and in construction. Reports were received from 80 firms, whose payrolls totalled 12,241, as compared with 11,918 a month ago.

Winnipeg.—Slight increases in manufacturing and quarrying, together with the large seasonal expansion in construction, brought the Winnipeg index up some 4 points. Employers who reported numbered 279, with payrolls of 26,883, as compared with 25,664 on May 1, 1926. Last year's figures showed very little change between May and June.

Vancouver.—In manufacturing losses were recorded, caused by reduction of staffs in saw-mills and non-ferrous metal works. Construction also recorded small losses. Reports were received from 216 firms, whose June payroll of 24,805 was smaller by 327 than that of May 1. The later month's downward movement repeats that shown on June 1 in 1925 and 1924.

Index numbers of employment by cities are given in Table II.

The Manufacturing Industries

Further advances were made in employment in manufacturing, the largest gains being in the edible animal product, lumber, printing, and pulp and paper and iron and steel groups. Losses were recorded in textiles, non-ferrous metals and tobacco. A combined working force of 460,894 persons was employed by the 3,818 manufacturers making returns, who had 448,490 operatives at the beginning of May. The general increase was more than half as much again as that recorded on June 1, 1925.

NOTE.—The number employed by the reporting firms in Jan. 1920, is taken as 100 in every case. The "relative weight" in Tables I and II shows the proportion of employees in the indicated district to the total number of employees reported in on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing

Animal Products, Edible.—The continuance of seasonal activity in fish-preserving establishments caused very important increases in the number of persons employed in this group, while dairies and meat-preparing plants also reported gains. The greatest advances were in the Maritime Provinces, but an upward tendency was noted generally. Statements were received from 214 firms in the edible animal product group, having 16,295 employees as against 14,768 at the beginning of May. This increase was rather larger than that noted on June 1, 1925, when the index number stood between four and five points lower.

Leather and Products.—In accordance with their usual practice at the time of year boot and shoe factories laid off a considerable num-

NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

ber of workers; the decline was more extensive than on June 1, 1925, but the index number then stood at 70.3, as compared with 72.4 on the date under review. An aggregate working force of 15,683 persons was reported by the 190 employers making returns, who had 16,515 workers in the preceding month. The most pronounced reductions were in Quebec.

Lumber and Products.—Extensive additions to staffs were noted in rough and dressed lumber mills, while furniture and a few other industries coming under this heading showed moderate curtailment of operations. The working force of the 718 reporting firms rose from 46,625 persons on May 1 to 54,294 at the beginning of June. All provinces except British Columbia shared in the gains, but those in Ontario were greatest. The situation was practically the same as on June 1 last year, although the improvement then was rather less marked.

Plants Products, Edible.—Practically all industries in the vegetable food group showed heightened activity; fruit and vegetable canneries, biscuit, sugar and syrup factories, however, reported the largest increases. Much smaller additions to staffs were indicated at the beginning of June, 1925, when the index number was slightly lower. Data were compiled from 309 establishments employing 25,548 persons, as against 24,899 in their last report. Ontario registered most of the gain.

Pulp and Paper Products.—Further and greater expansion was shown in pulp and paper mills, while printing and publishing establishments made some recovery from the declines that have been noted in recent months. According to statistics from 461 manufacturers, their staffs were increased by 1,611 workers to 55,407 on June 1. Quebec mills absorbed the majority of these additionally employed persons. The gains exceeded those reported on the corresponding date last year, when the index number was over seven points lower.

Rubber Products.—The trend of employment in rubber factories was upward, 356 persons being reinstated by the 30 firms making returns, who employed 12,134 workers. Most of the improvement was registered in Quebec, while in Ontario further curtailment was shown. Increased activity was also recorded on June 1, 1925; the situation then was practically the same.

Textile Products.—General reductions of a seasonal nature were indicated in the textile group; by the 504 co-operating employers; whose pay rolls totalled 70,569 employees, or 1,116 less than on May 1. The largest losses were in garment and personal furnishing factories in Quebec. Somewhat greater contractions were noted on June 1 last year, and the index number then was about four points lower.

Tobacco, Distilled and Malt Liquor.—A decline of 342 persons was recorded in this group, according to 104 reporting firms, with 11,874 workers on the date under review. The loss was mainly confined to factories in Quebec. Conditions on the corresponding date last year were very similar, although additions to staffs were made at that time.

Clay, Glass and Stone Products.—Continued improvement was reported in building material factories, chiefly in brick works. All provinces except British Columbia shared in the upward movement, which gave employment to practically the same number of extra workers as on June 1, 1925. The index number then, however, stood at 88.9, as against 103.6 on the date under review, for which statements were received from 115 manufacturers having 10,272 employees, or 551 more than at the beginning of May.

Electric Current.—Further and more marked improvement was reported in electric current plants, the gain exceeding that indicated on June 1 of a year ago; the index number then, however, was higher. The most pronounced increase on the date under review took place in Quebec. A combined working force of 11,910 persons was reported by the 89 establishments reporting, which had 11,316 employees in the preceding month.

Iron and Steel Products.—The payroll of the 633 firms furnishing data rose from 127,772 employees on May 1 to 129,508 at the beginning of June. All branches of the iron and steel industry shared in the expansion, which was most marked in the railway car, steel shipbuilding, and crude, rolled, and forged divisions in Quebec and Ontario. On the corresponding data last year, a moderate reduction was reported, and the index number then was over nine points lower than on June 1, 1926.

Non-ferrous Metal Products.—Employment in smelters and refineries and other industries coming under this heading showed a decline that considerably exceeded the decrease also registered on the same date of last year when activity was decidedly less. Statistics were tabulated from 104 establishments having 13,462 employees, as compared with 13,863 at the beginning of May. Firms in British Columbia and Ontario recorded the bulk of the loss.

Mineral Products.—Further but less extensive increases were noted in mineral product factories, 76 of which added 120 workers to

their staffs, bringing them up to 9,803 on the date under review. Improvement was noted at the beginning of June of last year, when the index number was somewhat higher.

Logging

River-driving operations provided employment for a large number of additional workers, according to statistics from 215 firms who increased their payrolls from 16,044 to 21,080 employees on June 1. The gains, which in many cases were temporary in character, were registered chiefly in Quebec and Ontario. Smaller increases were reported on the corresponding date of last year, and the situation then was very slightly less favourable.

Mining

Coal.—For the first time since the beginning of the year, there was a general increase in coal mining, most of the gain taking place in Nova Scotia and Alberta. Although considerable reductions were noted on June 1, 1925, employment then was in practically the same volume as on the date under review. Statements were tabulated from 86 operators having 23,936 employees as against 23,120 on May 1, 1926.

Non-metallic Minerals, other than Coal.—Further additions to staff were registered in these industries at the beginning of June; all provinces except British Columbia shared in the upward movement. An aggregate working force of 6,649 persons was employed by the 72 firms making returns, as compared with 6,115 workers in their last report. Rather more extensive gains were shown on the same date of last year, but the index number then was about seven points lower.

Communication

Continued improvement was reported by telegraphs, while employment on telephones declined slightly. The result was a net increase of 238 persons in the staffs of the 182 communication companies making returns, which employed 24,304 workers. The index number stood at 116.9, as against 110.1 on the same date in 1925.

Transportation

Street and Electric Railways and Cartage.—For the fourth consecutive month, there was an advance in employment in this division, in which 113 employers enlarged their payrolls by 602 workers to 19,314 on June 1. A considerable proportion of the gain took place in Quebec. A much smaller expansion was noted on the corresponding date last year, when the situation was rather less favourable.

Steam railways.—Another and more pronounced gain in activity was reported on steam railways, in all except the Maritime Provinces. The level of employment was somewhat higher than on June 1, 1925. Statistics were received from 102 firms and divisional superintendents having 75,533 employees, as against 73,154 in the preceding month.

Shipping and stevedoring.—Seasonal activity at all except the winter ports caused employment in water transportation to show an important increase, that greatly exceeded the gain recorded on June 1, 1925. Sixty concerns in this division employed 17,243 persons, as compared with 12,238 in their last report.

Construction and Maintenance

Building.—Very decided gains were recorded in building construction, according to 327 contractors who enlarged their working forces by 4,173 men to 31,825 at the beginning of June. The index number stood at 166.7, as compared with 122.7 on the corresponding date last year, when the improvement was much less extensive. All provinces except British Columbia shared in the upward movement indicated on the date under review.

Highway.—Further and larger additions to staffs were registered on highway work; the expansion was very slightly greater than at the beginning of June, 1925. Statements were compiled from 114 firms, whose payrolls included 12,907 workers, as compared with 7,277 in the preceding month. The most marked gains were in Quebec and Ontario, but all provinces reported heightened activity.

Railway.—The construction and maintenance departments of the railways reported the greatest increase indicated in any month since 1920, when 16,715 persons were added to their forces on June 1. They employed 51,258 workers. Important expansion was noted in all provinces, but that in the prairie district was most pronounced. The level of employment was higher than in any other month since the record was begun in 1920.

Services

Continued improvement was noted in summer hotels, while laundries and other personal service establishments were also busier. An aggregate working force of 14,660 persons was reported by the 166 firms making returns, as compared with 14,029 on May 1. Quebec and the Prairie Provinces showed most of the gain. Similar additions to staffs took place on June 1, 1925, but the index number then was over four points lower.

Trade

The trend of employment in retail stores was downward, while increased activity was recorded in wholesale establishments. The result was a net increase of 57 persons in the payrolls of the 568 trading firms, whose reports were tabulated and who employed 57,807 persons. Considerable reductions were noted on June 1 of last year, and the index then was nearly four points below its present level. Practically all the curtailment in retail trade on the date under review was in Ontario, while the gains in wholesale trade were generally distributed over the country.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns for June 1, 1926.

EMPLOYMENT OFFICE REPORT FOR MAY, 1926

THE volume of business transacted in the offices of the Employment Service of Canada during the month of May, 1926, showed only a nominal gain over that transacted during the previous month, but an increase of nearly 18 per cent was recorded when a comparison was made with the work effected by the Service during the corresponding period of last year. This gain was general throughout Canada, increased placements being recorded under all industrial divisions, except logging.

The accompaying chart shows the trend of employment since January, 1924, as represented by the ratio of vacancies notified and placements effected for each one hundred applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curves of vacancies and placements declined somewhat during the first half of the month, that of vacancies being more pronounced, but both remained practically unchanged during the latter half of the period and on a much higher level than that attained at the close of May, 1925. The ratio of vacancies to each one hundred applications was 85.6 and 85.5 during the first and second half of May, 1926, in contrast with the ratio of 78.8 and 74.8 during the same periods of 1925. The ratio of placements to each one hundred applications during the periods under review was 78.3 and 77.4 as compared with 71.8 and 71.4 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications during the first half of May was 1,678, as compared with 1,711 daily during the preceding period, and with 1,648 daily during the corresponding period of 1925. Applications for work during the latter half of the month registered 1,783 daily, in contrast with 1,535 daily during the latter half of May a year ago. Employers notified the Service of a daily average of 1,436 vacancies during the first half, and of 1,526 during the latter half of the month under review, as compared with a daily average of 1,298, and 1,149 vacancies during the month of May, 1925. Vacancies offered to the Service during the latter half of April, 1926, averaged 1,567 daily. The Service effected an average of 1,315 placements daily during the first half of May, of which 820 were in regular employment and 495 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,351 daily and 1,184 daily during the first half of May, 1925. During the latter part of the month under review placements averaged 1,381 daily (935 regular and 446 casual) as compared with an average of 1,096 daily during the corresponding period a year ago.

During May, 1926, the offices of the Service referred 35,115 persons to vacancies, and effected a total of 33,655 placements. Of these the placements in regular employment numbered 21,877, of which 18,473 were of men and 3,404 of women, while placements in casual work totalled 11,778. Opportunities for employment numbered 25,994 for men and 10,972 for women, a total of 36,966. The number of applications for work was 43,209, of which 31,957 were from men and 11,252 from women.

The following table gives the placements effected to date by the offices of the Employment Service:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
